Following the national trend in health care, a trend toward the use of paraprofessionals, the CHR program has been able to deliver a variety of medical services in a more cost-effective manner. Reaching a person who is in the first stages of illness and treating him at that stage is, as we all know, much less costly than treatment of advanced illness, to say nothing of the success of the treatment. The CHR staff also enables the few and overworked Indian Health Service doctors to handle the more serious medical needs of the community.

The CHR program is managed and carried out by tribal organizations, contracting with the Indian Health Services. In fiscal year 1980, CHR personnel provided an estimated 1,600,000 services through contractual arrangements with 234 American Indian and Alaska Native groups in 25 States. The local input and management of the program has allowed it to address the specific and most critical needs of each group.

On the North Dakota reservations, the CHR program has been the major contributor to the growing health awareness and improving health conditions of the Indian people. Of the 91 CHR's at the Fort Berthold, Turtle Mountain, Standing Rock, and Devils Lake Reservations over 75 percent are trained as emergency medical first responders and 50 percent are certified emergency medical technicians. These first responders are on the scene of a medical emergency within minutes providing life-saving care until the ambulance arrives.

Emergency medical service is a particularly critical need because of the large isolated areas, severe climatic conditions, and high accident and trauma rates on the Indian reservations in North Dakota. Each tribe requires that all CHR's receive first responder training and that one CHR plus one backup CHR remain on call 24 hours, 7 days per week. The tribes in North Dakota, in addition to providing various in-service training maintain ongoing emergency medical training at each reservation.

Many other essential health services are provided by CHR's. The Turtle Mountain Indian Reservation employs 29 CHR's to provide services to an Indian population of 7,500. Emergency medical service is an established high priority, however, their CHR program is successfully meeting and exceeding objectives in raising immunization levels of the children on the reservation; extending home and health services to the elderly; working with the school to monitor the general health and well-being of school age children; and providing physical therapy and environmental health services. Because approximately 30 percent of the homes on the reservation do not have

water, three CHR's are assigned to a water delivery program.

This program provides a vital service to those affected. In response to another priority need established by the Turtle Mountain Reservation community, the tribe established Safe House. Safe House is a 24-hour crisis center which shelters battered women and children. The shelter has been in operation for 1 year with five CHR's assigned to maintain the shelter and provide counseling services.

The CHR program has brought medical care to persons isolated in rural areas, persons who may not otherwise have received medical attention until, as it too often has happened, it was too late. The rural and isolated nature of the reservations and the cultural differences of the people have been addressed by the program—addressed in perhaps the only way—by the management of a health program on the local level.

Given our need to curtail the Federal spending and our desire to provide adequate health care services to all Americans, it seems to me to be a very serious and costly mistake to cut the community health representative program by $10,000,000.

UP AMENDMENT NO. 527

Mr. BOREN. Mr. President, I am pleased to join my colleague from Oklahoma in support of the amendment to allow continued use of the Chilocco Indian School for specified post-secondary purposes. The intent of Congress in adopting the original prohibition against use of the Chilocco facility was to prevent further operation of the off-reservation boarding school. This clarifying amendment simply states that educational programs, other than elementary and secondary boarding school programs, may be considered for location at the Chilocco facility.

Mr. McCLURE. I believe that the discussion with respect to the amendment offered by the distinguished junior Senator from Oklahoma, together with the remarks of the distinguished senior Senator from Oklahoma (Mr. BOREN), completes the action on the pending amendment, and I ask for its adoption.

Mr. JOHNSTON. Mr. President, we have no objection.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (UP No. 527) was agreed to.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. McCLURE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. COCHRAN). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. COHEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 528

Mr. COHEN. Mr. President, I send to the desk an unprinted amendment.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Maine (Mr. COHEN) proposes an unprinted amendment numbered 528.

Mr. COHEN. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 47, strike lines 2, 3, 4, 5, 6, and 7, and insert in lieu thereof the following: "not to exceed $30,000,000 of the amounts collected by the Secretary of Health and Human Services under the authority of title IV of the Indian Health Care Improvement Act shall be available until September 30, 1983, for".

On page 46, line 18, delete "$6[illegible],905,000" and insert in lieu thereof "$611,905,000".

Mr. COHEN. Mr. President, last Friday, a printed amendment, No. 614, was adopted as though it had been reported by the Appropriations Committee. I oppose the provision in the Interior appropriations bill for fiscal year 1982 which would mandate the use of funds collected from medicare and medicaid to be used to offset the cost of providing Indian health services. Title IV of the Indian Health Care Improvement Act (P.L. 94-437) authorized the Indian Health Service and Indian tribes or tribal organizations to collect medicare and medicaid payments and reimbursements for medical assistance provided in certain types of facilities covered by the Social Security Act medicare and medicaid provisions.

The reimbursements collected under the authority of title IV are to be used to enable IHS and tribal health facilities to attain and maintain national certification standards required of all medicare and medicaid providers. The title assures that the regular IHS appropriation will not be reduced by the amount of such third party reimbursements collected, that there will be equal services for persons served, and that there will be accountability for the use of funds collected.

The bill, as originally reported by the Senate Appropriations Committee, did not contain any provision for use of medicare/medicaid collections. However, the House Committee report indicated concern by that committee over the lack of control and accountability as to the use of the funds collected. The House committee indicated that it believes that a portion of the funds so collected should be used to offset the cost of providing Indian health services in addition to correcting deficiencies leading toward hospital accreditation. Therefore, the House committee included bill language providing that the first $15 million in medicare/medicaid collections be used to offset health services program costs. The Senate Appropriations Committee has now followed suit in providing that the first $5 million of these collections be used to offset health services program costs.

Mr. President, as chairman of the Select Committee on Indian Affairs, the authorizing committee with jurisdiction over the Indian Health Care Improvement Act, I have some serious problems with the Appropriations Committee nullifying language in that act through the appropriations process this year. Section 401(b) of the act amends title XVIII of the Social Security Act to add a new section 1880. Section 1880 provides the authority for medicare collections, and in subsection (c), requires the Secretary to place payments in a special fund to be used by him exclusively for the purpose of making any improvements in the hospitals and skilled nursing facilities of the Indian Health Service which may be necessary to achieve compliance with the applicable conditions and requirements of title XVIII.

Subsection (c) further provides that the exclusive use provision will cease to apply only when the Secretary determines and certifies that substantially all of the hospitals and skilled nursing facilities of the Indian Health Service in the United States are in compliance. In addition, section 401(c) of the Indian Health Care Improvement Act requires that any payments received for services provided to beneficiaries not be considered in determining appropriations for health care and services to Indians.

So what has been done by this body last Friday is in direct violation of existing law, and we have done it through the appropriations process. No hearings were held before my committee. No record was built. Yet the Senate has gone ahead and done something which I submit is in direct contravention and violation of existing law.

Section 402(a) of the Indian Health Care Improvement Act amends title XIX of the Social Security Act by adding a new section 1911. This new section provides that a facility of the Indian Health Service operated by the Service or by an Indian tribe or tribal organization shall be eligible for medicaid reimbursement for medical assistance provided medicaid recipients.

The Secretary is required by section 402(c) of the Indian Health Care Improvement Act to place collections in a special fund to be used by him exclusively for the purpose of making any improvements in facilities which may be necessary to achieve compliance with applicable conditions and requirements of title XIX. The exclusive use of such funds for this purpose is required until the Secretary determines and certifies that substantially all of the health facilities of the Service in the United States are in compliance with such conditions and requirements.

Section 402(d) requires that any payments received for services provided medicaid recipients under this provision not be considered in determining appropriations for the provision of health care and services to Indians. The Senate committee is doing just that in violation of the law.

The Indian Health Service has used medicare/medicaid collections to make improvements necessary to achieve and/or maintain accreditation of the facility collecting such funds and to achieve and/

or maintain certification as a provider to allow the facility to bill and collect reimbursements from medicare and medicaid. The improvements include correction of deficiencies cited by the Joint Commission on Accreditation of Hospitals (JCAH) and medicare surveys. If these funds are not used to achieve and maintain the certified and accredited status, IHS facilities will be in jeopardy of losing their accreditation and provider status which will cause the facilities to lose their ability to bill and collect from medicare and medicaid. This would mean that the collections by IHS would decline as facilities lost their accredited and certified status. The use of medicare/medicaid collections to offset IHS appropriations will have the net result of reducing the direct health services to Indians residing on reservations.

Mr. President, the Indian Health Service has used medicare/medicaid collections to meet personnel requirements to correct deficiencies cited by JCAH and medicare surveys. Currently, 675 staff people are needed to correct deficiencies. IHS has been able to hire 411 of these people by using medicare/medicaid collections.

The Indian Health Service had approximately $5 million in unobligated fiscal year 1981 medicare/medicaid collections. The Indian Health Service has indicated that the current collection rate averages approximately $1 to $1.5 million per month which would generate approximately $16 million in fiscal year 1982 rather than the $30 million anticipated by the Appropriations Committee. However, only $12 million of fiscal year 1982 collections would be usable in such year because collections from fourth quarter billings are not received in time for use in the same fiscal year.

The billing and collection methods have a built in lag time from the time the patient is seen and billing prepared and forwarded to the appropriate agency for payment and payment received by the IHS accounting point. After receipt by the IHS accounting point, the money is deposited with the Treasury and after processing through the Treasury channels, IHS receives an apportionment. When IHS receives the apportionment, an allowance is issued to the accounting point that collected the funds and the money is available for use by IHS. This time period normally takes 8 to 12 weeks.

The fact is that if the first $5 million of medicare/medicaid collections are used as appropriated funds, these 411 people will be eliminated. Part of the $5 million in carry-over collections has already been spent and would not be available to be used as appropriated moneys. These 411 people are nurses, nursing assistants, laboratory technicians, X-ray technicians, medical record technicians, pharmacy assistants, housekeeping staff, biomedical engineering technicians, maintenance staff, diet cooks, and other staff required to correct deficiencies cited.

In addition, contract for the medical records function in certain locations, for the radiology function in another location, and for pathologist and radiologist services would have to be terminated as they are paid out of medicare/medicaid collections. Also, many maintenance and repair projects for the correction of life and safety and other cited deficiencies and equipment deficiencies would have to be postponed.

Mr. President, in addition to the violation of the provisions of the Indian Health Care Improvement Act, I do not believe the Senate wants to jeopardize the health care of Indians residing on reservations and jeopardize the ability of the Indian Health Service to collect medicare/medicaid payments and reimbursements.

Mr. President, I urge my colleagues to oppose the provision in the bill to require the Indian Health Service to use medicare/medicaid collections as appropriated funds to pay for Indian health services in violation of the Indian Health Care Improvement Act. Mr. President, the elimination of this provision would not increase the appropriated funds for the Indian Health Service but would simply eliminate a stated reduction.

If the provision is eliminated, I will be happy to schedule hearings on this point to survey the deficiencies remaining to be corrected and ascertain when it will be feasible to require IHS to use medicare/medicaid collections to offset the costs of the Indian Health Service programs. I believe that the authorizing committee should take the lead in this matter and pledge to you that we will do so if the provision is eliminated from the bill.

So, Mr. President, specifically what my complaint is here today is that the fees collected by the Indian Health Service and by the Indian tribes for medicare and medicaid services be placed by the Secretary of Health and Human Services in a special fund. That is the existing law. Yet the moneys placed in this fund should be used exclusively to upgrade the Indian health facilities. That is part of the existing law. That is the exclusive use of these fees operate until the Secretary of Health and Human Services certifies that the health care facilities meet the certification standards for medicare and medicaid and provide services and finally existing law provides the fees collected for medicaid and medicare patients shall not be considered in determining the level of appropriations to provide health services to Indians.

Both the Senate and the House appropriations bills now violate these provisions of the Indian Health Care Improvement Act. The House bill directs that $15 million of fees be provided for health care services. The Senate bill provides that $5 million of the fees be so used.

There are several problems in addition to the one that I have raised, namely, we are acting in direct violation of existing law through the appropriations process. That is the initial concern. But beyond that if either position is adopted the ability of the Indian health facilities to provide services is going to be placed in serious jeopardy. The funds are currently used to employ some 411 people who are essential to the certification of hospitals and in fact an additional 264 people are still necessary. The maintenance and repair projects that are needed to bring the health facilities in conformity with national standards are likewise going to be placed in doubt.

Consequently, if Indian Health Service is denied the capacity to use the medicare funds many facilities are going to use current certifications which are contingent on continued improvements, and the burden is going to be shifted to whatever alternative facilities exist and in many instances there are no alternatives.

So I submit to this body that we have, No. 1, acted in contravention of existing law; No. 2, we have acted without any hearings being held before the authorizing committee which I chair; and, No. 3, it seems to me what we are doing is jeopardizing the very goal of the Indian Improvement Act, and that is to bring these hospitals which are currently substandard up to certified standard so that we can provide equal medical attention and service to the Indian people of this country.

Mr. President, I submit that there is a serious dispute which currently exists about the amount of money that is being collected. For example, the Interior Appropriations Subcommittee believes that some $22 million is available. The acting Director of Indian Health Service expects to collect only $16 million and only $12 million of that will be usable for fiscal year 1982 because of the time lag between the filling and actual collection. So we have a situation of $5 million in carryovers, bringing fiscal 1982 to $16 million at the outside.

Mr. President, I submit that the way in which we have gone about this is not only detrimental to the Indian Health Service Improvement Act itself and the goals, but it is going to bring about a contrary result because we have engaged, in my judgment, in a catch 22 process whereby we want the money to be used to bring up the standards of the hospitals and now we are using the money to be reimbursed for different purposes.

We will bring about the very result that this Congress in the past has deemed it inadvisable to pursue.

Mr. President, I urge my colleagues to support this amendment by striking the language that was adopted last Friday and restoring $5 million.

The PRESIDING OFFICER (Mr. RUDMAN). The Senator from Idaho.

Mr. McCLURE. Mr. President, I rise in opposition to the amendment.

We are familiar with the questions which have been raised concerning the diversion of a portion of third-party collections received by the Indian Health Service in offset of some of the regular program costs.

It is important to note, however, that these collections have far exceeded those projections which were available when the authorizing legislation was enacted.

The actual collections have grown from just over $2 million in fiscal year 1978 to an estimated $22 million in fiscal 1982.

The $5 million recommended to offset program costs through this amendment merely takes the increase collections between fiscal 1981 and 1982 and applies that difference to the program.

Therefore, the Indian Health Service will be able to maintain its current level of accreditation work at a level of approximately eight times greater than that conducted in fiscal 1978.

I also point out that, in addition, we added $7.5 million for additional Indian Health Service staff for hospitals and clinics. The Indian Health Service is currently funding 400 positions from the medicaid fund. The increased direct appropriations will, therefore, lessen the demands for personnel costs to be supported from collections.

The distinguished Senator from Maine, who is chairman of the authorizing committee, says to make this direction is in contravention of existing law. Let me suggest to the Senator that is the tension that always exists between an authorizing committee and an appropriating committee. The authorizing committee sets its level, exercises its judgment, and makes recommendations which Congress oftentimes adopts.

When we get into the appropriations process, we have to balance what is available and when we do that balancing, we sometimes come to the judgment that there are things that need to be done that may not be optimum. We have to do less than we might like to do and, therefore, we have to make some recommendations that are not the statement of the authorizing committee.

Mr. COHEN. Mr. President, will the Senator yield?

Mr. McCLURE. I yield.

Mr. COHEN. Let me say I have enormous respect for the Senator from Idaho, but it is my understanding that the purpose of the authorization proceedings and deliberations is to try and appropriate dollars and not pass upon legislative matters; in other words, to reverse something that is rooted in law passed by this body. It seems to me, that what we have done through the appropriations process is tantamount to legislation upon appropriations, and that seems to me to be inconsistent with both the authorization process and appropriations process by changing a fundamental rule of law through not just cutting out money but specifying that we will take money from a fund which has previously been designated as inviolable, that there is the Secretary's decision as to how to spend that to bring hospitals up to certification.

I appreciate the pressures on the Appropriations Committee. It seems to me this is inconsistent with the process.

Mr. McCLURE. Mr. President, I understand what the Senator is saying.

Let me indicate, further, that when the Indian Health Care Improvement Act was passed the estimated flow of money through this fund from this source was $2 million. As a matter of fact, in 1978 this fund actually collected $2,109,000. That grew in 1979 to $6,599,000. It grew in 1980 to $11,852,000. It is estimated for 1981 receipts will be $16 million and the 1982 receipts will be $22 million.

That is an elevenfold increase over that which was contemplated at the time the authorizing committee presented the legislation and Congress acted on it.

I think it is worth noting, also, that the Appropriations Committee is no less concerned than is the committee that the distinguished Senator from Maine chairs with respect to seeing that these facilities are accredited.

It is my understanding that the hospitals are now accredited. The only ones that are not now accredited are those that are due for replacement in the near future.

So we are not backing away from the commitment that these facilities be accredited. We are meeting that commitment.

If this is a totally unreasonable idea on our part to say that the first $5 million be offset, how much more unreasonable is the other body who suggests that three times that amount be offset?

Mr. COHEN. Three times more unreasonable.

Mr. McCLURE. Unreasoning is in the eye of the beholder apparently, but at least there are two bodies that have made this suggestion, not just the Subcommittee of the Appropriations Committee or indeed the full committee of the Appropriations Committee.

Mr. COHEN. Mr. President, will the Senator yield for one more question?

Mr. McCLURE. I yield.

Mr. COHEN. I am concerned about the figures which have been supplied to the Senator and those which my committee has been operating under.

As the Senator has just stated, the Interior Appropriations Committee believes there is $22 million available and the figures that I look at show that their estimate of collections is $16 million, only $12 million of that amount usable during fiscal 1982.

So I am not sure we are operating from the same figures or where the Senator's committee got its figures.

Mr. McCLURE. Mr. President, I might say to the Senator I think we are operating from the same figures. The question that the Senator from Maine raises is a slightly different one, not different figures, but the question of timing and availability of the amount of money collected in 1981. There will be $5 million carried over to 1982 out of that sum. There would be similarly a lapse in the availability for the use of funds that might be collected in 1982 that would carryover into 1983, and that might reduce the $22 million that it is estimated to be collected. In terms of whether or not it can actually be used. I think is a valid criticism, but the same thing that is true with respect to the 1981 funds is also true of the 1980 funds.

So there is a constant carryover in these funds. I do not think we are talking about totally different things but just focusing on a different way in which we look at those figures.

Mr. JOHNSTON. Mr. President, we have not received any objections on this side of the aisle. I would ask of my colleagues if they do have any objection to this amendment to communicate it. So we have no objection to proceeding at this point.

Mr. COHEN. There is another point I would like to make before calling for a vote, Mr. President, which is that what has been done here is in direct violation of the law which says you shall not use these funds for any other purpose, and I think that is the point I was trying to make.

I understand the pressures on the Appropriations Committee. I understand what it is trying to achieve. But it seems to me that when you have an express law which says you cannot and shall not use these funds for any other purpose, and then we come into the appropriations process a year later and say we are going to use it for some other purpose, that we are acting in contravention and inconsistently with the objective expressed by Congress.

So while I never want to object to what has been achieved through this debate on the bill starting last Friday, I recognize there does not seem to be any sentiment on the Appropriations Committee for reversing what I consider to be an error in its judgment and in its action. I move the adoption of the amendment.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. COCHRAN. I am not seeking recognition. I am ready to proceed with a vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Maine (putting the question).

The amendment (UP No. 528) was rejected.

Mr. COCHRAN. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. COCHRAN. Mr. President, I suggest the absence of a quorum.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GRASSLEY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. GOLDWATER). Without objection, it is so ordered.

Mr. GRASSLEY. Mr. President, debate on the bill now pending before the Senate—H.R. 4035, Interior Department Appropriations, fiscal year 1982—affords me an opportunity to bring to the Senate's attention a matter which has been troubling me for some time. I make reference to the Department of the Interior, specifically the Bureau of Indian Affairs, providing, without statutory authority, funds to Indian tribes to defray attorney fees and litigation expenses of independent counsel.

I have prepared an amendment that seeks to prohibit the use of Federal funds in such instances except where such litigation or the expenditure of funds is specifically authorized by law. I do not intend to offer the amendment at this time. My reason is not that my resolve to set things straight has weakened; rather, I am giving the Interior Department and the appropriate congressional committees a chance to do the things they are supposed to do and to demonstrate that ours is a nation ruled by law and not by men.

The Department of the Interior has, since the mid-1970's, made Federal money available to Indian tribes to commence actions and initiate litigation against other parties, including other tribes, in a variety of situations. These funds are

paid to private attorneys retained by the tribe. This practice conflicts with the normal procedure of having the Department of Justice represent the tribe if the Federal Government has an interest in the matter pending or requiring the Indian tribe to pay for its legal representation out of its own funds, just as other citizens must do.

Disbursing Federal funds to Indian tribes to pay over to private attorneys is, with only one exception that has been brought to my attention, not authorized by law. Instead, the Bureau of Indian Affairs has justified its actions by giving an extremely expansive and creative interpretation to the general organic law for the BIA, the Snyder Act of 1921. The BIA has also given an extremely expansive, permissive and incorrect interpretation of two opinions of the Comptroller General, said opinions dated 1975 and 1976.

Mr. President, I should like, at this point, to detail the way in which I became interested in this matter. My office was approached earlier this year by a group of landowners residing along the Missouri River in western Iowa whose land, totaling approximately 9,000 acres, is being claimed by the Omaha Indian Tribe. An action brought by the tribe, seeking title to the land in question as well as $50 million in damages, is currently pending in the Federal district court for northern Iowa. My initial reaction was to decline to become involved in this controversy until I learned of the extent to which the Federal Government was, and is, involved in fomenting and furthering the litigation.

My current feeling is that the third branch of the Federal Government, the judiciary, should continue to operate and render a decision on the merits free of any outside influence. The court's decisions should be made on the basis of the evidence produced in court and the law which can be applied to that. However, it does seem an appropriate matter for senatorial inquiry to examine the role of the executive branch of the Federal Government in this dispute.

In that context, it is relevant to note that the Department of the Interior, specifically the Bureau of Indian Affairs, has, since 1975, been picking up the tab for all of the tribe's attorney fees and litigation expenses. While I may have reservations with respect to that fact, what strikes me as especially wrong is the way in which this has been accomplished.

Mr. President, since 1979, the Omaha Tribe has received thousands of dollars—the information at my disposal indicates that the correct figure runs up into the hundreds of thousands of dollars—to pursue this matter. This money has been spent in spite of the fact that neither the Interior Department nor the Justice Department has, to date, found a Federal role sufficient or a good enough reason to justify bringing this action or otherwise significantly involving the Federal Government.

In other words, the Omaha Tribe has decided that it wants the 9,000 acres of Iowa land in question. The Omaha Tribe has been unable to make a case for the direct involvement of the Department of Interior, nor to demonstrate that attorneys employed by the Department of Justice would be unable to sufficiently protect its interests as provided by law, and has, instead, gone ahead and engaged the services of a private attorney. However, the tribe has been unwilling or unable, I do not know which, to commit its own funds or assets to this challenge, and, instead, has requested and sought Federal money to pursue its claim.

Suffice it to say that the landowners, the defendants in the pending litigation, have had to pay for their attorneys out of their own pocket. They have had, as the saying goes, to paddle their own canoe. The Iowa landowners have found themselves in the understandably uncomfortable situation of having to pay their own attorney fees and litigation expenses, as well as those of the plaintiffs seeking to take their land.

Mr. President, I am not, at this point, going to argue that the current landowners ought to receive funds to pursue their legal interests. It may come to that some day, but not right now. What I am questioning is the propriety of continued funding of the tribe's independent counsel. It is my understanding that similar situations are taking place across the United States today.

During the spring, I attempted to begin a dialog with the Department of the Interior, specifically the BIA, to determine whether or not: First, this kind of activity is allowed by Federal law; and second, whether this funding of independent counsel is mandated by law and the sort of thing that ought to be continued.

Let me say to my colleagues that I hope that they do not have to go through what my staff and I have gone through and are even now experiencing in dealing with the Bureau of Indian Affairs. My efforts to simply secure information have been stymied, resisted, and stonewalled by lower and mid-level BIA bureaucrats. The Federal employees have their own notions of what the law provides and have frustrated my every effort to get to the heart of this matter.

It was necessary for me to personally contact the Secretary of the Interior, Mr. Watt, in order to secure even a measure of information, much less cooperation, from the Department of the Interior. The Secretary of the Interior has indicated that he understands the problem and is now doing something to resolve the matter. But my impression is that, even as we speak, there are those at the Interior Department whose first loyalty is not to the laws and the people of the United States, the people who pay their salaries and in return set out specific tasks to be performed, but rather to their own special interests, pet projects, preconceived notions about the way things ought to be, and former associates.

On this last point, I should like to set forth the following illustration. On June 19, 1981, I questioned whether it was appropriate for the attorney now representing the Omaha Tribe to continue in that capacity in light of the fact that this gentleman was an attorney, employed by the BIA, who worked on this very matter as a Federal employee. I brought to the attention of the Interior Department the provisions of ABA Ethical Consideration 9–3 and Disciplinary Rule 9–101(B) which read as follows:

Ethical Consideration 9–3: "After a lawyer leaves judicial office or other public employment, he should not accept employment in connection with any matter in which he had substantial responsibility prior to his leaving, since to accept employment would give the appearance of impropriety even if none exists."

Disciplinary Rule 9–101(B): "A lawyer shall not accept private employment in a matter in which he had substantial responsibility while he was a public employee."

The response which I received from the Interior Department on October 22, 1981—I was promised an answer by mid-August—contains the following enlightening language:

We do not think, however, that Ethical Consideration 9–3 and Disciplinary Rule 9–101(B) bar Mr. Veeder from representing the Omaha Tribe in the present instance since in his present capacity as a private attorney he is simply continuing the representation of the tribe which before his retirement he was undertaking as a federal employee. Whether, in general, Ethical Consideration 9–3 and Disciplinary Rule 9–101 (B) constitute barriers to former federal employees' representations of Indian tribes notwithstanding the provisions of 25 U.S.C. Section 4501(f) is a matter which we have not as yet considered.

Mr. President, I do not mean to cast aspersions on first-year law students, but I must confess that the foregoing analysis has all of the brilliance of a legal analysis prepared by a first-year law student in danger of flunking out of law school. The Interior Department answer confirms the point which I sought to make, namely, that the attorney in question, Mr. Veeder, is continuing to do the same things as a private attorney paid with Federal funds that he did as a Federal employee paid with Federal funds. This may work out just fine for the Omaha Indiana Tribe and its advocates in the BIA, but it certainly appears improper to the Iowa landowners and this Senator.

Moreover, it appears that the Interior Department is unwilling to even consider whether the conduct it is sanctioning and funding is unethical according to the American Bar Association and commonly accepted notions of how our judicial system should operate.

The amendment which I had drafted was extremely moderate and narrowly drawn. It would not have prevented Indian tribes from securing the advice, counsel and representation of BIA or Justice Department lawyers. They could have still done that under the terms of my amendment; the Indian tribes can still look to the Federal Government to defray the expenses of legal counsel.

The amendment was so limited that it did not even deny Federal funding to independent counsel where a tribe is sued directly or the U.S. Government is sued and a tribe's rights and interests are challenged. These two situations, as identified in the BIA's fiscal year 1982 budget justifications, could still give rise to the Federal payment of independent counsel attorney fees and litigation expenses. All that I seek to do is halt funding where a tribe brings an action not specifically authorized, as in the case I have previously described. Even the BIA, in its fiscal year 1982 budget justi-

fications, has assigned this kind of potential funding situation its lowest priority.

I have been in close communication with the Secretary of the Interior and other Senators concerned with this problem. It is, I think, generally agreed that what I am suggesting is not a massive restructuring of the special relationship which exists between the Federal Government and Indian tribes; rather, it is a first, small step toward putting an end to a practice not specifically authorized by law or the Congress. It would end current abuses such as I have described.

To summarize, Mr. President, it is my expectation that a thorough review of the question of funding private attorneys to represent Indian tribes will take place in the Congress and the executive branch. It is my further expectation that the final result will be the cessation of such spending. The Secretary of the Interior has assured me that such a review is taking place in his office; I will do what I can to assist in this undertaking. I have spoken with the Senator from Idaho (Mr. McCLURE), who chairs the Subcommittee on Interior and Related Agencies, so that moneys will no longer routinely be made available for the purposes I have described without an examination of authority and procedures for such expenditures.

I have spoken with the Senator from Maine (Mr. COHEN) who chairs the Select Committee on Indian Affairs; it is my understanding that he is considering holding hearings to review the questions which I have raised. I am trying to give the legislative process a chance to work. If, at some future date, it appears that my concerns and those of the landowners of Iowa are being ignored, as they have been in the past, then I will avail myself of every opportunity to make corrective changes. At the same time, it is my plan to continue my investigation of the Bureau of Indian Affairs through the Judiciary Committee's Subcommittee on Agency Administration, which I chair.

Mr. RUDMAN. Mr. President, I say to the Senator from Iowa that his points are well taken. As the Senator has stated, the chairman of this subcommittee has been assured by the Senator from Maine (Mr. COHEN) that his Committee on Indian Affairs will be looking into this situation very thoroughly.

We are glad that the Senator from Iowa agrees that, although it is an excellent idea, it probably is not germane or relevant to what we are trying to do today.

I thank the Senator for not offering the amendment at this time.

Mr. GRASSLEY. I thank the Senator from New Hampshire for his kind comments.

I disagree with the point that the person made with respect to the germaneness of the amendment, but that is not really the question.

Frankly, I am persuaded that that is not necessarily a good way to legislate. I have been assured of cooperation by the Senator from Idaho, and I believe that is the appropriate way to deal with this—through the legislative process. I have deferred for that reason.

As I have pointed out in my remarks, the amendment was narrowly drawn, so as not to raise the question of germaneness, because it only affected the appropriations in this bill and did not affect existing law.

As I tried to point out, I do not have any intention, through my amendment or through this process we are pursuing, to see if this specific instance and others like it are right. The only question is whether or not they will be carried out under existing law, and I say that they are not. But I do not intend to affect, nor would my amendment affect, places where the Justice Department can make that determination, that there is an interest for the Government to be involved with or where the Department of the Interior has made that determination.

All I am saying is that in this specific instance—and there are even more throughout the country to which I have referred—there has been no such determination made. I believe we are a government of law and not a government of men where some people in the bowels of government in this country can make a determination to pursue a goal on their own, contrary to statute.

That is the only thing we have in question, and that is what I want the appropriate committees of Congress to pursue, and only that point.

I believe that existing law is what it should be, and it should be maintained. I do not try to change existing law. I want only to put a stop to the procedures that are being pursued that do not have the force and effect of law behind them, where even the question has not been decided and there has been every effort to avoid making a decision as to whether the law is applicable.

I believe that every penny appropriated by Congress and expended by the bureaucracy should be spent in the performance of the mandate dictated by Congress.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. McCLURE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

IS A PHOENIX BIA AREA OFFICE REALLY NECESSARY?

Mr. GOLDWATER. Mr. President, I would like to just say a few words about the Bureau of Indian Affairs budget as it relates to administrative costs, and how the reduction in funding levels affects the Phoenix area office.

This year, more than any other year, I have received more complaints about the operations and personnel of the Phoenix area office and more support for its elimination. Now, I have apprcached Secretary Jim Watt about the contracting out of services through an intermediary for the tribes of Arizona; however, Assistant Secretary Ken Smith wants to fully maintain the Phoenix area office and contract out certain services through the agency offices. This sounds all right; but, the agency offices rarely do anything without having it okayed through the Phoenix area office and more often than not, it is the resources obtained through the area offices that the tribes need and want. I have not given up on this yet and I will continue to work on Secretary Watt to get the BIA off the dime and do what it is supposed to do, serve the Indian people.

Be that as it may, I have now tried to go through the back door. If we cannot contract out the services from the area offices, we can at least cut down on the personnel which are not needed in the area offices and protect direct services from further cuts. The full appropriations committee has recommended that $9.8 million be cut from administrative costs, along with $881,000 in travel funds. I was very pleased to see this and I would hope that the Bureau of Indian Affairs follows through and reduces the Phoenix area office personnel and related administrative costs by $776,000. This reduction should be coming out of personnel and not necessary tribal related programs.

Senator McCLURE's subcommittee attempted to get a capability statement on such a reduction and it took four or five attempts to get the information; I would hope that this does not indicate an unwillingness on the part of the BIA to decrease greatly the size of the Phoenix area office; after all, in Phoenix, we have our own BIA public relations office, our own plumber, and a couple of architects to boot, just to mention a few positions that we do not need. In addition, we have a social welfare office in the Phoenix BIA area office that our Arizona tribes do not need and do not want. The tribes also do not want any shifting of positions from the agency to the Phoenix area.

Along these same budget lines, it is our understanding that the Papago early childhood education program is up for refunding to the tune of $272,000. This has been a very successful preschool program which has allowed Papago children to improve their basic skills so that they can meet or at least approach Arizona's State testing standards. I would hope that the Phoenix area office would fund this program separately and not penalize the tribe by taking the money out of tribal educational administrative funds as this is not what we have intended.

BIA: PAPAGO EARLY CHILDHOOD

Mr. DeCONCINI. Mr. President, I would like some additional clarification on the language included in the committee report concerning the Bureau of Indian Affairs.

The committee has directed the Bureau of Indian Affairs to provide sufficient funds to continue the Papago early childhood program in fiscal year 1982 and expects the funds to be made available from the moneys allocated to the Phoenix area office for administrative purposes.

The sum of money we discussed in committee is $272,000 and I would like to emphasize, with the chairman's concurrence, that these moneys are not to be transferred from other educational funds, or education administration funds.

Mr. McCLURE. It is the committee's

intent to transfer these funds from General Administration moneys and not from the education accounts. I would point out, however, that the report is silent as to the amount of additional funds which are required for the project. We trust that can be negotiated between the affected parties.

MULTIPLE MIRROR TELESCOPE

Mr. DECONCINI. Mr. President, the amendment by the distinguished floor manager, the subcommittee chairman, eliminates the moneys which were added, at my request, to accelerate the completion of the multiple mirror telescope. The MMT, located in Arizona, is partially funded through the astrophysical observatory of the Smithsonian Institution. I support the chairman's amendment—as we are forced to make a lot of sacrifices to cut spending as much as possible.

However, I would ask the committee to accommodate this very small amount of money, which will go a long way to enhance the scientific performance of the telescope, in fiscal year 1983.

The multiple mirror telescope is perhaps the most exciting development in astronomy in recent years. It is a great scientific achievement and its unqualified success makes possible very large future telescopes of similar design.

Mr. MCCLURE. I can assure the Senator that the reduction proposed by the committee does not prejudice any future action, and the committee will certainly take a close look at providing funding for the telescope in fiscal year 1983.

Mr. MOYNIHAN. Mr. President, my distinguished colleague, the Senator from Arizona, and I wish to comment on the provisions of this bill that would delete from the Smithsonian Institution's fiscal year 1982 appropriation all funds for collections acquisition. As chairman of the Board of Trustees of the Hirshhorn Museum I am particularly struck by the consequences of this proposed reduction. In fiscal year 1981 the Smithsonian's appropriation for acquisitions was $889,000, divided among the National Museum of American History ($80,000), the National Museum of American Art ($215,000), the National Portrait Gallery ($315,000), the Hirshhorn Museum and Sculpture Garden ($249,000), and the Museum of African Art ($30,000). Federal acquisition funds have proven essential to the task of maintaining for the public a first-rate collection of historic and artistic treasures worthy of the national museums of the United States.

Mr. GOLDWATER. I wholeheartedly concur with my distinguished colleague, the Senator from New York. As chairman of the National Portrait Gallery Commission, I too, am acutely aware of the important role that Federal acquisition funds have had in helping the Smithsonian fill gaps in its existing collections and keep current with contemporary developments in the areas of its responsibility.

Mr. MOYNIHAN. We are talking about relatively modest sums, especially when compared with the funds provided to similar national museums. For example, appropriated acquisition funds for the British National Museums in fiscal year 1981 totaled $22,938,000. While modest in amount, the Federal acquisition funds can only be described as providing basic subsistence for the Smithsonian. Every museum strives to obtain the grand gift, the extraordinary acquisition but equally important are the smaller, less glamorous purchases, the ones that provide a collection with range and coverage. The pieces that make a whole, the settings for the great diamonds come not from the generosity of but a few major benefactors but rather from careful and diligent acquisition efforts. With the loss of its Federal funds, the Smithsonian faces a devastating cut in its acquisitions budget.

Mr. GOLDWATER. I strongly suggest that when this bill reaches conference an appropriate adjustment be made to allow the Smithsonian to continue to use a reasonable level of Federal funds for its acquisitions program.

Mr. MOYNIHAN. My distinguished colleague's point is extremely well taken and I urge the Senators who will conference on this bill to give this issue all due consideration.

ENERGY CONSERVATION

Mr. DECONCINI. Mr. President, my colleagues Senator GOLDWATER, Senator CRANSTON, Senator HAYAKAWA, and I share a concern about the energy conservation appropriation and we would like to address a question to the distinguished floor manager:

Is it the floor manager's understanding that of the amount available for industrial waste energy reduction in the energy conservation appropriation, at least $900,000 is included for continued research and initial engineering for test quantities of liquid hydrocarbon fuels from 10 tons per day of cellulostic waste?

Mr. MCCLURE. That is correct.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MCCLURE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WALLOP. Mr. President, since 1974, a land policy group (LPG) has operated in the Department of the Interior to manage the land and water conservation fund and coordinate actions by the National Park Service, Fish and Wildlife Service, Bureau of Land Management, and the Forest Service in the Department of Agriculture. In recent years, the land policy group has initiated cooperative efforts by the directors of these four agencies to identify the highest priority land worthy of Federal attention, and find cost-effective alternatives to fee simple acquisition to save the taxpayer money. The LPG also has been responsible for coordinating Federal land acquisition and protection policies, assuring prompt responses to congressional inquiries, carrying out committee directives, and responding to recommendations by the General Accounting Office.

For fiscal year 1982, money from the land and water conservation fund is being appropriated directly to the four land managing agencies rather than through a central coordinating group. Consequently, it appears that the funding needed to support a small professional staff for the LPG may not be available.

I ask the chairman of the committee to comment on the possibility that within the $99,246,000 being provided for the Federal portion of the land and water conservation fund, approximately $350,000 could be allocated to support a small staff for the land policy group.

Mr. MCCLURE. Mr. President, the committee certainly recognizes the contributions made by the land policy group, which is now in the office of the Assistant Secretary for Fish and Wildlife and Parks. Our report on fiscal year 1981 commended the Department's efforts to develop alternatives to fee acquisition, efforts led primarily by the LPG. The House Appropriations Committee also commended the LPG in their report on fiscal year 1980 rescissions. Based on its work in the past, we agree that this group can be the key to eliminating unnecessary spending for land acquisition and assuring that consistent policies are developed and implemented by the four agencies using the land and water conservation fund. The bill, as amended in the full committee by Senator JOHNSTON, does not provide for Federal administrative expenses, including funds for the land policy group and one of their major programs of encouraging nonfee acquisition and protection of nationally significant land areas. The House bill does provide for Federal administrative expenses, but none for the land policy group.

I recognize the value of the land policy group and will work in conference to see if there is a way to earmark some of the Federal administrative expenses to continue the land policy group.

Mr. WALLOP. Mr. President, I thank the chairman. I look forward to working with the land policy group as we continue our efforts to find new, cost-effective approaches to meeting Federal land management responsibilities and working cooperatively with States, local governments, and the private sector.

Mr. President, in keeping with the general tenor of the times, there are substantial cutbacks in the budget for several Department of the Interior natural resource planning and recreation grants programs for which we historically have had strong support. I refer specifically to those programs formerly administered by the Heritage Conservation and Recreation Service and recently transferred to the National Park Service. Among the programs transferred are the land and water conservation fund and the urban park recreation recovery program. Congress has also agreed to budget reductions for salaries and expenses for nongrant programs including planning and technical assistance. The rationale for these cuts was, and is, sound. There is a general need to reduce budgets and we understand that significant cost savings are being made through the elimination of overhead.

However, we supported funding for the purpose of continuing certain programs specifically authorized by Public Law 88–29, the Federal Outdoor Recreation Co-

ordination Act of 1963, as it has become known. For those of you who are not familiar with this act, which, by the way is one of the most clear and concise ever approved by the Congress, the functions to which I refer are:

Recreation resources inventory and classification nationwide recreation planning;

Recreation technical assistance;

Research and education; and

Interagency coordination and cooperation.

In addition, the National Park Service is responsible for resource area designation studies and Federal real property transfers.

Mr. President, I am extremely concerned that funds appropriated for these purposes be used for these purposes. I believe the Federal Government should continue to play a leadership role, and should continue to provide to State, local, and private recreation suppliers technical services, planning assistance, and other forms of recreation support. It is imperative that the capacity to perform those authorized functions be retained. This calls for the allocation, within the National Park Service, of adequate resources in the form of people and dollars to carry out these legitimate responsibilities.

I am more than a little dismayed and chagrined by staff reports that bookkeeping procedures in the NPS may further reduce the resources for these programs over and above the cuts we have agreed to make. These administration cuts in appropriated funds preclude the recreation arm of the service, essentially former HCRS functions and people from effectively carrying out these functions.

It is my understanding, Mr. President, that the purpose of authorizing and appropriating the $3,815,000 for the recreation and natural programs salaries and expenses item of the National Park Service was, indeed, to insure the continuation of the programs cited, and that the Service will be so instructed. Am I correct in this interpretation of the bill?

Mr. McCLURE. Mr. President, the Senator is correct that it is the committee's intent to continue these programs. These programs were transferred from HCRS and were reduced significantly from earlier funding levels. The funds provided by this bill will be available for program operations and for necessary administrative costs. We understand that these necessary administrative costs were not identified in the administration's March budget revisions, but that they will be charged against this amount as necessary.

TITLE II OF THE DEPARTMENT OF INTERIOR, AND RELATED AGENCIES APPROPRIATIONS BILL, 1982

Mr. TSONGAS. Mr. President, I wish to engage the chairman in a colloquy about one of the provisions of title II, if I might.

As I understand it, the committee has recommended an appropriation of $23 million for MHD in fiscal year 1982 and expects the Department of Energy to provide a further $6 million which was deferred in fiscal year 1981.

Mr. McCLURE. Yes, that is correct, Mr. President.

Mr. TSONGAS. In the committee report, No. 97–166, accompanying the bill, the committee has directed that the program concentrate on engineering testing at the two existing DOE test facilities. However, we all recognize that research and development are inseparable. Research answers fundamental questions—and these answers provide direction to the entire engineering development process. Attempting engineering development without the direction that research provides becomes a time-consuming and expensive exercise in trial and error.

Am I correct, then, that it was not the intent of the committee to exclude ongoing support of research at other facilities?

Mr. McCLURE. Yes, that is correct, Mr. President.

Mr. TSONGAS. Thus, am I correct in stating that, within the constraints of this budget, there is funding available for continued MHD research at other facilities as well as engineering development?

Mr. McCLURE. Yes, that is correct.

Mr. TSONGAS. Mr. President, I appreciate the chairman's statement. At the Massachusetts Institute of Technology, there are high-quality facilities and ongoing MHD research that is recognized as one of the premier programs in the Nation. They have a unique superconducting magnet facility which allows them to study MHD electrodes and channel components under the conditions that would prevail in a large commercial plant, yet do so at a fraction of the cost that such work can be done at other existing facilities. Also, Aerodyne Research, Inc., a small business engaged in advanced research, has developed unique coal burner facilities, combustion diagnostics, and mathematical models for the MHD program. These facilities are being used to assess component reliability and formulate operating parameters for both pilot scale and large commercial MHD power generators. Such research to understand and improve electrode and generator channel reliability and lifetime as being carried out at both MIT and Aerodyne Research, Inc., is essential before any cost-effective commercialization of MHD can be effected by industry.

Am I correct, then, in stating that the research in MHD done at the Massachusetts Institute of Technology and Aerodyne Research, Inc., is representative of that being done at facilities other than in Montana and Tennessee which could receive continued support?

Mr. McCLURE. Yes, that is correct, Mr. President.

Mr. TSONGAS. Once again, I thank the distinguished chairman of the Interior Appropriations Subcommittee for this opportunity.

FUNDS FOR METROPOLITAN RIVER CORRIDOR STUDY

Mr. DURENBERGER. Mr. President, may I inquire of Senator McCLURE, is it acceptable to the committee to earmark funds in existing accounts by floor amendment?

Mr. McCLURE. No, Mr. President, the committee's position is that no money can be earmarked here. This is not a decision based on the merits of the project. There are projects not specified in the bill which have committee support, but, rather, the committee is opposed to the action.

Mr. DURENBERGER. I understand, Mr. President. I am particularly concerned about section IX of Public Law 96–607 which authorized the creation of the Metro River Corridor Study Committee in Minnesota. The study is intended to actively involve Interior and other Federal agencies who have interest in the rivers, along with State and local representatives in focusing on the recreational opportunities and systematic management of the rivers consistent with multiple use designations.

Does the fact that the project is not in the bill preclude funding by the Department of the Interior from the National Park Service, rivers and trail account, the Fish and Wildlife Service, or other appropriate accounts?

Mr. McCLURE. No; it does not preclude funding. The metropolitan river corridor study is eligible for funding. I understand the 15-member study has been appointed and has started to meet. The committee hopes that the National Park Service will give careful consideration to funding this study.

Mr. DURENBERGER. Mr. President, I thank the chairman for consideration and support for the metropolitan river corridor study funding.

Mr. CANNON. Mr. President, it has become a matter of some concern that the milling and smelting capacity of this Nation has declined and that this decline will continue. The recent closure of the Homestead Mine in the Senator's neighboring State of Oregon is a case in point. The small miner, in particular, has had his options narrowed greatly by the continued closing of mills and smelters providing custom service. The small miner is a very important segment of the mining community. It is he who often finds and first develops the new ore bodies. The small miner should not be frozen out of his or her vital role in this process. Thus, I feel it is important that an effort be made to reverse the trend of custom mill and smelter closings and to develop new technologies which will encourage the continued efforts of the small miner.

I recently invited the Director of the Bureau of Mines to my office to discuss this problem, a concern the Bureau shares, and to develop a strategy for reviewing and hopefully reversing the present poor situation. With the Bureau's encouragement, I have requested that the Bureau prepare a preliminary analysis of the major factors at work in the decline of our smelting capacity. This study addresses the state of the art technology for processing ores of gold, silver, copper, lead, zinc, or other nonfuel commodities of major importance to the mineral economy of the Western States; that identifies areas in which technological improvements could make a significant contribution toward improving process economics, thereby encouraging private sector investment; and that discusses alternative technologies that may be of utility to the individual prospector or miner.

This study will also include an assessment of the significance of mining to the Western States' overall economy, present milling and smelting capacities—

whether toll, captive, or a combination of the two—future prospects of milling and smelting operations within individual States, an economic assessment of current operations where known, the impact of environmental rules and regulations upon the continued operation of these plants, and any other pertinent information or data which would aid individual miners and small operations to survive.

Mr. President I ask unanimous consent that my letter to the Bureau and the Bureau's response be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OCTOBER 15, 1981.

Mr. ROBERT C. HORTON,
Director, Bureau of Mines, Department of the Interior, Washington, D.C.

DEAR BOB: As you are aware, there is concern among many in the minerals sector over the continued decrease of milling and smelting facilities in the United States. Because of this decline it is becoming more difficult for individual prospectors and miners to have their ores and concentrates milled or processed.

I am particularly concerned because of the potential impact that this trend is having in Nevada and other western states where mining is an important part of our economic structure.

As a specific case study of national significance, could you please prepare for me a preliminary analysis of the major factors relative to this issue that addresses the state-of-the-art of technology for processing ores of gold, silver, copper, lead, zinc, or other nonfuel commodities of major importance to the minerals economy of Nevada; and other western states; that identifies areas in which technological improvements could make a significant contribution toward improving process economics, thereby encouraging private sector investment; and that discusses alternative technologies that may be of utility to the individual prospector or miner.

I would appreciate an assessment of the significance of mining to the State's overall economy, present milling and smelting capacities (whether toll, captive, or a combination of the two), future prospects of milling and smelting operations within individual states, an economic assessment of current operations where known, the impact of environmental rules and regulations upon the continued operation of these plants, and any other pertinent information or data you think would aid individual miners and small operations and continue to contribute to the growth of the minerals industry in this region.

I want to thank you for agreeing to have this important evaluation done by the Bureau of Mines. Your staff has indicated it may be possible to have this analysis completed in three months, in time for the Congress to make recommendations for Fiscal Year 1983. Your cooperation and assistance with this important matter is greatly appreciated.

With best wishes, I am
Sincerely,

HOWARD W. CANNON.

BUREAU OF MINES,
Washington, D.C., October 26, 1981.

Hon. HOWARD W. CANNON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CANNON: Thank you for your letter of October 15, 1981, requesting the Bureau to look into the disturbing trend of diminishing milling and smelting capacity within the United States. I share your concern regarding this development in terms of both its adverse economic impact as well as its negative effect on our overall national security.

The Bureau will be pleased to carry out the study and will bring together its experts in both mineral problem analysis and mineral technology development to provide a thorough review of this matter within the time frame you have suggested.

If we can be of further assistance, please let us know.

Sincerely,

ROBERT C. HORTON,
Director.

Mr. CANNON. Mr. President, my question of the Senator is with regard to funding within the Bureau of Mines budget for this initial assessment work. I have amendments prepared which will either provide additional funds or will earmark money for the study. I feel very strongly that this study should be one of high priority for the Bureau. Can the Senator advise me about the availability and adequacy of research funds within the appropriation level in this bill to fully provide for this study?

Mr. McCLURE. There are adequate funds within the Bureau of Mines budget to conduct the study the Senator from Nevada has referred to.

Mr. CANNON. Mr. President, I thank the Senator for his response. The Bureau has made clear to me that it does, indeed, have funding sufficient to undertake this initial assessment of milling and smelting technology and that a report will be possible within 3 months. I am convinced that sufficient congressional direction exists to continue the study beyond the initial assessment. If the assessment shows that a more involved and systematic technological study program will yield positive results, it may be appropriate to focus more direction and commit specific funding for such a study in the future. I shall be pleased to work with the Senator and with the committee in the future. This is an important first step, one I am pleased can be handled through the funding provided in this bill. The problems of the small miner must be addressed and additional efforts will be necessary.

Mr. MOYNIHAN. Mr. President, I wish to ask my distinguished colleague and chairman of the Appropriations Subcommittee on Interior and Related Agencies, the Senator from Idaho (Mr. McCLURE), to clarify a point for me concerning the provisions in this bill for the National Park Service's operations budget.

On December 28, 1980, President Carter signed into law a bill establishing the Women's Rights Historic Park in Seneca Falls, N.Y. The park commemorates the historic events in Seneca Falls that marked the beginning of the American women's suffrage movement. Because this legislation was passed so late in the last congressional session, no funds have been specifically earmarked for operation and maintenance of the park in fiscal year 1982 in the appropriations bill we are now considering.

I ask the chairman, the Seneca Falls park will need a budget of approximately $200,000 in fiscal year 1982. This money will be used for a limited staff and for direct and indirect support services. It will not be used for land acquisition. Am I correct in understanding that this money could be made available from the National Park Service's operations budget?

Mr. McCLURE. That is correct Mr. President. There is nothing in this bill that would prohibit the National Park Service from allocating funds from its operations budget for the activities that you have described at the Seneca Falls Park. The committee's bill provides over $500,000,000 for the National Park Service's park management and planning budget for fiscal year 1982.

Mr. MOYNIHAN. I thank my distinguished colleague for clarifying this point for me. It is my fervent hope that the National Park Service will provide the needed operations and maintenance assistance for this historically significant park for fiscal year 1982. What is required is but a small amount to launch such an important commemorative effort. Let us not forget the significant role that Seneca Falls played in the early years of the suffrage movement in this country.

In 1848, the first Women's Rights Convention, organized by Elizabeth Cady Stanton and Lucretia Mott, was held in Seneca Falls. It was at this convention, in Wesleyan Chapel, that a declaration of sentiments was signed. This historic document called for a broad range of societal changes aimed at eliminating discrimination against women. Among the changes demanded were the enforcement of equitable divorce laws, equal education opportunities, the right of women to own property, and, most importantly, the right of women to vote. This landmark declaration was crucial to the efforts of women to achieve equality and is often considered the Magna Carta of the women's suffrage movement.

Two years later in Seneca Falls, Susan B. Anthony and Elizabeth Cady Stanton met and formed a coalition that was later to become the National Women's Suffrage Association of 1869. When the 19th amendment was passed in 1919, women finally gained the right to vote, due in large part to the efforts of those remarkable women in Seneca Falls.

Mr. McCLURE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. ANDREWS). Without objection, it is so ordered.

AMENDMENT OF MR. PROXMIRE

Mr. PROXMIRE. Mr. President, I am working on an amendment I intend to offer in a few minutes. It will take a few minutes for us to check out the amendment and make sure it is in order and it is the amendment we want to offer. Meanwhile, however, the managers of this appropriations bill have asked me to go ahead with the debate.

Mr. President, this amendment would cut almost all of the fiscal year 1982 money provided by deferral of fiscal year 1981 funds for the Solvent Refined Coal Synthetic Fuels Plant in Newman, Ky.

I do not take this action lightly. However, the Solvent Refined Coal–I Plant is

an example of some of the worst aspects of our past synthetic fuel policy.

In fact, it is the kind of project that could discredit an entire industry.

First, what is Solvent Refined Coal–I? It is a demonstration plant which will take 6,000 tons per day of coal and convert that into three products: A solid boiler fuel, metallurgical coke, and a liquid boiler fuel.

According to the SRC–I environmental impact statement, the plant will produce these end products in roughly three equal parts.

This size plant, unlike other demonstrations, is about the largest that can be built using commercially available parts.

According to one of the private companies undertaking the project, a plant processing 600 tons per day of coal—one-tenth the size of SRC—would have been big enough to test this technology.

What is wrong with this appropriation? Mr. President, almost everything. First, the project is one of the most expensive nondefense projects ever funded by the Federal Government, and it gets more expensive every day. The total cost has risen from $685 million in 1977 to $2.289 billion in December 1979, and then by another 100 percent to $4.574 billion in May 1981.

Design and construction costs alone have risen over 63 percent between December 1979 and April 1981.

Plant supporters have tried to mask this great cost increase by crediting the project with greatly increased revenues from the sale of its products. They claim potential revenues rose from $801 million in December 1979 to $2.546 billion in April 1981. However, the Department of Energy doubts the validity of crediting SRC–I with huge revenue gains. In testimony before the House Interior Appropriations Subcommittee on May 8 of this year Roger LeGassie of DOE said that since the estimate of the product revenue had jumped by almost 300 percent, the procedure used by the SRC–I project participants to cut revenues was, and I quote, "not valuable" in estimating the true net costs for SRC–I, and revenues from product sales are much more speculative than are costs.

One reason why this project is so expensive is that it is so big. Other synthetic fuel pilot projects such as the Exxon donor solvent plant—250 tons per day or about one-twenty-fifth this size—and the H-coal process—600 tons per day or about one-tenth this size—are much smaller. In fact, Mr. President, the largest currently operating solvent refined coal plant is only 50 tons per day. That is one one-hundred and twentieth the project size of SRC–I.

This large increase in size troubled the General Accounting Office which felt there was a great deal of risk involved in such a scaleup.

An independent study of coal liquefaction conducted by the National Academy of Sciences concluded that a plant of 150 to 600 tons per day would supply the information necessary for commercialization. This is 10 times that size, and obviously far, far more expensive than necessary.

We have the GAO, the National Academy of Sciences, both competent and objective judges, which indicate that that is the case.

Even if we go along with the rosy forecast of future production revenues given by the International Coal Refining Co., the project's industrial partner, the products would have to sell at an equivalent of $76 per barrel, if the plant could operate at 100-percent capacity for its 5-year "operation phase." With any lower rate of operating efficiency the product would have to sell at even higher prices. In addition, there are no guarantees that anyone would want the products at that price.

Will the project help us reduce our dependence on foreign sources of oil? Not with the current mix of products. The SRC–I boiler fuel is a substitute for another solid boiler fuel, the coal from which it was made. While the SRC–I solid fuel burns much more cleanly than coal, we should ask ourselves, Mr. President, whether we should spend money for an expensive synthetic fuel plant just to develop a more expensive alternative to scrubbers.

In addition, does the International Coal Refining Co., the project's industrial partner, want to make coke more than they want to make synthetic fuels? According to an interview in Forbes magazine of May 1980, the president of Air Products Corp., one of the two companies making up the International Coal Refining Co., said that if the process does not make synthetic fuel it will still be a success because, the company can get more money for coke than for synthetic fuel. They might go ahead and just make coke.

Well, that might be dandy for the International Coal & Refining Co. it might be great for the private investors, but it would be completely useless as far as the Federal Government is concerned. It would mean this $4.5 billion investment, which was to produce a substitute for oil, did not work. Still the investors could come out on top smelling like a rose even though the Federal Government would have wasted its money. Obviously, we are not looking for coke. We are looking for a substitute for oil.

Even worse, Mr. President, the Federal Government made a very bad deal, and I mean a very bad deal, with ICRC to finance the plant. Despite steadily rising costs, ICRC will not have to increase its contribution to the project of the $90 million required by its contracts with DOE. That is only 2 percent of the $4.5 billion it is costing now.

Keep in mind that ICRC, the private carrier, puts in 2 percent, and they will not have to pay two-thirds of even that money until construction is completed, which will not be before late 1985.

In other words, they might be putting in $15 million or $20 million, and that is it.

While ICRC was required to pay the Federal Government $5 million per year beginning with October 1979, as of May 1981 no, I repeat no, real cash payment has been paid. I discovered this when I sent the Department of Energy a series of questions on this company's finances. I would like to submit that for the RECORD. I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the information was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF ENERGY RESPONSES TO QUESTIONS SUBMITTED BY SENATOR PROXMIRE

Question 1: The original contract with ICRC established a payment schedule for ICRC to reach its payment contribution of $90 million by October 1984. Is this still accurate?

Answer: The ICRC contract required that the Industrial Partner's $90 million in contribution will be complete 30 days prior to the end of Phase II which was originally estimated to be October 31, 1984. ICRC's latest schedule estimate for completion of Phase II is December 1984.

In addition, the schedule of payments in the contract states that no "real" cash contributions shall begin until October 1 of the year subsequent to contribution of the site. Site acquisition depends on completion of NEPA process and congressional action on the Administration's proposal on the project.

Question 2: Please list by date and amount ICRC's cash payments to date.

Answer: ICRC has made no "real" cash payments to date. Such payments will not commence until October 1 of the year subsequent to contribution of the site to the U.S. Government. The plant site at Newman, Kentucky, has not been acquired although options to purchase the site have been obtained (see Question 3).

"In Kind" contributions to date are as follows:

Foregone fees	$7,000,000
Prior R&D (non-recoverable costs)	2,000,000
Land options	277,000
	9,277,000

In addition, $1 million has been spent by ICRC to date for operating and R&D expenses for which reimbursement is not being sought. The $1 million is not being sought from DOE and is outside the $90 million contribution.

Question 3: Have they purchased the land or options for proposed site and what is the price? What are these options to date? Has the Government acquired this land?

Answer: ICRC has purchased options for 277 acres of land at a cost of $277,000. These options expire May 1982.

The Commonwealth of Kentucky has obtained purchase option on 818 acres of land (two tracks). This option expires August-October 1981.

The total land under option is 1,095 acres.

Option offers have been made but not consummated for eight additional parcels of land comprising 390 acres.

The U.S. Government has not acquired the site. Site acquisition depends upon the completion of the NEPA process, congressional action on the President's budget request, rezoning, and (condemnation action) if the purchase options outstanding are not consummated. ICRC would then acquire the site after the completion of these activities followed by transfer of title to the U.S. Government thereafter.

Question 4: With respect to the project, how much Federal funding has been appropriated through FY 1981 for SRC–I in construction and operating expenses?

Answer: Total appropriations for the SRC–I project through FY 1981 are $262,500,000 of which $237,500,000 has been appropriated for construction and $25,000,000 has been appropriated as operating expenses. It should be noted that $157,500,000 of construction funds have been proposed for rescission.

Question 5: Of the total amount appropriated through FY 1981, how much has been obligated to date for construction and operating expense? How much has been costed to date?

Answer: The following table summarizes the obligations and costs for the operating and construction appropriations:

	Obligations	Costs
Construction	$49,120,000	$48,618,000
Operating	21,317,000	17,878,000
Total	70,437,000	66,496,000

Please be advised that the Department is currently conducting an internal reconciliation of the appropriations, obligations and costs of the SRC–I Demonstration Plant.

Mr. PROXMIRE. As if that were not enough, if Solvent Refined Coal–I managed to generate net revenues during the 5-year planned "operation phase," these revenues, up to $49.8 million, will be split between the Government and the private contractor, ICRC, on a 50–50 basis. So the private contractor puts in 2 percent and gets back 50 percent. That is why this has been called Ed Donley's sweet deal.

How sweet it is for Ed Donley. It is not very sweet for the taxpayer who has to put in 98 percent of the money and obviously gets the kind of a deal that Barnum would love. "Hello, Sucker" as far as the taxpayer is concerned.

In addition, the private contractor will receive generous treatment if it licenses the process to other companies, or if it buys the original plant from the Government. That is not bad for a company which has paid only 2 percent of the total project cost. No wonder the Forbes magazine describes the contract as "Ed Donley's Sweet Deal," which it is.

Mr. President, I ask unanimous consent that that article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ED DONLEY'S SWEET DEAL

When Edward Donley, chairman and CEO of Air Products & Chemicals Inc., found that his research people had come up with a viable new synthetic-fuels process, he set about putting together a nifty deal. Not only could it give his company an entry into a business that could reach to the multibillions, but it does so at an initial cost of just $45 million plus the time of some of his executives and engineers.

That's why one spring day next year, the quiet Kentucky town of Newman will have its peace disturbed by a vast parade of bulldozers, cranes, steam shovels and other heavy construction equipment, when a small army of men will gather on a plain near the region's coalfields and begin building. For three years they will be there, amid the green hills, constructing over $1 billion worth of towers, tank farms, process vessels, banks of compressors and miles of connecting pipe.

When they are done, bituminous coal from the nearby mines will no longer be shipped out directly, but sent at the rate of 6,000 tons a day to the enormous new structure. There the coal will be pulverized and dissolved in a solvent resembling creosote. Hydrogen gas will be forced into the solution under high pressure. Heat in the process vessel will drive off most of the pollutant sulfur compounds that have clouded coal's future as a basic U.S. energy source. The rest of the sulfur and the unburnable ash content will be drawn off. (The ash, gasified separately with oxygen, will become the source of most or all the hydrogen.) Then the solvent and hydrogen will be extracted to repeat the cycle.

Left behind will be a shiny black slab and a residue of burnable liquids. The slab, when broken into small, uniform pieces, will be a near-perfect boiler fuel, nonpolluting, and delivering 45 percent more heat energy, pound for pound, than the coal from which it was made.

The processing will not stop there. Some of the slab will be cracked in refining towers, again in the presence of hydrogen, and transformed into synthetic crude oil particularly suited by its high naphthene content to make gasoline. Some will be converted into coke. The boiler fuel, coke and "syncrude," with the energy equivalent of 20,000 barrels of oil per day, will be shipped to feed refineries and power plants and steel and aluminum mills. If this enormous complex works as well as expected, within another six years the capacity of the installation will be increased 5 times and the output will grow to 100,000 barrels a day of crude oil equivalents.

That is what this branch of the synfuels industry can become. And if it all works, similar complexes will be built throughout the Appalachians, in Wyoming, Montana, Texas and wherever else coal is mined. There are no ifs about the complex near Newman, Ky. It will be built by Air Products, which until now has been best known as the second-largest supplier of industrial gases.

Ordinarily, a company of Air Products' size—assets of $1.4 billion, annual revenues $1.2 billion—could not hope to get into a new business, however promising, where the opening ante is $1 billion. But Donley got some partners into his act. He teamed his company in a joint venture with Wheelabrator-Frye, Inc., which knows its way around Washington, the law courts, construction sites and the fuels marketplace. Each company contributes about 5 percent of the total cost—$45 million in 1979 dollars. The Commonwealth of Kentucky contributes another $30 million. All the rest—$755 million, in 1979 dollars, remember—will come from the Department of Energy, which is financing four such demonstration projects around the country, each using a different process.

If the plant works out as Donley expects, it will transform Air Products into a major factor in the energy business. Given a 360-day year and $30 a barrel, the Newman, Ky. plant would ultimately produce annual revenues of just over $1 billion in current dollars. Air Products figures the probable cost at about $19 a barrel for boiler fuel and $24 to $28 for syncrude. Once the process is demonstrated at the pilot 20,000-barrel level, the joint venture will have the option of buying out the feds and expanding the plant to full size themselves. By then, the risks of proving out the profitability will have been borne by the government. Moreover, the operation will probably benefit from some other form of government support—loan guarantees, rate of return guarantees or both—depending upon which of several synfuels bills passes Congress.

And if the gamble doesn't prove out for one or another reason—such as if Gulf Oil's or Exxon's or somebody else's process proves superior—says Donley, smiling, "then we could use the plant to produce only boiler fuel and coke. We could sell the coke, actually for an even better price than we can get now for the synfuels." Steel-making coke is costly and in short supply because of the horrendous pollution problems of conventional coke ovens. And aluminum-making anode coke supplies, by-products of gasoline refining, seem sure to grow more slowly than the needs of the aluminum industry. So Donley will have markets. Meanwhile, Southern Co., which gets 85 percent of its electricity from coal now, is waiting in the wings, watching the project and eager to buy lots of nice, clean boiler fuel.

Of course, Donley doesn't want it to work out that way. But even if it does and he ends up with an also-ran process, Air Products is going to be a big winner from the synfuels business. Because whatever process or processes win, they are going to be using lots and lots of oxygen, one of Air Product's mainstays.

Donley picks up a sheet of paper from his desk and slowly counts the items on it. He looks up: "As of this morning, we have 14 inquiries from other companies' potential synfuels projects, totaling some 68,000 tons per day of oxygen capacity. Our total existing capacity is only 27,000 tons." Indeed, the entire country's existing oxygen capacity is only about 60,000 tons per day, and all the coal conversion technologies in view now use vast quantities of oxygen or hydrogen or both.

"If President Carter's proposal should come to pass for 2 million barrels per day of synthetic oil or equivalents by 1990—there is almost no chance now that the country could develop so much so soon, of course. But when we eventually do, the U.S. will have to triple its oxygen capacity by whatever process it employs." And he smiles, mentally playing with all the potential, new, noncyclical compound growth rates that could mean.

Donley, 58, who joined the Allentown, Pa.-based company in 1943, is obviously a very careful man. But then, so is his company. Air Products, from the first, has made most of its money cryogenically separating air, and selling off the component oxygen, nitrogen and argon. A lot of the rest of its profit is from producing hydrogen (from natural gas) and selling cryogenic equipment and services. A moderate-size chemicals business, about a third of revenues but just a sixth of operating income, lends some diversity.

A simple enough business, but making a stable, growing and above all noncyclical enterprise out of selling air took some thought. The big customer has always been the cyclical and mature steel industry, whose basic oxygen furnaces (BOF, now used in about 55 percent of steel production) take oxygen by the thousands of tons per day. The increasing share of the BOF process in the steel industry and of Air Products in the BOF segment carried the company a long way, but that market has long since been saturated.

The key to Air Products noncyclical profits, from the beginning, was doing things on a take-or-pay contract. "Suppose a steel mill normally uses 1,000 tons of oxygen per day," explains Donley. "We'd offer to build a captive plant next to it and supply it if the steel company will guarantee to pay for at least 800 tons per day. We give them a very low price, of course, but enough to guarantee a small profit at 800—and there is an inflation adjustment." Donley pauses. "Also, we take the contract to the bank and get very favorable financing, because the loan is effectively guaranteed not only by us, but also by the resources of a major steel company." He pauses again, and smiles. "Then we build the plant to produce 1,200 tons per day. Since the steel company covers most of the overhead with the first 800 tons, we can produce the rest at a very low incremental cost and sell it, mostly to metalworking firms, in the merchant gas market, which is a very lucrative business."

That's oxygen. Nitrogen, which is 3 times more abundant, goes largely to the frozen-foods industry: "Most of McDonald's hamburgers are frozen with our liquid nitrogen," notes Donley. (And the argon, a tiny atmospheric fraction, is used in metallurgical processes that can be performed only in an inert, oxygen-free atmosphere.)

The results have been heartwarming. Air Products has grown at an average compound rate of well over 20 percent annually for 20 years. The company netted $97.5 million last year, on revenues of $1.2 billion, and earned 20 percent on equity.

But steel is nobody's idea of a growth market; metalworking grows slower than

Air Products and is cyclical; and last year the fast-food business also had a slow year. Meanwhile two large and determined competitors—British Oxygen's Airco Inc. and the U.S. arm of France's L'Air Liquide—are engaged in price-cutting to build market share against Air Products and the somewhat larger Linde division of Union Carbide. So Bob Hardiman, an analyst at Merrill Lynch, estimates that Air Products will earn $4 a share in fiscal 1980, ending in September. That is up from $3.45 last year, but most of that gain would come from a nonrecurring writedown in 1979 (12 cents a share), a 1980 capital gain (13 cents) and an accounting change (20 cents).

Obviously the time is right to look at new ventures. Synfuels might be just the ticket; if their potential is ever realized 20-percent-a-year growth might be pretty small potatoes for Air Products.

Mr. PROXMIRE. Proponents of SRC–I have also charged that halting the project now would cause great harm both to the synfuels industry and to the companies involved.

Mr. President, that simply is not true. Over 60 projects have applied to the Synthetic Fuels Corporation under the first round of funding, including a commercial liquefaction process. In addition, the Corporation's Board has been confirmed and will begin issuing its loans and loan guarantees. Projects which receive Synthetic Fuels Corporation joint venture assistance will have to work for it. At a minimum they will have to put up 40 percent of their own money. What a contrast with this sweet 2-percent deal which Mr. Donley has put together.

In addition, ICRC, the industrial partner, had not put any cash into the deal as of June.

The president of Wheelabrator-Frye, the other company which makes up ICRC, when questioned by the New York Times in March said that if SRC–I were canceled, "it would not put his own company in the bind because engineers who would be used on the project would be transferred to other company business."

Mr. President, I think that these defects provide more than enough reason for us to stop this project now. Each additional dollar spent encourages proponents to raise the issue of "sunk costs."

What I am saying is once we go ahead and put in a few tens of millions of dollars, the same argument comes up. "Look what you have done. You have already put the money in. You cannot quit now. You have put the money in the pot. You cannot quit now."

We can count on the fingers of one hand the number of times the Government has cut out a project once it gets money invested in a substantial way.

At a time when Congress is forced to make severe cuts in many worthwhile programs there is no excuse to continue to fund a loser like SRC–I.

Mr. President, I would like to let my colleagues in the Senate know how widespread the opposition is to this appropriation. I have a letter here from the Office of Management and Budget, incidentally, which puts the administration squarely on record as opposing the funds and, therefore, supporting the amendment.

I would also like to point out that the National Taxpayers Union, the Oil, Chemical, and Atomic Workers Union, the Environmental Policy Center, the Friends of the Earth, the League of Conservation Voters, the National Audubon Society, the National Wildlife Federation, the Sierra Club, the League of Women Voters, and others, have all indicated their opposition to this expenditure and their support, therefore, for this amendment which would delete it.

Now, Mr. President, I would like to read into the RECORD a letter which I have received from the Office of Management and Budget which opposes this expenditure. The letter reads as follows:

DEAR SENATOR PROXMIRE: Thank you for your letter of September 9, 1981, requesting a statement of the Administration's position on continued funding for the SRC–I project.

As noted in the Director's recent letter to Chairman Hatfield setting forth the Administration position on the Interior and Related Agencies Appropriations bill, the Committee recommendation to continue support for the SRC–I synthetic fuels plant is inconsistent with the President's revised budget.

One of the first spending control actions taken by the President was to order termination of the Department of Energy's taxpayer-funded fossil energy demonstration plants, including the SRC–I plant. In order to implement this decision, on March 17, 1981, the President asked Congress to rescind all unobligated funds available for the SRC–I plant, leaving only an amount sufficient for termination costs. The Administration's opposition to continuing the SRC–I project was also demonstrated in the President's revised budget for Fiscal Year 1982, in which we requested no funds for the project.

We believe that termination of the SRC–I project will yield major budget savings in future years without jeopardizing in any way the nation's energy security. Even at its current early state of planning, the SRC–I project has been experiencing massive cost-overruns. When initially authorized by Congress in 1977, the SRC–I project had a total estimated cost of less than $500 million. The most recent official DOE estimates—now eighteen months old—show a total cost of $1.4 billion. Contractor estimates developed this spring now show estimated construction costs at $2 billion and operating costs of another $2 billion. New DOE estimates under development indicate that even this large increase may significantly understate the actual cost of the project.

The Administration believes that synthetic fuels development must proceed on a basis that will lead to commercial deployment of private production facilities. The only way to ensure attainment of this goal is to limit the government's role to protecting against the unique political risks associated with construction of synfuels plants. By demonstrating an unwavering commitment to market pricing of energy, by directing Federal regulatory agencies to develop comprehensive reforms that will lead to simplified and less costly permitting, and by making available carefully-directed financial incentives through the Synthetic Fuels Corporation, the Administration believes that we have provided a climate in which an economically sound synthetic fuels industry will grow and flourish.

The SRC-I project, which has virtually no private capital involvement and which is managed by the Federal bureaucracy, is inconsistent with the Administration's synthetic fuels policy. Continuation of this project will saddle the taxpayer with an enormous financial burden, yet will yield little returns to anyone other than the project sponsors.

On behalf of the Director, I wish to thank you for your support of this element of the President's proposed budget. If I may be of further assistance, please contact me.

That, Mr. President, is from the Office of Management and Budget, specifically from Mr. Frederick V. Khedouri, Associate Director for Natural Resources, Energy, and Science.

Mr. President, in the years which I have been in this body, which are more than 24, I do not know of any administration that has been more conscious and more aggressive in insisting on adequate funding for any element that will improve our national security. I think that I have been critical of the administration, and I will continue to be, but on that score I think nobody can fault them.

The administration has taken a clear position, an emphatic position, that this $4.5 billion expenditure would not be productive. The Reagan administration has indicated as clearly and emphatically as they could in this letter that I hold in my hand that they oppose this expenditure and, therefore, would, of course, support an amendment to delete the funds.

I am delighted to work with the distinguished Senator from Oklahoma on this matter. We will be offering the amendment to the Senate within a few minutes. Mr. President, I yield the floor.

The PRESIDING OFFICER. The Senator from Oklahoma.

Mr. NICKLES. Mr. President, I compliment the Senator from Wisconsin. I think he has brought to point a very much needed change in our Government's spending, particularly in the area of synfuels.

I rise to cosponsor this amendment and look forward to, hopefully, its adoption by the Senate.

Mr. President, I believe it is vital that we do eliminate most of the funding that has been deferred from 1981 for the SRC–I synthetic fuels project. I think it is very important, Mr. President, that we stop this project before actual construction begins. I think all Senators realize how difficult it might be to stop this project after even a greater and more substantial investment has been made.

I am also pleased to see that the Reagan administration is supportive of this amendment. They are being consistent in their overall philosophy of free enterprise, particularly in the energy area, with less Government reliance on subsidies.

Mr. President, my opposition to this project is manifold. SRC–I, by its latest cost estimate, is almost 70 percent higher now than the original cost estimate. The initial cost, I believe, in 1977 was to be $685 million. This tripled by the time in December 1979 it rose to $2.3 billion, and then doubled again 2 years later, by May 1, 1981, with the estimate now having risen to $4.5 billion.

Mr. President, a big question, I think, that all Senators should ask and be well aware of is, What will the estimate be 2 years from now? This project has not yet been built. It has not been started. I would not doubt that, if we come back and if we proceed, 2 years from now it might double again. It has every 2 years before.

On the cost question, I think it is very, very serious grounds, and then there is the other point, Who is picking up the cost?

Senator PROXMIRE brought out an excellent point and it is probably my other major opposition to this particular project. That is the fact that the private sector is putting in such a small percentage of the total investment. They figure they are going to put in $90 million on a $4.5 billion project. I think that is ample reason for all Senators to reject this. Their cost is such a small percentage, and not a fixed percentage of the overall cost, but a fixed $90 million out of a $4.5 billion project. That gives them very, very little incentive to try to control and contain the cost of this project.

Mr. President, we even have a record of their own vice president saying they should increase their contribution, the private contribution to this project, and it was turned down.

I also wish to repeat Senator PROXMIRE's statement as to the fact that this plant is as much as 10 times larger than is necessary to demonstrate commercially the solvent refined coal process, according to the National Academy of Sciences.

Also, the point needs to be made that SRC–I will not produce a product mix that will truly aid our goal of energy independence but will, instead, produce basically boiler fuel.

The administration has made the statement that cutting off funds for SRC will not jeopardize our energy security and I wholeheartedly agree with it.

I think another point that needs to be brought out is that what will jeopardize the energy security and also the financial security of this country is that we are mandating, we are spending so much of our Government funds to go into Government-sponsored, taxpayer-sponsored projects. We are also diverting these funds very much needed in other projects or possibly, as in the case of this project, we are borrowing those funds from future generations to pay for it.

Mr. President, the American people are being asked to make some very tough choices these days about projects and expenditures. I think it is unfair to ask them to support such obvious subsidies to private corporations when the money is needed elsewhere.

Again, I compliment Senator PROXMIRE, Mr. President, and I hope our colleagues will join us in cutting out this obvious Government expenditure that needs to be and can be eliminated.

Mr. PROXMIRE. Mr. President, will the distinguished chairman of the committee permit me to send the amendment to the desk?

Mr. McCLURE. I shall be happy to do that.

UP AMENDMENT NO. 529

(Subsequently numbered amendment No. 618.)

Mr. PROXMIRE. Mr. President, I send the amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Wisconsin (Mr. PROXMIRE) proposes for himself and Mr. NICKLES an unprinted amendment numbered 529.

On page 40, line 21, strike the number "$408,490,000" and insert in lieu thereof the following:

"$273,490,000 and $135,000,000 to be derived from 'Fossil Energy Construction', Department of Energy,"

Mr. McCLURE. Mr. President, I understand what the distinguished Senator from Wisconsin and the distinguished Senator from Oklahoma are attempting to do. We have known all along that this issue would be fought out on the floor. The subcommittee looked at this matter with some care and determined that we would not remove the money which has already been appropriated in prior years. The administration has sent up a deferral and they intend to transfer this amount of money, $135 million, from this account to be used for other purposes within the budget. One can look at page 41 of the bill on line 18 and line 19. We already took $172 million out of the fossil energy construction account in the Department of Energy and transferred it to other uses. That represents SRC–II.

So the subcommittee, in looking at the fossil program, had made a decision to leave the money in for SRC–I and to take the money out for SRC–II. That deferral action is before the Congress. If indeed, that is the judgment of the Congress to terminate SRC–I, the deferral will be allowed to continue. If we decide that we want to continue the SRC–I, Congress will have to pass a resolution of disapproval of that deferral request.

But that action may or may not be taken independently of this legislation.

Mr. President, let me comment for a moment about the argument that has been advanced that SRC–I does nothing with respect to U.S. energy goals because it is a substitution for boiler fuel. Certainly this body does not need to be told again that we face a number of perplexing dilemmas in the energy field. How do we meet our needs of sufficient energy in the right form at the right place at a price that we can afford to pay? It is suggested that, since this is boiler fuel, all it does is substitute for other boiler fuel and therefore does not advance our cause at all. That is an appealing argument, Mr. President, but it does not stand up to analysis. It does not stand up for this reason: One of the great inhibitions we have today on the use of coal as an alternate to some other forms of energy is the pollution that is caused by the combustion of coal, the changes in the atmosphere as well as the particulates and the other emissions from the stack gases. One of the unresolved dilemmas is what effect we are having on the air quality and the water quality in the northeastern United States and southeastern Canada, with respect to the acid rain question and the changes in the character of the water courses and water bodies in that area of this continent.

I cannot tell this body that SRC–I is going to solve the acid rain question, but neither can anybody else in this body tell me it will have no impact on that question. We must resolve that question some way and we do not have all the answers.

One of the things we are attempting to do, Mr. President, in developing new solid fuels or new alternatives for coal as a fuel is to determine whether or not it is more efficient to remove the sulfur from the stack gases or to remove the sulfur from the fuel before it is combusted. Will SRC–I in the form of the fuel to be brought out solve that problem? I do not think any of us can really answer that question positively or negatively at this time. It is one of the things we need to know.

The Senator from Wisconsin has appropriately identified, as has the distinguished Senator from Oklahoma, that this is a large plant. It is not an experimental plant in that sense. So, perhaps we could determine whether or not this kind of fuel would have some effect upon the stack gas emissions as an alternative to combusting coal.

One of the things we have learned, however, is that theory in the laboratory changes as it is practiced and it changes both in economics and results as it is applied in the field. Things just do not always work the same when put into use as in theory.

One of the things we must determine is what is going to happen. There is a calculation in this particular project that it may, indeed, turn out to be a bad investment. It may, indeed, turn out to be one of the best investments this country ever made. I do not think anyone can answer that question yet. But if we are going to be able to marshal that one resource we have in great abundance in this country, and that is our coal resource, we are going to have to find these answers.

Mr. President, we could suggest, yes, indeed, let us put this back into the laboratory; let us continue small-scale expansions of the laboratory test on the order that the Senator from Wisconsin has outlined. But, at some point, we have to take that next step. At some point, we have to move beyond that small demonstration into one which is a commercial-sized demonstration. It is there we learn what it will actually do in a commercial-sized operation.

For those reasons, Mr. President, the judgment of the subcommittee was that we ought to leave the money for SRC–I in the budget without addressing it, and therefore the bill is silent on the question of SRC–I; but its silence is eloquent expression of the decision made by the subcommittee with respect to continued expenditure for this purpose.

Mr. JOHNSTON. Mr. President, I join with my distinguished chairman on this matter in opposing this amendment. The Senator from Wisconsin and the Senator from Oklahoma are correct in saying that this is an extraordinarily expensive undertaking. So it is. It is not $4.5 billion or $4.2 billion in scope as a cost to the Federal Government; rather, that cost to the Federal Government is $1.78 billion when you take away the revenues to be realized from the project, which are, in effect, contracted for. Nevertheless, $1.78 billion is an enormous sum.

How can we justify it? How do we on the committee, after studying this matter—frankly, not just for the few months of this Congress, but over a period of many years—justify spending these kinds of sums on this kind of process, which is only 6,000 tons of coal a day, which is the equivalent of about 20,000 barrels of oil?

First, Mr. President, this is, as my col-

league from Idaho said, the first module of a commercial demonstration. This is no pilot plant, but it is the first module of a commercial demonstration. The entire plant eventually will be five modules in size, or 100,000 barrels a day, which is one-fifth of the way toward the 1987 goal of 500,000 barrels a day of fuel equivalent in the whole synfuels program.

This first module is extraordinarily expensive. Why? First, because some 40 to 50 percent of the costs of the whole five modules, whole hundred-thousand-barrel-a-day plant, is borne by the first module, because the first module has all of the land cost sufficient to justify a 100,000-barrel-a-day plant; it has all of the coal-handling facilities so that the scaleup to a plant five times as large as the first module can be done for about a 50-percent additional cost. So we are talking about a building; for the first half of the dollars, in effect, we get only 20 percent of the product throughput.

Mr. President, it seems that the Senate, or at least some Members of the Senate, have very short memories. They forget how bad things were in our first two oil shocks and how helpless we seemed as a nation when we had the embargo of fuel and when we had the shortages of fuel.

So it was that Congress came together, in the last Congress, with a newfound resolve to build a synthetic fuels industry in this country which would provide not only price defense against the OPEC cartel but also a domestic source of energy—a domestic source particularly of liquid energy—a clean-burning fuel sufficient to at least put props under the economy of this country, which at that time was dependent solely upon imported fuel, with a declining domestic resource.

So it was that, with a great deal of fanfare, Congress—both Houses—overwhelmingly voted for the synthetic fuels bill and thought that we were ready to proceed in that direction.

What has happened in the meantime? Mr. President, it appears that the synthetic fuels effort, so bravely and so optimistically put into the law in the last session, is being dismantled piece by piece, by indirection—never by coming before Congress and asking to stop synthetic fuels, but by deferring money here, by putting in a board which is bound to determine not to go forward with synthetic fuels.

If this administration wants to stop synthetic fuels, wants to come out with this malarkey that the free market is going to solve this kind of problem, then let them come to Congress and ask for it. This is the first and only time I know of that the administration is firmly and directly meeting us on this question, and I say it is time for the Senate to stand up and say we at least want the first module.

Why is this important? Why is SRC important? It is a basic process that is similar to almost any other process, whether it be Exxon, donor solvent, or other kinds of processes that are necessary to prove up the liquefaction of coal.

It is a refining process, essentially, whereby the molecules are rearranged, the carbon and hydrogen are rearranged, in a different method; and to do that, you need enormous quantities of pressure and heat.

I do not mean to oversimplify the process, but it is basically pressure and heat in amounts and degrees and pounds per square inch that greatly exceed, for example, the old process where you go from coal to gas. It represents a quantum leap.

If we can demonstrate that this can be done on a commercial basis, which SRC–I is designed to do, then we can move a whole generation, a whole industry, of coal liquefaction, and a refined coal industry into place; and we cannot do it unless we take this first step of a commercial demonstration. Frankly, the risks are too great for private enterprise to do it.

Mr. President, I oppose substituting Government in energy for private enterprise. I have been a deregulator of energy for a long time, for many, many years, as has my distinguished colleague from Idaho. However, there are certain things the Government should do in energy, and one of those is that where you have a process which is extraordinarily valuable to this country, extraordinarily essential to its very strategic health, and where the risk is so great that private enterprise cannot do it, cannot demonstrate it, then that is a proper role for Government; and if we do not do it, nobody else will.

Not even Exxon is going to do this kind of thing, with this kind of cost. But if it pays off—and it is an "if"—then what we have is the ability to use hundreds of years' worth of coal, a resource base so vast that it dwarfs Saudi Arabian crude oil. We have a way to use it, first of all, under boilers in a clean way, so that you have no sulfur emissions, so that you have virtually no ash, so that you have no problem of acid rain, which is now threatening many of the lakes of the Adirondacks and other areas of this country which are so acid that they will support no fish population. Some areas have water so acid that it cannot be used for drinking purposes.

I will not detail the problems of acid rain, but SRC, with this solvent refined coal, solves that problem. You have a fuel so clean that it almost approaches natural gas in cleanliness. Then, it makes liquid fuels. Thus far, we have not only no process but also no hope of getting transportation fuels other than liquid fuels—certainly, no aeronautic fuels other than liquid fuels. If we want to have a domestic resource base to make up for that declining production of crude oil, this is the only source of which I know.

It is risk, yes. They said the same thing about the tar sands in Canada, when the Canadians came in, at a cost of hundreds of millions of dollars—I think it ran into the billions—and put in one of these huge plants that involves the same thing: Pressure vessels and types and a process so big that it almost dwarfs the imagination.

Yet, what do we have? The Canadians have proved-up their process and are now producing liquid fuels at a price that approaches $17 a barrel, which is a little more than half of what we are paying on international markets. Can we do that here? We hope so. If we can, it will be a much higher payoff than for the Canadians, because our resource base is much larger than theirs.

Mr. President, the crisis is not over. We have a temporary glut of crude oil. The Saudis have been holding down the price of crude oil to $32 a barrel and continue to produce about 9.5 million barrels a day, which some of us feel is a great favor to this country that the Saudis are doing, for whatever purpose, whatever their motives. Sheik Yamani says that one of his motives in holding up production and holding price down is that if he does not do that, this country and other countries are going to produce synthetic fuels, an industry that will make their enormous resource base worth much less.

Mr. President, that is exactly and precisely what I hoped we would do in SRC–I, come up with a substitute for crude oil. That, in turn, will hold that price down in international markets. But in order to hold it down and in order to be able to produce this fuel, we have to perfect the technology, and that is what SRC–I does.

The temporary glut will soon be gone. The Saudis will soon reduce their production by a million barrels a day, I predict, within the next 60 days. They will also raise the price about $2 a barrel, also within the next 60 days. Those are the first steps toward a return to the chronically short world supply of oil and chronically increasing price of crude oil.

This is not going to solve our whole problem, but it will go a long way toward doing it. I remind my colleagues that the history of synthetic fuels in this country has been a history of on again, off again—the Government involvement and then pulling back because private industry has been saying for more than 50 years that they were going to do it.

I am reminded that our first retort for shale oil was built in Rifle, Colo., in 1907, more than 70 years ago.

And guess what? After all of those years we still do not have a shale oil plant in this country.

We have been told ever since that private industry was just on the verge. We passed legislation here, I think it was in the 1940's or 1950's, to get the Government back in, and again the private oil companies came up and said, "We will do it," or, "It is not necessary."

Mr. President, that just is not good enough. We are far along here with over $100 million invested in this process. I believe it can prove out to be extraordinarily successful.

The experiment, and it is just that, is worth it to the country. I hope we will not be off again. I hope we will not scuttle the synthetic fuels initiative, the great and brave start that we started.

We know times are tight. But tight times do not mean that we should scuttle the very thing that can do more than virtually anything else to cure our economic ills, and that is to get a domestic energy resource base so that we can reduce that enormous hemorrhage of money going outside of this country to buy foreign oil.

Mr. President, I hope and trust that the Senate will follow this bipartisan

lead of this committee and resoundingly kill this amendment.

Mr. PROXMIRE. Mr. President, will the Senator from Louisiana yield for a question?

Mr. JOHNSTON. I yield.

Mr. PROXMIRE. Mr. President, why can't SRC–I apply to the Synthetic Fuel Corporation like everyone else? Why should they be singled out to be permitted to be funded by an act of Congress that overrules the President, the only one of the five demonstration plants originally funded by DOE? Memphis applied to the Synthetic Fuel Corporation. SRC–II was dropped when West Germany and Japan dropped out. Perry County and Noble City were canceled by industrial sponsors. Only this plant remains.

Mr. JOHNSTON. I think that is a very appropriate question. The means of funding this plant and building it have not been yet determined. What we are dealing with here is $135 million which, together with $100 million already spent, represents design cost of this plant. Should we fail to go forward with this now, we will simply slip the whole schedule by a period of probably 2 years. When we are dealing with one of these matters, assuming that we could hold our team together and assuming there are no other costs, 2 years in interest and inflation make an enormous amount of difference.

What I am saying, in effect, is that we should keep this money which guarantees its design in the fastest possible means. Then is the question of how best to proceed, whether to do so under the umbrella of the Synthetic Fuels Corporation which, frankly, I prefer. I prefer that that means be used, but that has not been decided, and then is how to go about the actual construction of the plant. Contracts have not been let. The corporate structure of this group has not been put together. I hope that they will apply to the Synthetic Fuels Corporation, but if not, in any event this Congress will have a chance to look at that before it is put together.

Mr. HUDDLESTON. Mr. President, will the Senator yield?

Mr. PROXMIRE. Mr. President, it seems to me only fair they go ahead on that basis.

Go ahead. I have other questions for the distinguished Senator from Louisiana.

Mr. HUDDLESTON. Mr. President, I was just going to point out that under the law that the Synthetic Fuels Corporation is requiring very detailed information of applicants and they are going to have to complete this phase of the engineering in the critical areas before the Corporation considers them to be a viable project.

Mr. JOHNSTON. The Senator is correct. I think that is a very valid point.

Mr. FORD. Mr. President, will the Senator yield, then, for a further question?

Mr. JOHNSTON. I yield.

Mr. FORD. Is it not also true that the Synthetic Fuels Corporation can only fund commercial operations and not demonstration plants? Has not that line been drawn? And SRC-I is a demonstration plant and not a commercial operation.

Mr. JOHNSTON. Under the Synfuels Act, they can go into modules.

Mr. FORD. That is only for a joint venture.

Mr. JOHNSTON. That is a joint venture, and I suppose this would be appropriate for a joint venture but not as a commercial demonstration under the Synfuels Act. In any event, that has yet to be decided upon; and we could even go under the synfuels law, which I prefer; or we can go into some other method of financing and construction. And, if we go into another method, that would be approved by this Congress.

Mr. PROXMIRE. Of course, it is quite a demonstration project. As pointed out, it is 10 times as big as any other. It is bigger than the National Academy of Sciences or the GAO has said it has to be by far.

So it seems to me it is much more of a commercial operation than it is a demonstration plant.

Let me ask the Senator. The Senator made a very good point and he is always so reasonable and persuasive that I think we should nail this down.

He argued that the total project cost is not $4.5 billion, but it is $1.77 billion.

Mr. JOHNSTON. It is $1.78 billion.

Mr PROXMIRE. All right $1.78 billion. Let us point out the reason why I think we should be concerned about that $4.5 billion:

One point $7 billion or $8 billion is the net cost, not the total cost.

Mr. JOHNSTON. That is correct.

Mr. PROXMIRE. That is standard business procedure. Certainly business does not interchange gross and net revenues. The total net cost is critical for two reasons. First, the total costs continue to go up and rapidly. As the Senator knows, they skyrocketed in the last 2 years.

Second, the revenue projections by ICRC are very optimistic. Even DOE doubts the credibility of the revenue projections. In testimony before the House Interior Appropriations Subcommittee on May 8 the DOE Acting Assistant Secretary of Fossil Energy, Roger Le Gassie told the committee that since the ICRC estimates of project revenues had jumped almost 300 percent, the procedure of computing revenues was "not valuable" in estimating true net cost. He challenges whether revenue estimates have validity at all.

We know what the total costs are. But then to come up with a multibillion dollar revenue estimate which the experts in DOE say we cannot accept and to subtract that and say this is real cost $1.77 billion is really reaching out and is very speculative.

Mr. RUDMAN addressed the Chair.

The PRESIDING OFFICER (Mr. D'AMATO). The Senator from Louisiana has the floor.

Mr. JOHNSTON. Mr. President, I shall yield the floor in a moment.

Mr. President, if I may just make one point, that is to speak about this escalation of costs. It has been said that SRC–I costs escalated 700 percent. The fact of the matter is that actual project costs have decreased by 9 percent based on constant dollar comparisons for a 6,000-ton-per-day plant.

If we make a smaller plant as some have taken a different projection based upon, I think it was 2,000 tons per day, if we want to make that comparison of 2,000 tons per day and only solid fuel as opposed to 6,000 tons per day solid and liquid fuel, then we can indeed make a case for an escalation in costs.

That is not an escalation in costs. That is a change in specifications. There has actually been, as I say, a 9-percent decrease in constant dollar comparison of costs.

Mr. PROXMIRE. Mr. President, let me ask the Senator one additional question before the distinguished Senator from New Hampshire inquires.

The Senator made a big point of the fact that we are talking about a liquid product here and how valuable that is. The fact is that the papers presented by the ICRC officials project 49 percent liquid and 51 percent solid. Furthermore, the DOE is much less optimistic and says that SRC–I will produce its three products in about equal parts: SRC boiler fuel, anode coke, and hydronated boiler fuel. Only one-third would be liquid.

Mr. JOHNSTON. The Senator is correct.

Mr. PROXMIRE. We are not talking about a 100-percent liquid product.

Mr. JOHNSTON. The Senator is correct. We are talking about three different products. The product mix can be varied, but each of these products is enormously valuable. The solid product is a relatively sulfur-free boiler fuel that has virtually no particulates in it. It does not need a scrubber. It can be burned almost precisely as natural gas so that it avoids this enormous economic problem of having to put in scrubbers. But even more than that it avoids the problem of pollution and of acid rain.

That is why the solid fuel is so much more valuable than either the ordinary coal from which it comes or indeed even more so than crude oil or residual fuel oil.

Mr. PROXMIRE. May I say to my good friend from Louisiana that it is an interesting argument, but it is also interesting that virtually every conservation organization deeply concerned with pollution of the air and with acid rain, vigorously opposes this project, and has said so. The League of Conservation Voters, the Friends of the Earth, the National Wildlife Federation, the Sierra Club, the National Resources Defense Council—I cannot think of one conservation organization that does not oppose this project.

Mr. JOHNSTON. I do not know why they oppose it, but I can tell you this: There is no question about what I say respecting the clean fuel. Maybe they oppose it because they do not want to use coal, because you have strip mining, and because of all the other things attendant upon the mining of coal. But I can tell you that this fuel burns cleanly.

Mr. PROXMIRE. I admitted that. There is no question about the fact that it does burn cleanly. But the question is whether this is the most economical way

of having a clean fuel or far more expensive than using scrubbers.

Mr. JOHNSTON. Well, scrubbers do not clean up to the extent that this cleans up. Scrubbers will not take out much of the sulfur, and this does.

Mr. NICKLES. Mr. President, will the Senator yield?

Mr. JOHNSTON. Yes.

Mr. NICKLES. I very much respect the advice of the Senator from Louisiana, but I am troubled with the dollar amount. The figures we have of the total cost of building the project, the figures from DOE, are $4.5 billion. The Senator came up with and said it is $1.78 billion.

Mr. JOHNSTON. For the cost of the construction of the project, together with 5 years operating cost, the estimate we have is $4.2 billion; but that includes the cost of operation of the project for a period of 5 years.

If you take out the products to be sold which, as I understand it, is not a fanciful sort of plan but rather firm commitments for the purchase of the product, then you have a net cost to the Government of $1.78 billion—no small sum to be sure; but, nevertheless, it is not a risk to the Government of $4.2 billion.

Mr. NICKLES. I appreciate the Senator's comments, but that makes a great deal of difference to me.

Looking at the $1.7 billion or the $4.5 billion, OK, the $4.5 billion includes 5 years of operating expense, and you say we need to subtract the revenues being received. Is that just revenues to be received during that 5-year period of time, or is that anticipated revenues throughout the years ahead?

Mr. JOHNSTON. I will get the Senator a definitive answer to that. I believe it is the 5 years.

Mr. FORD. Mr. President, will the Senator yield?

Mr. JOHNSTON. Yes.

Mr FORD. Inclusion of the operation of the plant over the 5-year period plus the contract for the sale of the product produced in that period shows a $400 million profit.

Now, you have to take into consideration beyond that at the end of that period that the private concerns will have to buy, under the contract signed, the plant at its present day value as of that day. Then beyond that, which will be estimated to be about $800 million, including research and development, as of that day they get 100 percent of the royalty in the contract which—and I do not have the figures—until it is paid for, and then beyond that they go 50–50 on that, and the Government will receive 2½ times its investment back from private enterprise. That is the financial arrangement as it relates to this one plant.

So in essence the Government will be returned every dime that it has been out, plus 2½ times what its investment is.

Mr. PROXMIRE. That is, of course, if it works.

Mr. FORD. Sure. Of course, if you do not squeeze the cow, she will not kick. [Laughter.]

Mr. NICKLES. Mr. President, will the Senator from Louisiana yield?

Mr. JOHNSTON. I will yield for a question.

Mr. NICKLES. On this assumption, looking at the value of a product—and I do not know, the Senator mentioned it might be more valuable than residual fuel—but the estimated production, if I am correct, is 20,000 barrels or the equivalent per day; is that correct?

Mr. JOHNSTON. That is approximately correct.

Mr. NICKLES. I do not know who is going to be able to say, and I think it will be overly optimistic, but if the cost of production was only $20 per barrel, let us say, and the sales price would be in the $30 range, we would have a $10 per barrel profit, and I think that would be generous on our side, the plant would only generate profits of about $72 million a year, and at a multibillion cost, where we are talking about $2 billion or $4 billion, you are still talking about a rate of return on investment on the higher amount of about 1.6 percent, if that is the profit they made from the sale of this material, it would be 1.6 percent rate of return on investment.

If we use your figure it would be closer to and be in the neighborhood of 4 or 5 percent, but still a ridiculously low rate of return where the Federal Government is putting up 90 percent and paying 14-percent interest on the money it is borrowing.

Mr. JOHNSTON. What the Senator has done is, in more graphic terms, portray why the Government must do this and private industry cannot, because it is an enormously large undertaking that will not yield a bottom line figure, at least in the early years, sufficient to make it worth while for one of these companies. Wheelabrator-Frye, for example, which is one of the industrial participants, is a very small—I mean it is a big company as I think of a company—but compared to these dollars there is no way it could handle or provide these dollars.

In fact, what it is putting into this project already represents 80 percent of its total earnings for 1 year.

The reason why Government must get into this is because in this first commercial demonstration, in order to prove whether it works or not on a commercial scale, only the Government really can take that risk. It is a big risk. The Senator from Wisconsin says if it works, all of these things that the Senator from Kentucky says would come true, that is true. If it works, it is going to be an enormously wonderful, marvelous thing for this Government that is going to pay off richly and handsomely, and if it does not, we will be out, perhaps, $1.78 billion if the thing fails miserably and totally. But actually——

Mr. PROXMIRE. If the Senator will yield, Mr. President, if it does not work you are out the $4.5 billion. You only have the revenues if this works well enough so that you get a product you can sell.

Mr. JOHNSTON. What we mean by not working is this. We know you can make liquids and you can make a solvent-refined coal from this process. What we mean when we say if it works is that it is an economic and viable project which can be duplicated, replicated, around the country. That is what we mean.

Mr. PROXMIRE. Mr. President, if the Senator will yield, there certainly is a very, very serious question as to whether or not you can get enough so that you can cut the Government's costs down to $1.78 billion. That is challenged very vigorously by the Department of Energy and others.

Mr. JOHNSTON. It is not challenged directly by the Department of Energy. There may be some people in the Department of Energy who would come up with some slightly different figures.

Mr. PROXMIRE. Certainly challenged by OMB.

Mr. JOHNSTON. Well, OMB, you understand, wants to stop this project along with milk for school children and virtually everything else.

Mr. PROXMIRE. Nobody is perfect. [Laughter.]

Mr. JOHNSTON. I would say to the Senator if the point is—and I think it is a very valid point—that there is a high risk of losing lots of dollars to the Federal Government, the point is correct. That is the very reason why the Federal Government has got to do it. The real question here is, Do you want to demonstrate that we can use coal for liquids and for clean-burning boiler fuel? If you want to demonstrate that, and get to the 2-million-barrels-a-day goal by 1992 in the synthetic fuels bill, this is the first and essential step toward doing it.

If you do not want to do that, then do not take this step. But if you do, you have got to take a big step an expensive step which does involve some risk.

Mr. HUDDLESTON. Mr. President, will the Senator yield?

Mr. JOHNSTON. I yield to the Senator from Kentucky.

Mr. HUDDLESTON. Mr. President, I commend the distinguished floor leaders of this legislation on both sides of the aisle for the position they have taken and the logical approach that they have suggested to this problem.

The debate in the last few minutes has demonstrated, in my judgment, what the major problem is with the United States achieving energy self-sufficiency and trying to develop the infrastructure in this country to convert the energy resources that we have in great abundance to the kind of energy that we need to operate our powerplants, to operate our automobiles, and all of the other things for which we need energy. This debate has centered on the economic viability here in 1981 of a particular process. That is the problem with which we are confronted.

We are talking about projects that take years to bring into fruition through research and development, engineering and design, and construction. How can anybody say here today what the economic viability is of this kind of a project? If we are to depend in every project on whether we can say with some kind of certainty at this time that the product of those projects will be viable economically in the world or domestic markets at a given period of time, then we are not going to have any synthetic fuels pro-

gram or any other significant long-range energy development within our country.

Mr. PROXMIRE. Will the Senator yield?

Mr. HUDDLESTON. Yes, I yield to the Senator.

Mr. PROXMIRE. The Senator is making a very, very good point. But what bothers this Senator very much is that here we have a situation where Uncle Sugar—the taxpayer—puts up everything. How much does this private contractor put up? Very, very little until 1985.

Mr. HUDDLESTON. The sum of $90 million.

Mr. PROXMIRE. Very minimal, while the Federal Government puts all the money in and takes all the risk.

Mr. HUDDLESTON. The Senator has made his statement and I will respond to that in just a moment.

The question in the future is not necessarily going to be whether we can get oil at $20 a barrel or $30 a barrel or $50 a barrel or $100 a barrel. The question that has tied up the security of this country in the future is whether we are going to get any oil at all and from what source.

That is why we need the capability in this country to convert the energy resources that we have in abundant supply to meet the needs that could develop tonight, tomorrow morning, 5 years from now, 10 years from now, 20 years from now, or 50 years from now, when the oil supplies of our country are depleted and when oil supplies of other countries are not available to us.

That is why the security of the Nation is tied up in what we do now to develop alternatives to oil. It will not be available to us at any price and that is why we have to have a resource that we can use.

As to this particular project, the two private companies that make up the private partnership are committing, up to this point, $45 million apiece. For one of them, that is 50 percent of its 1980 earnings; for another, it is 80 percent of its 1980 earnings.

You cannot expect, as the distinguished Senator from Louisiana has eloquently and correctly said, private industry to take both the economic and the technological gambles in this kind of an expensive, long-term project. What we are trying to do here is to get the project past that initial phase so that a determination can be made as to which direction we shall go in its final financing.

The companies tell me they have explored the private financial markets about participation in this project. Some 12 companies are being checked out and 6 investment companies have been consulted. There is potential interest, once this first phase is accomplished, in getting additional partners and additional private capital in seeing this through.

A great deal has been made about the size of this particular plant. As the distinguished Senators from Louisiana and Idaho have indicated, this is not a pilot plant. This is not a plant to determine whether or not the technology works. We know this process will make from coal a clean-burning liquid fuel and a clean-burning solid fuel. No doubt about that.

What we do not know is whether or not everything will work, when you step up the size to one which will be large enough to be commercially viable. The plant is designed to use the largest components that are now available, to put them together in the proper chain in which they have not yet all functioned together, and see whether or not they will work under the pressure of day-to-day operations, converting 6,000 tons of coal into 20,000 barrels of energy. That is what this is all about.

Now, why did they go to 6,000 tons? In the first place, it was DOE who suggested it.

Mr. PROXMIRE. Mr. President, will the Senator answer one more question on the point I raised about the private contribution? Is it not true that to date these two private firms making up ICRC have made no real cash payment and that when they do make a cash payment it will be in the year subsequent to the contribution of the site to the U.S. Government? That will probably be 1985; and that when they do make the contribution, as the Senator says, it will be $45 million each, which is 2 percent of what the Federal Government has to risk and put in altogether?

Mr. HUDDLESTON. Of the total amount up to that point. As I understand it, the firms have already spent in the neighborhood of some $6 million. The State of Kentucky has committed some $30 million. The State of Kentucky is a partner in this.

Mr. PROXMIRE. Well, it has been committed. They have not expended it yet.

Mr. HUDDLESTON. You cannot spend it until it is time to spend it.

Mr. PROXMIRE. I understand that. But we are appropriating the money now.

Mr. HUDDLESTON. It will be spent as the project progresses and at the proper time to spend it. There is no sense in spending money before it is needed, is there?

Mr. PROXMIRE. Well, I am just trying to make a point here that the Federal Government—the taxpayers—is putting in the lion's share of the money and putting it in up front.

Mr. HUDDLESTON. And that is the only way for this kind of a project if we are going to have one. That is why the Federal Government is involved in the first place.

The additional volume of production was determined to be necessary and desirable in order, first of all, to demonstrate—and, again, we are demonstrating in that we are not having a pilot project—to demonstrate the technology, demonstrate the equipment, demonstrate the environmental feasibility, and to produce a sufficient amount for sufficient revenue.

A significant thing about this plant which has not been mentioned—the question brought up was whether we need solid fuel or liquid fuel—is the flexibility of it. It can produce 90-percent solid and 10-percent liquid, if that is what the market is asking for, or it can switch over and produce 85-percent liquid and 15-percent solid, if the market demands that. So, it has that capability.

This will facilitate the switching from oil, the elimination of using oil for producing electric power to that resource that we have in an abundant supply, coal, as no other thing that we can do will facilitate that.

Mr. President, it has been a while since we have had long gas lines.

Though we are left with painful economic adjustments to make, the shock is finally wearing off high oil prices, and some prices are actually starting to come down a little. In short, many of the more obvious and direct manifestations of the energy crisis have left us temporarily.

But, before we declare an end to the energy crisis—before we abandon our commitment to the development of alternate fuel sources—let us take a look at what has happened to us over the last 8 years.

The world price of oil rose from less than $3 per barrel to more than $12 per barrel in 1974, and to more than $30 per barrel in 1980.

The U.S. oil import bill increased from $8.2 billion in 1973 to $80 billion annually by 1980.

The Producer Price Index (PPI) for fuels and lubricants rose at an annual average rate of 23.1 percent—more than double the rate of all producer prices.

Twice in the last 8 years we suffered oil supply interruptions that coincided with substantial deterioration of our economy—inflation, unemployment, decline in economic growth.

Time and time again over the last 8 years we have seen just how vulnerable our economy and our national security are to arbitrary price increases and supply interruptions.

We are still vulnerable—to the tune of 5 million barrels of oil a day and $100 billion a year.

We would be living in a fool's paradise to believe that price increases and supply reductions are all behind us. They have happened before, and given the volatile conditions in the Middle East, we must be prepared to deal with them in the future.

A sustained supply interruption or oil price increase of any magnitude at all could have a devastating effect on this country, not to mention the world. All the efforts we have put into cutting the Federal budget and reducing taxes; all our efforts to beef up our national security—all could go for naught if we permit our dependence on foreign oil to continue.

This is why it is imperative that we do not abandon the development of a strong synthetic fuels program in this country. And the SRC–I project is a vital step in our attempts to establish this industry and to develop technologies that can use Eastern high sulfur coal in an environmentally acceptable manner.

The SRC–I project is a joint venture of the Department of Energy, the State of Kentucky, and the International Coal Refining Co., which is currently made up of Wheelabrator-Frye, Inc., and Air Products & Chemicals, Inc. Both private-sector companies have put up substantial sums of money for moderate-size corporations under their cost-sharing agreement with the Department of Energy—80 percent of 1980 earnings for Wheel-

abrator-Frye, Inc., and 50 percent of 1980 earnings for Air Products and Chemicals, Inc.

They have agreed to forgo fees for engineering services done by their subsidiaries under the contract, have agreed to buy out the plant at its full fair market value after the technology has been demonstrated, and have agreed to forgo 85 percent of the royalties from the construction of future SRC plants until the Government has received back its investment in the development of SRC technology and the construction of this demonstration plant. Following that, royalties will be split 50/50 until the Government receives back 2½ times its investment.

This project very clearly has the commitment of senior management of these companies. Their involvement greatly increases the chances of success of the project. Both companies consider the project to be their best chance to get into the synthetic fuels business and are doing what it takes to make the project a success.

Furthermore, the SRC–I technology is unique. Unlike ordinary liquefaction technologies that repeatedly recycle coal in a single stage with a high penalty in energy efficiency, SRC–I keeps the residence time in the solvent stage at a minimum. As soon as the processing of coal has proceeded to the point where the ash, heavy metals, and sulfur settle out, the product is removed. At this point it is suitable either as a clean boiler fuel or as a feedstock for the second stage of the SRC–I process. This stage functions as a coal refinery and can be operated to produce any of the products that can be produced from an oil refinery, ranging from coke, to boiler fuels, to refinery feedstocks.

Therefore, with SRC–I it will not be necessary to try to guess the market for boiler or transportation fuels several years ahead of time when the synthetic fuels plant is designed. Rather with SRC–I, it will be possible to make seasonal or marketplace product line adjustments just as is done in the refining industry of today.

It is pretty clear that this project will not be able to go forward under the Synthetic Fuels Corporation as currently constituted. Further legislative action will be necessary to effect the transfer that has been proposed by the administration. In light of this, I urge my colleagues to support the Senate committee and the House in providing $135 million for this project, which will allow the detailed design of this project to be completed.

Knowledge gained from such detailed design work and cost estimates can be applied to other projects, allowing for enhanced development of all synthetic fuels.

On the other hand, to kill this project now would be tantamount to tossing away 20 years of research and development.

It would signal a willingness to surrender yet another important technological area to foreign competition. At present, only the Germans and South Africans have commercial scale synthetic fuels technologies, but other countries, including the Soviet Union and Japan, have recently announced stepped-up synthetic fuels research programs.

And, to let this project die would cast serious doubt on our country's commitment to energy independence.

I do not pretend that this one demonstration project can solve this Nation's energy problems, but I do contend that it is an important part of the solution.

The products from SRC–I will be American products. The energy will come from America's most abundant resource—coal. We will be in control of the price of SRC–I. SRC–I products can help put a cap on foreign oil prices. And, by allowing the project to move forward, we can help put an end to the foreign domination of the energy marketplace.

The money we are talking about to fund this project is miniscule compared to the $100 billion a year we send overseas for oil and compared to the benefits we can expect from it.

Mr. President, I urge the Members of the Senate to take into account the study and the effort that has been made by the committee, by the chairman of the committee and the ranking minority member. They have considered this project and have made a determination that it is in the best interest of the country and that the expense to the Government is justified: If we are ever going to have self-sufficiency and meet our very elemental needs, our very basic needs, we have to get on with this problem of developing the necessary infrastructure for a synthetic fuels program. We cannot be too concerned about the economic viability at any one point in time, if the major problem is going to be supply, as I believe it is, rather than the cost of the energy in the future.

Mr. PROXMIRE. Mr. President, would my good friend from Kentucky yield?

Mr. HUDDLESTON. I yield.

Mr. PROXMIRE. The Senator from Kentucky, of course, is extremely knowledgeable on this matter, and has studied it for a long, long time. Senator FORD, as Governor, had a great deal to do with this project and has spent a great deal of time studying it. Senator HUDDLESTON is an expert on it.

I would like to ask the distinguished Senator, Senator HUDDLESTON, if he would enlighten me on one point. I thought he gave the impression that there was an option to provide more liquid fuel if that seemed to be the most promising and useful way to go rather than produce a product which is 51-percent solid or maybe even two-thirds solid. It that the Senator's point?

Mr. HUDDLESTON. That is correct.

Mr. PROXMIRE. As I understand the key to the product slate flexibility is what they call two-step liquefaction process. That involves the SRC process unit which yields mostly a molten solid and then an expanded bed catalytic hydrocracking unit which converts one-third to two-thirds of the molten solid into liquids and solids. The key to a higher percentage is the hydrocracker. However, as I understand it, the 60-ton-per-day pilot plant in operation at Wilsonville, Ala., only began break in runs on this type of unit in May. Therefore, we have no idea how that unit, the hydrocracker, will perform. It is critical to the assertion of the SRC–I, can the process yield a good percentage of liquids? It is still speculative whether or not we will be able to get greater than, say, 49-percent liquid in this process. Is that correct or not?

Mr. HUDDLESTON. It has been demonstrated at the pilot plant in Fort Lewis, Wash., for several years and is in limited use in commercial applications here and abroad. The SRC–I process builds on this experience to increase the product slate flexibility. It is a process that produces both liquid and solid.

Mr. PROXMIRE. Well, it has been demonstrated, but it only began break-in runs in May and we do not know how well that will work. It is still speculative as to whether the hydrocrocker will work as efficiently as the distinguished Senator indicated it might. We hope it will.

Mr. HUDDLESTON. We hope it will, and, as has been pointed out, it has in other applications, but not at this scale. All of this is speculative to some extent or we would not be here arguing about it now. We would be operating it.

Mr. PROXMIRE. Can I ask the Senator, how many years' money will be required to fund this project? Will ICRE keep coming back for more money? Is it something we can expect next year and the year after, for years to come?

Mr. HUDDLESTON. Our information is that the $135 million that is here will complete the engineering and design. At that point, the decision will have to be made as to whether we go to the Synfuels Corporation, which would take it out of the budget process, or whether or not there is sufficient private interest to carry in the private sector. I do not think we can say now what the future might hold.

Mr. PROXMIRE. I thank the Senator.

The PRESIDING OFFICER. The Senator from Kentucky.

Mr. FORD. I thank the Chair.

Mr. President, the distinguished Senator from New Hampshire, Senator RUDMAN, wanted to make some remarks in opposition to the amendment of Senator PROXMIRE and Senator NICKLES. I believe he had to leave the Chamber momentarily.

Mr. President, there have been very eloquent arguments both ways. I commend the chairman and the ranking minority member, Senator MCCLURE and Senator JOHNSTON, for their defense of the position of the committee and the information which both of them gave concerning entrance into this field. My colleague, Senator HUDDLESTON, is well versed and has long struggled in this field of work in an arena which will help to give this country energy independence.

My good friend, the distinguished Senator from Wisconsin, has called this a sweet deal or a loser.

Well, you cannot have both. There is no way to have both.

They say that one-tenth of the plant is all we need. Well, we have two pilot plants going now, and, yes, there are always experiments, there is always

moving on. That is why we have pilot plants and that is why we move to the demonstration to see that out in the real world, taking it out of the laboratory stage and going to the real world, we see if it works, and we hope that it does.

We are talking about the expense of the plant. There is not a private company in the country that can handle it alone. It is doubtful that there are several private companies that can go on their own on one plant and operate it; yes, perhaps three or four big oil companies.

This is the only solvent refined process left. We jerked the rug out from under Japan and Germany on SRC–II. We curtailed Baytown. We have done all these things to put down the ability of this country to have its own energy policy.

We are talking today about the problems in the Mideast. One of the problems with the Mideast is energy because we are so dependent on that area.

We talk about the $4.5 billion that this plant, roughly, will cost, but over a 5-year period. Those who are against it always raise the cost. It never fails when you try to defend that that you do the best you can with facts.

The facts are, as the distinguished Senator from Louisiana said, that the plant will cost $1.772 billion. The $4.574 billion that the opponents of this project talk about are grossly misrepresenting SBC–I's price tag for the Federal Government. The larger number considers the total gross cost of the project, including several years of operating expenses without giving any consideration to the billions of plant revenue, and I underscore billions.

The vast majority of the $4.5 billion will not come from Federal Government financing.

Let me repeat that: The vast majority of the financing of this plant will not come from Federal financing. That, I think, flies in the face of some of the criticism.

I think our estimates are just as good as CBO's, OMB's, or anybody else's, or Roger LeGassie's. Our estimates show that there will be a $400 million profit that the Government will make in this plant, if it works, and we certainly hope it works. You ought to want it to work.

The private partners are putting in large sums, given their size.

I want to say one other thing. This is a project that does not have a major oil company in it. It is trying to get along on its own. That may be one of the reasons this project is having a lot of trouble, because there is no major oil company involved. Sure, they are major companies compared to what? These are small companies compared to major oil companies.

Here is a State not asking for any Federal dollars but is putting up $66 million trying to find new sources of energy. The Commonwealth of Kentucky has committed $30 million in front money for this operation, and I believe the figure is over $5 million for the purchase of the land where this plant will be built.

When we look at the total contributions of the three partners, it will be, in my judgment, in excess of $150 million.

Then we have a contract that says at the end of the demonstration period, when the plant is up and operating, the Federal Government is not going to give it away. The Federal Government is not going to give it away. The private partners must pay the then—not today's, but the then—current economic value of the project to receive it from the Federal Government. There is a price tag on that of approximately $700 million.

And there are royalty payments. The SRC technology will go to the Federal Government until the Government has received its entire investment, including its research and development expenses, dating back to the early 1960's. It is going to be a retroactive payment.

Then, after all that is paid, royalties will be split 50–50 until the Federal Government has received 2½ times its investment. I can say to those who oppose this amendment, they will even have to agree that that is a better deal than most given—if it works. If it works. Therefore, Mr. President, the Government can make a profit on this project.

There is something else here that I think we ought to think about. I see everybody running upstairs and getting information and coming back down. I know whom they are getting it from. I know where the opponents are coming from. I am surprised at the support some of my conservative colleagues are giving them.

There are major defense implications to the failure—I am talking about major defense implications—to the failure to put an emphasis on developing synthetic fuels. In many ways, the SRC project is a defense project for this country. It can produce fuels to be used in our military equipment. Think about that: It can produce fuels to be used in our military equipment. Unlike other synthetic fuel plants, it can produce coke, which is getting into short supply and is used in production of aluminum used in our ships, our air weapons, and our land-based military equipment. So it can be used in defense and it can be said that it is a defense project.

Mr. President, we talk about going to the Synfuels Corporation. The way this administration is going, there will not be one left to go to. They have a little bit of money there now, with 64 applications for commercial operations. Some are still in the pilot stage with commercial implications. So where do we go? Send them to the Synfuels Corporation and you know they will not be funded.

Why do not taxpayers have a stake in the defense of this country? We pay for airplanes and ships, but if we do not have the fuel to run them, they are not going to be of much use to us. We are trying to store now in SPR, but how well are we doing? Not too well. I admit that this administration is doing better than we had anticipated and better than they had anticipated. But where are we going? We sent the synfuels bill to the House twice. How did it come back to us, finally? Defense Production Act. We are talking about the defense of this country.

We are slowly but surely closing every option we have in the synfuels for energy independence. We continue to cut it off and cut it off and cut it off.

Why, today, every time the OPEC countries raise the price of a barrel of oil $1, it costs this country $6 billion. They are getting ready to raise it $2, have already announced they are going to raise it $2. That is a $12 billion cost to the consumers of this country. So we are talking about $1.5 billion for this project while OPEC countries raise their price per barrel and cost us billions and billions more.

Mr. President, I sure would like to spend a little of that in this country to use our own resources, to develop our own energy for our needs instead of closing it off and saying, no, we do not want to take a chance. This country would not be here today if we had not taken a chance. We probably would not have won World War II if Roosevelt had not said, "We have to have synthetic rubber and do it in 12 months." He took private enterprise and Federal dollars and put them together and now we ride on synthetic rubber tires.

All we are saying now is, to be energy self-sufficient, we have private enterprise as the manager and a funder and the Federal Government as an overseer and a funder, and we want to start synthetic fuels.

Let me say, Mr. President, that big oil is not all foolish. They are not dumb. Conoco was not a fight over how much oil they had. Thirty billion dollars was developed by various interests in financing ability to buy Conoco. Think about what they had. Was it oil they had? No. It is the second largest owner of coal reserves in this country. So big oil is trying to push out little fellows who have a good idea, and have a good system, have been working on it for years, and, all of a sudden, it looks like it is going to be good and here comes big oil cutting them off at the knees. It is about time we said to the little fellows, "The Government will help you, also."

Now, Mr. President, we are talking about dollars, funding, and that is the only argument, the only argument that makes it better. The only argument is dollars and who is going to have to do it. We know the suggestion, go to the private market and do it. You and I know it is not going to happen.

So, Mr. President, I am disappointed in those who try to defeat a proposal that looks good and has been piloted to death in pilot projects, and keep closing all our options. One of these days we are going to look up and see, with 20–20 hindsight, that we should have done something about this.

Mr. RANDOLPH. Mr. President, will my colleague yield?

Mr. FORD. I am happy to yield to my colleague from West Virginia.

Mr. RANDOLPH. I hesitate to interrupt, but you speak of 20–20 hindsight; is that correct?

Mr. FORD. That is correct.

Mr. RANDOLPH. We in this country

are guilty, on the types of projects that are being considered, SRC–I today, of what I think is a tragedy in American life, Mr. President. That is, we act after the fact, not before the fact. We have always done this in matters which address sufficient supply of petroleum products or alternates to petroleum products in the United States of America. Does my colleague agree?

Mr. FORD. Yes, sir, Mr. President.

Mr. RANDOLPH. Mr. President, we act after the fact instead of before the fact, and we have had the opportunity over and over again to gird ourselves with the alternatives. Is that correct?

Mr. FORD. That is correct.

Mr. RANDOLPH. I speak of the alternatives with which to take care of the energy requirements of our economy. Although in a recessionary period at the present time, the economy of the United States, must continue to grow—in population, and in improving the mobility of people and products moving from factory, field, and mine.

To accomplish this the Congress must continue its work in developing legislation to produce alternative energy from coal. To achieve efficient development and production of synthetic fuels further improvements of coal-dependent technologies will be required: Government should participate in such efforts by assuring not only research, but development and demonstration funds are available for adequate comparison of expensive coal liquid and gas processes. Government should participate in such efforts by encouraging all competing energy market forces, not just a segment of the market, to pursue commercialization of new and improved technology. Recognizing these values, the solvent refined coal project should receive the Senate's full support.

These values were also incorporated in the Synthetic Liquid Fuels Act of 1944 signed by Franklin D. Roosevelt on April 5th of that year, authorizing the Secretary of the Interior, through the U.S. Bureau of Mines, to develop new technologies to produce methanol, ethanol, and other liquid fuels from coal, oil-shale and agricultural products.

In 1947, a memorandum circulated within the Interior Department which foresaw 5 years later a federally subsidized synthetic fuels industry able to produce 2 million barrels of oil—84 million gallons of gasoline—a day.

In 1949, the Bureau of Mines managed two synthetic fuel plants in Missouri which turned coal into an assortment of petroleum products including gasoline for vehicles and diesel fuel for railroad engines. The cost of such production, said the Government experts, was 3 to 4 cents higher per gallon than the same product made from crude oil. The New York Times reported that—

> The United States is on the threshold of a profound chemical revolution. The next ten years will see the rise of a massive new industry which will free us from dependence on foreign sources of oil.

So at that time the Federal Government conducted a substantial synfuel program which the Truman administration considered to be nearly commercially feasible.

In 1955, a decision was made by the administration to eliminate all Government involvement in development of coal gasification, oil shale, and other alternative energy projects. Then President Dwight Eisenhower ordered the program ended on the assumption that, if needed, private industry would anticipate and correctly respond to insure that the Nation had adequate fuel supplies. The events during the past decade show this was not to be the case. If we had continued the Government support for synthetic fuels initiated in the early forties, we would have domestic commercial production of the fuels today.

This realization led in 1979 to a Department of Energy budget of $600 million to develop synthetic fossil fuels and finally to the creation and passage of the Energy Security Act of 1980 (Public Law 96–294) under the Carter administration which authorized $20 billion in subsidies and loan guarantees during the next 4 years to companies producing synfuels. An additional $68 billion was to be available through 1992. Private industry indicated a willingness to invest billions more, expand their research and development programs, and plan scores of huge projects to liquefy and gasify coal.

The Reagan administration has now apparently retreated from that $88 billion program like their predecessors in the fifties, initiating major problems for the fledgling synfuels industry. The likely result will be a smaller synfuels industry with fewer companies and less Federal money involved.

If we do nothing to encourage alternative fuels production, and the threat of disruption of oil imports again becomes a reality, the administration should be held responsible for slowing development of alternate forms of energy.

Commitment to a vital synthetic fuels industry will be demonstrated only when the administration actively becomes involved in insuring that the Synthetic Fuels Corporation carries out its mandate. Commitment will be demonstrated when top White House energy advisers, the Chairman of the Synthetic Fuels Corporation, and the Secretaries of Defense and Energy publicly state and act to create a positive political, financial, and environmental climate for synthetic fuels development.

Commitment will be demonstrated when those involved with Federal budget activities surrounding alternative fuels admit that the funding provisions of the Energy Security Act of 1980 will for the most part take the form of Federal loan and price guarantees. In all likelihood this type of assistance will never result in actual Federal outlay, but will give the proper incentives for private development. We must not take a step backward again in our national commitment to synthetic fuels. The money spent on these efforts are investments in our future.

They are, in fact, of equal importance and must interlock with our defense spending for national security purposes. If synfuel development had been permitted to reach its commercial potential in the fifties, much of the international tension being experienced today in the Mideast would have been negated.

Alternative fuel sources must be developed because supply disruptions are always possible. Methanol as an automobile fuel should be encouraged to offset the enormous energy requirements for processing synthetic crude to the stage where it can be refined into gasoline or diesel fuel. Promotion of this fuel source would also significantly reduce the demand for conventional petroleum-based fuel.

Reserves of conventionally produced oil and natural gas will not last forever. Billions of dollars must be invested in developing tar sands, shale oil, coal, alcohol, and hydrogen.

The risk of successful synthetic fuels projects must be taken many times by government and private industry who will together, as a nation, reap the economic benefit of such a risk. The legislative and executive branches of our Government must set specific, mandatory long-range synthetic fuel objectives and then stick by them. To make the judgment not to continue with alternative fuels in this decade would be to see, once again, history adversely repeat itself.

It matters not what State is involved. I should like to speak for West Virginia always. I do not do that today. Senator FORD speaks for the Commonwealth of Kentucky, as he should and as does his colleague Senator HUDDLESTON. But they and others forget for the moment in this debate, the sectionalism of the country, the regionalism of the country. By and large, what we do for one specific spot, if what is being done there is done for America, will benefit every part of this country.

The Senators from Oklahoma, Wisconsin, and others say, "Let's go back to doing business as usual." You cannot go back to doing business as usual in the United States of America, from the standpoint of the alternatives to the fuel supplies from unstable and, in most instances, unfriendly countries.

Here, within America, once again we are challenged with a vote in the Senate to be realistic, to be practical—in a sense, if you want to call it that, to be visionary.

I thank the Senator for yielding.

Mr. FORD. Mr. President, I say to the distinguished Senator from West Virginia that he is correct; that we find that we are beginning to close our options, because at this particular time we are dependent on others and cannot do it for ourselves. That is not the way this country was built. We are dependent on others. We do not have a free oil market. Do Senators know why? We do not set the price. Therefore, we do not have a free market. Others are setting it.

Here we are debating something that those who are attempting to kill this legislation said they would provide since back in the 1940's. But have they? No.

So the extremes on both sides, right to left, are coming down now to say, "No, you can't do it and should not do it"—the extremes on both sides.

Mr. President, I hope that my colleagues, sincere as they are, can understand that this is a promising program that can lead us into the field of energy self-sufficiency, a field that can be used for the defense of this country, to be used in the machinery that we may need at some point. We hope and pray we do not.

Mr. PROXMIRE. Mr. President, will the Senator from Kentucky yield for a couple of questions?

Mr. FORD. A couple.

Mr. PROXMIRE. I ask the distinguished Senator about the possibility of future funding, and I am referring to the design completion. The reason I ask that is that the data I have here indicate that much of the design will not be finished until fiscal year 1983.

For example, Solvent Refined Coal unit, SRC, early fiscal year 1983.

Mr. FORD. Is that SRC–I or SRC–II?

Mr. PROXMIRE. SRC–I.

Gas systems, fiscal year 1982, early fiscal year 1983. Cryogenic systems, fiscal year 1983. Coke-liquids, fiscal year 1982, early fiscal year 1983. Utilities and offsite, fiscal year 1983.

Much of these processes, as the Senator can see, are not expected to be finished until the next fiscal year at the earliest. My question is, will the $135 million take care of all of that, or will it be necessary for the Senate to provide more next year?

Mr. FORD. The Senator should understand that it is up to the will of Congress if we go further and that funding that is necessary now will take us to the point, as I understand it, where if we are committed then, we will have a schedule; and the $135 million will give us the ability to make the designs, the necessary commitments, so that a schedule of construction can be formulated. We are talking about $135 million, and once that commitment is made, as the funds are needed, it will have to be spent.

Let me say this to the Senator: I agree that an effort should be made—and I believe there is an effort to be made—by these two private operators to get as many outside partners as they can. I think there has been testimony—and I am sure the Senator from Wisconsin is aware of it—that Lehman Bros. is attempting to put the package together, and they are doing the best they can to get the job done. As long as we keep them on a yo-yo here, as we have been for some time, it is very difficult for them to get anybody to say yes or no to them out there, because the funding is at the point that I doubt seriously if any group of companies in this country, unless they turn everything inward, into one project, can get anything done.

Mr. PROXMIRE. The reason I asked the question is that there is a very disturbing article from inside DOE dated August 7, after the House passed the appropriation, which says:

> With FY-82 funding of $135 million all but certain for the SRC-I pilot plant, project sponsors are now turning their attention toward FY–83—and they are not at all enamored with the prospects. What those officials who run the solvent-refined coal solids demonstration project (SRC–I) see is a funding battle as tough, and most likely tougher, than the one waged to secure FY–82 money. Said one official close to the project, "There is a realization that the odds are against us being funded [in FY–83] in the current environment. The chances are that we won't be funded."
>
> The official went on to emphasize, however, that just because project officials realize the huge odds against them does not mean they don't intend to push for FY-83 money. Commented the official, "The odds were against us this year, too. I hate like hell for people to think we are going to quit. We intend to push for more funds."
>
> The official added that the funding struggle could have a beneficial effect on the management of the project. The funding problems, said the project official, have "put the fear of God" in those who manage the project to manage it right and keep the costs on budget.

That is why I am concerned about that: I wonder whether we should consider that even if we go ahead with this project and defeat the amendment that the Senator from Oklahoma and I have offered, we would be faced with further appropriations next year, and we might lose the $135 million we put in.

Mr. FORD. Not necessarily. The Senator is aware that under Gramm-Latta, in the reconciliation, the funding is over, and you have to come back for new authorizations if it is not spent in 1982.

Mr. PROXMIRE. How does it apply?

Mr. FORD. Gramm-Latta sets the end of funding. SRC–I is authorized only through fiscal 1982, and that is under the Gramm-Latta reconciliation.

In fiscal 1982 it has to be reauthorized again, under Gramm-Latta, and it has to go through two committees.

Mr. PROXMIRE. The problem I have is that if it is not authorized further, would the dollars we had spent on SRC–I be worth anything, without going for more appropriations?

Mr. FORD. I think it is. There are no additional dollars. You are just asking to kill the project. The deferral did not kill the $135 million. If the Senator recalls, they are going to put it someplace else.

Mr. PROXMIRE. One of the reasons I am offering this amendment is my concern with the fact that the company itself is putting in a very modest amount compared to what the Federal Government is committing. No one has rebutted this argument.

I say especially because I have an article here from Newman, Ky., from the Evansville Courier Journal which quotes a Mr. Peacock, who is the vice president of ICRC as making the following statement:

> Peacock said he suggested increasing the private investment—from $90 million to $180 million—at a recent board meeting. "They laughed at me," he recalled.
>
> Undaunted, Peacock said even a more modest 50 percent hike probably would send a positive signal to the Reaganites.
>
> "It would do two things," he explained. "It would show the level of our commitment, and it would be the free market responding to changing conditions."

If that kind of action should be taken by the company I think it would produce a much better feeling on the part of Members of Congress that the company has faith in this project, that they are willing to put more up-front money into it.

Mr. FORD. I just told the Senator I thought that the two participants are in the process now of making every effort to find additional support and, of course, if we do not give them an opportunity it will not make any difference anyhow.

I can get the actual information as to who attempted to put the package together for them and who is trying to make this sale as it relates to the project.

Mr. PROXMIRE. The other point I wish to make, concerns a point the Senator from Kentucky made that these are not very large companies, not like Exxon. That is true. They are also not mom and pop industries.

Wheelabrator-Frye, a New Hampshire-based outfit, but operating also in Kentucky, is ranked 255th in the 1980 Fortune 500 list of companies with total assets of $1.9 billion. That would be very big in Wisconsin.

Air Products and Chemicals was ranked 242d with assets of $1.75 billion.

Each of those companies is reluctant to spend more than $45 million on SRC.

Wheelabrator-Frye spent $646 million to acquire Pullman-Kellogg in 1980. In fact, in commenting on the high acquisition cost the vice president of Wheelabrator-Frye was quoted as saying:

> When the stakes are that high you do not want to lose everything by trying to cheap it out. You have to let the meter run.

If the SRC–I is so important to ICRC, it is hard to understand why they have turned the meter off in this case.

Furthermore, the stated $90 million contribution of ICRC is a paper commitment. The partners comprising ICRC received $7 million cash credit for work contracted out to affiliates.

Air Products and Chemicals received $2 million cash for its data and information gained in the previous liquefaction research.

ICRC received cash credits acquiring land for the site.

ICRC was not required to make cash payments until it received full credit for costs.

So ICRC contributed no cash. These companies contributed no cash to SRC–I project to date.

That was documented in a letter that I wrote and submitted to the Department of Energy.

Mr. FORD. The Senator was asking me a question? I am sorry.

Mr. PROXMIRE. I was making a statement.

I say if the distinguished Senator from Kentucky wishes to make a comment, fine.

Mr. FORD. I do not know. I think the Senator might say that before the operation of the demonstration plant begins Wheelabrator-Frye will have contributed equivalent of 80 percent of its 1980 earnings and Air Products and Chemicals will have contributed 50 percent of its earnings. I think that is digging down pretty deep. I doubt seriously one would find any other company that would do that. Even though the Senator claims they are large, they are small in what is needed here.

But when they commit 80 percent of their profits and 50 percent of their profits, that is pretty good.

Mr. PROXMIRE. That is 80 percent and 50 percent of their profits for 1 year.

When we are talking about an acquisition and enormous venture of this kind that would involve billions of dollars and would certainly be worth as much as Pullman-Kellogg for which they spent $646 million, that $45 million is not quite as big.

Mr. FORD. In answer to the Senator's question—he talks about how big they are, how many dollars they have, why can they not do it themselves—the Senator from Wisconsin for one should know very well there is not enough money in those two companies to make it work and they are going to have to need help from the Federal Government.

Mr. PROXMIRE. I think the Senator is right, and I agree with that. I think they should do a little more.

Mr. FORD. Second, I might add that I hope they can. I hope they can find some more money.

We both agreed on one thing. It is beyond the ability of these two companies to make it work and the Senator agreed with me. I agree with him that they should try to find some additional money. But the thing that we are losing sight of is this is the last solvent refined project on the market, and we are losing our option and the Senator wants us to close our option. I wish he would not do that.

This country needs these in the worst kind of way. We talk about the ability to convert.

Mr. PROXMIRE. That is a very legitimate point. I think whether or not this kind of project will work is more convincing if the private firm that has the expertise and knowledge and is going to benefit from it is willing to take the risk.

Let me make one other point. The distinguished Senator from Kentucky indicated that this was a pretty good deal for the Federal Government because the ICRC will share royalties from the SRC–I process with the Government until the Government receives two and a half times its investment.

The answer to that is this sharing only occurs if ICRC decides to buy the plant from the Government. That decision is totally up to the private firm. If the process does not work, the Government is left with a $4.5 billion plant that does not work.

Mr. FORD. May I correct the Senator a moment?

Mr. PROXMIRE. Yes.

Mr. FORD. There is a difference between the Senator's statement of fact of money and my statement of fact. If they sold their product during the demonstration period, that will reduce it to $1.77 billion.

So I hope the Senator will quit referring to $4.5 billion plant when they will, in fact, have better than $2 billion in sales by contract now.

Mr. PROXMIRE. In other words, they will not have those sales unless they can develop a product that they can sell. That is highly questionable.

Mr. FORD. Wait a minute, though. The operation of the plant is included in the Senator's $4.5 billion over a 5-year period. So we have to deduct the operation of that plant off the figure the Senator is using. So will the Senator yield me that much?

Mr. PROXMIRE. The operation of the plant?

Mr. FORD. If it does not work then they do not operate it.

Mr. PROXMIRE. Yes. But we will not know how much it is going to work for sure until they have operated it and tried to sell it.

Mr. FORD. If it does work then we get the money back. If it does not work we cut it off and we cannot have the 5 years of operational cost of the plant. So yield just a little bit to me as to the cost of the plant.

Mr. PROXMIRE. The Senator may be correct. We may cut our losses some time before that 1985 period, but still the risk and the money the Federal Government has to put in is $4.5 billion. They may be able to sell it. As I pointed out the revenues are highly questionable and the economics are very suspect. That they would reduce it to $1.78 billion is in my judgment very unlikely. Perhaps it could be reduced only to $3 billion or some other lesser amount.

Mr. FORD. My judgment says they will do it. Someone is going to have to agree or disagree with us.

Mr. PROXMIRE. Let me say that if ICRC decides to buy out the plant, if the process works out, this pay back will only materialize if the process is highly successful and is used by other companies.

Furthermore, given that the Government will bear 97 percent of the total cost of this speculative venture it is incredible that it will share any royalties with ICRC at all, much less consider its share a pay back.

If the Senator from Kentucky or the Senator from Wisconsin were making an investment and putting in 97 percent and the other party putting in 3 percent and they say now we will share 50–50 with you, we would laugh at them. "If you share with us, we want 97 percent of it."

The taxpayers are putting in 97 percent. Why should they not get 97 percent of the royalties?

Mr. FORD. I would not invest in battleships or airplanes for myself either.

So the thing we need to look at here is this is a possibility and the ability of the people to have an opportunity to find out. If you are going to make an investment you are going to make an investment. Then that is one thing, and the Senator has the ability to make a judgment. I have an ability to make a judgment, and I think we are on the right track with 9 years of work on this.

Mr. NICKLES. Mr. President, will the Senator from Kentucky yield?

Mr. FORD. I yield the floor.

The PRESIDING OFFICER (Mr. KASTEN). The Senator from Oklahoma is recognized.

Mr. NICKLES. Mr. President, I wish to clarify one point, but first I thank the Senator from Kentucky for pointing out a few things that I have been waiting to hear and I think other Senators have also.

He stated that the $4.5 billion is the gross revenue and the total amount of cost including the operational expense of the plant for over the 5 years in addition to the construction cost.

So if we subtract out the $1.78 billion of construction cost we come up with operating cost for the first 5 years of $2.8 billion, and I am trying to figure out, and I ask the Senator from Kentucky if we can figure out, that $2.8 billion in operational cost over the 5 years, given the production—100-percent production—of 20,000 barrels per day. So if we are able to multiply that out, that 20,000 barrels per day, given the 100-percent operational capacity, no down times, no shutdowns, no interruptions for any reason whatsoever, we come out that that plant would produce 36 million barrels of oil in that 5-year period of time.

Mr. JOHNSTON. Mr. President, will the Senator yield at that point?

Mr. NICKLES. I yield.

Mr. JOHNSTON. I think perhaps the Senator misunderstood. The operational cost is not $2.5 billion. What we have here is that the net cost to the Government is $1.78 billion. That is not the construction cost. That is the net cost. There are built-in large percentages for contingencies, such as down time. As a matter of fact. I think there are 20-percent contingency costs in this $4.2 billion total cost.

The 5-year operating cost is built in here so that the point I am making is the $1.78 billion is the net cost to the Government and not the construction costs, and the rest being operation costs.

Mr. NICKLES. I appreciate the Senator's comments, but I think what we are going to do is to go to an even greater increase. I have calculated if they were successful in production in that 5-year period of time they would have to produce 36 million barrels equivalent of energy, and to do that if you separate—and I think everybody agrees—the total cost of all the expenses, which would be $4.5 billion in that period of time, and subtract out the $1.7 billion of plant costs, that then we are coming up with $2.8 billion, and if you divide that by the number of barrels of total production we are talking about a cost of $76 per barrel, and that is what we are talking about.

I seriously question whether or not the value of this product to be produced from this plant will be able to sell at $76 per barrel to break even during that 5-year period of time, and if we are going to start paying back the taxpayers for their investment mentioned earlier, it is going to have to be more valuable than $76 per barrel.

I really seriously doubt that any product that is going to be derived from this plant will be of a value over 2 and one-half times what the market value of crude oil is today.

It was originally mentioned that the purpose of this was to help break our dependency on OPEC. If OPEC sees that it costs us, using a synfuels process, if it costs the Federal Government to develop this fuel, $76 a barrel, it is going to give them a great incentive to increase their price up to that level, and so instead of helping to break the chains of OPEC, what we will be doing is showing them the ceiling to which they can raise their prices, and I submit

that, I think that, is exactly what a lot of OPEC people would love to see.

So I think this idea, if we develop this plant, and if my figures are correct—and if they are not correct I would very much appreciate the Senator from Louisiana or the Senator from Kentucky showing me figures that differ—but if this product is going to be produced in SRC–I, and has to be sold at or above $76 per barrel or more before it can break even, then I think that further substantiates that the project is a boondoggle and certainly not one that the Federal Government or the taxpayers of this country should subsidize and finance.

Mr. JOHNSTON. Mr. President, just very briefly, this is the first module, a 20,000 barrel a day, in effect, beginning of a 100,000-barrel-a-day plant. About 40 to 50 percent of the total cost of the 100,000 barrels per day is borne by this first module. So I do not frankly expect the first module to break even is my own expectation. Perhaps it could, but the chances are it will not.

But if it is proven up, however, then the leap forward to the 100,000 barrels will be much cheaper because all of the land, all the coal-handling facilities are already bought, all of your technology is then proved up, all of your demonstration-type gages and equipment to test the validity of the commercial demonstration on the first module will already have been paid for and will not need to be replicated in the second part. There is where the big payoff comes, not only in the total 100,000-barrel-a-day capacity eventually to be built on this site but, more importantly, in proving up the viability, the economic viability, and the technological viability of a process vital to the liquefaction and making of the solvent refined coal.

Mr. NICKLES. Senator, I appreciate the comment. If I might ask you an additional question: If we develop this one-fifth of the total grant project, and given all the plant expenses, given the land, given all the fixed expenses, yet they determine through the production capabilities of this plant that it still costs—given the plant is free, zero cost of the plant, that the additional cost of one barrel of refined solvent comes out to be $76, do you think that any company—I think this would doom the additional four units.

I do not see how it would be economically feasible, marketable, in any way, shape, or form, and I think it would just end the project right there at $76, given a zero cost for the plant and equipment, given no replacement cost, no depreciation or anything, not figuring any of those costs in, just the marginal production cost of an additional barrel of fuel if it comes out to $76 per barrel, and I seriously doubt that the marketplace or the Federal Government would want to duplicate that type of disaster.

Mr. JOHNSTON. I think the Senator is correct in saying that if all this process can do is to produce and demonstrate fuel at a price of $76 per barrel in today's dollars, there is no question that it is not economically viable. We do not believe that will be the case. We believe in 1981 dollars that we will be able to do much, much better than that.

As a matter of fact, we believe it will be economically viable, otherwise we would not be building the plant. But this is the first step. You have to take a first step that is not economically viable in order for the process to become viable.

Mr. McCLURE addressed the Chair.

Mr. FORD. Mr. President, will the Senator yield for just one point? The $76 cost is 1988. That is DOE's estimate of the cost in 1988, taking into consideration the inflationary track through, I say to the Senator from Oklahoma.

Mr. McCLURE. Mr. President, it is the hope of the managers of the bill that we will be able to move this to the point of being able to get to final passage around noon tomorrow.

We have identified three amendments that will be offered tomorrow morning upon which rollcalls will likely be required, and it is our hope to be able to complete the remainder of the amendments today and then enter into a unanimous-consent agreement that would allow us to consider those three amendments and vote on the pending amendment sometime tomorrow morning.

But, pending that time, it is my hope that we can dispose of a couple of other amendments of which we are aware, one by the Senator from Mississippi (Mr. COCHRAN) and the other by the Senator from Kansas (Mr. DOLE). For that reason I ask unanimous consent that we temporarily lay aside the pending amendment and move to the first amendment, the amendment of the Senator from Mississippi and, second, to the amendment of the Senator from Kansas, at which time we will revert to this or whatever other unanimous-consent request might then be agreed upon.

The PRESIDING OFFICER. Is there objection?

Mr. PROXMIRE. Mr. President, will the Senator yield until I get the yeas and nays on my amendment? Mr. President, I ask for the yeas and nays on the pending amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The Senator from Idaho.

Mr. McCLURE. I renew my unanimous-consent request.

Mr. JOHNSTON. Mr. President, reserving the right to object—and I shall not object—I believe we have essentially wound up debate on this amendment. I ask the distinguished Senator from Wisconsin and the Senator from Oklahoma as well as the Senators from Kentucky so that if that is correct at the appropriate time we will be prepared to go along with simply setting a time for the vote tomorrow and not have any more debate in order on this amendment.

Mr. McCLURE. The Senator from Louisiana is correct. I think the principals who have been involved in the debate today on this amendment are all here and apparently are all in agreement. That would be our expectation.

The PRESIDING OFFICER. Without objection, it is so ordered.

● Mr. BENTSEN. Mr. President, it was only a few years ago that all the so-called energy experts were predicting two trend lines that would never change: increasing energy dependence for America at ever higher prices.

Well the experts were wrong. During the past 4 years we have cut our imports of foreign oil by about 40 percent—and OPEC is feeling the pinch. There is substantial downward pressure on prices.

There are two critical elements in our decreasing energy imports. A successful effort at conservation is obviously of paramount importance. We are driving more fuel efficient cars, turning down thermostats, insulating our homes. After decades of counterproductive energy policy, this Nation has also—at long last—realized the importance of incentives for domestic production. Along with a tide of deregulation has come record numbers of rigs drilling for oil and gas in this country; the rig count is up by more than 1,200 from last year.

Now that they can finally charge a fair market price for their product, America's energy producers are demonstrating a willingness to accept the increasingly expensive risks involved in energy exploration. And those risks are paying off in increased domestic production. People who maintained for years that America had been squeezed dry, that there was no more energy to be found domestically, are beginning to take another look at America's energy potential.

So I think we can all agree, Mr. President, that this country has made enormous and significant strides toward greater energy independence through conservation and new incentives for production.

There is, however, one area in which we have yet to live up to our potential, and that is the development of alternative sources of energy at competitive prices. We are still waiting for that dramatic technological breakthrough that will point America in the direction of new energy sources for the 21st century.

In looking to the future, it is important to understand that we are energy rich; our potential is virtually unlimited. America is the Saudi Arabia of the world when it comes to coal. We have enough coal to provide our energy requirements for hundreds of years.

In the period right after World War II we relied on coal for almost one half of our energy needs. Today, despite the fact that coal accounts for 90 percent of our fossil fuel reserves, we use it to meet less than one-fifth of our national requirements.

There are reasons for the declining use of coal, and many are well known. Coal is bulky and expensive to transport from mine to market. Its increased use raises important environmental questions. We have seen that strip mining can leave cruel scars on the landscape.

It seems to me Mr. President, that one of our most urgent national priorities should be an effort to determine how we can take an abundant resource—like coal—and find acceptable ways to use it for energy independence. The question, Mr. President, is: How can we make better use of our energy assets?

And one promising answer to that question is being pursued in Newman, Ky., where a solvent refined coal project will soon become the Nation's first demonstration of two-stage direct liquefaction technology.

The SRC–I project is a result of Federal research programs that began back in 1962; a process that has advanced from the laboratory to pilot plant testing facilities.

We are talking about a process that yields one-third again as much energy per ton of coal as other coal conversion technologies. We are looking at new technology with vast promise for greater energy independence. One of the more attractive aspects of the SRC–I process is that it converts high sulfur coal in an environmentally safe manner.

The SRC–I project in Kentucky is important not just for that State or that region, but for all America. It is an example of how the public and private sectors of our economy can work together to achieve important national objectives.

Congress first authorized the SRC–I 4 years ago in order to demonstrate the technology necessary to convert 6,000 tons per day of high sulfur bituminous coal into 20,000 barrels of energy products. The demonstration project alone could save the United States about $250 million a year in imported oil. But in the long run the technology represented at the Newman facility holds out the prospect of substantially greater energy independence.

Mr. President, I think this is an investment well worth pursuing. We have seen what appropriate incentives can do for energy production in America, and I am confident we will soon see similar results in the area of alternative energy sources.

The amendment before the Senate would virtually end Federal support for this important project, and I hope it will be defeated.●

UP AMENDMENT NO. 530

(Purpose: To add certain funds to the Fish and Wildlife Service for the National Wildlife Refuge Fund)

Mr. COCHRAN. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report the amendment.

The legislative clerk read as follows:

The Senator from Mississippi (Mr. COCHRAN) proposes an unprinted amendment numbered 530.

Mr. COCHRAN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 10, after line 18, add the following new category:

"NATIONAL WILDLIFE REFUGE FUND

"For expenses necessary to implement the Act of October 17, 1978 (16 U.S.C. 715s), $7,000,000.".

Mr. COCHRAN. Mr. President, the amendment I have sent to the desk provides for adding $7 million to an account in the Fish and Wildlife Service for payments in lieu of taxes to local governments for tax-exempt land in wildlife refuges in their jurisdictions. In past years the Congress has provided a direct appropriation whenever national wildlife refuge revenues have not been sufficient to compensate local governments for the burden of tax-exempt Federal lands within their taxing area.

This year, all of the funds for payments in lieu of taxes were put in the BLM account in the Interior appropriations bill. There was an expectation that legislation which would have consolidated different payments in lieu of taxes accounts would be adopted by the Congress. But there has been no action on that legislation.

Moreover, it is clear that unless the Congress acts now in this legislation to provide this money there will be a shortfall in the Fish and Wildlife Service account that provides payment in lieu of taxes in the amount of $7 million. The total amount of money needed, based on current assessments of land values, is $11.1 million. But there will be revenues from these refuge lands of approximately $4.1 million, leaving the $7 million balance which this legislation seeks to provide.

It is my understanding that a balance of approximately $1.8 million left over from last year's appropriation has lapsed and is not available for expenditure.

If this amendment is not adopted, 700 counties, located in all 50 States, will be denied payments in lieu of taxes for wildlife lands in their jurisdictions.

While the overall amount of money in the amendment may not seem like a large amount compared to the total revenues of local governments, the amounts are very significant. Moreover, most fish and wildlife lands were formally on the tax rolls, making those counties heavily dependent upon these payments. In my judgment, Mr. President, it would be unfair, now, to stop making the payments to counties which have relied upon them in the past and which under the law have a right to expect payments.

There has been strong bipartisan support in the Senate for payments in lieu of taxes to local jurisdictions which have Federal lands in their jurisdictions. I urge my colleagues to support this amendment which is to important to many local governments.

Mr. President, I ask unanimous consent that the distinguished Senator from Arkansas, Mr. PRYOR, and the distinguished Senator from Georgia, Mr. NUNN, be added as cosponsors to this amendment.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. McCLURE. Mr. President, I think the Senator from Mississippi has pointed to a problem that was in danger of falling between the cracks, because there was indeed the expectation that the payment in lieu of taxes legislation would be modified and that the moneys that were being paid to the refuges would be merged into that legislation. With the failure to adopt that legislation, there was no funding because we assumed that the funding would all be in one sum.

With the failure to get that legislation passed and our failure to include money separately under this separate account, I think it is wise that the Senator has brought this to our attention.

It would be my intention to ask for a rollcall vote on the passage of this amendment so that the Senate support for this program may be amply demonstrated as we take this matter to conference. I do not have an objection to the amendment. However, it would be my intention to ask for the rollcall for that reason.

Mr. JOHNSTON addressed the Chair.

The PRESIDING OFFICER. The Senator from Louisiana.

Mr. JOHNSTON. Mr. President, we have no objection to the amendment. If the distinguished chairman thinks a rollcall is necessary, we will go along with that.

Mr. McCLURE. Mr. President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. COCHRAN. Mr. President, I wish to thank the distinguished chairman of the subcommittee for his remarks and for his support of the amendment and likewise the distinguished Senator from Louisiana, Mr. JOHNSTON, for his support.

Mr. PRYOR. Mr. President, I wish to add my support to Senator COCHRAN'S amendment to the Interior Department appropriations bill, H.R. 4035, and to explain my reasons for this position.

The amendment would add $7 million to meet the entitlements due to counties under the revenue sharing programs of the Fish and Wildlife Service. These are, in effect, payments in lieu of taxes, affecting about 700 units of local government.

In the past, the Federal Government has made payments to counties for Federal lands not subject to real estate tax. These have been made through several different programs, under various acts, and related to lands under the jurisdiction of various bureaus in the Department of the Interior and the Department of Agriculture.

Legislation has been introduced to bring these programs together and make payments uniform, but until the bill has passed, lands administered by Fish and Wildlife Service lag behind those administered by the Bureau of Land Management and U.S. Forest Service. Since there has been no action on this legislation, counties in all States will lose funds unless we add to the land management funds into the National Wildlife Refuge Fund.

I urge passage of this amendment, Mr. President. Many of us—including the Fish and Wildlife Service—are gravely concerned about future implications for the land acquisition and wetlands preservation programs if we continue to underfund paybacks to counties for losses of tax revenues. Certainly no county or State will be willing to support preservation efforts if substantial losses of tax revenues are the results. This amendment, in my opinion, will go a long way toward righting an obvious wrong.

Mr. McCLURE. Mr. President, I think we are prepared to vote it.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Mississippi (Mr. COCHRAN). The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Texas (Mr. BENTSEN), the Senator from Delaware (Mr. BIDEN), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from Ohio (Mr. METZENBAUM), the Senator from Maine (Mr. MITCHELL), the Senator from Mississippi (Mr. STENNIS), the Senator from Massachusetts (Mr. TSONGAS), and the Senator from Nebraska (Mr. ZORINSKY) are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 89, nays 1, as follows:

[Rollcall Vote No. 331 Leg.]

YEAS—89

Abdnor	Exon	McClure
Andrews	Ford	Melcher
Armstrong	Garn	Moynihan
Baker	Glenn	Murkowski
Baucus	Goldwater	Nickles
Boren	Gorton	Nunn
Boschwitz	Grassley	Packwood

East	Mattingly	Williams

NAYS—1

Proxmire

NOT VOTING—10

Bentsen	Long	Tsongas
Biden	Metzenbaum	Zorinsky
Hollings	Mitchell	
Inouye	Stennis	

So Mr. COCHRAN's amendment (UP No. 530) was agreed to.

Mr. COCHRAN. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Senate will be in order.

Mr. COCHRAN. Mr. President, I ask unanimous consent that the name of the Senator from Minnesota (Mr. DURENBERGER) be added as a cosponsor of the amendment just agreed to.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. Mr. President, I am about to propose a unanimous-consent request, and I hope Members will listen.

Under the previous order, the Senator from Kansas is to be recognized to offer an amendment. I now ask unanimous consent that the time on that amendment be limited to 20 minutes, to be equally divided.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object—I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SCHEDULE

Mr. ROBERT C. BYRD. Mr. President, will the distinguished majority leader indicate what the program is for the remainder of the day?

Mr. BAKER. I thank the minority leader.

Mr. President, I expect that there will be a rollcall vote on the next amendment. That will be the last rollcall vote I anticipate today.

It is the intention of the leadership to ask the Senate to convene in the morning prior to 10 o'clock.

It is my hope that a unanimous-consent agreement can be entered into this afternoon that will provide for the orderly disposition of the remaining amendments and final passage of this appropriation bill some time during the day tomorrow.

After the disposition of this bill, it is the intention of the leadership either to proceed to another appropriation bill, as yet not determined, or to other matters that are on the calendar and available.

Wednesday, of course, is the day set aside for debate on the resolution of disapproval in respect to the AWACS sale.

After that, it is anticipated that the Senate will return to other appropriation bills, and I expect to have a further announcement to make on that in the next day or so.

Mr. ROBERT C. BYRD. I thank the distinguished majority leader.

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1982

The Senate continued with the consideration of H.R. 4035.

Mr. SARBANES. Mr. President, will the majority leader indicate what time tomorrow he might expect the rollcall votes to commence?

Mr BAKER. If I may yield to the distinguished manager of the bill, who has been attempting to enter into a unanimous-consent agreement on the several amendments proposed, he can answer more fully than I can.

Mr. McCLURE. It appears that when we get back on this bill at 10 o'clock tomorrow morning, as it is my hope, and if the amendments we have identified can be under the time limits which so far have been identified to us, we will expect to have the first rollcall vote about 10:40.

Mr. BAKER. I would not expect to ask the Senate to remain in session except for routine business after the disposition of the next pending amendment. So the next rollcall vote will be the last rollcall vote tonight.

The PRESIDING OFFICER. The Senate will be in order.

The Senator from Kansas is recognized.

UP AMENDMENT NO. 531

Mr. DOLE. Mr. President, I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) proposes an unprinted amendment numbered 531.

Mr. DOLE. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 42, line 2, before the period insert the following:

"*Provided further*, That no funds appropriated by this or any other Act may be used to continue, administer, enforce or by adjudication to impose upon any State, instrumentality thereof, or person (including any public utility as defined by Section 210 of the National Energy Conservation Policy Act) any obligation or any requirement established under Part I of title II of the National Energy Conservation Policy Act, as amended by Subtitle B of title V of the Energy Security Act, and under title VII of the National Energy Conservation Policy Act, as added by Subtitle D of title V of the Energy Security Act. This limitation does not apply to any funds used to revoke any existing regulations under these acts. The $7,000,000 deferred from FY 81 to FY 82 for the Residential Conservation Service Program by the Supplemental Appropriations and Rescission Act, 1981, shall be used for the Energy Policy and Conservation Grants Program, under Part D of title III of the Energy Policy and Conservation Act relating to State Energy Conservation programs, or under Part B of title IV of the Energy Conservation and Production Act relating to State Energy Conservation plans in addition to any appropriations otherwise made available for that program.

Mr. DOLE. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. DOLE. Mr. President, I offer an amendment to transfer appropriations within the energy conservation function for the Department of Energy. My proposal would eliminate funding for the residential conservation service and transfer the $7 million recommended by the committee to the energy policy and conservation grants program.

Mr. President, I should like to say at the outset that I applaud the efforts of the distinguished Senator from Oregon, chairman of the Appropriations Committee, and the distinguished Senator from Idaho, chairman of the Interior Subcommittee, for their efforts in bringing to the floor legislation which generally does a superb job of allocating our scarce Federal resources.

However, the Senator from Kansas is concerned that this bill will continue an ill-advised and burdensome Federal regulatory program, a program we clearly do not need in an era of reduced Federal

regulation and spending. The residential conservation service program is a Federal program requiring all large utilities to notify and make available to customers, residential energy audits.

These energy audits are estimated to cost between $85 and $150, but utilities are prohibited by statute from charging more than $15 per audit. In fact, some reports indicate audit costs in excess of $200.

Mr. President, those expenses will not be borne by the utilities. Those costs will be added to the rate base and passed along to consumers. A 1979 Department of Energy estimate indicates total compliance with the Federal RCS regulations could cost consumers as much as $4.9 billion over the life of the program and there are many who argue that figure could easily be doubled.

In fact, recent figures released by the Department of Commerce estimate the cost of the program at $15 billion.

Moreover, DOE estimates that only 7 percent of eligible customers—primarily customers in the upper income brackets who can afford to implement audit recommendations—will participate in the RCS program, while all consumers will pay for it. Experience by utilities already involved in the program shows a response vote as low as 1 percent, in some cases. And, according to a recent Oak Ridge National Laboratories study, low and fixed-income people have proven less likely to participate in the RCS program. The Senator from Kansas cannot support a program which, in the name of conservation, results in nonparticipating low-income individuals subsidizing the audit costs of higher income participants. Not to mention the subsidy provided by renters and small businesses across the country who cannot participate in the program.

Second, Mr. President, high energy prices, tax incentives and State and local energy policies have created a flourishing market for energy management firms, house doctors, homebuilders, as well as utilities, and their regulators on their local level, are all responding enthusiastically to this new market demand.

However, the $15 statutory limit on what utilities may charge for each energy audit under RCS, sanctions an unfair competitive advantage by utilities against small energy conservation and solar businesses and entrepreneurs in the marketing of energy services. Over the long run, we will be proven shortsighted if we allow the RCS program to impede development of private sector conservation initiatives, by pricing them out of the market.

Mr. President, I point out to the Members of the Senate that the $7 million recommended for the RCS program will not go to fund a single conservation audit. That money will be spent in Washington by the Department of Energy for the promulgation and enforcement of needless regulations.

For any Senator that is interested, I have a list of Washington consulting firms that profited handsomely from RCS in fiscal year 1981. My proposal would transfer that money to the energy policy and conservation grants program where it will be used to help finance State energy offices and foster conservation efforts at the local level.

I also point out to the Senate that the administration is opposed to continuation of the Residential Conservation Service. In a recent letter to me, DOE General Counsel R. Tenney Johnson wrote that the RCS "poses an unnecessary and heavy burden on States, utilities, and the utility customer."

Mr. President, I ask unanimous consent that that letter be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF ENERGY,
Washington, D.C., September 29, 1981.

Hon. ROBERT DOLE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DOLE: The Interior and Related Agencies Appropriation Act, H.R. 4035, is awaiting consideration on the Senate floor. I understand that you plan to offer an amendment that would: (1) transfer $7,000,000 in deferred monies from the Residential Conservation Service (RCS) to the schools and hospitals program; (2) permit use of appropriated funds to revoke the onerous existing RCS regulations; and (3) prohibit the use of appropriated funds to continue, administer, enforce, or by adjudication to impose any obligation or requirement under the RCS or Commercial and Apartment Conservation Service programs. I am writing to you to express support for your amendment.

The Administration, through its revised FY 1982 budget submission, requested no funds for the RCS. Existing tax credits and the complete decontrol of oil provide adequate incentive to the consumer to retrofit his home. The RCS program imposes a heavy consumer burden on States, utilities and the utility customer. The Administration is opposed to imposition of these regulatory burdens. A number of utilities have found that these types of conservation programs are in their own economic interest and have implemented them voluntarily. Therefore, a Federal program for the same purpose is an unnecessary imposition on the marketplace.

We support your efforts to eliminate funding for the RCS program.

The Office of Management and Budget has advised that, from the standpoint of the President's program, there is no objection to the submission of this letter for your consideration.

Sincerely,

R. TENNEY JOHNSON,
General Counsel.

Mr. DOLE. Mr. President, I agree with the Department of Energy that RCS is unnecessary and should be repealed or discontinued. Unfortunately, the statutes mandating RCS are so strict and complex that administrative changes in RCS regulations will not provide any significant regulatory relief. The RCS program is a burdensome, costly intrusion by the Federal Government into areas of public utility regulation traditionally reserved to States and local governments. The complex, statutory mandates of RCS duplicate existing energy conservation programs tailored by public utility commissions and utilities to their own local service areas. State and local governments and utility commissions are denied the flexibility to design and adopt conservation programs to their own needs, by the RCS statute.

My amendment does not prohibit States or utilities from implementing similar energy audit programs. Furthermore, nothing in my amendment would affect the power of DOE to extend technical assistance and voluntary guidelines to those States, local governments, and utilities which voluntarily sponsor their own residential conservation programs.

I know that in some States existing programs are popular and successful. I also know that in other States, like my home State, the Federal requirements are not appropriate and are not wanted. I would say to the distinguished chairman of the committee that I understand the State of Oregon has a good program and I would do nothing to prevent any State from voluntarily implementing a program. I would also not force any State to implement an unwanted, costly and inequitable program.

Finally, Mr. President, I question the actual energy savings that will result from continuing the RCS program. Affluent consumers who can afford to install conservation measures in their homes will still be able to secure energy audits from private concerns and will continue to do so as energy costs rise. I believe we will be substantially better off in both the short and long run by allowing those individuals to pay for their own audits and transfer our scarce Federal funds to the energy policy and conservation grants program.

Mr. President, I want to make it clear that the Senator from Kansas is not anticonservation. I oppose continuation of the RCS program because I do not believe it is an appropriate response to our need to conserve energy. I do not believe we should force the poor to subsidize the conservation efforts of the more affluent and I do not believe we should force independent small businessmen out of this growing market. That is why I am offering this amendment and encourage the Senate to support it.

Mr. President, it seems to me that this is an opportunity to end what I consider an ill-advised and burdensome Federal regulatory program, a program we do not need—a program, I might add, that is opposed by the Department of Energy.

I would also indicate that a number of utilities have their own program, and I think this is a way we can stop one regulatory effort.

It also has been estimated that most utilities are experiencing a participation rate of one-half of 1 percent. These audits cost between $100 and $150, but, by statute, the cost is limited to $15, and that cost is passed on to all consumers, while primarily only middle- and upper-income rate payers participate in the program.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. The Senate is not in order. There is a time limit on this amendment, and the Senate is not in order.

Mr. McCLURE. Mr. President, I oppose the amendment, not because I think the Senator from Kansas has not made a valid point, but because this program is just getting started. I believe it deserves a chance before we render judg-

ment. That was the judgment of the subcommittee and of the full appropriations committee.

Mr. President, I ask unanimous consent that the Senator from Oregon be the manager of the time in opposition to the amendment and apportion the remainder of the time in opposition.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATFIELD. Does the Senator from Louisiana wish recognition?

Mr. JOHNSTON. Will the Senator yield me 2 minutes?

Mr. HATFIELD. I yield.

Mr. JOHNSTON. Mr. President, I strongly oppose this amendment, and I will tell the Senate very briefly what the amendment does.

We have, according to the 1978 law, a plan ready to go into operation almost immediately; 41 States and 33 nonregulated utilities have plans ready to go. What those plans will do, at almost no Federal expense—only $21 million over 3 years for Federal expenses—will be to make available to individual homeowners the ability to have an energy audit at their homes. They do not have to take the audit, and they do not have to take the advice of the auditors if they do.

The Department of Energy estimates that this program can save $33 billion worth of energy. It is going to take a lot of voluntary expenditures to get that kind of savings. But we are right on the verge of being able to implement this program; and if we throw this out now, we are silly. All these utilities are ready to go, and we should go through with it.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. JOHNSTON. I yield.

Mr. JACKSON. Mr. President, I associate myself with the remarks of the distinguished Senator from Louisiana and the chairman of the Appropriations Committee. I strongly support the continued funding for the Residential Conservation Service. I cannot think of a more cost-effective investment this country can make in terms of conservation.

The state of our economy is indeed a matter of deep concern now, given the level of interest rates, the poor performance of the stock market and the bond markets. However, we are fortunate that rising oil prices are not adding to our economic difficulties. The reason for our relative good fortune is that there is an oil glut in the world today due to decreasing demand for oil.

While domestic production of crude oil in the United States is down by 0.3 percent for the first 282 days of this year as compared to last year, we are still importing 20.9 percent less petroleum as compared to last year—exclusive of SPR. Energy conservation is a major factor here.

Mr. President, I would submit to my colleagues that the United States is in a better position to maintain an oil glut in the world than any other oil consuming nation, just because of the size of our oil imports and our great potential for energy conservation. Energy analysts have recently noted that U.S. oil savings between 1979 and 1980 are comparable in size to the total consumption of many industrialized nations in Western Europe and Asia. The United States, according to a recent report, accounted for over half of the "free world's" reduction in oil consumption between 1979 and 1980.

Conservation in the United States, Mr. President, is the key to maintaining that oil glut in the world. It is also the way that Americans can better cope with heating oil prices that are 23 percent above the prices at this time last year, to say nothing about the price increases that would accompany natural gas decontrol.

That is why I strongly support continued funding for the Residential Conservation Service.

Mr. President, energy costs for residential buildings are cutting deeply into household budgets across the United States. If we are to see the residential sector realize the potential energy savings that are not only feasible but entirely economical; if the free market of energy conservation ideas is to function in the residential sector then the homeowner must have low-cost, reliable, and unbiased information as to what measures his residence needs and what the costs and benefits are. The residential conservation program offers that information.

Under this program, local utilities will offer the homeowner a package service of an energy audit for which he is charged no more than $15, information on the costs and energy savings of various retrofit items, and lists of suppliers, installers, and lending institutions to finance the measures.

It is important to note that the RCS plants which govern nonregulated utilities are written by the utility itself. The State writes the plan for regulated utilities. The Federal Government only approves or disapproves the plans submitted by the States or utilities.

The RCS program is working now; 260 utilities covering 57 million households are now offering these on-site energy audits for their residential customers.

Before the creation of the RCS program only 40 utilities offered on-site residential audits that informed the customer of what conservation measures would cost and what would be his energy savings.

There are some critics of the program, particularly utilities who, like everyone else, do not want to be required to do anything, even if they are fully reimbursed for their costs. But what if the RCS program were abandoned? Utilities would generally go back to simply mailing pamphlets to customers. There would be no national infrastructure of energy auditing companies to step in and provide onsite energy audits for a cost of $15. Homeowners would have to rely on home improvement companies for onsite energy audits. Let us not kid ourselves—many homeowners distrust these firms because while most are reputable, there have been some bad apples.

That does not mean that we cannot improve the RCS program. The Department of Energy has prepared regulatory changes to the program that would cut in half the cost of the program to States and utilities. These amendments have, I understand, been cleared by OMB, yet the DOE is sitting on them. DOE should propose the amendments to the regulations and adopt them if they will improve the program.

My colleagues should note that elimination of the RCS funding will not repeal the legal requirement that utilities implement an RCS program. It will only eliminate the Federal funding for monitoring the program and revision and promulgation of the regulations. If this amendment prevails, DOE would not have funds to improve the program and States and utilities would be uncertain as to what they are really required to do.

Mr. HATFIELD. I yield 1 minute to the Senator from Maine (Mr. COHEN).

Mr. COHEN. Mr. President, I oppose the amendment offered by the distinguished Senator from Kansas, Senator DOLE, that would transfer all funds for the residential conservation service program to the schools and hospitals program.

The residential conservation service program was established by the Congress in 1978, in an effort to further reduce our nation's energy consumption and diminish our dependence on foreign oil. At this time, very few homeowners were sufficiently familiar with the rewards of energy conservation, or had access to reliable and objective information on what type of conservation improvements could be made, at what cost, and how long it would take to get your money back through energy savings. There was a general feeling that without this information, many homeowners would forego energy-saving investments.

Thus, the RCS program was established to provide the homeowner with this vital information. Under the program, large electric and gas utilities are required to offer on-site energy audits to their residential customers and arrange financial assistance, if necessary, for the purchase and installation of suggested conservation measures.

Contrary to arguments presented earlier by some of my colleagues, the RCS program does not burden the utility customer with regulations. The program offers the homeowner the opportunity to have an energy audit, but does not require one. Nor is a homeowner required to make energy saving investments after receiving the results of the audit. The program simply makes the information readily available for homeowners so that they may make intelligent choices about energy conservation in their homes.

Opponents of the RCS program have claimed that it is too expensive. I disagree. The Senate is being asked to provide $7 million for a program that has been projected to have $33 billion in reduced energy bills over the next 5 years. I am convinced that this $7 million will be money well spent.

I have also heard complaints that the RCS program places an unnecessary regulatory burden on State governments and utilities. The DOE has proposed many regulatory changes to the RCS program which have already been ap-

proved by OMB, but have not yet been issued. According to DOE, these changes will reduce the costs to State and utilities by 50 percent. If we fail to provide funds for the RCS program, these regulatory changes will never be implemented, and the current rules will be continued.

In the last few weeks, I have received several calls from Maine inquiring as to the effects of the Dole amendment on the RCS program. The program in Maine has just gotten underway and the consumer response has been impressive.

The Senate has already agreed to reauthorize the program for this fiscal year, and failure to provide funding would only prevent the DOE from revising the regulations and monitoring the State programs. States and utilities would still be required to implement the program, but would not receive any assistance from DOE. This will only serve to place a significant burden on State governments and utilities, and add further to the disenchantment they already feel toward the Federal Government.

I believe the RCS should be continued, and I urge my colleagues to oppose the amendment offered by the Senator from Kansas.

It seems to me that we have a chance to really conserve a lot of energy at a small amount of money. We are being asked to provide $7 million for a program projected to save $33 billion and reduce energy bills over the next 5 years. I am satisfied that this $7 million will be well spent.

Mr. HATFIELD. I thank the Senator from Maine.

I yield 2 minutes to the Senator from Illinois.

Mr. PERCY. Mr. President, I was scheduled to address a conference in Springfield on energy at noon today. I felt so strongly about this amendment that I canceled the trip to Springfield and addressed them by telephone from Washington, so that I could be on the floor to vigorously express my opposition to the amendment to delete the funding for the residential conservation service program.

The residential conservation service was created under the National Energy Act to facilitate the installation of energy conservation measures in existing homes by utilizing utilities as the primary delivery mechanism. Under the program, large electric and gas utilities inform their residential customers of potential energy-saving improvements within their homes, conduct home audits upon request, and arrange financial assistance, if necessary, to purchase and install suggested conservation measures.

Given the prospect of escalating fuel costs for some time to come, a program cushioning the impact on the consumer is needed—the residential conservation service responds to this need.

The percent of median disposable income spent by midwestern households on energy has increased dramatically in the past few years. The average family spent 12.5 percent of its disposable income on energy in 1978, while by 1980 they spent 16.8 percent. By 1985, 18 percent of household income is expected to be spent on energy costs in the Midwest.

The residential conservation program is expected to result in savings of $33 billion in reduced energy bills over the next 5 years and oil savings of 8.5 quads—the equivalent of a full year's oil imports. We cannot afford to let this opportunity pass.

Indeed, the program has been hindered in the past by overly burdensome regulations, but I am assured by the President's emphasis on regulatory reform that this problem will be addressed. In fact, the Department of Energy has already acted to streamline the existing regulations.

Some minimum funding must be made available at the Federal level to insure that these new, improved regulations are issued.

Given the magnitude of the potential benefits, this program deserves a chance.

I urge our colleagues to defeat this amendment as contrary to the intent of the program which has been developed over several administrations.

The PRESIDING OFFICER. The Senate is not in order. The Senate will be in order.

Mr. HATFIELD. Mr. President, what is the time situation?

The PRESIDING OFFICER. The Senator has 5 minutes and 38 seconds on his side. The other side has 7 minutes and 43 seconds.

Mr. HATFIELD. Mr. President, I will outline briefly the fact that the amendment offered by the Senator from Kansas, I believe, attempts to abolish probably the most popular energy program we have ever enacted.

I oppose the amendment offered by the Senator from Kansas and strongly urge my colleagues to retain funding for the residential conservation service program which is projected to save nearly $30 billion over the next 5 years.

The arguments for retaining funding for this program are compelling.

First, the Dole amendment is contrary to two previously enacted bills in which the Senate agreed to retain money for home energy audits and reauthorize the program of fiscal year 1982.

Second, contrary to statements that the RCS program is expensive and onerous, the RCS program is projected to achieve enormous economic savings and has been revised by the Department of Energy to streamline Federal requirements and reduce regulatory costs.

For example, the 1979 regulatory analysis projected that while the program costs would be as high as $4.9 billion the economic benefits from reduced energy consumption would be $33 billion over the 5-year life of the program. More importantly, Mr. President, pursuant to President Reagan's February 17, 1981, Executive order, the Department of Energy has drafted revised regulations, which have been approved by OMB and which are ready to be implemented immediately. DOE estimates that these proposed revised regulations would cut program costs in half.

Mr. President, they are stalling because they hope to abolish the program. Senator from Kansas is correct. They do not like the program. But the point is that they have been instructed by the President to come up with these regulations, and I do not think we should permit the Department to further frustrate the President's directions as they are doing thus far.

To illustrate my point further, the actual cost of the RCS program to a utility customer averages just 15 cents a month or $1.80 for the year.

This idea that it only benefits the people in the upper-income bracket is just simply not true. If a homeowner invests even $10 in caulking or weatherstripping, their monthly bill could be permanently reduced by 10 percent.

Mr. President, this is a very important program, and I see no reason whatsoever to abolish it before it has a chance to get on track. I do not think that is cost effective either.

My third point is that the RCS program, contrary to reports by its critics, is one of the most popular energy programs ever enacted. It is projected that over 35 percent, 7 percent annually, of the 57 million eligible households will voluntarily request home energy audits and followthrough by installing conservation improvements in their homes. This amounts to nearly 20 million households in the next 5 years, and millions more who will request audits but must wait for more favorable economic conditions until they take action on their suggested conservation improvements.

It is difficult to predict what might happen in the marketplace if the RCS program is not funded. Forty-one States, as has been stated, are now offering home audits under the RCS program, but only 4 States have enacted laws which would continue RCS if the Federal program were terminated. It is important to point out as well that prior to the RCS act only a handful of utilities were offering their customers information about energy use in the home. Since enactment of the RCS program over 200 major utilities are now providing their customers this essential money-saving information.

I reserve the remainder of my time.

The PRESIDING OFFICER (Mrs. HAWKINS). The Senator from Kansas.

Mr. DOLE. Madam President, let me make just one or two points.

I know that I certainly have great respect for those who are voting against the amendment, but I point out to Members of the Senate that the $7 million recommended for the RCS program will not go to fund a single conservation audit. That money will be spent in Washington by the Department of Energy for promulgation and enforcement of needless regulation.

I have a list here of beltway bandits, the Washington lawyers and consulting firms, that profited handsomely from RCS in fiscal year 1981.

My proposal is to transfer that money to the energy policy and conservation grants program where it will be used to help State energy offices foster conservation efforts at the local level.

This amendment does not do one thing to stop States from having their own program; 41 States have the program; that is fine.

But what we are suggesting is we should not load the cost of this program on low- and middle-income utility users when there is some question about the energy savings offered by the program. It has been estimated this program could cost upward of $15 billion, an estimate based on recent Commerce Department figures. And the Department of Energy estimates only 7 percent of the eligible customers will participate in the program and only 1.5 percent will add conservation measures. In practice, most utilities are experiencing a participation rate of one-half of 1 percent to 2 percent.

The energy savings estimated by DOE is only seven-tenths of 1 percent of projected residential energy consumption or 0.1 million barrels per day of oil equivalent. Those savings will cost utilities $4.9 billion, according to DOE. Other sources indicate it could exceed $7 billion. This cost is going to be rolled into the utility rate base, raising the rates of everyone on the system.

It is my understanding, based on an Oak Ridge National Laboratory study, that the people most likely to participate in such a program are upper- and middle-income individuals, who can afford to make the recommended changes themselves. If the audit costs $85, they should pay $85. If it costs $150, they should pay $150, and not have a statutory limit of $15.

The position that I am proposing is supported by the Air Conditioning Contractors of America, the American Consulting Engineering Council, the American Gas Association, the American Institute of Architects, Edison Electric Institute, the Mechanical Contractors of America, the National Association of Home Builders, the National Plumbing, Heating, and Cooling Contractors, and the U.S. Chamber of Commerce.

In addition to that, it just seems to me that this is one regulation that we can do without.

I quoted from the letter of the general counsel of the DOE.

In my opinion the amendment should be adopted. This program is not in the House bill, and I hope that the amendment might be accepted.

Mr. COCHRAN. Madam President, will the Senator yield?

Mr. DOLE. I yield to the Senator from Mississippi the remainder of my time.

Mr. COCHRAN. Madam President, I thank the Senator for yielding.

Earlier this year I introduced legislation to repeal the residential conservation service program and the commercial and apartment conservation service program.

After I found out that what we were going to have was low-income people subsidizing, in effect, the middle- and upper-income folks who could afford to buy and install these conservation measures that would be found to be needed by the audits.

This does not seem to be a program that the Federal Government needs $7 million to write regulations for.

In some States, like Oregon, Massachusetts, the District of Columbia, there are ongoing programs that are working fine, pointing out to those who want to pay for the services or who can utilize the suggestions how they conserve energy in their homes.

In my State we are finding out we have to cut off the light, we have to turn down this thermostat, we have to do without. We cannot afford to buy fancy installation and storm windows and all the rest of the things that the auditors tell us we need.

That is not the point and this bill does not provide a single dollar to help pay for those things.

I support the amendment being offered by the Senator from Kansas.

The statute requires that the States enforce the provisions of their State plans and requires that utilities notify their customers and offer to audit residential and commercial dwellings and provide supportive services to those customers whose homes are audited.

The real losers in this whole affair, are the American consumers. In the vast majority of the States, most if not all the costs of this program—which would run somewhere from $5 to $7 billion according to DOE—are going to be passed directly to consumers. They are the ones who will have to foot the bill for State regulations, training of auditors, customer notification and other requirements of these programs.

DOE estimates that only 7 percent of eligible customers will respond to the program. Even this presents problems, however, since the consumers most likely to benefit are the ones who can most afford to purchase and install the measures recommended by program auditors. However, the utility implementation costs and State implementation costs will, in most instances, be borne by all, including those who cannot afford to participate. Thus, it is likely that nonparticipating low-income people will subsidize the audit costs of higher-income individuals who do participate.

In many States, consumers already get audits and utility assistance if they so desire. Residential and consumer programs are present in Massachusetts, Oregon, the District of Columbia, and 170 different utilities currently participate in the Edison Electric Institute conservation program. TVA utilities have insulated around 200,000 homes under its voluntary program. The key here, though, is that only those who participate pay.

Madam President, I support the Dole amendment and urge my colleagues to do so.

The PRESIDING OFFICER. Who yields time?

● Mr. CRANSTON. Madam President, I oppose the amendment of the Senator from Kansas (Mr. DOLE), which would transfer to the schools and hospitals conservation grants program all funds provided in this bill to maintain the residential conservation service program. I agree with the Senate Appropriations Committee's determination that both these programs—which assist different groups of energy consumers—are valuable and cost effective and should be preserved.

Congress mandated in the 1978 National Energy Conservation Policy Act a residential conservation program operated by energy distribution utilities to accelerate investments in improved energy efficiency of the Nation's existing residential housing stock. Again, just last year in the Energy Security Act, Congress—with strong bipartisan support—significantly broadened the RCS program to cover multifamily and small commercial buildings and to authorize utilities to provide additional conservation-related services.

Neither the compelling reasons which motivated congressional action last year nor the world energy picture have changed so dramatically that this program has now suddenly become unnecessary, ill conceived and burdensome, as the amendment's sponsors contend.

A February 1981 GAO report on residential energy conservation outreach activities strongly supported the RCS program. GAO concluded that comprehensive, onsite energy audits—like those provided by the RCS—are the most effective means of encouraging individuals to implement voluntary energy conservation measures.

While the very detailed DOE specifications for compliance with the law have caused some complaints by 1 of the 19 California utilities required to establish an RCS program, I believe the complaints involved can be met by revised regulations easing the procedural requirements and giving utilities greater flexibility to design a program within the law's objectives. I certainly support such administrative changes. As the Senator from Oregon has pointed out, the Department has already drafted revised regulations which could reduce program costs by as much as 50 percent. These revised regulations are ready for publication pending a firm congressional decision to continue RCS.

The proponents of this amendment claim that only relatively few eligible customers—primarily those in the upper income brackets who can afford to implement the audit recommendations—will participate in the RCS program, while all customers will pay for it. They argue, we are wrong to continue a program that results in nonparticipating low-income individuals subsidizing the audit costs of higher income participants.

But this argument fails to understand that in the long run all consumers benefit from lower utility rates when the total demand for energy is reduced.

Despite wide variability in program design and energy savings, a 1980 independent review of existing RCS-type utility conservation programs reported that all programs studied were cost-effective—costing less to save energy than to meet existing demands.

There is—to be sure—a real problem of minimal participation of low-income individuals in the RCS program. But this problem can and should be addressed directly, not used as an excuse for eliminating RCS entirely.

Those truly concerned about the burdens of energy costs on low-income people should support an aggressive RCS program, properly tailored to reach lower income groups—including many

elderly, handicapped, and non-English-speaking individuals—who most need relief from rising energy prices and for whom the barriers to implementing cost-effective energy measures are greatest.

Lower income households occupy a disproportionate share of the Nation's older, less efficient housing with the highest potential energy savings payback, but such households are least able to finance the necessary efficiency improvements.

I believe the RCS program can be extremely helpful in achieving the weatherization of low-income homes if adequate attention is devoted to this objective.

California's recently approved RCS plan, for example, which covers the State's major investor-owned utilities and many municipal utilities, provides for major outreach efforts to insure equal access to RCS program services for all segments of the population.

It will provide both information on low- or no-cost conservation measures and also make available deferred payment loans at low or no interest for conservation investments. Also, the State RCS strongly encourages participating utilities to contract with local governments or community-based groups to assist in the implementation of conservation measures.

Often, local government and community workers have much easier access to residents to whom they are already providing services than utility representatives and, even without prior involvement in energy programs, may provide many conservation services effectively.

California will also establish a State advisory group with representatives from the California Office of Economic Opportunity, Energy Extension Service, Department of Consumer Affairs, local governments, small, energy-related businesses, community-based, energy-related organizations, labor unions, low-income organizations, and black, Hispanic, Asian, and Native American minorities, to coordinate and review the conduct and performance of the California RCS program. Participating utilities will establish similar groups to help them carry out conservation activities.

Clearly, energy price decontrol alone will not bring about conservation investments by those who do not have the capital to make those investments, especially with today's very high interest rates.

But the administration's energy policy—based largely on price decontrol—is self-defeating when the administration simultaneously attacks the residential conservation service—which helps to make conservation improvements affordable.

Moreover, the concern expressed for low-income people by the administration rings hollow in light of the severe burden on low-income people that would result from energy price decontrol.

Rather than eliminating the RCS program, I urge my colleagues to support the committee position and defeat this ill-conceived amendment.●

THE RESIDENTIAL ENERGY CONSERVATION SERVICE

Mr. PACKWOOD. Madam President, I support the Senate Appropriations Committee's decision to provide $7 million in fiscal year 1982 for the residential conservation service program (RCS).

The arguments presented in support of the termination of the RCS program center on two basic issues. One is that the program is costly, and the other is that the program is burdensome.

With regard to cost, I have never been a supporter of massive spending by DOE. However, in the most comprehensive cost-benefit analysis to date done on the RCS program, it was found that the program would be cost-effective, generating benefits of $33 billion from 1980 to 1985. Judging from this analysis, the RCS program seems to have substantial economic benefits.

Undoubtedly, the first regulations for the RCS program were burdensome. The Department of Energy has developed new draft regulations, however, which will cut this burden in half.

The State of Oregon, Madam President, has been a leader in the residential energy conservation field. Two of our private utilities, Pacific Power and Light, and Portland General Electric, have proven through excellent programs that investments in residential energy conservation improvements not only reduce individual energy bills, but they also reduce the need to construct costly additional power generation facilities.

To sum up, I think the Senate Appropriations Committee has acted wisely to provide funding for the RCS program. I do not favor transferring this money to some other DOE program, and running the risk of losing these important economic and energy conservation benefits.

Mr. HATFIELD. Madam President, I ask unanimous consent to have printed in the RECORD the letters that I have here relating to this subject matter.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CONSUMERS UNION,
Washington, D.C., October 26, 1981.

Hon. MARK HATFIELD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: Today Senator Dole will likely offer a floor amendment on H.R. 4035, the Interior and Related Agencies Appropriations bill, to eliminate funds for the Residential Conservation Service. Consumers Union urges you to oppose this amendment. This clearly is an inappropriate time to scrap the leading federal program that helps homeowners make economically sound decisions about which conservations measures will yield the greatest savings of energy and money.

The Residential Conservation Service is an information program. Among other things, it requires large electric and gas utilities to conduct, on request, a home energy audit by a trained auditor who provides estimates of the cost and savings of specific conservation measures for that home and that geographic area.

A totally hands-off federal approach to conservation would be grim news for consumers. The energy market is not like the market for beef. When beef becomes too expensive, consumers can always find cheaper sources of protein without great hardship. But consumers cannot easily switch from one source of energy to another. Nor can consumers stop heating their houses without hardship. Conservation is a wise response to crushing prices, but it requires an investment and sound choices.

The benefits of the RCS for energy users and the nation are great. The DOE's most comprehensive Regulatory Analysis for the RCS found the program had a cost-benefit ratio of 2 to 1, generating benefits of $33 billion in just five (5) years. The RCS deserves your support.

Sincerely,

ROGER DAVIS,
Attorney, Washington Office.

AMERICAN ASSOCIATION OF SCHOOL ADMINISTRATORS,
Arlington, Va., October 9, 1981.

Hon. MARK HATFIELD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HATFIELD: The American Association of School Administrators (AASA) supports the position you are taking in opposition to the amendment Senator Dole intends to offer when the Senate considers H.R. 4035, the Interior and Related Agencies Appropriations Bill. It is the Association's understanding that the amendment would transfer $7,000,000 recommended for the Residential Conservation Service Program to the Schools and Hospitals Program (National Energy Conservation Policy Act, Title III).

The Association has weighed this decision very carefully for the schools of this nation desperately need the technical and financial assistance provided under the Schools and Hospitals Program. AASA has long been regarded as the spokesman for the educational community regarding energy, particularly the Schools and Hospitals Program. The Association has conducted its own survey and found the program efficient and effective in reducing energy consumption and alleviating some of the fiscal burden on schools. Its energy and economical benefits to education and the nation are well documented. We are pleased that Senator Dole has acknowledged the energy conserving effectiveness of the program in his intended amendment.

It is not the Association's intention to discuss here the full merit of the Schools and Hospitals Programs nor its merits relative to the Residential Conservation Service (RCS). The benefits of both programs are well known to you. Rather to stress that AASA's support of your position should not be misconstrued to suggest to anyone that the schools do not need the assistance that $7,000,000 would provide. They do. Desperately. Nor does AASA wish anyone to take its position in this matter as a tool to justify future cuts in the Schools and Hospitals Program. The benefits in construction jobs, reduced energy consumption, preserving educational programs and ameliorating the local taxpayers' burden all point to the exceptional benefits in federal support of this program.

The Association views the move to eliminating the $7,000,000 in federal RCS administrative funds as an attempt to eradicate the program. Should the program lose its federal guidance, support, technical assistance and information sharing capabilities, it would generate local uncertainty and inconsistency as to what should be done and it would most likely flounder and die. Thus, AASA has weighed the educational grants funds to schools and hospitals against the value of the total RCS program.

RCS provides important information to homeowners so they might know the most cost effective ways to reduce energy consumption. It serves all homeowners, including the poor and elderly who can least afford the ever higher energy costs. It benefits not only the nation's energy and economic position, but cuts the local residents' fuel and utility bills. These residents are the school's parents, neighbors, friends and supporters. As desperate as the schools' energy plight is, education does not wish to gain at the ex-

pense of these individuals who clearly receive important help from the RCS program.

In times of dwindling resources, whether it be energy or federal assistance, the flames of adversarial relationships are easily fanned. Survival of our democracy might well rest on the ability of various groups to step back, view the broader picture and act compassionately toward others' needs. The assistance provided by the Schools and Hospitals Program has been cost-effective, energy-effective and extremely valuable to the schools; however, the American Association of School Administrators cannot support any move to transfer the much needed $7,000,000 to the Schools and Hospitals Program if it means stepping on, indeed obliterating, a program of such proven value to homeowners and the nation as the Residential Conservation Service.

Sincerely yours,

PAUL B. SALMON, Ed.D.,
Executive Director.

ENERGY CONSERVATION COALITION,
Washington, D.C., September 9, 1981.

Hon. MARK HATFIELD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: In the FY 82 Interior appropriations bill, the Committee on Appropriations recommends funding of $7 million for the Residential Conservation Service (RCS) program. The Energy Conservation Coalition urges you to support the Committee's action, and to oppose any amendment to delete funds for this important cost-effective energy conservation program.

The RCS program requires large electric and gas utilities to provide home owners with the opportunity to receive on-site energy audits of their homes and estimates of the cost and savings of specific conservation and renewable energy measures.

The RCS program should be maintained for at least four reasons.

1. The cost-benefit ratio of this program is at least 2 to 1.

In the most comprehensive cost-benefit analysis to date of the RCS program (USDOE, Regulatory Analysis, October, 1979), DOE found that the program would cost $15 billion from 1980 to 1985, but would generate benefits of $33 billion. (Page 2–303)

2. Two-thirds of the "costs" are actually investments incurred voluntarily by home owners to save energy and money.

Of the $15 billion in estimated costs, $9.8 billion is productive investment undertaken by home owners in response to the RCS audits. The total costs per barrel of oil equivalent saved is only $10—less than one-third the current world market price of oil. (Reg. Analysis, page 2-20)

3. The program will save energy and free capital for productive use.

DOE estimates that the program will save 8.5 quads—the equivalent of one year's oil imports. Moreover, it will reduce the need for utilities to borrow new capital at high interest rates for new generating plants. (Reg. Analysis, page 2–19)

4. The program will create employment.

DOE estimates that the RCS program will create 30,000 new jobs throughout the economy. (Reg. Analysis, page 2–13)

Only four states currently have explicit authority to carry on a comprehensive RCS program if the federal program should die. The RCS program provides enormous national benefits. It deserves your support.

Sincerely,

DAVID H. MOULTON,
Policy Director.

Mr. HATFIELD. Madam President, I just make one further comment.

The Senator from Kansas indicated that only 7 percent, it is estimated by the Department of Energy, will take up this opportunity. That is quite correct. Only he has to remember that that is seven times five because that is what the actual report indicated, 7 percent annually for 5 years. That is 35 percent, not 7 percent in the cumulative aggregate form.

Madam President, the Senator from Kansas also indicated that because of this rolled into the rate structure, I think it should be pointed out also, that the new facilities are rolled into the rate structure and let us bear in mind that new facilities cost far more than what we are talking about in this instance and I think because low-income families get stuck anyway paying for the cost and construction of new facilities, it is in their interest that whatever we can do in the other income groups to reduce the energy use is to their advantage as well.

So I think that cuts both ways to recognize what is rolled into the rate base.

Therefore, I urge the defeat of this amendment because I think in the long term it is going to benefit the low-income families as much as it may immediately the middle-income families to have this program ongoing.

I am ready to yield back the remainder of my time.

I yield back the remaining part of my time.

Mr. DOLE. Madam President, I yield back the remainder of my time and ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Kansas.

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from California (Mr. HAYAKAWA) and the Senator from Pennsylvania (Mr. SPECTER) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from Ohio (Mr. METZENBAUM), the Senator from Maine (Mr. MITCHELL), the Senator from Michigan (Mr. RIEGLE), the Senator from Mississippi (Mr. STENNIS), the Senator from Massachusetts (Mr. TSONGAS), and the Senator from Nebraska (Mr. ZORINSKY) are necessarily absent.

I further announce that, if present and voting, the Senator from Hawaii (Mr. INOUYE) and the Senator from Michigan (Mr. RIEGLE) would each vote "nay."

The PRESIDING OFFICER. Are there any Senators in the Chamber desiring to vote?

The result was announced—yeas 17, nays 71, as follows:

[Rollcall Vote No. 332 Leg.]

YEAS—17

Boschwitz	East	Lugar
Byrd, Harry F., Jr.	Heflin	Mattingly
	Helms	Murkowski
Cochran	Humphrey	Nickles
Denton	Jepsen	Roth
Dole	Kassebaum	Tower

NAYS—71

Abdnor	Exon	Moynihan
Andrews	Ford	Nunn
Armstrong	Garn	Packwood
Baker	Glenn	Pell
Baucus	Goldwater	Percy
Bentsen	Gorton	Pressler
Boren	Grassley	Proxmire
Bradley	Hart	Pryor
Bumpers	Hatch	Quayle
Burdick	Hatfield	Randolph
Byrd, Robert C.	Hawkins	Rudman
Cannon	Heinz	Sarbanes
Chafee	Huddleston	Sasser
Chiles	Jackson	Schmitt
Cohen	Johnston	Simpson
Cranston	Kasten	Stafford
D'Amato	Kennedy	Stevens
Danforth	Laxalt	Symms
DeConcini	Leahy	Thurmond
Dixon	Levin	Wallop
Dodd	Mathias	Warner
Domenici	Matsunaga	Weicker
Durenberger	McClure	Williams
Eagleton	Melcher	

NOT VOTING—12

Biden	Long	Specter
Hayakawa	Metzenbaum	Stennis
Hollings	Mitchell	Tsongas
Inouye	Riegle	Zorinsky

So Mr. DOLE's amendment (UP No. 531) was rejected.

Mr. McCLURE. Madam President, I move to reconsider the vote by which the amendment was rejected.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UNANIMOUS-CONSENT AGREEMENT

Mr. McCLURE. Madam President, I ask unanimous consent that the Senate resume consideration of the Interior Appropriations bill, H.R. 4035, at 10 o'clock a.m. on Tuesday, October 27, 1981.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. Further, I ask unanimous consent that Senator ROBERT C. BYRD be recognized to offer an amendment dealing with historic preservation with a 20-minute time limitation equally divided at the hour when we resume consideration of this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. Further, I ask unanimous consent that following the disposition of the Robert C. Byrd amendment, Senator LEAHY be recognized to call up his amendment dealing with Economic Regulatory Administration with a time agreement of 40 minutes equally divided.

Further, I ask unanimous consent that following the disposition of the Leahy amendment, Senator MITCHELL be recognized to call up an amendment dealing with energy conservation with a time limitation of 1 hour equally divided. Following the disposition of the Mitchell amendment I ask unanimous consent that Senator BUMPERS be recognized to offer an amendment dealing with prime

farmland with a 40-minute time limitation equally divided. Following disposition of the Bumpers amendment, I ask unanimous consent that a rollcall vote occur immediately on the Proxmire amendment debated on Monday, October 26.

Following the disposition of the Proxmire amendment, I ask unanimous consent that Senator McCLURE be authorized to offer an SRC–I substitute amendment, to make SRC–I part of the legislative language of the bill rather than in the report as now stated; that following the disposition of the McClure amendment that there be a Cannon amendment with a time limit thereon of 40 minutes equally divided; that following the disposition of the Cannon amendment, Senator MATTINGLY be recognized to offer an amendment dealing with a percentage cut with a 30-minute time limitation equally divided.

Further, I ask unanimous consent that any amendments offered in the second degree be limited to 30 minutes equally divided, and that the agreement be in the usual form with respect to the division and control of time, and that the time on any debatable motion, appeal, or point of order be limited to 10 minutes equally divided.

Further, I ask unanimous consent that following the disposition of the Mattingly amendment and/or any amendments to it, the Senate proceed immediately to third reading and then final passage on the bill but not before 2 p.m., with no intervening motions, appeals, or points of order.

Mr. ROBERT C. BYRD. Reserving the right to object, regarding the reference to the rollcall vote on the Proxmire amendment, may I ask the distinguished Senator has that rollcall vote already been ordered?

Mr. McCLURE. I would say to the Senator that the yeas and nays have already been ordered on the Proxmire amendment.

Mr. ROBERT C. BYRD. I thank the distinguished Senator and I have no objection.

The PRESIDING OFFICER. Is there objection?

Mr. McCLURE. Madam President, with one addition, I did not state a time limit on the amendment of the Senator from Idaho, Senator McCLURE. There will be a limitation of 10 minutes, 5 minutes on each side.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the agreement follows:

UNANIMOUS CONSENT AGREEMENT

Ordered, That on Tuesday, October 27, 1981, at the hour of 10:00 a.m., the Senate resume consideration of H.R. 4035, an act making appropriations for the Department of Interior and related agencies for the fiscal year ending Sept. 30, 1982, and for other purposes, and proceed to the consideration of an amendment to be offered by the Senator from West Virginia (Mr. Robert C. Byrd), dealing with historic preservation, on which there shall be 20 minutes; to be followed by an amendment to be offered by the Senator from Vermont (Mr. Leahy), dealing with the Economic Regulatory Administration, on which there shall be 40 minutes; to be followed by an amendment to be offered by the Senator from Maine (Mr. Mitchell), dealing with energy conservation, on which there shall be 1 hour; to be followed by an amendment to be offered by the Senator from Arkansas (Mr. Bumpers), dealing with prime farm land, on which there shall be 40 minutes; to be followed by an amendment to be offered by the Senator from Wisconsin (Mr. Proxmire), which shall be voted on immediately; to be followed by an amendment to be offered by the Senator from Idaho (Mr. McClure), dealing with SRC No. 1, on which there shall be 10 minutes; to be followed by an amendment to be offered by the Senator from Nevada (Mr. Cannon), on which there shall be 40 minutes; to be followed by an amendment to be offered by the Senator from Georgia (Mr. Mattingly), dealing with a percentage cut, on which there shall be 30 minutes, with the time on these amendments to be equally divided and controlled by the mover of such and the manager of the bill; with time on any amendment to an amendment to be limited to ½ hour, to be equally divided and controlled by the mover of such and the manager of the bill; and with time on any debatable motion or appeal which is submitted or on which the Chair entertains debate to be limited to 10 minutes, to be equally divided and controlled by the mover of such and the manager of the bill: *Provided,* That in the event the manager of the bill is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or his designee.

Ordered further, That when the Senate disposes of these amendments and any amendments thereto, it proceed to third reading of the bill and immediately vote on final passage without any intervening motions or appeal, but not before 2:00 p.m.

THE COAL PREPARATION PROGRAM

Mr. JEPSEN. Will the Senator yield for some questions on the coal preparation program?

Mr. McCLURE. I yield to the distinguished Senator from Iowa.

Mr. JEPSEN. Mr. President, is is my understanding that the House has approved the original $6 million figure for the coal preparation program. Is this accurate?

Mr. McCLURE. The Senator is correct.

Mr. JEPSEN. Then this a conferenceable item and it is possible that the $3 million could be restored in conference.

Mr. McCLURE. The Senator is correct.

Mr. JEPSEN. Mr. President, I fully appreciate the Senator's difficult job in trying to come up with additional savings in order to balance the Federal budget. The distinguished Senator from Idaho has my full support in this effort. However, I am concerned about the effect this cut could have, not only on the program directly, but on that aspect of the program being carried out by Iowa State University.

As the Senator knows, different aspects of the coal preparation program are being carried out by different research institutions. Iowa State University, for instance, is involved in testing processes and equipment as well as providing feedback for the various coal utilization projects. Each aspect of the research program plays an integral role in the overall success of the project.

Unfortunately, the Department of Energy has announced that if the $3 million reduction in the coal preparation program is approved, no funds will be sent to Iowa State University to continue its part of the project. My question to the Senator is: Was it the committee's intention that the Iowa State research project be eliminated if this cut is approved?

Mr. McCLURE. I assure the senior Senator from Iowa that this was not the intention of the committee.

Mr. JEPSEN. Would the Senator agree that if this money is not restored and cuts are necessary in the program, these cuts should be made proportionally so that no programs experience a disproportionate share of the cuts?

Mr. McCLURE. That seems to be the appropriate response by the Department of Energy.

Mr. JEPSEN. Mr. President, I appreciate the Senator's taking the time to answer my questions. I am sure the people at Iowa State will be relieved by his assurances. In closing, I say to the distinguished Senator from Idaho that I am very appreciative of his efforts to cut the Federal budget. His diligence and forthright approach to this issue are well known and he has earned my respect and the respect of his colleagues because of this.

Mr. DOMENICI. Madam President, I was planning to introduce an amendment to the appropriations bill regarding Federal aquisition of water rights, but in discussing this matter wtih the distinguished floor manager of this bill (Mr. McCLURE) and the distinguished Public Lands and Reserved Water Subcommittee chairman of the Energy and Natural Resources Committee (Mr. WALLOP), I have decided to withhold the amendment.

Mr. WALLOP. I thank the Senator from New Mexico for bringing his amendment to our attention and I assure him that I share his concern regarding the subject of appropriative water rights claims by the Federal Government. As the Senator from New Mexico knows, my committee is in the process of developing a policy in this area and it is my understanding that the Department of the Interior is hoping to have a new policy announcement on this area before the end of the year. I add that my subcommittee, of which the Senator from New Mexico is a member, and the staff will look closely at this policy once it is announced.

Mr. DOMENICI. I thank the Senator from Wyoming for his remarks, and I look forward to sitting with him when we look at this new policy. I, as the Senator from Wyoming, was extremely gratified earlier this year when Secretary of the Interior James Watt announced that his department would observe State water laws when it came to the question of nonreserved water rights.

As a matter of fact, I think officials throughout the Western States cheered that announcement. However, almost to the day of that announcement by the Secretary of the Interior, a letter surfaced in New Mexico from a district office of the Bureau of Land Management to livestock operators who hold grazing permits. This letter, which I shall ask to have printed in the RECORD, raised many questions in the minds of New Mexicans regarding appropriative water rights ap-

plications by the Bureau of Land Management. We have been in contact with both BLM officials in New Mexico and in Washington, D.C., regarding this letter.

We later found out there was $1.3 million in this Interior appropriations bill for filing fees for acquiring State water rights for their land resources program, but the program was still under departmental review. I sincerely felt that, for several reasons, this money should not be spent unless Congress knew what priorities would be carried out by the BLM in filing for water.

The Department of the Interior did everything possible to answer my questions and define a policy, but were unable to. I was afraid that without a firm policy, BLM would be filing applications on every water right they could get their hands on while observing and fulfilling the obligations of State water laws. Again, I have been assured by Senator WALLOP and the Department of the Interior that this is certainly not the case and that in just a few short months, the issues I raised should be resolved.

Again, I thank the Senator from Wyoming and his staff for their assistance and his help in this matter of great concern to all of the Western States.

Mr. McCLURE. I thank the Senators from New Mexico and Wyoming for their assistance in working out an agreement on this question of Interior Department policy toward the acquisition of appropriate State water rights. I assure both Senators that this is a great concern in my State of Idaho and I, too, am looking forward to the policy announcement by the Department of the Interior in this area, and I look forward to working with my fellow Senators on this important issue.

I recognize the difficulties faced by the Department of the Interior in reviewing past policies and coming up with an all-encompassing policy that deals effectively with State water laws that differ from State to State. I have the utmost confidence that officials at the Interior Department will be able to resolve the situation described by Senator DOMENICI and I know Senator WALLOP, through his subcommittee, will review any new policy with the utmost care.

Madam President, I ask unanimous consent that the letter referred by Senator DOMENICI be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
BUREAU OF LAND MANAGEMENT,
Roswell, N. Mex., September 2, 1981.

DEAR RANGE USER: I am sure you are aware that the Bureau of Land Management is entering into a comprehensive program to inventory and quantify its uses of water (including those of permittees or licensees). This program was initiated recently to implement the President's June 6, 1978, Water Policy Message, the Department of the Interior Solicitor's Opinion of June 25, 1979, and the recommendations of the President's Task Force on Non-Indian Federal Water Rights. Such an inventory of all water uses and submission of water right claims has also been necessitated by several general water rights adjudications in the State, such as those in the Pecos River Basin (Civil Nos. 20294 and 22600 consolidated, Chaves County District Court) and San Juan River Basin (Case No. 75-184, District Court, San Juan County).

Recently, there have been several inquiries from livestock operators concerning the filing of water rights applications on the public lands. BLM, like any water used in Mexico, will file water right claims. The BLM will file claims on those water sources located on BLM administered lands that are now used or will be needed to implement BLM land and resource management programs. BLM will also pay the filing fees for water right claims on these sources. It is the Bureau's general policy that all water rights for the management of public land resource program will be held in the name of the United States or in the name of the permittee and the United States, except (1) in water base areas where the user currently has a valid State appropriative water right for his base property (Taylor Grazing Act), and (2) when the use of water is not needed for the management of public land resource programs. The filing and granting of water rights to the United States (BLM) will not, however, affect the authorized use of water by the public; i.e., all water sources on the public lands presently used by livestock will be claimed for livestock use. Let me emphasize that no grazing licensees or permittees will, therefore, be adversely affected by these filing or subsequent adjudications.

To prepare for present and future adjudications, we are presently conducting an inventory of all water sources and uses on BLM administered lands in New Mexico. This includes streams, springs, wells, reservoirs, lakes and catchments. We would appreciate receiving any information that you feel would be helpful to us (such as the location of water sources used for stockwatering, the number of cattle using each source, the time of year used, etc.). The inventory information will be permanently stored to assist in our land management operations.

If you have any specific questions concerning BLM's water use inventory or compliance with New Mexico's water law, please contact the Roswell District Office.

Sincerely yours,

PHILLIP D. NORELAND,
Area Manager.

Mr. MATHIAS. Madam President, last year, the Interior Appropriations Conference Committee instructed the National Park Service in its 1981 bill to use the U.S. park police training barn as a replacement facility for the national center for therapeutic riding program. The need arose because the National Park Service had condemned and razed the Rock Creek Horse Barn, where the program previously took place. Even though a year has passed since congressional action, the Park Service still has not provided a replacement.

In order to spur the Park Service, I requested that an amendment be included in the fiscal year 1982 bill, providing NPS $800,000 to relocate the U.S. mounted park police barn as a facility for the program. I withdrew this request because I was assured the Park Service plans to take the necessary steps to make the required facility available and has the money to rehabilitate it. I am told that NPS plans to make a reprograming request for the funds necessary to rehabilitate the Edgewater facility, where the park police training program will be relocated, and that the committee fully intends to give this request every consideration.

Mr. McCLURE. Madam President, the committee agrees that this is an important project and is concerned about the lack of responsiveness on the part of the Park Service, so much so that it had language included in the fiscal year 1982 bill, reinforcing the original directive. I am aware that funds are available to rehabilitate the park police facility for the center's use. Furthermore, since accommodating the national center is contingent upon the mounted police training program's relocation to the Edgewater facility, I hope to be able to approve this reprograming request when submitted.

Mr. HUDDLESTON. Madam President, there is a matter dealing with the Abandoned Mine Reclamation Fund which I would like to discuss with the distinguished floor manager of the bill. First, as the chairman of the subcommittee knows, during our original consideration of this bill, I had language inserted into the committee report dealing with the rural abandoned mine program (RAMP) that is administered by the Soil Conservation Service in the Department of Agriculture. That language can be found on pages 35 and 36 of the committee report. Basically, what we said was that RAMP is one of the reclamation programs presently in place that has worked well and deserves close attention from officials at the Department of the Interior who are responsible for providing funding to the soil conservation service. As the report indicates, RAMP has the capability of permitting up to $30 million worth of projects this fiscal year.

However, also in the report is a line on page 35 which indicates that the committee only intends the funding provided to maintain the RAMP program "at a maintenance level with no new project starts." Although I frankly believe that the $4.3 million provided for RAMP is wholly insufficient, if that is the dollar amount we must deal with, I believe it is important that we clarify our intentions with respect to no new project starts.

Is it the chairman's understanding that the overriding language in this situation is that which says that the administration should consider the transfer of additional funding to the Soil Conservation Service from available unobligated balances as the opportunity for additional work under the RAMP is clearly defined to OSM by the Soil Conservation Service? In other words, if RAMP can be proven to be as worthwhile as we believe it is, the SCS would have the opportunity to initiate new starts in the fiscal year within the bounds of the $4.3 million we have appropriated and whatever unobligated balances may be made available by the Department of the Interior?

Mr. McCLURE. That is my understanding, Madam President. The committee intends that the RAMP should continue and that as the Soil Conservation Service clearly defines the needs of the program to OSM, OSM will in turn closely examine the possibility of transferring funds from available unobligated balances in the Abandoned Mine Fund to RAMP. Such action, were it approved by OSM, would certainly mean that additional project starts would be necessary and that new project starts within

the $4.3 million appropriated in this bill would also be permitted.

BRYCE CANYON NATIONAL PARK, FISCAL YEAR 1982 FUNDING FOR SNOW REMOVAL

Mr. GARN. Madam President, I would like to bring to the floor manager's attention the matter of the Senate's earmarking of $267,000 within available funds to maintain the road to Rainbow Point at Bryce Canyon National Park during the months September to May. (See Senate Report 97-166, page 19.)

The earmarking of these funds will provide a much-needed stimulus to the local economy surrounding the Bryce Canyon National Park. This is an area heavily hit by the economic restrictions associated with limited-access Federal lands.

Garfield County, Utah, where Bryce is located, actually has three national parks in it, the other two being Zion and Capitol Reef National Parks. As you can well imagine, the opportunities for economic development in these areas are severely limited.

Therefore, it is essential to take advantage of every opportunity to promote those economic activities which are suitable to such an environment.

The proposed earmarking would provide an excellent stimulus to tourism by helping to make Bryce a year-round park. In a study done for my office, the Regional Office of the National Park Service calculated that the benefits arising from maintaining the Rainbow Point road during the winter months would outweigh the costs of that action by at least a factor of two.

It has been brought to my attention, however, Mr. President, that the Interior Department has appealed to have the requirement to maintain Rainbow Point road eliminated. In doing so, the Department ignored the severe economic conditions surrounding the park and the anticipated returns that would occur in Garfield and surrounding counties if this $267,000 were used to keep that road open.

I would therefore like to ask the floor manager to give his assurance that he will do his utmost to prevent any conference report language against this earmarking and to insure that the Park Service implements the action intended by this earmarking.

Mr. McCLURE. Madam President, I am happy to respond to the Senator from Utah. We have had occasion to discuss this matter several times before and I am in full agreement with the sentiments he expresses. I will be glad to preserve the effect of this earmarking in the conference with the House of Representatives and will encourage the Park Service to implement its provisions.

INTERIOR'S OFFICE OF WATER POLICY

Mr. ABDNOR. Madam President, if I may, I would like to engage the distinguished chairman of the Interior Appropriations Subcommittee in a colloquy with regard to the Federal water policymaking structure.

I do not wish at this time to get into a protracted discussion of the merits of my bill, S. 1095, which has been reported unanimously out of the Committee on Environment and Public Works and which would establish a national board on water resources policy.

However, I do want to remind my colleagues of our agreement for prompt floor consideration of the bill, based upon the withdrawal of the House-Senate compromise language from the reconciliation conference report.

Let me say to the distinguished chairman that I strongly support the provision in the appropriations measure before us today of $1.842 million for an office of water policy within the Department of the Interior.

The Department must address many significant water policy issues, and I commend the Secretary for his initiative in attempting to address these issues forthrightly.

There are those who fear, however, that the Department of the Interior is attempting to dictate policy to other agencies, particularly the U.S. Army Corps of Engineers, which falls under the jurisdiction of the Water Resources Subcommittee, which I chair.

And, while I do not believe Interior is trying to usurp policy authority from the Corps, I do feel very strongly that there are important interdepartmental policy issues which should be addressed and that the current policy-making machinery, as well as the current climate of suspicion and mistrust, are less than conducive to sound decisionmaking and to effective action.

Whether my colleague agrees with my thesis that there is room for improvement and that enactment of legislation along the lines of S. 1095 will enhance the credibility of Federal water policy deliberations, he will recall our understanding that the bill would be aired on the floor of the Senate on a timely basis.

I recognize full well the demands upon the time of the Senator, but this matter has been pending for quite some time now. Might I inquire when he believes we can get together and agree on the time and terms for bringing S. 1095 to the floor?

Mr. McCLURE. Madam President, I am pleased to have the support of my colleague from South Dakota, the distinguished chairman of the Water Resources Subcommittee, for fiscal year 1982 funding for an office of water policy within the Department of the Interior. He is entirely correct in pointing out that the office will address only issues pertaining to the direct authorities of the Department itself.

With respect to S. 1095, to establish a national board on water resources policy, I recognize the need for sound and coordinated interdepartmental water policymaking. And, while I am not certain your bill is the best means to address that need, I do recall our agreement for floor consideration.

Mr. ABDNOR. Madam President, the Senator knows that, generally speaking, my views are very much in accord with his own, and most particularly with respect to water policy. When we get into the specifics of S. 1095, I believe he will find me most receptive to his viewpoint as well.

Mr. McCLURE. Madam President, I shall be pleased to work with the chairman of the Water Resources Subcommittee in working with the majority leader to bring S. 1095 to the floor. There are a number of other Senators who have a great interest in this legislation and who have expressed a desire to consider its effects carefully before it is scheduled for action on the floor. I do understand the Senator's concern, because time is growing short.

THE URBAN INDIAN HEALTH PROGRAM

● Mr. BOSCHWITZ. Madam President, back in 1972, Minneapolis embarked on a program which has since become a model project for other States.

This was the beginning of what is today known as the urban Indian health program. There are now 41 similar projects around the country with fiscal year 1981 funding of $8.9 million. And although great progress has been made with concern to Indian health, we still have a long way to go.

A 1979 HEW report concluded that:

> The health status of American Indians . . . still lags 15 to 20 years behind that of the general population.

The House has recognized this, and recommended a 1982 funding level of $9.790 million for urban Indian health.

For some reason, however, the Senate Appropriations Committee had decided to zero-out this line item.

Although I would like to see us adopt the House level of $9.79 million, I recognize that we do not live in an ideal world and that budget pressures necessitate that all of us be more cautious in what we request.

So I am not going to offer an amendment to put the money back in, but I am going to suggest a partial solution to this dilemma.

Since the House has $9.79 million for urban Indian health, and we have nothing, it is entirely reasonable to suggest to the conferees that they accept a level half-way between. This would amount to about $4.5 million, which also happens to be what the Reagan administration requested. So I do not think this is out of line.

I disagree with the administration, however, in how this money should be allocated among the projects. The $4.5 million request assumes a 50-percent reduction in funding across-the-board for all 41 projects. I believe it makes more sense to give first priority to those projects providing direct health care services.

Currently, five projects provide full-time direct health care services, including the Minneapolis project. These programs have been shown, by an outside audit, to be extremely cost effective and to provide the highest quality of health care.

Second priority should go to those 17 projects with limited health care services, and the third to those providing only information and referral.

I understand that the Indian Health Service may be amenable to this plan, but would prefer some direction from Congress.

I urge the chairman to consider my request, and I would be glad to offer whatever other assistance I can provide.●

FUNDING FOR GYPSY MOTH PROGRAM

● Mr. HUMPHREY. Madam President, I would like to take this opportunity to

express my sincere appreciation to the members of the Senate Subcommittee on Interior and Related Agencies, particularly my colleague, Senator McCLURE, who is the distinguished chairman of that subcommittee. Their cooperation led to a change in program funding which will help curb the problem of gypsy moth infestation.

Leaf-eating gypsy moth caterpillars defoliated more than 9 million acres of valuable forest and ornamental trees in the Northeast in 1981. This was the worst outbreak in history, and next year promises to be just as bad, if not worse.

Repeated defoliation by the gypsy moth kills some trees and weakens others, leaving them vulnerable to attacks from other insects and diseases.

Gypsy moth infestation for 1982 has been projected to be as high as 11 million acres in the Northeast, the effects of which would be devastating.

With this in mind, it became evident that the $2.3 million previously appropriated for the gypsy moth program for fiscal year 1982 would fall far short of the need. The U.S. Forest Service has estimated that as much as $7 million may be needed in fiscal year 1982 for the Federal share of insect suppression projects related to the gypsy moth.

At the request of the two Senators from the State of New Hampshire and through a cooperative effort with the Subcommittee on Interior and Related Agencies, a recommendation was made.

The Committee on Appropriations recommends in a Senate report accompanying H.R. 4034 that this necessary funding for infestation control activities be provided out of the funds appropriated in fiscal year 1982 along with insect and disease carryover funds from fiscal year 1981.

The committee also expects the Forest Service to shift funds from the technical assistance and survey line item to the insect suppression line item or through other reprograming or supplement appropriations actions, if necessary, to meet insect infestation needs in fiscal year 1982.

The committee recommendation is both judgmentally sound and necessary to achieve the goal of gypsy moth suppression and therefore should be implemented by the Forest Service.

States and localities must devise plans for gypsy moth control, and with the assurance that Federal moneys will be available, they may now begin this task. The increased funding level of $7 million will enable States to effectively combat the gypsy moth. I commend Senator McCLURE's subcommittee for recognizing the severity of the gypsy moth blight and for taking appropriate and timely action.●

AMENDMENT NO. 601

Mr. McCLURE. Madam President, I call up amendment No. 601 and ask that it be stated.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from Idaho (Mr. McCLURE) proposes an amendment numbered 601.

Mr. McCLURE. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, line 2, delete "$529,869,000" and insert in lieu thereof "$503,703,000".

Mr. McCLURE. Madam President, I wish to modify the printed amendment by restoring $5 million of the proposed reduction. The new figure would then read $508,703,000.

Madam President, in line with the other committee amendments which were earlier accepted, I ask unanimous consent to modify the amendment as printed.

The PRESIDING OFFICER. The Senator has a right to modify that amendment and the amendment is so modified.

The amendment was modified, as follows:

On page 17, line 2, delete "$529,869,000" and insert in lieu thereof "$508,703,000".

Mr. McCLURE. Madam President, the new figure, now reading $508,703,000, conforms to an objection Senator WALLOP and Senator MELCHER raised earlier with respect to the availability of funds for the monitoring and accounting of the royalty payment in the budget of the U.S. Geological Survey. Senators WALLOP and MELCHER and I have consulted on this. I have talked with Secretary Watt today. He supports the request for that money.

Madam President, I think this modification of the amendment is now ready to be agreed to by both sides.

Mr. JOHNSTON. Madam President, I wonder if the Senator can tell me if the effect of this amendment is to have no decrease in the royalty management fund.

Mr. McCLURE. The Senator is correct.

Mr. JOHNSTON. Madam President, we have no objection.

The PRESIDING OFFICER. The question is on agreeing to the amendment as modified.

The amendment (No. 601), as modified, was agreed to.

Mr. McCLURE. I move to reconsider the vote by which the amendment was agreed to.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. McCLURE. Madam President, in line with committee amendments which were earlier accepted, I ask unanimous consent that this amendment be considered as original text for the purpose of further amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 532

Mr. McCLURE. Madam President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Idaho (Mr. McCLURE) proposes an unprinted amendment numbered 532.

On page 35, line 23, after the word "Forest" insert the following: ": *Provided further*, That Section 10(a) of the Forest and Rangeland Renewable Resources Planning Act of 1974, as amended, (16 USC 1608) is amended by deleting all of the sentence after the word "benefits": *Provided further*, That no more than $242,542,000 shall be obligated for the construction of forest roads by timber purchasers".

Mr. McCLURE. Madam President, this amendment changes the Forest Service accounting procedures for timber purchaser credit.

Under the 1974 Forest and Rangeland Renewable Resources Planning Act, timber purchaser credits are required to be treated both as budget authority and budget outlays. This means that the Forest Service budget each year must contain an amount for purchaser credits, and that the amounts of purchaser credits allowed by the Forest Service during the fiscal year are not to exceed the amount authorized and appropriated. This is so, even though no Federal dollars are expended from the Treasury. As a result, there is placed upon the Forest Service a ceiling for timber sales as the timber contracts must take into account the amount of timber purchaser credits. Once this ceiling is reached, no further timber sales can become available.

Attached is an amendment to move the funds for timber purchaser credit road construction off budget. In the fiscal year 1982, there is proposed a budget authority of $242,542,000 for timber purchaser credit, a budget outlay of $23,000,000.

If the amendment is adopted, funds expended by the timber purchaser to construct the roads needed to harvest the timber will not be counted as either budget authority or outlays. Further, the amendment requires the Forest Service to continue to track and control the rate of purchaser credit road construction.

Mr. JOHNSTON. Madam President, we have no objection.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (UP No. 532) was agreed to.

Mr. McCLURE. Madam President, I move to reconsider the vote by which the amendment was agreed to.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER OF PROCEDURE

Mr. McCLURE. Madam President, I wonder if the distinguished minority leader would indicate whether or not he is in a position to clear any nominations on the Executive Calendar.

Mr. ROBERT C. BYRD. Madam President, in response to the inquiry by the distinguished acting Republican leader, the following nominations are cleared on this side of the aisle: Beginning with the Department of Labor on the first page of the Executive Calendar and going through page 2 of that calendar.

Mr. McCLURE. I thank the distinguished Senator.

EXECUTIVE SESSION

Mr. McCLURE. Madam President, I ask unanimous consent that the Senate

go into executive session to consider all the nominations on the Executive Calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. Madam President, I ask unanimous consent that the nominations be considered en bloc and confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations are considered en bloc and confirmed en bloc.

The nominations confirmed en bloc are as follows:

DEPARTMENT OF LABOR

John F. Cogan, of California, to be an Assistant Secretary of Labor.

Lenora Cole-Alexander, of the District of Columbia, to be Director of the Women's Bureau, Department of Labor.

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

Rosemary M. Collyer, of Colorado, to be a member of the Federal Mine Safety and Health Review Commission.

DEPARTMENT OF LABOR

Ford Barney Ford, of California, to be Assistant Secretary of Labor for Mine Safety and Health.

DEPARTMENT OF EDUCATION

Jean Tufts, of New Hampshire, to be Assistant Secretary for Special Education and Rehabilitative Services.

CIVIL AERONAUTICS BOARD

Clinton Dan McKinnon, of California, to be a member of the Civil Aeronautics Board.

Mr. McCLURE. Madam President, I move to reconsider the vote by which the nominations were confirmed.

Mr. JOHNSTON. Madam President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. McCLURE. Madam President, I ask that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. McCLURE. Madam President, I ask unanimous consent that the Senate now return to legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATOR ARMSTRONG COMMENDED FOR SUPPORTING AWACS SALE

Mr. BAKER. Madam President, this afternoon, Senator WILLIAM ARMSTRONG announced his support for the sale of AWACS aircraft to Saudi Arabia, and I want to take this opportunity to congratulate him. Senator ARMSTRONG'S statement was significant in its own right: It was a responsible, well researched, and I believe correct response to a critical question facing the Senate and the country.

But, Madam President, Senator ARMSTRONG'S announcement is also significant in one other respect. For days, I have listened to reports calling the proposal finished, and certain to face disapproval in the Senate. Senator ARMSTRONG'S endorsement is the latest indication that these reports are false.

PROPOSED ARMS SALES

Mr. PERCY. Madam President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of the proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulated that, in the Senate, the notification of proposed sales shall be sent to the chairman of the Foreign Relations Committee.

In keeping with the committee's intention to see that such information is immediately available to the full Senate, I ask to have printed in the RECORD at this point the notification which has been received. The classified annex referred to in the covering letter is available to the Senators in the office of the Foreign Relations Committee, room 4229 of the Dirksen Building.

The notification follows:

DEFENSE SECURITY ASSISTANCE AGENCY,
Washington, D.C., October 23, 1981.

Hon. CHARLES H. PERCY,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith Transmittal No. 81-108 and under separate cover the classified annex thereto. This Transmittal concerns the Department of the Air Force's proposed Letter of Offer to Pakistan for defense articles and services estimated to cost $1.1 billion. Shortly after this letter is delivered to your office, we plan to notify the news media of the unclassified portion of this Transmittal.

Sincerely,

ERICH F. VON MARBOD,
Director.

TRANSMITTAL NO. 81-108

(Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act)

(i) Prospective Purchaser: Pakistan.

(ii) Total Estimated Value:

	(billion)
Major Defense Equipment*	$0.6
Other	0.5
Total	1.1

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Forty F-16 aircraft with related munitions, support equipment, spare parts, training, training equipment, and technical assistance.

(iv) Military Department: Air Force (SCA and SEA).

(v) Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid: None.

(vi) Sensitivity of Technology Contained in the Defense Articles or Defense Services Proposed to be Sold: See Annex under separate cover.

(vii) Section 28 Report: Included in report for quarter ending 30 September 1981.

(viii) Date Report Delivered to Congress: October 23, 1981.

POLICY JUSTIFICATION

PAKISTAN—F-16 AIRCRAFT

The Government of Pakistan has requested the purchase of 40 F-16 aircraft with related munitions, support equipment, spare parts, training, training equipment, and technical assistance at an estimated cost of $1.1 billion.

This sale will contribute to the foreign policy objectives of the United States by enabling Pakistan to increase its capability to provide for its own security and defense, particularly in view of the increased threat resulting from the Soviet invasion of Afghanistan.

The Government of Pakistan requires modern fighter aircraft to replace a number of its Korean War vintage planes which have reached the end of their service life. The Government of Pakistan will use this equipment to enhance its air defense capability as part of an overall force modernization plan.

The sale of this equipment and support will not substantially alter the overall military balance in the region.

The prime contractor will be the General Dynamics Corporation of Fort Worth, Texas.

Implementation of this sale will require the assignment of U.S. contractor representatives to Pakistan (the exact number will be determined after completion of a site survey) until the Pakistan Air Force can achieve self-sufficiency.

No impact of substance on U.S. defense readiness is anticipated as a result of this sale. Full logistical support, however, will not be delivered with the first six aircraft and U.S. Air Force assets may be required for support and training during the initial part of the program.

PTA MEMBERSHIP MONTH

Mr. HAYAKAWA. Madam President, since 1897, the Parent-Teachers Association, the PTA, has initiated programs to improve the education and home life of elementary and secondary students and their families. The passage of House Joint Resolution 318 in the House of Representatives and Senate Joint Resolution 105 in the Senate established October 1981 as "National PTA Membership Month," to commend the PTA for its consistent advocacy of the interests of children and youth.

The key to the success of the PTA is cooperation. Together parents, teachers, industry, and community leaders are meeting students' needs by providing a wide range of services for children, families, and schools.

One of the National PTA's most important tasks is that of parent-educator. Seminars, publications, and other resources have been developed in parenting, health, and alcohol education. On the State level, the California State PTA publishes movie reviews in their official publication, the Bulletin. Films are PTA rated for violence, sex, profane or obscene language, cruelty to animals, drugs, and nudity. The California State PTA has also worked with the March of Dimes in sponsoring a series of seminars to assist parents in communicating with their children. All of these activities can help parents with the important task of rearing their children.

The PTA has been resourceful in its use of outside funds to develop useful programs for parents and children. Underwritten through a cooperative ar-

rangement with the Grolier Educational Cooperation, the California State PTA is producing a series to help parents turn television viewing into a positive experience. The PTA believes that the home and school can work together in teaching children to be discriminating in their program selection.

Five statewide viewing skills workshops for parents are planned for January 1982. The California PTA is also working with the Kellogg Co. in a program to guide young people in making wise decisions about health issues affecting their lives. Student health education forums allow students to reach their own consensus in identifying health education concerns. The publications used in this project were paid for by Kellogg, and put to use by PTA volunteers and students.

The PTA has greatly expanded its community involvement through preventive programs in drug abuse, health, early teenage pregnancy, school discipline and other community concerns "Learning vs. Violence and Vandalism: Can Students Make a Difference?" was the subject of a California State PTA-sponsored creative writing competition for secondary students. A total of 350 entries were received and prizes awarded in two divisions: grades 7–9 and 10–12. The students showed great insight into the causes of school violence and vandalism, and offered many creative solutions to the problem.

The California PTA is also training local volunteers in the use of "A Guide to School and Community Action" which was developed in cooperation with the California State Department of Education. This is a guide for communities interested in gathering facts and determining solutions about concerns such as early teenage pregnancy and drug abuse.

Throughout its 84-year history, the welfare of the students has been the major concern of the PTA. This year, student loans and grants totaling $190.000 will be awarded by the California PTA's honorary service award program. The PTA remains dedicated to building schools, families, and communities where young people can realize their full potential. As Mary Ann Leveridge, National PTA president recently told the 1981 PTA convention, their organization is "Parents and Teachers Working Together—Still the Best Aid to Education."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. DOMENICI, from the Committee on the Budget, without amendment:

S. Res. 223. Resolution to waive section 402(a) of the Congressional Budget Act with respect to the consideration of S. 1024, the Federal-Aid Highway Improvement Act of 1981 (Rept. No. 97–251); and

S. Res. 224. Resolution waiving section 303(a) of the Congressional Budget Act of S. 1024 (Rept. No. 97–252).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. HELMS, from the Committee on Agriculture, Nutrition, and Forestry:

Everett George Rank, Jr., of California, to be a Member of the Board of Directors of the Commodity Credit Corporation; and

Susan Meredith Phillips, of Iowa, to be a Commissioner of the Commodity Futures Trading Commission for the term expiring April 13, 1985.

(The above nominations were reported from the Committee on Agriculture, Nutrition, and Forestry, with the recommendation that they be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. HATFIELD (for himself, Mr. CRANSTON, Mr. GORTON, Mr. MATHIAS, and Mr. MATSUNAGA):

S. 1771. A bill to establish in the Federal Government a global foresight capability with respect to natural resources, the environment, and population; to establish a national population policy; to establish an interagency Council on Global Resources, Environment, and Population, for other purposes; to the Committee on Governmental Affairs.

By Mr. DOMENICI:

S. 1772. A bill to amend title 10, United States Code, to provide for the nonpreemption of State law in cases relating to the division of retired or retainer pay between members or former members of the Armed Forces and their spouses, and to provide an appropriate means of enforcing decrees and orders of State courts providing for the division of such law; to the Committee on Armed Services.

By Mr. DANFORTH:

S. 1773. A bill to amend the National Traffic and Motor Vehicle Safety Act of 1966 to direct the Secretary of Transportation to require all car manufacturers to install automatic crash protection in new passenger cars on the same effective date; to the Committee on Commerce, Science, and Transportation.

By Mr. BAUCUS:

S. 1774. A bill to exempt certain wilderness areas in Montana from mineral leasing; to the Committee on Energy and Natural Resources.

By Mr. GRASSLEY (for himself and Mr. DOLE):

S. 1775. A bill to amend title 28 of the United States Code to provide for an exclusive remedy against the United States in suits based upon acts or omissions of U.S. employees, to provide a remedy against the United States with respect to constitutional torts, and for other purposes; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HATFIELD:

S. 1771. A bill to establish in the Federal Government a global foresight capability with respect to natural resources, the environment, and population; to establish a national populations policy; to establish an interagency Council on Global Resources, Environment, and Population, and for other purposes; to the Committee on Government Affairs.

GLOBAL RESOURCES, ENVIRONMENT AND POPULATION ACT OF 1981

● Mr. HATFIELD. Mr. President, today I am introducing legislation designed to bring about institutional change and improve the global foresight capability of the U.S. Government. This bill requires that there be established an Interagency Council on Global Resources, Environment, and Population which would be mandated to develop a national population policy. This policy would include a declaration encouraging national population stabilization in the long term.

It is time that our country face the stark realities of geometric population growth, resource depletion, environmental degradation, and their direct link to our national security interests. It should come as no surprise that our current Government policies and capabilities to address such significant problems is grossly deficient and disjointed. This legislation provides crucial direction to our Government to begin focusing on the wide range of demographic trends and problems that affect us all. Population change has tremendous impacts on our Nation's problems involving energy conservation, hunger, education, housing, and employment. We can no longer ignore such tendencies. We must adopt the flexible policy called for in this bill to capably respond to the monumental demographic concerns that presently confront us.

Several unexpected and uncontrolled events in our history have led to resource shortages, scarcity of manufactured goods and heightened world tensions. The most prevalent illustration of such an occurrence is the post-World War II baby boom which clearly demonstrates our Government's weakness in collecting and wisely utilizing demographic data. The population bulge that ensued because of the large number of babies born between 1948 and 1968 first crowded the maternity wards of our hospitals, then further crowded our schools and universities.

The decade of the fifties saw school enrollments jump almost 50 percent. Following graduation, this generation has flooded the job and housing markets. Some demographers are predicting the children of the baby boom will produce another bulge in numbers and our country will again be unprepared. When the baby boom generation reaches retirement age, great demands will be put on health care and retirement systems.

Another demographic pattern which has impacted our Nation has been the internal migratory shifts in our population caused by economic, political, and cultural factors. A recent illustration of this trend can be noted in the industrial towns of the northern Midwest which have depended heavily on the auto and steel industries for their very existence. The fall in the auto and steel employment has resulted in a large internal migration to the more prosperous cities in the Sun Belt where better opportunity exists for the skilled unemployed of the North.

Mr. President, you may recall that earlier this month several Senators, including myself, engaged in a colloquy here on the Senate floor in recognition of

World Food Day. I raise this matter because of the direct relationship of food and hunger to the demography of our age. The hunger problem we are witnessing sharpens our understanding and defines the magnitude of geometric population expansion.

Today, 800 million people are suffering from starvation. Worldwide, 12 million people dies of starvation each year before they reach the age of 5. In Latin America, El Salvador has the highest rate of malnutrition of any nation in the hemisphere, and we have seen not only the suffering and instability which this creates, but the opening which it gives to extremist ideology. One does not have to utilize great intelligence to realize a spiraling world population has brought an exponential erosion of our finite resource base and substantial increase in human sacrifice.

As Americans, we can no longer afford to stand by and remain spectators of this calamity. We must take responsible actions and confront this dilemma head-on.

There have been several attempts on behalf of the U.S. Government to address pressing global issues during our two previous administrations. In 1975, President Ford recognized the significance of such global problems and originated and ad hoc group on population policy within the National Security Council. A more visible effort was carried out under President Carter's direction and completed in the summer of 1980. This multi-agency study was entitled: "The Global 2000 Report to the President." The follow-up document to the report, "Global Future: Time to Act," strongly recommends that a single government center is needed to insure availability of adequate demographic data to U.S. decisionmakers. Mr. President, there appeared in the February 1981 edition of Nation's Business a very eloquent article on the Global 2000 study. It was written by James J. Kilpatrick, a noted conservative journalist, and I think it accurately describes the report and corresponding issues. I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article ordered to be printed in the RECORD, as follows:

THE COMING CATASTROPHE

(By James J. Kilpatrick)

Five years ago, Scribner's published an English translation of Jean Raspail's The Camp of the Saints. The novel had been well received abroad, but here in the States the liberal reviewers killed it with ridicule or with silence. The plot was intolerable to them. Raspail was predicting that somewhere around 1990 or 2000 a horde of wretched, starving have-nots would swarm like locusts upon Southern France and ravage the food, the property and the lives of the haves. This was a nightmare novel, chillingly told.

Raspail's prophetic work came to mind the other day, when I finally got around to reading Global 2000. This was a report submitted to President Carter last summer by the Council on Environmental Quality and the Department of State. It is an immensely important study, staggering in its implications, and if you wonder why it has received so little attention, I can only surmise that in Washington we are inundated by reports, and at the time of publication this must have looked like merely one more report.

It is much more than that. The authors have pulled together the best projections of experts in a dozen fields—population, food production, natural resources and the like—and have compressed them into a single word: catastrophe. If we fail to heed the clear warnings of this study—if we fail to take sensible actions now—we will invite terrible consequences just two decades hence.

The population projections alone are enough to cause serious concern. By 2000, the world's population will have increased to about 6.35 billion, a gain of 55 percent over 1975. The more developed countries will increase slowly: The United States may have 248 million inhabitants, up 16 percent; Western Europe can anticipate a population of 378 million, up 10 percent. But the less developed countries will soar. By 2000, Mexico can expect a population of 131 million, up 119 percent. Mexico City will be the largest city in the world, with a population of perhaps 31.6 million—three times as large as New York is today. Africa's population will double; China will go to 1.3 billion and India to 1 billion.

How are these billions of human beings to be fed? In most of Asia, and in poor areas of North Africa and the Middle East, a calamitous drop in food per capita is projected. In these areas, "the quantity of food available to the poorest groups of people will simply be insufficient to permit children to reach normal body weight and intelligence and to permit normal activity and good health in adults." The number of seriously malnourished people will roughly double, from about 600 million today to 1.3 billion two decades hence.

What these projections suggest is that the great grain and rice producing nations must redouble their efforts. An answer cannot be found in putting more land in production, because most good land already is under cultivation. Increased reliance upon fisheries could help, but "unfortunately, the world harvest of fish is expected to rise little, if at all, by the year 2000."

Other concerns cry out for thoughtful attention. The world's forest resources are in deep trouble. By 2000, growing stock per capita is expected to decline 47 percent worldwide and 63 percent in less developed countries. Water supplies, already short in many areas, will get worse.

One thing leads to another: As urban sprawl continues, valuable cropland goes out of cultivation. As forested hills are denuded, erosion takes over. For want of fuel wood, millions will be forced to burn animal dung, thus robbing the soil of organic nutrients.

The authors emphasize that their projections are conservative. They do not allow for drought, or wars or agricultural pestilence. On the other hand, they do project technological developments that will enhance productivity. They do not assume breakthroughs in fusion energy or solar energy. They acknowledge the increased risk that goes with increased production of electrical energy in atomic plants, and grimly but matter-of-factly they point to the mounting problem of disposing of atomic wastes.

Yes, this is a gloom and doom report, made all the more disturbing by the constrained and dispassionate style in which the authors lay out the evidence. But it is not a report without hope. Their message, finally, is that the impending catastrophe can indeed be averted—or at least minimized—if sensible public policies are put in motion now. New methods of safe and reliable birth control must be developed. The world will need new varieties of fast-growing trees. New techniques of aquaculture and desalinization will have to be found.

Above all, a sense of urgency has to be aroused. Otherwise, our children and grandchildren may soon discover that Jean Raspail wrote not fiction, but fact.

Mr. HATFIELD. Mr. President, we should note that President Reagan has also indicated his interest in global issues and has instructed the Council on Environmental Quality to begin conferring with other Government agencies to develop a response to some of the most critical global problems. This past summer the President participated in the Ottawa Economic Summit Conference involving Canada, France, Germany, the United Kingdom, Italy, and the United States. The following statement on population was included in the official declaration of the Ottawa Summit:

Paragraph 20: We are deeply concerned about the implications of world population growth. Many developing countries are taking action to deal with that problem, in ways sensitive to human values and dignity; and to to develop human resources, including technical and managerial capabilities. We recognize the importance of these issues and will place greater emphasis on international efforts in these areas.

Several academic studies have been completed which point to the need to establish national population policy. Two such efforts have been issued by the Boston College Environmental Law Center and Stanford University respectively.

Mr. President, this legislation, as I mentioned previously, establishes an Interagency Council on Global Resources, Environment and Population.

The council shall be composed of one representative from each one of 19 agencies which formulate policy on these issues. The bill calls for staffing responsibilities to be carried out by the Office of Administration within the Executive Office of the President. This council will not cost the taxpayers any additional expense and will not add to the Federal work force. In this manner, we can prudently establish the institutional base necessary to address this vital task and not add to the Federal deficit.

Mr. President, for many years during my tenure here in the Senate I have tried to advance the notion that we are not the owners of the natural resources and treasures of this Earth, but rather its stewards, entrusted with its temporary use. We as a nation must live and act in ways that demonstrate this stewardship. The benefits to be realized—reduced human suffering and strife for future generations—will certainly be worth the cost.

I am honored to be joined in this effort by Senators CRANSTON, GORTON, MATHIAS, and MATSUNAGA as original cosponsors. I appreciate this support and look forward to working with many other colleagues on this legislation as well.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1771

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this

Act may be cited as the "Global Resources, Environment, and Population Act of 1981".

DEFINITIONS

SEC. 2. For the purposes of this Act, the term—

(1) "agency" shall have the same meaning provided in section 551(1) of title 5, United States Code;

(2) "Chairman" means the Chairman of the Council on Global Resources, the Environment, and Population established by section 7 of this Act;

(3) "Council" means the Council on Global Resources, the Environment, and Population established by section 7 of this Act;

(4) "global population stabilization" means the stage in the change in world population when the number of human births approximately equals the number of human deaths;

(5) "long term", when used with respect to trends or impacts means a period of twenty or more years;

(6) "national population stabilization" means the stage in the change in national population when the sum of the number of human births and the number of individuals immigrating approximately equals the sum of the number of human deaths and the number of individuals emigrating;

(7) "person" shall have the same meaning provided in section 551(2) of title 5, United States Code;

(8) "population characteristics" means the number of individuals in the population, and the fertility, mortality, immigration, emigration, internal migration, age structure, and geographic distribution of the population, and the health, education, employment, income, and natural resources needs of the population; and

(9) "short term", when used with respect to trends or impacts, means a period of less than twenty years.

FINDINGS AND POLICY

SEC. 3. (a) The Congress finds and declares that—

(1) population growth directly affects the availability of natural resources, the environment, economic development, and national security;

(2) continued unplanned changes in population characteristics affect the ability of the Nation—

(A) to fulfill the needs of the people for education, training, jobs, health care, housing, and transportation,

(B) to maintain adequate energy supplies;

(C) to conserve natural resources;

(D) to produce food and agricultural products;

(E) to protect the environment;

(F) to provide income maintenance for retired and disabled individuals, and

(G) to control Government expenditures;

(3) there are economic, social, governmental, and environmental advantages to the attainment of national population stabilization in the United States;

(4) the Federal Government has the responsibility for coordinating planning for changes in population characteristics;

(5) the Federal Government is presently unable effectively to derive internally consistent projections of long term national and global trends in population characteristics, the availability of natural resources, and environmental change, to analyze the effects of such trends on Federal policies and programs, and to consider such trends in planning and modifying Federal policies and programs appropriately; and

(6) the Federal Government must improve its capability—

(A) to coordinate research and analysis with respect to, and prepare projections of, national and global trends in population characteristics, the availability of natural resources, and environmental change, and

(B) to assess the impact of such trends on the national security and the economic well-being of the people of the United States.

(b) It is the public policy of the United States that—

(1) the Federal Government use all practicable means, including financial and technical assistance, to establish and maintain conditions which (A) promote the achievement, at the earliest possible time, of national population stabilization in the United States at a level which is consistent with the maintenance of a high standard of living and conservation of natural resources and the environment, and (B) do not cause major social or economic dislocations in the national population;

(2) the Federal Government cooperate with State and local governments and other persons to promote national population stabilization in the United States;

(3) the Federal Government encourage the nations of the world to achieve national population stabilization and a balance between population characteristics, the use of natural resources, and environmental change; and

(4) the Federal Government develop and maintain the capability—

(A) to coordinate research and analysis with respect to, and to prepare projections of, national and global trends in population characteristics, the availability of natural resources, and environmental change,

(B) to assess the impact of such trends on the Nation, and

(C) to coordinate national planning and decisionmaking based on such projections.

PURPOSES

SEC. 4. The purposes of this Act are—

(1) to provide for coordinated national planning for changes in national population characteristics;

(2) to facilitate the attainment of a balance, both nationally and, through cooperation with other nations, globally, between population characteristics, the use of natural resources, and environmental change;

(3) to encourage national population stabilization in the United States;

(4) to assure that, in the interpretation and administration of Federal laws, regulations, and policies, and the planning and administration of the programs of the Federal Government, the goal of national population stabilization and projections on national and global trends in population characteristics will be considered;

(5) to establish an interagency council to improve the capability of the Federal Government to provide the President, the agencies, and the Congress with accurate, timely, and internally consistent projections of short term and long term national and global trends in population characteristics, the availability of natural resources, and environmental change; and

(6) to assure coordination of the activities of all agencies which assess the effects of the national and global trends referred to in clause (5) on the national security and the economic well-being of the people of the United States, and on Federal, State, and local policies and programs relating to education, employment, housing, agriculture, commerce, energy, the environment, transportation, communications, and services to senior citizens.

INTERPRETATION AND ADMINISTRATION OF POLICIES, REGULATIONS, AND PUBLIC LAWS; AGENCY ACTION

SEC. 5. The Congress authorizes and directs that, to the fullest extent possible—

(1) the policies, regulations, and public laws of the United States shall be interpreted and administered in accordance with the policies set forth in this Act; and

(2) all agencies of the Federal Government shall—

(A) use reliable demographic research in planning and decisionmaking which affect national and global population characteristics, the impact of national and global population characteristics on the availability of natural resources, the environment, the security of the United States, and the attainment of national and global population stabilization;

(B) identify and develop, in consultation with the Council on Global Resources, the Environment, and Population established by section 7 of this Act, methods and procedures which will insure that national and global population characteristics and the promotion of national and global population stabilization will be considered, along with environmental, economic, natural resource, and technical considerations, in planning and decisionmaking in such agencies; and

(C) make available to State and local governments and to other persons such advice and information as may be useful for planning for changes in population characteristics and national population stabilization in the United States.

POLICY REVIEW

SEC. 6. The head of each agency shall review the statutory authority, administrative regulations, and policies and procedures of the agency for the purpose of determining whether there are any deficiencies or inconsistencies which limit or prevent compliance with the purposes, policies, and provisions of this Act. The head of each agency shall, within one year after the enactment of this Act, take such action as the head of the agency considers necessary to eliminate any such deficiencies or inconsistencies and recommend to the President such administrative actions and to the Congress such legislative actions as the head of the agency considers necessary to eliminate any such deficiencies or inconsistencies.

COUNCIL ON GLOBAL RESOURCES, THE ENVIRONMENT AND POPULATION

SEC. 7. (a) There is established a Council on Global Resources, the Environment, and Population. The Council shall be composed of the Secretaries of Agriculture, Commerce, Defense, Energy, Health and Human Services, the Interior, State, and Transportation, the Attorney General, the Director of the Office of Management and Budget, the Director of Central Intelligence, the Chairman of the Council on Environmental Quality, the Administrator of the Environmental Protection Agency, the Director of the United States International Development Cooperation Agency, the Director of the National Science Foundation, the Assistant to the President for National Security Affairs, the Director of the Office of Policy Development of the Executive Office of the President, the Director of the Office of Science and Technology Policy of the Executive Office of the President, and the United States Trade Representative, or their designees.

(b) The Chairman of the Council on Environmental Quality shall be Chairman of the Council. The Council shall elect a Vice Chairman from among its members. In the absence or disability of the Chairman, the Vice Chairman shall act as Chairman.

(c) The Chairman shall preside at all meetings of the Council. At least seven members of the Council shall constitute a quorum. Each member of the Council, including the Chairman, shall have one vote. Decisions of the Council shall be determined by a majority vote of the members present.

FUNCTIONS OF THE COUNCIL

SEC. 8. (a) The Council shall—

(1) assist and advise the President in the preparation of the National Population Change and Planning Report required by section 10 of this Act;

(2)(A) coordinate population research by agencies and compile information on the current and foreseeable trends in United States

and global population characteristics and on the conditions causing such trends;

(B) analyze and interpret such information to determine the probability that such trends and conditions will limit the achievement of the policies set forth in this Act; and

(C) compile and submit to the President and Congress such studies as the Council considers appropriate to promote the achievement and implementation of the purposes of this Act and policies of this Act;

(3) review the laws, regulations, programs, and activities of the Federal Government to determine the extent to which such laws, regulations, programs, and activities limit or promote the achievement and implementation of the purposes and policies of this Act, and make recommendations to the President for such administrative actions and the Congress for such legislative actions as the Council considers necessary to eliminate any provisions of such laws or regulations or to modify any such programs or activities which limit the achievement or implementation of the purposes and policies of this Act;

(4) develop and recommend to the President and the Congress a national population policy, including a national policy on immigration, which will facilitate planning for changes in population characteristics and promote national population stabilization in the United States;

(5) conduct investigations, surveys, and research, and prepare studies and analyses relating to national population characteristics and the impact of the population characteristics on the availability of natural resources, the environment, and achievement of national population stabilization;

(6) prepare and revise projections and analyses of short term and long term global trends in population characteristics, availability of natural resources, and environmental change, including the impact of such trends on the Nation, and report such projections and analyses to the President at least every two years;

(7) develop and recommend to the President policies and programs which will encourage global population stabilization at a level which is consistent with the highest possible standard of living and does not deplete the natural resources of the world or degrade the global environment; and

(8) make such recommendations with respect to matters of policy and legislation as the President or the Congress may request.

(b) In carrying out its functions under this Act, the Council shall consult with appropriate officials and representatives of State and local governments, and other persons, including persons interested in population, science, industry, health, education, agriculture, labor, conservation, social welfare, and international affairs, to obtain information, opinions, and advice without compensation or reimbursement.

ADMINISTRATIVE PROVISIONS

SEC. 9. (a) The Chairman is responsible for the executive and administrative operation of the Council in carrying out the provisions of this Act. The Chairman is authorized—

(1) to use, pursuant to appropriate agreements, the services, equipment, personnel, and facilities of other agencies and of State, local, and private instrumentalities, without reimbursement therefor;

(2) to enter into agreements with the heads of such other agencies and the heads of any State, local, and private instrumentalities as may be appropriate; and

(3) to request such information, data, and reports from any agency or person as the Council may require to carry out the purposes and provisions of this Act.

(b) The head of each agency represented on the Council shall promptly furnish necessary services, equipment, personnel, and facilities to the Council.

(c) The head of each agency shall, to the extent permitted by law, provide the Council with information of the agency requested by the Council, including suggestions, estimates, and statistics.

(d) The expenses of the Council shall be paid out of appropriations available for the payment of the administrative expenses of the Executive Office of the President.

ANNUAL REPORT

SEC. 10. Within one year after the date of enactment of this Act, and annually thereafter, the President shall prepare and transmit to the Congress a National Population Change and Planning Report which shall include—

(1) the current and foreseeable trends in national and global population characteristics;

(2) an evaluation of the adequacy of available natural resources for fulfilling the human and economic requirements of the United States and the world based on such current and foreseeable trends;

(3) an evaluation of the short term and long term impact which national and global trends in population characteristics, availability of natural resources, and environmental change will have on the economy and national security of the United States;

(4) a review of the effects of the laws, regulations, programs, and activities of the Federal Government and State and local governments and of the activities of other persons on population characteristics, the attainment of national and global population stabilization, and planning for such change and stabilization; and

(5) such recommendations for legislative actions as the President considers necessary to carry out the purposes and policies of this Act.●

By Mr. DOMENICI:

S. 1772. A bill to amend title 10, United States Code, to provide for the nonpreemption of State law in cases relating to the division of retired or retainer pay between members or former members of the Armed Forces and their spouses, and to provide an appropriate means of enforcing decrees and orders of State courts providing for the division of such pay; to the Committee on Armed Services.

DIVISION OF CERTAIN MILITARY PAY

● Mr. DOMENICI. Mr. President, after the Supreme Court decision that State courts could not consider military pensions for settlement purposes in divorce proceedings, several bills were introduced in both Houses of Congress to give States the authority to do so. I commend my colleagues for taking immediate action to move legislation to correct this inequity. I support their efforts. However there is a further problem to be dealt with and that is the reason for the introduction of this bill.

Even if the States are allowed to divide military pension between litigants in a divorce proceeding, and issue a decree doing so, the decree may be unenforceable when the pensioner moves out of State. Therefore, the bill I introduce has a provision for filing divorce decrees with the Secretary of Defense who will then issue pension checks as per those valid divorce decrees. This bill insures not only the right to share in a military pension but also provides a practical enforcement mechanism.

Mr. President, I hope that the Congress moves quickly in passing legislation to allow the States jurisdiction over military pensions in divorce cases. There are several proposals before the proper committees. But I also hope that we include an enforcement mechanism which will allow a practical disbursement of the adjudicated shares of pension settlements.●

By Mr. DANFORTH:

S. 1773. A bill to amend the National Traffic and Motor Vehicle Safety Act of 1966 to direct the Secretary of Transportation to require all car manufacturers to install automatic crash protection in new passenger cars on the same effective date; to the Committee on Commerce, Science, and Transportation.

MOTOR VEHICLE SAFETY AMENDMENTS ACT OF 1981

● Mr. DANFORTH. Mr. President, I am introducing today the Motor Vehicle Safety Amendments Act of 1981, legislation which would reduce substantially the individual and social costs of automobile accidents on our Nation's highways. Enactment of the legislation would reverse the decision of the National Highway Traffic Safety Administration, announced on October 23, to rescind Federal Motor Vehicle Safety Standard 208.

The costs of automobile accidents have reached appalling proportions, and yet they promise to grow far worse in the next few years. As chairman of the Surface Transportation Subcommittee, I feel a special obligation to call to my colleagues' attention the horrifying facts about automobile accidents and the adverse impact NHTSA's decision will have on automobile safety.

The impact of the NHTSA decision will fall most heavily on young Americans, since car accidents are the leading cause of death for Americans under age 35. A study released earlier this month showed that nearly one-half of all Americans who die between the ages of 16 and 19 are killed in automobile accidents. This year, more than 53,000 people will die in auto accidents, and 2 million others will suffer disabling injuries. In terms of death and disfigurement, the United States suffers a Vietnam war every single year.

The future is even more horrifying. The growing number of small, light, fuel-efficient cars on the highways will likely push the death toll over 70,000 lives per year by the end of this decade, according to NHTSA's own predictions. This is certainly not the time to abandon lifesaving technology, but NHTSA has decided to turn back the clock on automatic crash protection.

The legislation I am introducing today would insure that all 1984 model year and later model cars would be equipped with an automatic crash protection system, as required by the now defunct FMVSS 208. It has been estimated that implementation of the standard could save 9,000 to 12,000 lives each year and prevent perhaps hundreds of thousands of serious injuries.

I cannot overemphasize that this legislation is not a futile effort to protect people from themselves. It cannot be denied that enforcement of the automatic crash

protection standard would mean that several times more people would be protected than are protected today by manual safety belts. Nor can it be denied that the benefits of the additional protection would be shared not only by those whose lives are saved, but also by all who pay health and automobile insurance premiums and by the American taxpayer. At stake are nearly $19 billion per year in medical costs, lost wages, and welfare and social security payments. Experts have subjected the automatic crash protection standard to strict cost-analysis and have found that all of us would be better off if the standard were enforced.

Yale economist William Nordhaus estimates that half of the costs of auto accidents are external to the victims and are therefore borne by the taxpayers and others. The upward pressure on insurance premiums would be relieved somewhat by the enactment of this legislation. Without the standard, rising insurance costs can be expected to price some drivers out of the market, thus exposing more and more of us to the risk of being hit by uninsured motorists.

NHTSA's rescission of FMVSS 208 is a mistake. The administration has undone a decade of consideration, negotiation, and research. It is my intention to hold hearings on this decision at the earliest possible date and to likewise move forward with this legislation. This is the only course which is consistent with the policy underlying the National Highway Traffic and Motor Vehicle Safety Act of 1966—to reduce the bloodshed on our Nation's highways.

Mr. President, I ask unanimous consent that the Motor Vehicle Safety Amendments Act of 1981 be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1773

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Motor Vehicle Safety Amendments Act of 1981".

SEC. 2. Congress hereby declares that the purpose of this legislation is to provide comfortable and convenient crash protection for occupants of passenger cars in a manner which avoids competitive and financial disadvantages to any manufacturer.

SEC. 3. Part A of title I of the National Traffic and Motor Vehicle Safety Act of 1966 (15 U.S.C. 1391–1410b) is amended by adding at the end thereof the following new section:

"SEC. 126. (a) Each automobile manufacturer shall install automatic crash protection in each passenger automobile manufactured on or after September 1, 1983.

"(b) The Secretary, in carrying out his responsibilities under section 201(c) of the Motor Vehicle Information and Cost Savings Act (15 U.S.C. 1941(c)), shall develop and disseminate information to inform the public about the performance and benefits of automatic crash protection.

"(c) For purposes of this section—

"(1) the term 'passenger car' means a motor vehicle with motive power, except a multipurpose passenger vehicle that is, a motor vehicle with motive power, except a trailer, designed to carry ten persons or less (which is constructed either on a truck chassis or with special features for occasional off-road operation), motorcycle, or trailer, designed for carrying ten persons or less, and

"(2) the term 'automatic crash protection' means Federal Motor Vehicle Safety Standard 208 (49 CFR 571.208) as in existence on January 1, 1981.".●

By Mr. BAUCUS:

S. 1774. A bill to exempt certain wilderness areas in Montana from mineral leasing; to the Committee on Energy and Natural Resources.

EXEMPTION OF CERTAIN WILDERNESS AREAS FROM MINERAL LEASING

Mr. BAUCUS. Mr. President, the Bob Marshall wilderness complex is 1.5 million extraordinary acres threatened by unprecedented pressure for development.

Located in Montana's Rocky Mountains, this region is actually composed of three congressionally designated wilderness areas: the Bob Marshall, Scapegoat, and Great Bear wildernesses. The "Bob", as it is known in Montana, is a unique resource. As one of the largest roadless areas in the continental United States, the area is a critical reserve for air, water, and wildlife resources. Furthermore, the Bob provides invaluable recreation opportunities for visitors from across the Nation.

Even a brief review of the region underscores its importance. The airshed of the Bob Marshall complex is designated class I, indicating that it is virtually free of all pollutants. The waters flowing from the area are pure with two rivers classified "wild" under the Wild and Scenic Rivers Act. The wildlife of the wilderness is abundant including the threatened grizzly bear, the endangered gray wolf, bald eagles, and peregrine falcon as well as plentiful big game and sport fish.

More important, however, the Bob is a human resource. Tens of thousands of visitors every year enter the Bob Marshall wilderness complex to hunt, fish, ride horses, hike and ski. Having toured part of this area just last August, I can assure my colleagues that no visitor leaves the wilderness unchanged.

The experience was perhaps best expressed by one of the pioneers of American forestry, Bob Marshall, himself. He remarked that "Enjoyment of solitude, complete independence, and the beauty of undefiled panoramas is absolutely essential to happiness."

Given this background, I am sure you can understand the concern which many in Montana felt when exploration for oil and gas resources was proposed for the Bob Marshall Wilderness complex. In fact, with more than 340 applications for leaseholds filed within the Bob Marshall, Great Bear, and Scapegoat Wildernesses, the future of the wilderness is in question.

Arguably, such exploration is allowed under the letter of the law today. The Wilderness Act of 1964 permits mineral exploration and leasing until December 31, 1983. As a matter of public policy, however, I believe that Congress must not allow this development to occur.

The first step in this direction was taken by the House Interior and Insular Affairs Committee on May 21, 1981, when it adopted a resolution directing an emergency withdrawal of these lands at the urging of Montana's Congressman PAT WILLIAMS. The objective of the committee's action was to allow sufficient time for review of the management of the three wilderness areas. While the Secretary of the Interior did comply with this directive, the withdrawal is now the subject of litigation brought by the Secretary's former law firm, the Mountain States Legal Foundation.

Interestingly enough, the administration has declined to defend the constitutionality of the House committee's action. Both the House committee and the Senate have, however, entered the litigation as "friends of the court" to uphold the validity of the provision within the Federal Land Policy and Management Act which grants Congress this important legislative tool.

I am hopeful that the court will be persuaded by the arguments which I and other participants in this case have made. Furthermore, I also hope that Secretary Watt would act independently to preserve the wilderness values of the Bob Marshall area. Nonetheless, I am convinced that Congress should clarify the management of the Bob Marshall complex. To that end, I am introducing legislation today.

The necessity of withdrawing this area is brought home by the report submitted by Secretary Watt to the House Committee on Interior and Insular Affairs concerning the committee's directive for emergency withdrawal of these lands pending congressional review of the situation. The message of the report is clear: A massive exploration and development program within the Bob would simply sacrifice all other natural resource values on an altar of theoretical energy production.

The development of oil and gas deposits would mean the transportation and operation of mammoth drilling rigs suitable for deep holes. Roads and pipelines cut through miles of virgin forest lands would spell the destruction of the wilderness character of the region.

The impact of such activity on traditional recreational uses of the Bob Marshall complex is dramatic. In the words of the Secretary's report, "Disturbance to the recreation user would extend a great deal beyond the physically disturbed areas. Entire drainages may become unsuitable for primitive recreation use for 50 to 100 years."

If our Nation is in fact so desperate for this last potential energy resource, then I believe that much more drastic steps than exploration within the Bob Marshall Wilderness is in order. On the contrary, vast amounts of public lands outside of the wilderness remain to be explored adequately. Alternative energy sources remain largely untested. The dramatic benefits of conservation have barely been examined.

Accordingly, the bill which I bring before the Senate today would, in a straightforward manner, withdraw the Bob Marshall, Scapegoat, and Great Bear Wilderness areas from mineral leasing. Such a policy directive is clearly

the prerogative of Congress. Even more, I believe it is our obligation.

I look forward to the support of my colleagues and I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1774

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4 (d) (3) of the Wilderness Act (Public Law 88-577) is amended by—

(1) inserting "(A)" after "(3)";

(2) inserting after "December 31, 1983," the following: "except as provided in subparagraph (B),"; and

(3) adding at the end thereof the following new subparagraph:

"(B) Notwithstanding subparagraph (A), effective May 21, 1981, the Bob Marshall, Scapegoat, and Great Bear Wilderness areas in Montana are withdrawn from all forms of appropriation under the mining laws and from disposition under all forms of appropriation under the mining laws and from disposition under all laws pertaining to mineral leasing and all amendments thereto.".

By Mr. GRASSLEY (for himself and Mr. DOLE):

S. 1775. A bill to amend title 28 of the United States Code to provide for an exclusive remedy against the United States in suits based upon acts or omissions of U.S. employees, to provide a remedy against the United States with respect to constitutional torts, and for other purposes; to the Committee on the Judiciary.

FEDERAL EMPLOYEE TORT LIABILITY

● Mr. GRASSLEY. Mr. President, I am pleased to introduce a bill to amend title 28 of the United States Code with respect to tort actions filed against the United States and Federal employees.

This bill will represent a continuation of efforts made in the previous two Congresses to deal equitably with the serious problem of the increasing number of lawsuits filed against Federal employees in their individual or personal capacities.

Since the 1971 decision of *Bivens* v. *Six Unknown Named Agents of Federal Bureau of Narcotics,* 403 U.S. 388 (1971), there has been an exponential increase in the number of lawsuits which attempt to seek redress directly from the individual defendant's personal resources rather than from the Government. Moreover, because of well-founded concepts of sovereign immunity, the United States is not amenable to Bivens suits, which are also known as "constitutional" tort actions. The primary characteristic of these actions is that they allege a personal cause of action in tort damages arising directly out of a provision of the Constitution such as the fourth or fifth amendment.

The Supreme Court has continued to adhere to the theory announced in Bivens and, indeed, has expanded it to permit a suit against a Congressman under the fifth amendment, *Davis* v. *Passman,* 442 U.S. 228 (1979), and a direct suit against prison officials, *Carlson* v. *Green,* 446 U.S. 14 (1980), even though an alternative remedy, the Federal Tort Claims Act, was available in that case. The lower Federal courts have extended the Bivens or constitutional tort action to claims arising out of virtually the entire Bill of Rights.

Although our figures are incomplete, we believe that there are presently in excess of 1,000 lawsuits pending against Federal officials in their individual capacities. Several of these lawsuits involve multiple defendants, some as many as 30 to 45. Initially, Bivens suits were primarily filed as a result of incidents involving law enforcement activities; however, in recent years such suits increasingly have arisen out of regulatory or personnel actions taken by Federal officials.

The current situation is an unsatisfactory one from the perspective of all parties concerned. From the point of view of the Federal employee, the specter of personal lawsuits is harmful to morale, serves to chill vigorous and effective public action and is inherently unfair to the individual attempting to fulfill his Federal mission. From the point of view of the plaintiff, the pursuit of a Federal official through a Bivens action is expensive, exhaustive, and unlikely to result in a collectible judgment.

From the point of view of the Government, the Bivens action entails expenditure of large resources, great complexity in the defense of individuals, and entangling complications such as the existence or assertion of conflicts of interest between multiple defendants or between the United States and one or more individual defendants. The latter difficulty frequently requires the hiring of outside private counsel at Government expense in order to properly defend individual defendants.

Mr. President, added to these difficulties is the fact that the Federal Tort Claims Act, as currently constituted, permits personal lawsuits against individual Federal employees even for common law or nonconstitutional torts except in the cases of Federal drivers of vehicles and most Federal medical personnel. There is, of course, no general provision for indemnification of sued Federal officials. Thus, the current state of the law leaves the conscientious Federal official woefully exposed to possible catastrophic personal loss for actions taken in the course of duty. The legislation will bridge the current gap in the law. It is my hope that my colleagues will wholeheartedly support this measure.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1775

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (b) of section 1346 of title 28, United States Code, is amended—

(1) by inserting "(1)" after "jurisdiction of"; and

(2) by striking out the period at the end thereof and inserting in lieu thereof ", or (2) civil actions on claims against the United States, for money damages, sounding in tort arising under the Constitution of the United States for injury or loss of property, or personal injury or death, caused by an act or omission of any employee of the Government while acting within the scope of his office or employment, such liability to be determined in accordance with applicable Federal law.".

SEC. 2. Section 2672 of title 28, United States Code, is amended in the first paragraph—

(1) by inserting "(1)" after "United States" the first place it appears;

(2) by striking out the colon after "occurred" and inserting in lieu thereof ", or (2) for claims for money damages sounding in tort arising under the Constitution of the United States for injury or loss of property, or personal injury or death, caused by an act or omission of any employee of the Government while acting within the scope of his office or employment, such liability to be determined in accordance with applicable Federal law:"; and

(3) by inserting "or any award, compromise, or settlement based on a claim arising under the Constitution of the United States" after "25,000".

SEC. 3. Section 2674 of title 28, United States Code, is amended—

(1) by striking out the comma after "claims" in the first paragraph and inserting in lieu thereof "other than those arising under the Constitution of the United States,";

(2) by inserting "(a)(1)" at the beginning of the first paragraph;

(3) by inserting "(2)" at the beginning of the second paragraph; and

(4) by adding at the end thereof the following new subsection:

"(b)(1) The United States shall be liable, respecting the provisions of this title relating to tort claims arising under the Constitution of the United States, to the extent recognized or provided by applicable Federal law, and shall be entitled to all defenses heretofore available to an employee of the United States and to which the United States would otherwise be entitled. The United States shall not be liable for interest prior to judgment or for punitive damages.

"(2) Damages in any such case shall be the greater of (A) actual damages or (B) liquidated damages of $1,000 or, in the case of a continuing tort, $100 a day for each day of violation up to a maximum of $15,000.".

SEC. 4. Subsection (a) of section 2675 of title 28, United States Code, is amended by striking out the comma after "employment" and inserting in lieu thereof "or upon a claim against the United States for money damages for a tort arising under the Constitution of the United States caused by an act or omission of any employee of the Government while acting within the scope of his office or employment,".

SEC. 5. (a) Subsection (b) of section 2679 of title 28, United States Code, is amended to read as follows:

"(b) The remedy against the United States provided by sections 1346(b) and 2672 of this title for claims for injury or loss of property or personal injury or death resulting from the negligent or wrongful act or omission of any employee of the Government while acting within the scope of his office or employment and for claims arising under the Constitution of the United States for an act or omission of any employee of the Government while acting within the scope of his office or employment, is exclusive of any other civil action or proceeding arising out of or relating to the same subject matter against the employee whose act or omission gave rise to the claim, or against the estate of such employee, and shall also be deemed an equally effective substitute for any recovery against the employee in his individual capacity directly under the Constitution.".

(b) Subsection (d) of such section is amended to read as follows:

"(d)(1) Upon certification by the Attorney General that the defendant employee was acting within the scope of his office

or employment at the time of the incident out of which the action arose, any such civil action or proceeding commenced in a United States district court shall be deemed an action against the United States under the provisions of this title and all references thereto, and the United States shall be substituted as the party defendant. After substitution, the United States shall have available all defenses available to the employee and all defenses to which it would have been entitled if the action had originally been commenced against the United States under this chapter and section 1346(b) of this title.

"(2) Upon certification by the Attorney General that the defendant employee was acting within the scope of his office or employment at the time of the incident out of which the action arose, any such civil action or proceeding commenced in a State court shall be removed without bond at any time before trial by the Attorney General to the district court of the United States for the district and division embracing the place wherein it is pending. Such action shall be deemed an action brought against the United States under the provisions of this title and all references thereto, and the United States shall be substituted as the party defendant. After substitution, the United States shall have available all defenses available to the employee and all defenses to which it would have been entitled if the action had originally been commenced against the United States under this chapter and section 1346(b) of this title. The certification of the Attorney General shall conclusively establish scope of office or employment for purposes of removal.

"(3) The certification by the Attorney General under subsection (d)(1) or (2) that the defendant employee was acting within the scope of his office or employment shall be binding and conclusive, except that in the event that the Attorney General has not certified scope of office or employment, the employee may at any time before trial petition the court to find and certify that the employee was acting within the scope of his office or employment. A copy of the petition shall be served upon the United States in accordance with the provisions of Rule 4(d)(4), Federal Rules of Civil Procedure. In the event the petition is filed in a civil action or proceeding pending in a State court, the action or proceeding shall be removed without bond by the Attorney General to the district court of the United States for the district and division embracing the place wherein it is pending. Should the district court determine that the employee was not acting within the scope of his office or employment, the action or proceeding shall be remanded to the State court.

"(4) Where a civil action or proceeding under this chapter is precluded because of the availability of a remedy, compensation, or other benefits from the United States as provided by any other law, the action or proceeding shall be dismissed but in that event, the running of any limitation of time for commencing or filing an application or claim in a proceeding for any other remedy, compensation, or benefits shall be suspended during the pendency of the civil action or administrative proceeding under this chapter.

"(5) Whenever an action brought against a defendant employee in which the United States is substituted as the party defendant under this subsection is dismissed for failure first to present a claim to the appropriate Federal agency pursuant to section 2675(a) of this title, the claim shall be deemed to be timely presented under section 2401(b) of this title, if (A) the claim would have been timely if filed on the date the action against the defendant employee was commenced, and (B) the claim is presented to the appropriate Federal agency within 60 days after dismissal of the action.".

(c) Such section is further amended by adding at the end thereof the following new subsection:

"(f) If a civil action or proceeding under section 1346(b) or 2672 of this title arising under the Constitution of the United States results in a judgment against the United States or an award, compromise, or settlement paid by the United States, the Attorney General shall forward the matter to the head of the department or agency which employed the employee at the time of the act or omission for such further administrative investigation or disciplinary action as may be appropriate.".

SEC. 6. (a) Section 2680 of title 28, United States Code, is amended—

(1) by striking out the section heading and inserting in lieu thereof the following:

"§ 2680. Exceptions; claims not arising under the Constitution of the United States";

(2) by inserting ", relating to tort claims other than those arising under the Constitution of the United States," in the first paragraph immediately after "title"; and

(3) by amending subsection (h) to read as follows:

"(h) Any claim arising out of libel, slander, misrepresentation, deceit, or interference with contract rights.".

(b) The item relating to section 2680 in the table of sections at the beginning of chapter 171 of title 28, United States Code, is amended to read as follows:

"2680. Exceptions; claims not arising under the Constitution of the United States.".

SEC. 7. (a) Chapter 171 of title 28, United States Code, is amended by adding at the end thereof the following new section:

"§ 2681. Exceptions; claims arising under the Constitution of the United States

"The provisions of this chapter and of section 1346(b) of this title which relate to tort claims arising under the Constitution of the United States shall not apply to actions arising from the activities of the Tennessee Valley Authority, the Panama Canal Company, a Federal land bank, a Federal intermediate credit bank, or a bank for cooperatives.".

(b) The table of sections at the beginning of chapter 171 of title 28, United States Code, is amended by adding at the end thereof the following new item:

"2681. Exceptions; claims arising under the Constitution of the United States.".

SEC. 8. (a)(1) Subsections (a) through (d) of section 4116 of title 38, United States Code, are repealed.

(2) Subsection (e) of such section is amended—

(A) by striking out "(e)";

(B) by striking out "person to whom the immunity provisions of this section apply (as described in subsection (a) of this section)," and inserting in lieu thereof "employee of the Veterans' Administration"; and

(C) by striking out "Department of Medicine and Surgery" and inserting in lieu thereof "Veterans' Administration".

(b)(1) Subsections (a) through (e) of section 224 of the Public Health Service Act (42 U.S.C. 233) are repealed.

(2) Subsection (f) of such section is amended by striking out "(f)".

(c)(1) Subsections (a) through (e) of section 1089 of title 10, United States Code, are repealed.

(2) Subsection (f) of such section is amended by striking out "person described in subsection (a)" and inserting in lieu thereof "employee of the armed forces, the Department of Defense, the United States Soldiers' and Airmen's Home, or the Central Intelligence Agency".

(3) Subsection (g) of such section is amended—

(A) by striking out "and" at the end of clause (2);

(B) by redesignating clause (3) as clause (4); and

(C) by inserting after clause (2) the following new clause:

"(3) the Governor of the United States Soldiers' and Airmen's Home, in the case of an employee of the United States Soldiers' and Airmen's Home; and".

(4) Subsections (f) and (g) of such section are redesignated as subsections (a) and (b), respectively.

(d)(1) Subsections (a) through (e) of section 307 of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2458a) are repealed.

(2) Subsection (f) of such section is amended—

(A) by striking out "(f)"; and

(B) by striking out "person described in subsection (a)" and inserting in lieu thereof "employee of the National Aeronautics and Space Administration".

(e)(1) Subsections (a) through (e) of section 1091 of the Foreign Service Act of 1946 (22 U.S.C. 817) are repealed.

(2) Subsection (f) of such section is amended by striking out "person to whom the immunity provisions of subsection (a) of this section apply," and inserting in lieu thereof "employee of the Department of State (including the Agency for International Development)".

(3) Subsections (f) and (g) of such section are redesignated as subsections (a) and (b), respectively.

SEC. 9. Section 2520 of title 18, United States Code, is amended by adding at the end thereof the following new sentence: "This section shall not apply to any civil cause of action against an officer or employee of the United States while acting within the scope of his office or employment.".

SEC. 10. (a) Except as provided in subsection (b), the amendments made by this Act shall apply to all claims, civil actions and proceedings pending on, or filed on or after, the date of enactment of this Act.

(b)(1) With respect to any civil action or proceeding pending on the date of enactment against a Federal employee in his individual capacity, the plaintiff may, upon timely demand, (A) retain his right to a trial by jury if the demand for trial by jury is made prior to or on the date of enactment, or (B) elect a trial by jury if the time for election of a trial by jury pursuant to applicable law has not expired as of the date of enactment, except that in any case in which a trial by jury is elected under this paragraph, the provisions of section 2674(c) of this title, as added by section 3 of this Act, which relate to liquidated damages, shall not apply.

(2) With respect to any civil action or proceeding pending against a Federal employee in his individual capacity on appeal, or pending against a Federal employee in his individual capacity in a State court in which the time for removal pursuant to section 2679(d) of this title has expired, the amendments made by this Act shall not apply, except that the United States shall be substituted for the defendant employee upon certification by the Attorney General that the defendant employee was acting within the scope of his office or employment at the time of the incident out of which the action or proceeding arose.

(3) The provisions of section 2675(a) of this title shall not apply to a civil action or proceeding against a Federal employee in his individual capacity pending on the date of enactment of this Act, if the provisions of section 2675(a) were inapplicable to the action or proceeding when filed.●

ADDITIONAL COSPONSORS

S. 329

At the request of Mr. PELL, the Senator from Maine (Mr. MITCHELL) was added as a cosponsor of S. 329, a bill to amend the Internal Revenue Code of 1954 to provide a credit against tax for certain home heating costs.

S. 776

At the request of Mr. HUDDLESTON, the Senator from North Dakota (Mr. BURDICK) was added as a cosponsor of S. 776, a bill to amend the Immigration and Nationality Act to more fully limit and control immigration to the United States, and for other purposes.

S. 1131

At the request of Mr. DANFORTH, the Senator from Maine (Mr. MITCHELL) was added as a cosponsor of S. 1131, a bill to require the Federal Government to pay interest on overdue payments and to take early payment discounts only when payment is timely made, and for other purposes.

S. 1422

At the request of Mr. GRASSLEY, the Senator from Florida (Mrs. HAWKINS), and the Senator from California (Mr. HAYAKAWA) were added as cosponsors of S. 1422, a bill to authorize the donation of surplus property to any State for the construction and modernization of criminal justice facilities.

S. 1448

At the request of Mr. MATHIAS, the Senator from Minnesota (Mr. BOSCHWITZ) was added as a cosponsor of S. 1448, a bill to provide for the issuance of a postage stamp to commemorate the 70th anniversary of the founding of the Girl Scouts of the United States of America.

S. 1550

At the request of Mr. HELMS, the Senator from Idaho (Mr. MCCLURE) was added as a cosponsor of S. 1550, to amend the Federal Election Campaign Act to prohibit the use of compulsory union dues for political purposes.

S. 1635

At the request of Mr. WEICKER, the Senator from Maine (Mr. MITCHELL) was added as a cosponsor of S. 1635, a bill to delay the application of Revenue Ruling 81-216 until January 1, 1983.

S. 1641

At the request of Mr. GRASSLEY, the Senator from Idaho (Mr. SYMMS) was added as a cosponsor of S. 1641, a bill to extend the Reed Act and to authorize the designation of funds in State accounts as Reed Act funds in certain circumstances.

S. 1701

At the request of Mrs. HAWKINS, the Senator from North Dakota (Mr. ANDREWS), the Senator from Colorado (Mr. ARMSTRONG), the Senator from Tennessee (Mr. BAKER), the Senator from Oklahoma (Mr. BOREN), the Senator from Virginia (Mr. HARRY F. BYRD, JR.), the Senator from Florida (Mr. CHILES), the Senator from Mississippi (Mr. COCHRAN), the Senator from Maine (Mr. COHEN), the Senator from Missouri (Mr. DANFORTH), the Senator from Kansas (Mr. DOLE), the Senator from New Mexico (Mr. DOMENICI), the Senator from North Carolina (Mr. EAST), the Senator from Utah (Mr. GARN), the Senator from Washington (Mr. GORTON), the Senator from Iowa (Mr. GRASSLEY), the Senator from Utah (Mr. HATCH), the Senator from Pennsylvania (Mr. HEINZ), the Senator from Alabama (Mr. HEFLIN), the Senator from North Carolina (Mr. HELMS), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Wisconsin (Mr. KASTEN), the Senator from Iowa (Mr. JEPSEN), the Senator from Nevada (Mr. LAXALT), the Senator from Indiana (Mr. LUGAR), the Senator from Hawaii (Mr. MATSUNAGA), the Senator from Georgia (Mr. MATTINGLY), the Senator from Ohio (Mr. METZENBAUM), the Senator from Alaska (Mr. MURKOWSKI), the Senator from Oregon (Mr. PACKWOOD), the Senator from Indiana (Mr. QUAYLE), the Senator from Delaware (Mr. ROTH), the Senator from New Hampshire (Mr. RUDMAN), the Senator from Texas (Mr. TOWER), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from South Dakota (Mr. ABDNOR) were added as cosponsors of S. 1701, a bill to amend title 28, United States Code, to authorize the Attorney General to acquire and exchange information to assist Federal, State, and local officials in the identification of certain deceased individuals and in the location of missing children and other specified individuals.

SENATE JOINT RESOLUTION 33

At the request of Mr. HELMS, the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of Senate Joint Resolution 33, a joint resolution to establish a commission to plan for the 200th anniversary celebration of the birth of our Constitution.

AMENDMENT NO. 591

At the request of Mr. D'AMATO, the Senator from Alabama (Mr. HEFLIN), the Senator from Pennsylvania (Mr. HEINZ), the Senator from New Mexico (Mr. SCHMITT), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from Mississippi (Mr. STENNIS) were added as cosponsors of amendment No. 591 intended to be proposed to H.R. 4121, a bill making appropriations for the Treasury Department, the U.S. Postal Service, the Executive Office of the President, and certain independent agencies, for the fiscal year ending September 30, 1982, and for other purposes.

AMENDMENTS SUBMITTED FOR PRINTING

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATION, 1982

AMENDMENT NO. 617

(Ordered to be printed and to lie on the table).

Mrs. HAWKINS submitted an amendment intended to be proposed by her to the bill (H.R. 4035) making appropriations for the Department of the Interior and related agencies for the fiscal year ending September 30, 1982, and for other purposes.

AMENDMENT NO. 618

(Ordered to be printed.)

Mr. PROXMIRE proposed an amendment to the bill H.R. 4035, supra.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. McCLURE. Mr. President, I ask unanimous consent that the Committee on Energy and Natural Resources be authorized to meet during the session of the Senate on Monday, October 26, at 11 a.m., to hold a hearing on Senate Joint Resolution 115, a resolution to consider the President's recommendation for a waiver of law for the Alaskan natural gas pipeline pursuant to the Alaska Natural Gas Transportation Act of 1976.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON FOREIGN RELATIONS

Mr. McCLURE. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be authorized to meet during the session of the Senate on Tuesday, October 27, to hold a confirmation hearing on the nominations of:

Jean Gerard to be a representative to UNESCO;

Geoffrey Swaebe to be a representative to the European office of the United Nations;

Frank Shakespeare to be a member of the Board of International Broadcasters; and

Mark Goode to be a member of the Board of International Broadcasters; to be followed by a hearing on S. 1611, a bill to amend the International Center Act; Exec. X 96-2, Convention on Marine Living Resources in Antarctica; and Exec. L 96-2, Reciprocal Fishing Agreement With Great Britain.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON THE JUDICIARY

Mr. McCLURE. Mr. President, I ask unanimous consent that the Committee on the Judiciary be authorized to meet during the session of the Senate on Tuesday, October 27, at 2 p.m. to hold an oversight hearing on the Department of Justice and the Federal Trade Commission merger policies.

The PRESIDING OFFICER. Without objection, it is so ordered.

SELECT COMMITTEE ON INTELLIGENCE

Mr. McCLURE. Mr. President, I ask unanimous consent that the Intelligence Committee be authorized to meet during the session of the Senate tomorrow, Tuesday, October 27, at 8:30 a.m., to discuss committee business.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON GOVERNMENTAL AFFAIRS

Mr. McCLURE. Mr. President, I ask unanimous consent that the Governmental Affairs Committee be authorized to hold a hearing during the session of the Senate on Tuesday, October 27, to discuss the acquisition process in the Department of Defense.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

THE VOTING RIGHTS ACT

● Mr. HELMS. Mr. President, when the Senate takes up legislation to extend the provisions of the Voting Rights Act, I hope all Senators will bear in mind the burdensome requirements faced by the States, counties, and other political jurisdictions covered by section 5 of the act.

Mr. President, I recently received a letter from Don Evans, a respected lawyer in Rocky Mount, N.C. Mr. Evans was chairman of the Nash County Board of Elections for 7 years, including the year that the Voting Rights Act took effect. His experience with the act is typical of that of many other elected officials in North Carolina counties covered by section 5 of the act.

In order that my colleagues might have the benefit of Mr. Evans' observations, I ask unanimous consent that his letter be printed in the RECORD.

The letter follows:

EVANS & ROUNTREE,
Rocky Mount, N.C., September 16, 1981.

Re extension of 1965 Voting Rights Act.

Hon. JESSE HELMS,
Dirksen Building, Washington, D.C.

DEAR JESSE: I was amazed to read in the Raleigh newspaper a week ago that many of the N.C. Congressional delegation plan to vote for an extension of the 1965 Voting Rights Act. I do not believe that any of them would support extension if they really understood what the Act has done to local government in North Carolina. For example, are they aware that the City of Rocky Mount cannot annex one acre of land without first getting the permission to do so from the U.S. Attorney General?

You may recall that the punitive provisions of the Act were triggered by the mere fact that less than 50% of the eligible voters voted in the 1964 Johnson-Goldwater Presidential Election. That fact alone made Nash County guilty of voter discrimination. We are "guilty" and must prove our innocence.

Senator Ervin managed to get a provision included in the Act, a kind of "escape hatch," which provided that a suit could be brought by Nash County in the U.S. District Court (District of Columbia, naturally) asking to be "let out." If the Court found that, for a period of five years there had been no voter discrimination, it could sign an order taking the county out from under the provisions of the Act. The U.S. Attorney General also could agree to a consent order taking the county out from under the Act.

I have rather strong feelings about this matter because of my experience as Chairman of the Nash County Board of Elections for 7 years. I was Chairman when the Act became effective.

The Nash County Commissioners authorized us to file such a suit in U.S. District Court (the Attorney General refused to consent to let us out). The FBI investigated Nash County and found no evidence of voter discrimination. While our case was pending, Gaston County filed a similar suit and pushed the case for trial. Nash County decided to await the outcome of the Gaston County case, which went to the U.S. Supreme Court. The Court emasculated the "escape-hatch clause" by ruling that, regardless of the facts, the mere existence of a segregated school system prior to 1954 rendered any literacy test ipso facto discriminatory. So now, Nash County is prevented from proving its innocence.

We can live without a literacy test. However, the worst aspect of the Act is the infamous "hat-in-hand" provision, so-called because Nash County was forbidden to change a precinct line without begging the U.S. Attorney General, with hat in hand, for permission to do so. Similarly, we discovered that we could not move a polling place from one building to another, and we could not combine precincts to effect economy without the Attorney General's permission. Likewise, the City of Rocky Mount cannot annex any area without begging the Attorney General for permission to do so. North Carolina must send every legislative act for Attorney General approval if it deals with election laws. The Justice Department argues that each of these purely local decisions somehow (by some stretch of the imagination) might have the effect of diluting the voting power of the minority race.

I believe this is one of the worst pieces of legislation imposed on the South by the Congress since Reconstruction. Someone said that if these provisions were made applicable to all states, there would be a revolution.

If the Act is to be extended, it should be amended to eliminate Nash County and other innocent counties and also the State of North Carolina. Let it still apply to those counties and states where the Justice Department has found voting problems to exist during the past 17 years.

I sincerely hope you will have your staff study the Act and that you will conclude that these "hat-in-hand provisions" must not be extended again to innocent state and local governments.

Sincerely,

DON EVANS.●

LIBYAN OIL

● Mr. HART. Mr. President, in recent days, a growing number of Americans, including many of my colleagues in the Senate, have called for a ban of American imports of Libyan oil. Their ranks now have been joined by a distinguished and knowledgeable observer of Middle East politics, Mr. G. Henry M. Schuler, a former U.S. Foreign Service officer and oil company executive who is currently a Washington-based energy consultant.

In an essay, published in the Denver Post on Sunday, October 25, 1981, Mr. Schuler called for the end of American "business as usual" with the militant Libyan regime of Colonel Qadhafi. Specifically, Mr. Schuler argued that the U.S. boycott Libyan oil and thereby end its atrocious support of Libya's international terrorism.

The United States is now the largest single importer of Libyan oil, importing about 40 percent of Libya's oil exports. Last year, we paid $7 billion for these supplies. As Mr. Schuler points out, this amount is "enough to purchase a lot of Soviet arms and fund plenty of subversion."

In 1980 according to the American Petroleum Institute, oil revenue represented about 63 percent of Libya's gross national product. While we send military arms to Egypt and Sudan and pledge military intervention to resist Qadhafi's adventurism, we have not taken the most logical and direct step to curtail Libyan war and terror—we have not closed the largest market for Libyan oil: the United States.

As an informed and experienced Middle East-North Africa observer, Mr. Schuler makes a compelling case for an American ban on imports of Libyan oil. I commend this essay to all my Senate colleagues and ask that it be printed in the RECORD.

The article follows:

U.S. SHOULD STOP SUPPORTING TERRORIST LIBYA

(By G. Henry M. Schuler)

WASHINGTON.—As barbaric as it may appear on our television news, Col. Moammar Khadafy has ample cause to gloat these days. The assassination of Egyptian President Anwar Sadat has removed a second target from his publicly proclaimed list of leaders accused of betraying the Arab and Islamic cause by cooperating too closely with the United States. The first was struck from the rolls almost two years ago with the overthrow of the shah of Iran.

Anwar Sadat and Mohammad Reza Pahlavi are gone, but must they be forgotten by the United States after the eulogizing and handwringing are over? Only if we are prepared to accept the demise or capitulation of additional targets on the list.

Can we risk the consequences for our strategic and oil interests of hostile regimes at the entrance to the Mediterranean, on the narrowest choke point at the Straits of Sicily, on the Red Sea across from Jeddah, on the coastal horn of Africa near the Straits of Hormuz and in the energy heartland itself?

If not, then we would do well to reassess the best way to assist King Hassan of Morocco, presidents Bourguiba of Tunisia, Numeri of Sudan and Barre of Somalia and the monarchs of the Arabian Peninsula who are all on Khadafy's list.

Some will contend that this apocalyptic forecast overstates the importance of Khadafy, but that has been offered as an excuse for ignoring him for over a decade. It is time to admit the truth which is so unpleasant to a myriad of Western interests. Full details about the assassination will not be available until after Sadat's successor, Homi Mubarak, has consolidated power. And we may not know the assassins' links with certainty even then. But there can be no doubt that they received some degree of support or encouragement from Libya.

Khadafy's guilt does not depend upon evidence tying the assassins to renegade Egyptian Gen. Saadeddin Shazli's headquarters in Tripoli or to the numerous cells of youthful Islamic fundamentalists which Libya has trained, armed and funded.

Khadafy is no less culpable if the assassination was executed by Egyptian zealots who had no Libyan contact other than the steady stream of religiously coached anti-Sadat invective from a clandestine radio station established in eastern Libya as long ago as 1973.

To be sure, Western sophistry can be employed to obscure these current facts and ample evidence of prior threats and attempts. But we fool only ourselves, not the countries of the Middle East where perceptions are as important as reality. Unfortunately, intimidation works except in those exceedingly rare individuals like Anwar Sadat. Therefore, Khadafy's gloating is more than offensive to our humanitarian instincts, it is threatening to our geopolitical interests.

Sadly, we can do nothing to prolong Sadat's life, but we can at least take steps to minimize the threat of intimidation presented by his death.

The Reagan administration made a start some months ago by condemning Libyan subversion, a stand long preached to deaf ears by the late Egyptian president and his colleagues. But condemnation may prove to be the easy part because the opportunities for damage control have been limited by years of drift.

Egypt's tragic experience serves to remind us that the United States can provide little

internal security assistance at the muzzle end of the weapon of international subversion. Yes, we can sell massive quantities of sophisticated military equipment to Sudan and other target countries, but this will never stop determined assassins, and may, in fact, encourage unrest by raising the American profile and presence.

Similarly, we can suggest a willingness to intervene with our own forces as President Reagan did last week. But such ill-defined pledges risk further alienation while possessing little credibility in the presence of American oil installations and employees who could be seized as hostages long before American forces could be deployed.

We can also hope that the social, religions and economic problems endemic to the region be resolved. But their solution is way outside American control.

Finally, some argue that we can enhance regional stability by abandoning the policy for which Sadat died, but that only serves to reward the intimidators without satisfying their non-negotiable demand for the abandonment of Israel.

If there is little we can do at the muzzle end of international subversion, then we must turn our attention to the breech end of that weapon. In other words, we must attempt to interdict the funding, arms and propaganda at their Libyan source.

The prospects for a direct Egyptian assault on the Soviet-armed Libyan fortress are not promising. The United States would gain little political mileage—let alone moral stature—by resorting to Khadafy's own methods of clandestine assassination. But even if we cannot achieve an immediate or decisive interdiction of Libyan subversion by removing Khadafy, we can at least curtail Western support for his terrorist regime.

This can be accomplished by renouncing business as usual, regardless of whether that business is pumping Libya's oil, liquefying her gas, clamoring for her construction contracts, investing her petrodollars, meeting her import and technology requirements, consuming her petroleum grasping for whatever other piece of that multi-billion-dollar pie we can get our hands on.

Admittedly, that policy will require unusual bureaucratic and corporate courage. But such a collective resolve would hardly rise to the level of Sadat's personal valor in journeying to Jerusalem and accepting the dying shah. If we are to instill courage in the moderates within the new Egyptian government, in other Arab states and even among the Libyan population, the United States and its allies must break the commercial links which finance Khadafy and create his aura of invincibility.

Much of this disengagement will proceed from events, but the administration can begin by putting some muscle behind its request to American companies to withdraw their several thousand American personnel from Libya.

The companies profess to want an unequivocal order before they risk the shutdown of Libya's petroleum industry, an embargo on its exports to the United States, the nationalization of their remaining assets and the possible putting in jeopardy of those personnel.

It is far from certain that they would be happy with such a clarification, but we should recognize that the State Department is equally reluctant to accept responsibility and perhaps government liability. So the companies ignore State's widely publicized request, and Khadafy and his erstwhile imitators are reinforced in the conviction that the capitalist world is more enticed by Libyan oil and profits than it is repelled by his support for terrorism and subversion.

The administration is far from helpless in this intolerable situation. With no diplomatic representation in Libya and a military encounter only just concluded, State has every justification—even responsibility—to declare American passports invalid for Libya. A similar step was taken during the hostage seizure in Iran, but surely State does not have to wait until hostages have already been seized.

There are, of course, risks. Perhaps a highly visible withdrawal would precipitate the hostage situation which it was designed to avoid. But will waiting make it any less likely, given the confrontation course upon which Khadafy is embarked?

It is far more probable that such an action would lead to nationalizations, but there are legal remedies—albeit weak ones—and, ultimately, the United States government may have to provide compensation for assets jeopardized for strategic interests, anyway.

Although withdrawal of personnel would be designed to protect American citizens and to give the administration greater freedom of action to deal with future provocations, it would also affect Libya's oil industry.

We don't have to attribute indispensability to American technicians in order to recognize that their absence would hurt Libya. Many of the ablest Libyans have fled the repressive regime. It will be difficult to replace either nationality with British, French or Italian technicians, for the oil industry is booming everywhere and Khadafy's outbursts have not been aimed solely at the United States over the past 18 months. Nor are Soviet technicians a real alternative, for they have their hands full with Russia's oil production problems and are unfamiliar with the American equipment and techniques generally employed in Libya.

Thus, Libya's oil production could wind down, and its extremely complex gas liquefaction would be likely to shut down completely.

But even if Libyan oil sales were not interrupted by production problems, the withdrawal of personnel would likely prompt an embargo of shipments to the United States, which ran at a level of 570,000 barrels per day during the first six months of this year.

But an oil embargo might not be all bad, for our third largest supplier is also our most expensive. At a landed cost of $40.53 per barrel, the United States paid Libya well over $2 billion for a half-year's imports—enough to purchase a lot of Soviet arms and fund plenty of subversion.

Although it has been argued that we cannot do without Libyan oil, that argument tends to disappear when, as now, the Libyans price it at an unrealistically high level. An embargo would certainly hit different refiners in different ways but that is an argument for arrangements to share sweet crude, not an argument for perpetuating disproportionate dependence upon Khadafy.

There is, however, another view of the oil supply relationship—Libya's. Libya sold 40 percent of its oil to the United States during the first half of 1981. In the currently slack oil market, it is far from certain that Libya could readily find alternative markets for its high-priced oil. Libya's crude is better suited to American than to European product slates. Moreover, market considerations which harm Libya might be reinforced by diplomatic representations to allies in the industrialized nations, and to the moderate Middle Eastern producers, all of whom have an even greater interest in regional stability than we do.

We must undertake urgent efforts to stop subversion at its Libyan source by abandoning 12 years of a business-as-usual relationship with the Khadafy regime. No one would argue that those efforts are costless or riskless, but the hardships pale by comparison to those incurred by a continued drift which encourages Khadafy to work his way down a list of target countries. We cannot bring back Anwar Sadat, but neither can we permit him to have died in vain.●

PRODUCTIVITY: INTERNATIONAL LESSONS

● Mr. GARN. Mr. President, productivity is golden. It is bred in an atmosphere of cooperation and enlightened self-interest. That means that increases are usually produced in the private sector. It comes from the attitude that one's efforts will be rewarded, that one will receive the fruits of one's labor. It comes from the awareness that one must earn his livelihood, from the awareness that something received must somehow or another be supplied and that one's own efforts are somehow intimately involved with that supply. I am pleased to see that this kind of thinking is getting to be more commonplace, but it was not always so.

It is increased productivity that results in the real increase of wealth in a country. When I say wealth I do not mean more dollars. For years the working man has been receiving more dollars in his pay check only to find that when he gets to the store with them they buy less than they did yesterday. It is productivity that allows us to receive more for a day's worth of work; it is productivity that really increases our income, our buying power. It was a tremendously increasing productivity that made the United States the most powerful economic entity the world has ever known. But for the last number of years the U.S. Government has been sapping the strength out of American productivity.

Two articles published recently highlight some interesting lessons to be learned internationally. They make productive reading. The first, published in the Journal of Commerce, reports the results of some recent studies comparing productivity levels among various industrialized countries. These studies show that since 1960 the United States has trailed all of the major Western powers in increased labor productivity, behind that of Japan, France, West Germany, Italy, and Great Britain. One study shows that since 1960 labor productivity in Japan has increased by nearly 500 percent, while over the same 20-year period U.S. productivity has risen by only 100 percent, or something less than 5-percent per year. In the last few years that rate has slowed even further, to a mere 2.3 percent.

What is the secret to the Japanese success? Allow me to refer to the second article, which points out both the problem and the potential. Entitled, "A Tale of Two Ford Plants," this article, published a few days ago in the New York Times, compares output in two identical Ford Motor Co. plants, one located in Halewood, England, and the other in Saarlouis, West Germany. I repeat, that these are two identical plants, producing ostensibly the same product. The difference is that it takes twice as many workers in the plant in England as it does in the West German one to produce the same car. Twice as many.

Does that mean that the Germans involved are somehow better than the British? I do not think so, but I do think that it suggests something about attitudes involved. I think that incentives are somehow involved. I would just bet that in the British case the workers have

somehow or another become separated from the vision of how their effort, their personal effort, is involved in their own well-being. To quote from the operations manager at the West German plant:

It has to do with the mental attitude of our people here. People are very interested right from the beginning in making a high-quality product.

Because of that attitude and the resultant improved productivity, wages are higher at the West German plant, an average of $13.50 per hour as compared to $8.25 an hour at the British plant. Nevertheless, the West German product can be shipped to England and sold at the doors of the British plant for about $1,000 less than the British-made identical model.

To quote further from the article:

Aside from statistics, subjective differences between the two factories become evident. Halewood seems to overflow with workers—some of them reading or eating, others kicking a soccer ball—while Saarlouis seems almost depopulated and nearly every worker is hard at his job.

Mr. President, much of what has gone wrong in the British case cited is what is wrong in America. We share similar problems. For too long we have been placing disincentives on the American worker to produce while eliminating other incentives that had existed. For too long the U.S. economy has been unnecessarily burdened by government, by excessive regulation, by administrative and legal strangulation, and by the attitude that the Government should solve all of our problems. For too long we have relied upon the Government, and government just cannot do it. With a quarter or more of the average American's salary taxed away, it has been difficult for anyone to see how his welfare is affected by what he does on the job. We have come to think that the only way to improve our welfare is by getting ourselves a bigger slice of the Federal pie.

Government taxed and regulated away our incentive to become more productive. Instead of increased output we had increased governmental paperwork and more and bigger Washington lobbying groups. Well that is starting to turn around, Mr. President. Let us keep the momentum going in the appropriate direction. There is much to do, and breaking old habits will not be easy.

That is why President Reagan's economic program is running into so much opposition. We have gotten ourselves into old habits, and they are hard to break, very hard. But we need to be persistent, and no administration has been persistent until now. I am encouraged to see that the President is holding on course, that he is not afraid of the criticism he hears almost daily from the media and from those who do not have the stomach for strong economic medicine. This Government has been put on an austerity diet, but you have got to keep at it, or you will be right back where you were before, or even worse off.

The President's program will reduce, in fact is reducing, inflation, and increasing the incentive to save. As savings increase, interest rates will come down and the productivity born of prudent investment will go up. All of this has begun already, and the President's program is less than a month old.

An essential ingredient of that program is the reduction, the real reduction, of taxes so that there is an incentive to be productive, so that the worker can keep the fruits of his improved productivity, so that he can see that working better can get him somewhere. The economic recovery program is providing incentives and eliminating the disincentives to productivity. That is what the President's program is doing. Productivity will increase the wealth and prosperity of America.

The lessons to be learned in the international example, the key to the success in the Ford plant in West Germany, to the astounding success in productivity growth in Japan, is also the key to economic recovery in the United States. A quote from the Journal of Commerce article sums it up well:

With each Japanese worker seemingly convinced that the welfare of his own particular firm is tied up with his own personal welfare—and made painfully aware that only through hard work can he help his nation provide for Japan's 117 million people—this top-grade productivity should not be surprising.

Mr. President, I ask that the article from the Journal of Commerce and the article from the New York Times be printed in the RECORD.

The articles follow:

JAPAN'S OUTPUT GETS TOP MARKS

(By A. E. Cullison)

TOKYO.—Japan's output per man-hour continues to advance apace. The gain for this year is running close to 10 percent on an annual basis, judging from preliminary data.

There seems to be no end in sight to Japan's exceptionally good productivity performance.

Labor productivity in Japan's manufacturing industries, based upon per-hour data with 1960 as the base year with the index at 100, is now about 475 and rising at a steady pace, according to Japanese government sources.

Although the Japanese are evidently reluctant to make forecasts, it was admitted by some authorities in Tokyo that the figure could approach 500 this year and possibly top that rate by 1982 or 1983.

Using the same scale, originally released by the Ministry of International Trade and Industry in 1980, Italy is now only slightly above 275, France at about 273, West Germany at 270, the United States at close to 200 and Britain, at only 180 or below.

However, United Nations' figures, based as well on 1960, show that in 1978 the Japanese were at 450, West Germany at 294, France at 266, Britain at 177 and the United States bringing up the rear at only 164.

Another comparison of sorts can be gained by examining a chart of international productivity growth released by the U.S. Department of Labor, giving the base year as 1967. But even this scale shows Japan above 250, France at about 190, West Germany close behind, Britain at around 130 and the United States at nearly the same level.

Japanese industrialists, who believe that their envious gains in productivity are largely due to fierce local competition, high quality control systems and automation efforts, boast that their growth in this area compared to other major industrialized countries allows their plants to lead in almost every manufacturing field except foodstuffs and clothing.

They admit that the definition of each manufacturing sector may differ from country to country and that direct comparisons might not prove entirely accurate. Also, they have excluded shipbuilding and aircraft manufacture because of what they claim would be "distortions."

Nevertheless, the Japanese report that their comparisons largely agree—in general—with statistics provided by the statistics yearbook of the German Institute for Economic Research, France's and Italy's National Institutes of Economic Review, and the U.S. Survey of Current Business.

It has been pointed out that statistics show that labor productivity—average yearly increases in manufacturing industries—between 1976 and 1979, for example, climbed by 7.2 percent for Japan, 5 percent for West Germany, and only 2.3 percent for the United States. The gain for Japan this year is running close to 10 percent on an annual basis, if incomplete statistics are to be believed.

The Japanese reluctantly concede that one of the key reasons their industrial plants have been able to enjoy such high labor productivity and to maintain a continued expansion each year to widen the gap with their Western counterparts is that the country's unions are mainly company-by-company type organizations and usually not industrywide.

With each Japanese worker seemingly convinced that the welfare of his own particular firm is tied up with his own personal welfare—and made painfully aware that only through hard work can he help his nation provide for Japan's 117 million people—this top-grade productivity should not be surprising.

The result is that Japanese unions command only modest power and are scarcely able (even if they wanted to do so) to oppose the more productive replacement of man with machinery. It must be granted, however, that when Japan's workers are replaced they are not laid off or fired, but merely retrained for employment elsewhere in the same company or one of its subsidiaries.

Only recently, workers at a Matoushita Electric Industrial Co. plant raised a sign above their shop floor with the slogan: "seven of us are now working on this production process. Let us try to cut down the work force to five next year and then to three the year after next."

A TALE OF TWO FORD PLANTS

(By Steven Rattner)

SAARLOUIS, WEST GERMANY.—To the casual visitor, the sleek gray Ford Motor Company plant here appears to be exactly like its cousin at Halewood, England, outside Liverpool. At each, shiny Escorts, Ford's hot new car, roll off bustling production lines dominated by robot welders and vast automated presses punching out steel as if it were aluminum foil.

But the resemblance ends at physical appearance. This plant produces some 1,200 cars a day, more than the 1,015 that Ford planners had anticipated, and requires 7,762 workers. Its counterpart at Halewood, with virtually identical equipment and production targets, has averaged only about 800 cars a day this year, and 10,040 workers have been needed to achieve even that production level.

"Our standards say it should take something like 20 man-hours of labor in both the body and assembly plants to make an Escort," said Bill Hayden, vice president of manufacturing for Ford Europe Inc., in an interview. "At Saarlouis, they do it with 21 hours. At Halewood it takes 40 hours."

The experience of Ford, with two plants

that are alike in every important respect, provides an unusually graphic example of the extent to which Britain has fallen behind in the effort to improve worker productivity and the extent of the challenge facing Prime Minister Margaret Thatcher in her effort to restore Britain's competitiveness.

SYMBOLIC OF BRITISH INDUSTRY

"All of the problems I have in Halewood, I have in Dagenham," Mr. Hayden said in his office in suburban London, referring to a Ford plant in another British city. "All of the problems I have are symbolic of the whole of British industry."

To Mr. Hayden, and Ford officials in Halewood, the difference between the two plants comes down to the attitudes of the workers. At Halewood, 20 strikes have occurred already this year; at Saarlouis, strikes are unknown. Under pressure, management at Halewood has organized the two daily shifts so that no one works on Friday night; at Saarlouis, there is no such pressure.

"It has to do with the mental attitude of our people here," said Paul Swoboda, the burly operations manager here. "People are very interested right from the beginning in making a high-quality product," he said in the plant's executive dining room.

Aside from statistics, subjective differences between the two factories become evident. Halewood seems to overflow with workers—some of them reading or eating, others kicking a soccer ball—while Saarlouis seems almost depopulated and nearly every worker in evidence is hard at his job. At Saarlouis, workers dash to open doors for visitors touring in electric carts, while at Halewood, one worker greeted a news photographer by exposing himself.

QUALITY ALSO BETTER

Despite the smaller work force, Saarlouis's quality record remains unmatched in the Ford system. Saarlouis Escorts, on average, earn half as many demerits as Halewood cars, which are about equal in quality to those produced in American plants. On one recent day at Halewood, 14 percent of the cars were rejected at the electrical system checkpoint. At Saarlouis a day later, the same computerized "Qualitätskontrolle" rejected fewer than 1 percent of the completed Escorts.

For their part, the workers at Halewood maintained in recent interviews that shop conditions at Saarlouis were unsafe.

"If that was in England, I'd stop the job immediately," said Stephen Broadhead, the "convenor" at the body plant, who has visited the German plant twice. "It was such a violation of our health and safety regulations we couldn't live with it." Nonetheless, the Saarlouis plant has the lowest injury record in Ford's entire Europe subsidiary.

In one example mentioned by Mr. Broadhead, the Halewood union summoned a company doctor to rule that two men were required to lift the car hood onto the body, a job performed by one man at Saarlouis. But the other day at Halewood, only one man was lifting the hoods; the second man watched.

"From the very beginning it was always one man who picked up the hood," said Lothar Kotalla, a German worker here, as the dull silver car bodies moved along behind him, 58 an hour. "It's heavy so we switch every hour."

Such differences are found to pervade the two plants. In May, the workers at Halewood went on strike for 11 days because they contended that four men could not produce 60.2 transaxle assemblies an hour, as the company and the German experience suggested they could. Five months later, the four men are still assembling about 55 an hour.

The economic consequences for Britain of the lower productivity are also evident. When the two plants were retooled in August 1980, a significant portion of the 1,015 cars a day scheduled to be produced at Halewood were to be exported—to Scandinavia, France, Italy and elsewhere. The failure to meet production goals meant, in effect, no exports and no help for Britain's balance of trade.

Moreover, Ford officials have argued that the low productivity threatens British jobs. The Halewood workers earn the equivalent of just $8.25 an hour, including fringe benefits, while their German counterparts make $13.50 and have been offered a Saturday shift at premium wages to meet the demand for their cars.

With British workers half as productive, even that disparity is not enough and Ford officials calculated a few months ago that it costs $1,000 more to produce a car in Britain than to make one in Germany and ship it to Britain. That disparity has been kept down by the regular devaluation of the British pound—from 8.75 marks per pound in 1971 to 4.15 now.

Half of the Ford cars sold in Britain are imports and the company is looking to its other European plants for an increasing supply of parts for British assembly plants. By comparison, at Saarlouis recently railroad freight cars backed deep into the cavernous plant were being loaded with trailer after trailer of freshly stamped panels for an assembly plant in Valencia, Spain.

At Halewood, Ford officials have been struggling to improve the plant's poor performance. To some extent, the current economic distress seems to have had the desired effect of not only bucking up management but also convincing workers to become more cooperative. Although 20 strikes have occurred so far this year, 300 took place in 1976. Quality may not be as high as desired, but the number of quality demerits has been cut in half over the past 12 months.

"A lot of the men got it through their brains that if stoppages occurred as regularly as before they could lose their jobs," said John Bohanna, a soft-spoken body plant employee.

The line managers at Halewood also see signs of progress. "They may say it takes two men on the engine dress," said Arthur Rothwell, the general production manager. "Six years ago, they would have said six and gotten six."

But industry analysts say there is still a long way to go. Management's efforts are now concentrated on raising productivity, a painstaking process of identifying a bottleneck—at the moment, the assignment of workers and work in the paint shop—and negotiating at length with the unions to remove it. With various shop rules, moving one worker, part of a process known as "rebalancing," often requires that five be shifted.

"To really understand what we're talking about, you have to be English," said Ted Rayment, operations manager at the plant. "We English are not good receivers of instruction. We like to know the basis of the instruction and why it's being given."

Indeed, the English managers appear to be making almost as great an effort at communicating as their German counterparts to instill "positive motivation." A concept on the continent known as "area management" has been adopted, creating miniplants that are easier to operate and that provide closer contact with workers.

Meetings with union leaders occur regularly, and every six months or so the workers are given time off to hear a presentation about productivity and jobs. But only a small percentage of workers attend, according to Ford officials.

"The problems were compounded with the new model," Mr. Rothwell said of the period since August 1980. "All our management resource was involved in trying to control disruptions."●

PHOSPHATE MINING IN THE OSCEOLA NATIONAL FOREST

● Mr. CHILES. Mr. President, on Thursday, October 22, I appeared before the House of Representatives Interior Subcommittee on Public Lands and National Parks to testify on behalf of legislation to prohibit phosphate mining in the Osceola National Forest in Florida. I have introduced legislation in the Senate, S. 1138, to accomplish this same goal. The legislation is presently pending in the Senate Energy and Natural Resources Subcommittee on Public Lands. I have requested hearings on this important issue and am hopeful a hearing date will be scheduled in the near future.

Mr. President, during last week's hearing before the House subcommittee, the Reagan administration announced a drastic departure from the Carter administration concerning its position on phosphate mining in the forest. The Assistant Secretary for Natural Resources and Environment of the Department of Agriculture reported that the administration now believes the Osceola National Forest can be adequately reclaimed if strip mined for phosphate. Even the Environmental Protection Agency, previously opposed to leasing because of the serious threats it would pose for forest wetlands, now appears to be moving in the same direction as the Department of Agriculture.

I am very much concerned about this significant and most alarming announcement by the administration. Phosphate strip mining is totally contrary to why these forest lands were originally acquired—to promote timber management and protect the swamplands. The Osceola National Forest is also an important source of fish and wildlife recreational activities for the State of Florida and the Nation as a whole. To irreversibly damage this forest resource by strip mining for phosphate at a time when these mineral deposits are not critically needed would be an unfortunate and unnecessary decision.

Congress has an important responsibility to protect the Osceola National Forest and I, for one, intend to press for legislation to achieve this protection. I ask that my testimony delivered in the House of Representatives appear in the RECORD.

The testimony follows:

STATEMENT BY SENATOR LAWTON CHILES

Mr. Chairman, I appreciate having this opportunity to comment on an important aspect of the legislation before the Committee today. Congressman Fuqua's bill, H.R. 9, along with designating certain wilderness areas in Florida also addresses a controversial and long-standing issue concerning possible phosphate mining in the Osceola National Forest. Congressman Fuqua's bill would prohibit phosphate mining in the Forest. I wholeheartedly support this effort to protect this Forest from being permanently changed by stripmining activity, and I have introduced legislation in the Senate to accomplish this same goal. It is to this important issue—the question of phosphate mining in the Osceola—that I would like to speak this morning.

Most of the Osceola National Forest is "acquired land", purchased with Federal funds rather than set aside from the public domain. These lands were approved for pur-

chase under the authority of the Weeks Law of 1911, as amended, which directed the Secretary of Agriculture to recommend for purchase "lands (which) . . . may be necessary to the regulation of the flow of navigable streams or for the production of timber." According to a Congressional Report on the Osceola acquisition, the purchase of these lands was designed to promote timber management as well as to protect the swamplands.

Since the Osceola National Forest was first set aside, the use of the Forest has grown to include such popular activities as hunting, fishing, camping and other recreational opportunities. In addition, the Forest has fostered a rich wildlife community. In all instances the opportunities afforded by the Osceola National Forest have been totally compatible with the Forest's primary purposes of timber management and wetland protection.

Now, Mr. Chairman, the Department of Interior is reviewing 41 preference right lease applications for phosphate mining covering 52,000 acres of the forest. If approved, mining could take place on almost one-third of the Forest's acreage. The possibility of strip mining in the Osceola National Forest is drastically inconsistent with the purposes for which these lands were originally acquired. Environmental studies have pointed to the adverse impact of strip mining on water resources, timber production, and swampland protection.

In addition, phosphate mining would significantly impact existing uses of the forest for recreation activities and would pose serious threats to wildlife habitats and populations found in the forest. Past studies, agency reports, and public testimony have provided a clear record of the adverse impact of strip mining on the forest and have, in my view, presented a convincing case that the exclusive use of these lands for intensive phosphate mining would be contrary to multiple-use management objectives of the Osceola National Forest.

I join with Congressman Fuqua, the State of Florida, local and regional agencies, and interested citizen groups in strongly opposing the issuance of phosphate mining leases in the Osceola. At the present time none of the Osceola National Forest lease applicants have yet demonstrated they are "entitled" to a lease. This is a significant point, Mr. Chairman, that no rights to leases yet exist. The Department of Agriculture will play a crucial role in the months ahead to determine what, if any, rights exist. For this reason I want to outline, for the benefit of the Committee, the administrative procedure taking place at the present time concerning these lease applications.

The Mineral Leasing Act does allow the Department of Interior to lease phosphate and other mineral deposits located on acquired Forest lands. However, important provisions in the law clearly grant the Secretary of Agriculture, as the head of the executive department having jurisdiction over those lands certain authorities, to "ensure the adequate utilization of the lands for the primary purposes for which they have been acquired or are being administered."

Under existing regulations, after a company demonstrates that a discovery of a minable reserve has been made, then a final showing must be made to prove the current profitability of the mining operation. This final showing, the so-called "valuable deposit" test takes into account, among other things, the costs of operating the mining, of complying with existing governmental regulations, and of meeting reclamation requirements, Forest Service stipulations, and environmental standards. Meeting the valuable deposit test is a condition precedent to issuance of preference right leases.

The Department of Interior and the Department of Agriculture are presently in the process of completing the environmental and reclamation stipulations which will be used to determine if a valuable deposit has been discovered. It is important to point out that, because the Forest Service can impose surface resource protection and reclamation stipulations, and because the costs for complying with these stipulations must be accounted for in determining whether or not a valuable deposit discovery has been made, there is some possibility that, if all environmental costs are taken into account, the deposits covered by the 41 lease applicants cannot be profitably worked.

On this point I want to quote a portion of the letter sent to me by former Secretary of Agriculture Bob Bergland in December, 1978. He said, "There are serious doubts that the deposits can be profitably worked when all environmental costs are taken into account. If this proves to be the case, then the applicants will have failed to meet the valuable deposit test, and the Secretary of Interior will refuse to issue the leases."

Later in his tenure as Secretary of Agriculture, Secretary Bergland wrote to Interior Secretary Cecil Andrus requesting the Secretary to withhold leasing on the Osceola National Forest for the immediate future. In this May, 1980 letter he said that technology is presently unavailable or unproven to assure mining could be carried out under conditions that would insure the adequate utilization of the lands for the primary purposes for which they have been acquired or are being administered.

Soon after the Reagan Administration entered office, I contacted the Secretary of Agriculture, Mr. Block, concerning the Department's position on the Osceola phosphate mining leasing question. In an April, 1981 response to me Secretary Block indicated that the Department position was the same as that expressed by Secretary Bergland to Secretary Andrus in the previous Administration. I was encouraged by this response.

Then, a few months later, I began hearing reports about intense industry pressure on Interior regarding the pending lease applications. I knew efforts were underway in the Department of Interior to move forward quickly with processing the applications, but I was clearly distressed to learn that in trying to "speed up" the process, the Department was also trying to remove so-called "obstacles" to leasing, meaning past objections and concerns about projected mining activity.

One such incident involved a letter to Anne Gorsuch, Administrator of the Environmental Protection Agency, from the Assistant Secretary of Interior for Land and Water Resources. This June, 1981 letter was an apparent effort on the part of the Department of Interior to secure EPA's approval for the issuance of mining leases in spite of the strong reservations voiced by EPA in the past.

A position previously expressed by the Environmental Protection Agency stated that the issuance of the leases would lead to irreparable destruction of some 28,000 acres of the Osceola. A January, 1980 report to the Bureau of Land Management from the Agency recommended that no leases for phosphate mining be issued for the Forest and that alternative approaches be explored to resolve the matter of the pending lease applications.

I hope the position of the Environmental Protection Agency with respect to opposing the leasing on the basis of water quality impact and wetland restoration has not suddenly changed, but I have had no official word as yet on this point. I hope we'll get some answers from the Agency today.

Another discouraging signal I have picked up about the administrative process concerns the stipulations to be imposed by the Forest Service for environmental protection and reclamation. I hear reports that the Department is looking favorably towards the possible use of existing reclamation technology for mining in the Osceola. If this is, in fact, the case, then the Department has obviously departed drastically from the position of the former Administration as well as from its own position as conveyed to me earlier this year by Secretary Block.

I am very much concerned about the Forest Service making important decisions on the lease stipulations on the basis of unproven technology. What looks promising now and what may, in fact, prove to work sometime down the road should not be used at this point in time as a license to signal a "go ahead" for allowing mining to take place in the Osceola.

Frankly, I'm concerned about the process underway to develop the stipulations to be imposed by the Forest Service for environmental protection and reclamation. I have reviewed the General Stipulations recommended to the Bureau of Land Management from the Forest Service earlier this year and was particularly encouraged by one of these. Let me read this to you:

"Mining activities shall not jeopardize the survival or quality of wetlands or floodplains; and shall preserve natural systems, long term productivity of existing flora and fauna, species and habitat diversity and stability, hydrologic utility, fish, wildlife, timber and food and fiber resources; and other uses of wetlands and floodplains in the public interest including recreational, scientific, and cultural uses."

This general stipulation, along with others, is the basis for the more detailed stipulations which will be imposed for the purpose of determining whether a "valuable deposit" exists. I, for one, would like to find out if there will be an opportunity for review of the final stipulations prior to the time they are forwarded to the companies.

In closing, let me just say, Mr. Chairman, that I intend to monitor carefully the administrative process of determining what, if any, rights exist to mine phosphate in the Osceola National Forest. In any event, I feel Congress has a responsibility to reject outright the notion of strip-mining this small, productive, and popular Forest resource. We need to ask, and then answer, several basic questions concerning phosphate mining in this Forest:

Can we today say for sure that if strip mining is allowed to take place, then eventually these lands will be restored back to the Forest we know and appreciate today? Osceola? The answer is No, We Can't.

Can we say that the projected mining will not pose possible threats to wildlife populations and habitats found in the Osceola? The answer is No, We Can't.

Can we say that this mining can take place without significantly impacting existing uses of the forest for hunting, camping, and other recreational activities? The answer is No, We Can't.

Can we say that the mining won't run any risk of damaging the valuable Suwanee River system located immediately downstream from the lease areas? The answer is No, We Can't.

And, Mr. Chairman, is there today a critical need to develop the particular phosphate reserve underlying the Osceola National Forest. The answer is No, There Is Not.

Therefore, Mr. Chairman, the final question should be do the short-run benefits associated with mining this phosphate outweigh the long-range costs in terms of loss of these forest land resources? Clearly, the answer is No, They Do Not.

For this reason legislation needs to be enacted to prohibit phosphate mining in the forest and set forth a procedure for dealing equitably with those lease applicants who may prove to have an entitlement to

a mining lease. I hope this Committee will set the stage for action on this matter. I intend to press for action in the Senate as well.

Let me just mention, too, the wilderness areas in the other Florida National Forests being considered by the Committee. These areas were studied and recommended by President Carter and the Forest Service in April, 1979 as a result of the RARE II process. These areas have been approved twice by the House of Representatives and are non-controversial. It was unfortunate the Senate was unable to pass this legislation last year, and I hope the Committee will act on these proposals.

Thank you again for letting me be here.●

WILBUR COHEN SPEAKS ON SOCIAL SECURITY

● Mr. RIEGLE. Mr. President, over the past several months, I have held a series of public policy forums in Michigan. The topic of these meetings has been the current status of social security, and the featured guest has been Wilbur Cohen, former Secretary of HEW and one of the founders of the social security system.

These meetings have been well received in Michigan, and have drawn hundreds of citizens who are either retired or approaching retirement age. A consistent apprehension among all of the participants has been a fear about the future of social security, especially in light of the proposals to reduce or eliminate certain benefits.

Former Secretary Cohen made some cogent remarks concerning the current state of the trust funds, and his views concerning the proposals to modify the system to achieve financial stability. It is especially interesting to note that Mr. Cohen feels that the administration proposals are extreme and far exceed the actual needs of social security.

Mr. President, we have been working for quite some time to solve the financing problems in the social security system and I urge all of my colleagues to carefully examine Mr. Cohen's remarks, which I ask to have printed in the RECORD.

The material follows:

WHY I OPPOSE THE REAGAN CUTS IN THE SOCIAL SECURITY PROGRAM

(By Wilbur J. Cohen)

Ronald Reagan and the New Right Republicans are training their sights on Social Security in an effort to mutilate one of this nation's best programs of social insurance.

This should come as no surprise.

Just a few years ago, Reagan teamed up with Barry Goldwater in a scheme to make Social Security "voluntary"—which all experts agree would have undermined the actuarial and financial stability of the system. They were soundly repudiated in the 1964 Democratic landslide.

This time, Reagan was more devious. During the campaign he insisted with a straight face that the integrity of the Social Security system would be preserved. Once safely in office, he cynically broke his promise, and is now hell-bent on weakening Social Security under the guise of "budget cutting."

Eight Presidents and 22 Congresses made solemn promises to the American people regarding future benefit rights. Now we have an Administration in the White House which wants to enact cruel benefit cuts for present recipients, and to reduce protection for future beneficiaries.

The first blow falls on the three million Social Security recipients receiving the $122-a-month minimum benefit enacted by Congress to put some floor under their economic misery. Who are these beneficiaries:

About 16,000 of them are over 96 years old.

About half a million of them are over 80.

Two-thirds of them are over 70.

More than 85 percent of them are women (most are widowed homemakers, the others worked for the lowest wages in society.)

When the Reagan Budget was rammed through Congress, it wiped out the minimum provision, threatening an average cut of 40 percent for those drawing benefits already far below the poverty line.

Thanks to strong Democratic leadership, H.R. 4331—sponsored by Congressman Richard Bolling, chairman of the Rules Committee—passed the House overwhelmingly. The Save-Our-Security Coalition is committed to strong support for its passage in the Republican-dominated Senate—but it's going to be an uphill battle.

There's a lot more mischief in the Reagan scheme to dismantle Social Security. He's proposing a one-fourth cut in overall protection, to be achieved in this fashion:

A one-third cut for the totally disabled more than 75 percent of whom are over 50 years of age.

A 40 percent cut to punish those forced to retire at age 62, even though seven out of every 10 who retire early do so either because of poor health or because their old jobs have been shot out from under them.

A permanent 20 percent cut for future retirees by tampering with the formula for calculating benefits.

Changes in the way the cost-of-living adjustment is calculated, so that present and future beneficiaries will be unable to keep up with inflation.

How does the Administration hope to foist its harsh and insensitive scheme on Congress and the public? Like Chicken Little, Secretary Schweiker and Budget Director Stockman are running around screaming that "the sky is falling." They want people to believe Social Security is teetering on the brink of bankruptcy. This is sheer demogoguery.

The Old Age and Survivors' Insurance Trust Fund is the only part of the system facing any difficulties at all. This is due to the bad performance of the economy in the recent past: double-digit inflation has pushed up outgo, and high unemployment has pushed down income.

Its short-run problem can be met by permitting the Old Age and Survivors' Insurance Trust Fund to borrow from the Medicare and Disability Insurance Trust Funds, repaying them with interest once the crunch is over.

If there is any other need for funds, the law should permit loans from the general treasury, repayable with interest, just like Congress has done for years to help the state unemployment insurance system. It probably won't be necessary to do such borrowing, but knowing that such a mechanism is in place will assure workers and retirees that Social Security will always be able to meet its obligations.

Once the present mini-crisis is behind us, Social Security will be healthy well on into the next century. To make sure that Social Security continues to serve the public need when the post-World War II "baby-boom" generation begins to retire in the year 2005, Congress should change Medicare financing so that up to one-half the cost comes from general revenues. This will free up needed funds to pay Old Age and Survivors' Insurance benefits without any reduction in the payments people have been promised.

There's one other thing Congress should do: get Social Security out of the unified budget. The Social Security Trust Funds used to be autonomous; they should be restored to that status, to protect them against the short-term policy swings of elected officials and political appointees.

Reagan wants to build up an unnecessary $100 billion surplus in Social Security over the next five years to give the illusion of a budget more nearly in balance. But the law requires that Social Security's assets be used only to benefit the retired, the disabled, and surviving families of deceased workers. Restoring Social Security's autonomy would prevent the kind of financial sleight-of-hand that the Administration has in mind.

Polls show that the American people are outraged over Reagan's attempt to slash this essential program. They have good reason for their concern. Social Security is the best value money can buy. There is no other system which provides for indexing the earnings on which contributions are paid and also indexing of benefits to keep up with the cost of living. Therefore, it can be authoritatively stated that the system as a whole will pay contributors back more than they put in.

Four former Commissioners of Social Security, under both Democratic and Republican Administrations, have joined with me in the Coalition to Protect Social Security, and together we are working to mobilize public support for Congressional efforts to oppose the Reagan cutbacks.

We believe the government is acting as trustee for those who have built up rights under Social Security. Our goal is to make sure that the government fully carries out its compact with contributing workers and beneficiaries—that the government, as insurer, will meet its obligations as they fall due.

Social Security is a solemn government promise which must be honored.

THE POSITION OF THE SAVE OUR SECURITY COALITION (SOS) ON SOCIAL SECURITY FINANCING AND PROPOSALS FOR BENEFIT CUTS

(Statement by Wilbur J. Cohen, Chairman of SOS and former Secretary of H.E.W. (1968), and Robert M. Ball, former Commissioner of Social Security (1962–73))

1. SOS represents over 90 organizations with 35 to 40 million members more or less evenly divided between contributing workers and social security beneficiaries. Those getting benefits now and those now contributing have the same stake in an adequate and dependable social security system.

SHORT-TERM FINANCING

The Administration is exaggerating the short-term social security financing problem:

a. The short-term problem is entirely in old-age and survivors' insurance (OASI) and is caused by the highly unusual economic conditions of the recent past—wage increases falling behind price increases accompanied by the higher levels of unemployment. Since benefits increase automatically with prices and since income is tied to payroll levels, the contingency funds in OASI are very low. This temporary situation tied to bad performance of the economy does not justify permanent reductions in social security protection as proposed by the Administration, nor talk of 1982 bankruptcy, nor invocation of possible shifts in worker-beneficiary ratios which will occur, if at all, in the next century.

b. The size of the short-term problem in OASI depends on the performance of the economy in the near term. Under Reagan economic assumptions and those used by Congress in the reconciliation and tax bills, there is no problem. Reallocation of the overall social security tax rate between OASI and DI (under present law, too much of the rate has been allocated to DI and too little

to OASI) and short-term borrowing by OASI from HI is enough. Taking into account the cuts in the reconciliation bill, the combined social security funds grow by $46 billion over the next five years under these assumptions; over $150 billion through 1990. (If the minimum benefit is restored, as it should be, the first five-year figure becomes $39 billion and there would still be over $150 billion more in the trust funds at the end of 1990.)

Under the much more pessimistic assumptions labelled II–B in the 1981 trustees' report, similar to those of the Congressional Budget Office alternative, the combined funds stay above the necessary begining-of-the-year level of 9 percent until 1990, and in that year the OASDI funds begin to develop large surpluses, $20 billion in 1990 alone.

3. We favor dealing with the short-term problem in OASI by reallocating rates between OASI and disability insurance (DI), borrowing from hospital insurance and by providing stand-by authority to borrow from general revenues. (Some have argued that since HI is estimated to be short of funds in the 1990's, it should not lend money to OASI now. But lending money at proper interest does not worsen the financial condition of the HI fund. HI has excess funds now and OASI has excess funds in the 1990's, both because growth of the aging population slows down substantially—birth rates in the 1930's were low—and because of a 1990 scheduled increase in social security taxes.)

MIDDLE-RANGE FINANCING—APPROXIMATELY 1985–2005

4. In general, conditions in 1985–2005 can be expected to be favorable to financing cash benefits under social security—the age group 20–64 will grow enough (the baby-boom generation will be of working age) to offset increases in the number of persons over 65. Even small increases in productivity will cause OASDI expenditures to drop somewhat as a percentage of GNP or covered payroll. Under the more pessimistic of the trustees' intermediate assumptions, expenditures as a percent of GNP drop from 4.98 percent next year to 4.38 percent in 2005 and as a percent of covered payroll from 11.44 to 11.09.

5. Any HI financing problem in the rest of this century (none under some assumptions but problems in the 1990's under others) is related to the possibility of continuing increases in hospital costs that considerably exceed increases in wages. Of course, if in the 1990's hospital costs rise as much in relation to wages as in the recent past, Medicare will need more money—so will Blue Cross and private commercial health insurance and none of these plans will be "bankrupt" in any usual sense of the term.

LONG-TERM FINANCING

6. There will be a big increase in the absolute number of people over 65 from about 2005 to 2035. This is certain. They have already been born and increasing longevity assures this result.

7. For social security financing, however, it is the ratio of those getting benefits to those at work that is important, and the size of the work force depends on many uncertain factors—fertility rates, labor force participation rates of older people and women, immigration rates, etc. Social security expenditures as a percent of covered payroll will probably increase somewhat in the next century (although this is not certain) but the size of the increase is unpredictable, to some extent susceptible to policy decisions, and may be small. Some increase in the cost of caring for the elderly in the next century, measured as a percent of GNP, say, is a low price to pay for the slowdown in population growth. A return to large-scale population growth would reduce the relative cost of caring for the aged but would have much larger long-range social costs in terms of pressure on the environment and the quality of life.

8. A long-term increase in social security costs is not likely to be a bigger economic burden because of at least some productivity increases and because under the same assumptions that produce an increase in the size of the older population relative to the work force, there will be fewer children to support.

THE ADMINISTRATION'S PROPOSED BENEFIT CUTS

9. SOS opposed the Administration's social security budget cuts. The cuts are particularly unfair to those already receiving benefits such as those who have been getting the minimum benefits. These cuts violate the compact between the contributing worker and his government and the beneficiary and his government. The minimum benefit should be fully restored.

10. SOS opposes the Administration's recommendations for a long-term reduction in the scope of social security—an overall reduction of 23 percent, with a reduction of over 40 percent for those applying for benefits at age 62 and a reduction of one-third in the protection provided against the risk of long-term total disability. We are particularly concerned about the fact that little attention has yet been paid to the huge slashes proposed in disability insurance.

11. These proposals go way beyond the long-run need described by the Administration (and the description of the need may be exaggerated). The 75-year deficit for OASDI is projected at 0.75 percent of payroll under one intermediate set of assumptions in the trustees' report and 1.65 percent under the other intermediate set (slightly more if the minimum benefit is restored). The pending Administration proposals save 2.86 percent of payroll.

12. The Administration proposals are designed not only to meet the short-run OASI deficit they have been talking about, but also to rapidly build up the contingency reserves to produce enough excess of income over outgo to cover the cost of liberalizing benefits for those at work, to reduce social security taxes, and to accomplish all this under such pessimistic economic assumptions that there would be almost no real wage growth over the next five years, an unemployment rate of nearly 10 percent in 1983, and double digit inflation through 1985. Although the Administration does not expect such economic conditions, it insists on benefit cuts now instead of a contingency plan for borrowing from general revenues should the need arise.

It is perhaps more than coincidental that two overriding goals of the Administration would be furthered by insisting on benefit cuts:

a. Because of the present method of accounting, any excess of income over outgo in social security helps balance the overall budget, even though, by law, social security funds can be spent only for social security benefits and administrative expenses. (SOS favors returning to the practice in effect prior to F.Y. '69 of keeping social security financing entirely separate from the general budget and thus removing the temptation to cut social security to help the appearance of the general budget.) According to the Reagan Administration economic assumptions, the social security cuts would contribute nearly $90 billion to budget balancing over the next five years.

b. The benefit cuts would produce a much smaller, less adequate social security program for the long run and further the Administration's goal of reducing the role and size of Federal programs.

OTHER PROPOSED BENEFIT CUTS

13. SOS opposes change in the COLA designed to give beneficiaries less than a full cost-of-living adjustment.

14. SOS opposes reducing benefits for people who apply for benefits before age 68—both the Administration proposal to cut benefits for those applying between 62 and 65 and the proposals that would raise the age of eligibility for full benefits from 65 to 68.

15. Social Security contributors would be treated more fairly if state and local employers were required to forward social security contributions on the same time schedule as private employers, if outstanding social security checks were recredited to the trust funds, and if each year the trust funds earned interest at the current market yields on outstanding long-term government debt. SOS favors these steps.

CONCLUSION

Cutting social security benefits is unnecessary and wrong. The Administration has been exaggerating the seriousness of a quite manageable shortfall in OASI financing in the near term, apparently in the hope of persuading Congress to make major and permanent cuts in the social security program. It is difficult to escape the conclusion that the Administration in proposing these cuts has more in mind than social security. Slashing social security benefits would make a major contribution to their goal of balancing the general budget and, for the long run, would make a major contribution to their goal of reducing the size and scope of Federal programs.●

THE NATIONAL SCHOOL LUNCH PROGRAM

● Mr. HART. Mr. President, during the past few months, the child nutrition director for the State of Colorado, Dan Wisotzkey, has carefully monitored the effects of the reconciliation cuts on the national school lunch program. Last week, Mr. Wisotzkey presented the results of a survey of State nutrition directors to the House Labor and Education Committee. His testimony confirms that, despite administration assurances to the contrary, budget cuts in child nutrition have forced hundreds of schools around the country to withdraw from the school lunch program.

Mr. Wisotzkey's testimony includes an important table listing, State-by-State, the number of schools and students that have terminated participation in NSLP so far this year. This is the first time such comprehensive data has been made available. It deserves our serious attention.

The effect of the budget cuts on the school lunch program has been tragic and unnecessary. Full funding for the program could be restored if the Senate enacted my legislation to reduce the tax deduction for business meals and entertainment from 100 to 70 percent and earmark the savings for the school lunch program.

This proposal represents a simple, reasonable way to reorder our priorities with respect to federally subsidized meals. It does not increase the Federal budget. Given the drastic escalation of schools withdrawing from the school lunch program, our choice should be clear.

I ask that the table, and Mr. Wisotzkey's testimony be printed in the RECORD.

The material follows:

PARTICIPATION IN THE NATIONAL SCHOOL LUNCH PROGRAM—WITHDRAWALS SINCE JAN. 1, 1981

STATEMENT OF THE AMERICAN SCHOOL FOOD SERVICE ASSOCIATION, EDUCATION AND LABOR COMMITTEE

Mr. Chairman, Members of the Committee, I am pleased to be able to present the statement of the American School Food Service Association (ASFSA) on the impact of the school lunch budget cuts contained in the Omnibus Reconciliation Act of 1981. My name is Dan Wisotzkey; I am the Child Nutrition Director for the State of Colorado.

Mr. Chairman, during the last month in my capacity as Chairman of the State Directors Committee within ASFSA I have contacted every State Director in an attempt to discover whether or not schools have left the National School Lunch Program (NSLP). The results of my survey indicate that since enactment of the Omnibus Reconciliation Act of 1981 approximately 400 schools have terminated participation in the NSLP. The more than 100,000 students in those schools have no federal guarantee of a nutritionally adequate meal. The students that cannot afford to buy the a la carte, snack type lunch provided in place of the NSLP, by and large go without. In Arizona, for example, seven school districts have voted to terminate the NSLP, and in those seven districts over 3,200 children received a free or reduced-price lunch last year. Similar situations exist in many other states.

In addition to "school drop outs," student participation has dropped dramatically in some areas due to lunch price increases. Nationally the cost of a school lunch has increased approximately 30 percent. Lunches that cost 60 cents–75 cents last year cost 80 cents to 90 cents this year. This increase has forced several million children, conservatively, from the NSLP. Both the "school drop outs" as well as the lunch price increases are the direct result of the recent budget cuts.

Mr. Chairman, we recognize that 400 schools is not a large percentage of the total number of schools in the program, but earlier this year when the Administration first proposed drastic cuts in the school lunch budget it also listed school lunch as one of the seven "safety net" programs. This Committee was told by the Administration that if their proposals were enacted it would not result in schools being forced to terminate the Program. Various State child nutrition directors testified, however, that if the Administration proposals were enacted thousands of schools would be forced from the Program for financial reasons. This Committee greatly moderated the severity of the Administration's proposed cuts, but even with that lessening of the cuts schools are in fact leaving the Program and poor children are falling through the "net".

As this Committee knows, the National School Lunch Program was established in 1946 "as a measure of national security, to safeguard the health and well-being of the Nation's children . . . by assisting the States, through grants-in-aid and other means". No federal mandate was enacted. The idea was to use only the "carrot" of the federal aid to encourage local communities to operate a National School Lunch Program. And it worked. Over 90 percent of all the schools in the country participate in the National School Lunch Program.

As the federal "carrot" disappears, however, so does the incentive for local districts to participate in the National Program. This year schools will receive 21.5 cents in federal general assistance towards each lunch served (11 cents in USDA-donated commodities and 10.5 cents in cash). The 21.5 cents represents a 40 percent cut in federal assistance.

Nonetheless, budgetary pressure is again building for additional cuts in the National School Lunch Program. The question is asked by critics, "Why should the federal government contribute to a lunch consumed by non-poor children?"

The answer lies in the basic purpose and goal of the program. The National School Lunch Program is not a welfare program and was never intended as an income security program. The school lunch program is a nutrition program that is vital to children's education and health (as well as to the U.S. agricultural economy). Federal monies are spent to encourage local communities to operate a school lunch program for the same reason that federal funds are spent on the park system or on national defense: it is important to the country as a whole, rich and poor alike.

The 21.5 cents subsidy is not a subsidy to non-poor children or the "paying" child. It is a grant-in-aid to the schools to help defray costs based on total student participation. It is only by having a federal subsidy to local school lunch programs, without regard to the income of the people participating in the Program, that school lunchrooms can remain economically and politically viable at the local level. It is not reasonable to turn a nutrition program into a welfare program and expect local communities and governments to respond to the program in the same manner they have in the past.

In those school districts throughout the country where less than one-third (⅓) of the students are eligible for a free or reduced-price lunch, school districts simply cannot afford to participate in the NSLP unless the federal government provides some degree of general assistance for the program as a whole in addition to the "special" subsidy for poor children. If the federal government withdraws its small remaining general assistance, it will not be possible to maintain the National School Lunch Program as one of the President's "safety net" programs. It may not be possible to maintain the program at all.

Many schools that were at first tempted to drop the program this year did not do so in order to wait and see what would be the future direction of the program. Many districts are using up their financial reserves to stay in the NSLP "one more year." The 1983 budget to be released in January is the key in this regard. If the school lunch cuts have not "bottomed out", in the words of one director, and if the Administration continues to treat the school lunch program solely as an income security program, then I fear that that will become a self-fulfilling prophecy. The NSLP will become a welfare program and the 400 schools that have dropped the program this year will turn into an avalanche.●

THE 25TH ANNIVERSARY OF THE HUNGARIAN REVOLUTION

● Mr. GLENN. Mr. President, I rise today to join with freedom-loving people around the world who are commemorating the 25th anniversary of the 1956 Hungarian Revolution. Last Friday, October 23, marked two and a half decades since the Hungarian people rose to challenge their repressive Soviet overlords.

After driving the Russian occupation forces from Budapest, Imre Nagy and his courageous Freedom Fighters proclaimed Hungary an independent state and set about forming a coalition government.

But what might be described as the Budapest autumn fared no better than did the Prague spring of 1968. In each case, the cruel Soviet winter quickly extinguished the fragile blossoms of liberty.

On November 4, 1956, Russian tanks rumbled into Budapest and the spirited courage of the Freedom Fighters proved no match for the machine gun and the jackboot.

But although the Hungarian Revolution was brutally suppressed, the sacrifice and struggle of those who waged it was assuredly not in vain. The spirit of liberty was rekindled throughout the nation, and the Soviet Union was forced to loosen its brutal grip on almost every aspect of Hungarian society. Although the people of Hungary are not yet free, they have succeeded in easing their oppression and in frightening their tormentors.

Yesterday, it was Hungary. Today, it is Poland and Afghanistan. Who knows what tomorrow will bring? But there is one thing we do know, Mr. President. And that is that the yearning and the quest for freedom can never be completely crushed. And wherever that yearning expresses itself, there also will be inspiration to all who suffer tyranny's yoke. In 1848, another Hungarian revolutionary—Lajos Kossuth—clearly enunciated the universal significance of what happened in Budapest 25 years ago. He wrote:

> The cause of freedom is identified with the destinies of humanity. And in whatever part of the world it gains ground, it will be a common gain to all those who desire it.

So, today, let us remember, celebrate and rejoice in what happened 25 years ago in the city of Budapest. And until the Hungarian people have finally and fully received their independence, let us vow to keep their cause in our hearts, in our minds and before the court of world opinion. Someday, the Hungarian people will be free. Until then, let us raise our voices and loudly proclaim: Isten áldd a Magyart!●

A NATIONAL EFFORT TO END HANDGUN VIOLENCE

● Mr. PELL. Mr. President, today marks the beginning of National End Handgun Violence Week, which will be the largest grassroots effort ever made to raise awareness of the need for handgun control, and dramatize the tremendous support which already exists for new measures to curb handgun violence.

This effort was organized by the composer and singer, Harry Nilsson, after his friend John Lennon was killed in New York last December with a handgun. Hundreds of sponsors have volunteered their time to organize rallies, benefit concerts, and other public forums to promote the need for handgun control.

Since the passage of the 1968 Gun Control Act, a quarter of a million Americans have been killed in handgun shootings. The list of public officials and other well-known persons who have fallen victim to handgun violence is long and all too familiar to each of us. But the 250,000 Americans who have died from handgun bullets have not been the only victims.

In fact, we all have become victims of the fear of handguns, a fear that has become so pervasive that many of us have changed the way we live because of the odds of having a handgun pointed at me suddenly one night on the streets of almost any American city.

Many of our senior citizens have become virtual prisoners of their own homes, especially in the central cities, because of their fear of venturing out onto the streets.

Even more disturbing is the tide of new handguns that is threatening to engulf our society. Despite the 1968 Gun Control Act, foreign-made handguns of all types and sizes keep flowing in at an estimated rate of more than 600 new handguns a day. These, plus new American-made products, add up to almost 6,000 new handguns per day.

The number of handguns in circulation in the United States increased by more than 20 million during the seventies and at the current rate there will be over 100 million handguns in our country by the year 2000.

I believe it is possible to stem the frightening rise in the number of handguns on the streets of America. I see no reason why all handguns should not be registered, and all owners of handguns licensed, just as we require that all automobiles be registered and all drivers be licensed. Such a system would not infringe on legitimate use or ownership of firearms any more than our automobile laws infringe on the legitimate uses of cars.

I am extremely pleased to join Senators KENNEDY and MOYNIHAN and the other very distinguished members of the sponsoring committee in this national effort to end handgun violence. This is exactly the kind of grassroots initiative that will further increase public awareness of the problem, and translate the vast support that already exists into a strong public voice for stronger measures to curb handgun violence.

As we begin National End Handgun Violence Week, it is well to recall the words of Robert Kennedy, which are just as true today as when they were spoken in April 1968, following the assassination of Dr. Martin Luther King:

> The victims of violence are black and white, rich and poor, young and old, famous and unknown. They are, most important of all, human beings whom other human beings loved and needed. No one—no matter where he lives or what he does—can be certain who next will suffer from some senseless act of bloodshed. And yet it goes on and on and on, in this country of ours. Why?

Today, one reads those words with a twinge, but they are a compelling reminder of the need for a new national commitment to end the handgun violence which has made every one of us a victim of fear and the thought that a friend or loved one, or we ourselves, may be the next object of a senseless killing or serious injury inflicted by a handgun.●

TESTIMONY OF DR. MICHAEL NOVAK ON ANTI-SEMITISM IN THE SOVIET UNION

● Mr. HEINZ. Mr. President, as I mentioned in my statement last Thursday on the October 6 hearing on anti-Semitism in the Soviet Union, I would like to bring to my colleagues' attention the following testimony of Dr. Michael Novak and have his statement printed in the RECORD. Dr. Novak served as the U.S. representative to the United Nations Human Rights Commission in 1980 and is currently a resident scholar in religion and public policy at the American Enterprise Institute. He is the author of many philosophical works and two novels. His new book "The Spirit of Democratic Capitalism" will be published in February.

Dr. Novak's eloquent testimony addressed the human rights violations against all citizens of the Soviet Union but in particular the Soviet Jews. In discussing Soviet Jewry, Dr. Novak recalled the discrimination and harassment that constantly invades every Jewish home. He pointed to the uncertainties of emigration and the refusal of Soviet authorities to abide by the Helsinki accords. Most important, he pointed to the fact that the Jews of the Soviet Union are not free to learn of their history and heritages.

Dr. Novak's statement follows:

TESTIMONY OF MICHAEL NOVAK

Mr. Chairman, it is in my personal capacity that I speak before you today.

On the other hand, I should call to the attention of the Committee the fact that I served this past spring, and have recently been asked to serve again this coming year, as the United States Representative to the Human Rights Commission of the United Nations by the appointment of the President. I mention this for two reasons. First, I must point out that, except for my specific assignments, I'm a private citizen and independent scholar and, on this occasion in particular, am speaking in my private capacity. Secondly, as a Democrat who has accepted part-time service in this capacity under a Republican administration, I would like to emphasize the bipartisan nature of the concern about human rights by all American citizens. As debates in this country frequently show, there is a passion here about human rights.

The American people would like to send a message of hope to all citizens around the world who suffer from deprivation of their human rights. This is because most of us came to this land, or our families did, in pursuit of human rights. It is for its institutions of human rights that we are grateful to the land that has nourished us. It is through our roots in other lands that we remember what it was like to be able to look to America as a beacon of human rights. For these reasons, we would like this message of hope to continue going out to all the world, to Guatemala and Argentina, as well as to Cuba and Nicaragua, and to every continent and every nation where there are abuses of human rights. Our goal as Americans, a bipartisan goal, is to build a better world, in which institutions of human rights flourish, and in which individual human beings receive the respect and liberty which is their due through the inheritance which the Creator bequeathed them. This is our duty as fellow human beings and as Americans. It is also our deepest personal desire.

Mr. Chairman, it is, then, in my personal capacity that I speak. Among the many concerns to human rights activists around the world, one is especially difficult and painful to bring up. It concerns the Soviet Union, a nation with which in the interest of world peace we would desire to have the best and most cordial relations, but with which, in the interest of its own publicly acclaimed values, we must in the matter before us express dismay. For the Soviet Union is committed through many public documents to religious liberty and to rights of

free emigration. These are not values imposed from abroad. They are values to which the Soviet Union has publicly committed itself.

We recognize full well, of course, that it is difficult for a regime which desires total control over every aspect of the lives of its citizens to observe in practice the principles to which it commits itself on paper. This is the Soviet dilemma. The Soviet Union is committed to diametrically opposed principles, one set on paper, the other in practice. My hope as a private citizen (and I am sure that the hope is shared by all Americans and, indeed, by most citizens of the Soviet Union) is that the better angels of the Russian spirit will win out over the worse. In particular, and at the very least, we would hope for the free religious liberty and free right to emigration on the part of all Soviet citizens.

There are many groups of Soviet citizens who do not, in fact, enjoy complete religious tolerance and normal religious liberty. Bibles have been confiscated, religious meetings interrupted, religious leaders beaten, punished, and thrown in jail, and complicated schemes of penalties attached to those who insist upon religious belief and practice. Nonetheless, Mr. Chairman, witness after witness comes from the Soviet Union to tell us of the burgeoning of the spirit of religion just below the icy surface of everyday life. When I was a child, Mr. Chairman, as a Roman Catholic we used to pray at the end of mass everyday three Hail Marys "for the conversion of Russia." It appears now from the witness of Alexander Solzhenitsyn and others that these prayers have been among the most powerfully and plainly answered in all of history. Russia seems to be breaking out with religious desire and the appetite for freedom of conscience and movement.

Mr. Chairman, it has always seemed to me that in a pluralistic society like our own, one religious group ought to be especially active in speaking out on behalf of another. Thus, it gives me a sense of satisfying a religious obligation to speak, as a Roman Catholic, in defense in particular of the rights and liberties of Soviet Jews. In the Soviet Union, Jews are not the only ones who suffer the loss of religious liberties and rights. But they do seem to be particularly victimized. Evidence abounds concerning what they have suffered, and testimony after testimony has added to the weight of that evidence over the years.

In discussing Soviet Jewry I am forced to recall that we are speaking about individual persons with proper names and private hopes, men, women and children who are denied a most basic freedom of choice, the right of emigration. Each uncertain and fearful individual who endeavors to leave the Soviet Union must face the possibility of harassment and discrimination. No individual knows at the moment when he applies for a visa whether he will be permitted to leave without trouble or whether he will be dismissed from his employment and subjected to as much as a decade of uncertainty regarding his future. Each is frightened of his present circumstances and obliged to wait and wait.

For some reason, totalitarian societies seem to delight in the terrors of arbitrariness. A housewife may be told that she has state secrets while a physicist may be permitted to leave. One physician may be allowed to emigrate while another languishes without employment and without hope. All Soviet Jews must be prepared to confront the worst of fates before they exercise the most fundamental right of emigration. This right is guaranteed by the Helsinki accords, but the arbitrariness surrounding its use seems intended to spread terror. In a sense the refusenik is caught on the horns of a dilemma. He is unable to leave the Soviet Union freely, but he is also not permitted to live freely as a Jew within Russia.

Mr. Chairman, we could perhaps be less shocked by this denial of emigration if Soviet Jewry at least enjoyed religious liberty within the Soviet Union. Instead, Jews face a society which denies them vital institutions of culture, a regime which denies Hebrew teachers the right to teach and penalizes Yiddish, recognized by the law as one of the state languages of the Soviet Union. Basic expression of Jewish culture, theater and music, arts and poetry are severely limited and their performance so rare as to face almost total extinction. The words of Sholom Aleichem are not heard—cannot be heard—in the streets of Kiev, his native city.

The situation is especially bleak right now. Within the past four months an unprecedented number of Jews have been arrested in widely separate geographical areas as if to indicate that the Soviet Union wishes to attack every manifestation of Jewish identity everywhere within the country. We read almost weekly of harsh sentences, imprisonment and exile meted out to those who dare to speak of Jewish identity and Jewish community.

Even the harshness of the Soviet regime cannot destroy the freedom of the Jewish people, their desire to study their past and to remain faithful to their history. Since formal programs for the study of Judaism have been denied, informal seminars have flourished. Today even the latter are being closed down and their participants are now subjected to arrest, persecution and harassment. Many live in constant fear. Those Jewish scientists who had been dismissed from their positions within universities and research facilities or expelled from the prestigious Soviet Academy of Sciences used to form study sessions to stay current within their research and to keep in touch with the scientific publications of the world. They did this so that if they were granted a visa to leave, they could again obtain a professional appointment—and simply out of commitment to learning. Recently participants have been harassed, material confiscated and study sessions disbanded.

But the situation is even more serious when we consider the magnitude of the new Soviet persecution of the Jews. Caricatures of Jews and Judaism appear regularly in the Soviet press. Clichés of hatred and prejudice are routinely called forth to describe Jews. Words like "disloyal, deceitful, cruel, conspiring and enslaving" recall for the world the earlier era of Nazism. At the United Nations, an infamous Soviet-inspired resolution has equated Zionism with racism and thus unleashed a cancer on the body of the world community, distorting and disturbing every sane discussion regarding human rights and perverting processes designed to protect, and not attack, human dignity. Anti-Zionism in this pernicious form is the direct descendent of anti-Semitism in its most lethal expression. It is clear that the distortions which have been introduced into the world community because of this peculiarly pernicious form of anti-Semitism threaten not only to devour the Jew but to infect the world community of nations with murderous poison.

What is one to say when confronted with:

Growing arrests of Jews;

Increasing numbers of Jews imprisoned;

Denials of permission to study Hebrew language;

Disbanding of Jewish culture history and religion study groups;

Disbarring of Jewish scientists from private scholarly associations;

Television, radio and newspaper campaigns vilifying Jews;

Repeated official identification of Jews as the cause of all social and economic ills;

Repeated official efforts to deny Jews their national identity by a thinly-veiled program of anti-Semitism utilizing the rubric of "anti-Zionism."

Are we to consider these as isolated, unrelated events? Reasonable persons can only perceive this cumulative chain of actions taken by officials in the Soviet Union as being a sustained program of anti-Semitism.

Mr. Chairman, this day marks the fortieth anniversary of Babi Yar. During the week between the Jewish New Year and the Day of Atonement, just forty years ago, tens of thousands of Jews were killed at vast and bloody burial site. Today at Babi Yar there is no mention at the site of the identity of these victims. In totalitarian states, to mention or not to mention is an official act; history itself is subject to official will. Only in the free nations is history free and truth permitted voice. That is why we who are so far away must speak for those who cannot speak. And we ask nothing special—only ordinary decency, plain truth, civil respect obedience to official Soviet law and Soviet international commitments. We ask no more than that the Soviet Union be faithful in its institutions and daily life to the words it affirms on paper. If it cannot be trusted in its dealings with its own citizens, who can trust it elsewhere?

Mr. Chairman, what a better world it would be if the masters of Soviet officialdom respected their own peoples. We would like to be able to admire their moral practice, not simply their awesome military might. Hardware rusts; decency lives forever.

What Moses said to Pharoah is not at all old-fashioned: "Let my people go." If the people of the Soviet Union could speak to their rulers, would they not say the same?

Mr. Chairman, we in the United States desire a world of upright, free citizens, respected by their own governments, liberated for creative, constructive lives. It pains us to see others suffer unfairly during their brief lives. This suffering seems so unnecessary, and could so easily be ended.●

REQUEST FOR COAST GUARD HELICOPTER STATION IN LINCOLN COUNTY, OREG.

● Mr. PACKWOOD. Mr. President, for 191 years, the Coast Guard has played a vital national function in the form of its search and rescue mission. In recent years, the Coast Guard has been assigned numerous other duties including drug interdiction, illegal immigration patrol, fisheries enforcement, vessel documentation and inspection, pollution control, and on and on. But the basic mission of the Coast Guard, its first mission, is the search and rescue of commercial and recreational operators and vessels in our domestic waters.

In the State of Oregon, the Coast Guard has two stations along the coast: One in Astoria up north; and the other in North Bend along the southern part of the coast. What this leaves is a void in the central coastal area, an area which has seen rapidly increasing recreational, commercial, and educational use each year. The result is a critical need for deployment of a Coast Guard helicopter station in Lincoln County near Newport, Oreg.

The Oregon Legislature has recognized this need, and passed a resolution expressing its concern. Now it is up to us in Congress and the executive branch to

see that the Coast Guard in Oregon is equipped so that it can carry out its first and most important mission—search and rescue.

I request that Senate Joint Memorial No. 6 be included in the RECORD at this point.

The memorial follows:

SENATE JOINT MEMORIAL 6

Whereas the beaches of Lincoln County, Oregon, were used by at least 20,000 students for marine education programs in 1980; and

Whereas the number of visitors using Lincoln County beaches is expected to greatly increase within the next decade; and

Whereas Lincoln County has an increasing number of large commercial fishing vessels, operating in inclement weather and increasing the risk of accident; and

Whereas the North Lincoln Hospital has the nation's highest incidence of hypothermia caused by cold water exposure; and

Whereas the nearest existing United States Coast Guard helicopter stations are in North Bend and Astoria requiring one hour to respond to an emergency in Lincoln County; and

Whereas shorter response time could have saved at least three lives in Lincoln County in 1980 alone; now, therefore,

Be It Resolved by the Legislative Assembly of the State of Oregon:

(1) The Congress of the United States is memorialized to establish a fleet of United States Coast Guard helicopters in Lincoln County.

(2) A copy of this memorial shall be sent to the President of the United States and to each member of the Oregon Congressional Delegation.●

PERSONAL EXPLANATION

Mr. DODD. Mr. President, during consideration of S. 1196, the Foreign Assistance bill on Thursday, October 22, 1981, I was unavoidably absent. I recorded by position by live pair on the two amendments dealing with the Peace Corps, and I announced my position on the Tower amendment concerning defense leasing authority. However, I would like to take this opportunity to state my position on the record votes I missed.

Had I been present, I would have voted in the following way: Yea on the Moynihan amendment No. 498; yea on the Kennedy motion to table amendment No. 502; yea on the Percy amendment No. 503, nay on amendment No. 509, offered by Senator HELMS; nay on the motion to reconsider the vote on the amendment by Senator KASTEN No. 517; nay on Hatfield amendment No. 518.

Finally, Mr. President, had I been present I would have voted yea on final passage of S. 1196.

AN OLIVE BRANCH FOR NORTHERN IRELAND

● Mr. PELL. Mr. President, approximately 2 weeks ago, Irish Prime Minister Garret FitzGerald offered a plan, or to use his words, an "olive branch," to the people of Northern Ireland. In a speech to Parliament, he proposed that the Republic of Ireland be transformed into a nonsectarian state by amending its laws to remove the Catholic bias. In addition, he proposed that the Republic's constitutional claim to Northern Ireland be dropped. These are progressive and statesmanlike steps toward the resolution of the Northern Ireland problem, and I would like to commend and congratulate Dr. FitzGerald for taking them.

The roots of the tragic situation in Northern Ireland are political and religious. When the Irish Free State, later to become the Republic of Ireland, was created in 1922, the six northern counties were separated from the South and integrated into the United Kingdom. The British Government granted Northern Ireland, which was predominantly Protestant, a considerable amount of self-government by allowing the people to form their own parliament in 1921.

The political division of Ireland was never accepted by either the Republic of Ireland or the Catholic minority in Northern Ireland, which sought to reunite the North with the South. The Protestant majority was just as determined to preserve the union with Britain and increasingly used its powers in parliament to dominate Catholics.

Thus, the majority rule in Northern Ireland came to mean Protestant rule and the exclusion of Catholics from power. Similarly, the Catholic yearning for union with Ireland was perceived by Ulster Protestants as being obviously harmful to them.

When reduced to its simplest terms the Northern Ireland problem has been and continues to be whether Catholics should be a minority in Northern Ireland or Protestants should be a minority in a united Ireland. The long history of violence and confrontation between Catholics and Protestants in Northern Ireland suggests that it will be difficult to convince either group to accept such a minority status. Nevertheless, if the Irish problem is to be resolved and peace is to be restored to Northern Ireland, the Irish people must be united.

The constitutional and legal changes proposed by Dr. FitzGerald are designed to remove some of the obstacles to unification. By dropping its constitutional claim to Northern Ireland, the Republic would remove a major irritant in its relations with Protestants in the North. The proposed changes in Ireland's laws should allay the fears held by Northern Protestants about being the minority in a united Ireland. Protestants would be able to retain their identity within the parameters of a legal system which would not discriminate against them in favor of Catholics.

Because many of the citizens of my home State of Rhode Island are of Irish ancestry and are deeply concerned about the situation in Northern Ireland, I visited Dublin and London in late May. After numerous discussions with governmental and political leaders, I concluded that a solution to the Irish problem was achievable and that it should be nonviolent.

I am encouraged by Dr. FitzGerald's initiatives because they reflect sensitivity to the concerns of Northern Protestants and a willingness to accommodate to them. I am also impressed by the extraordinary courage which he has demonstrated in taking this step. As we have seen for far too long, the Irish problem causes passion to run high among Catholics and Protestants in both the North and the South. Finding a solution is no easy task, and inevitably, there will be criticism and political risks associated with any proposal. Nevertheless, Prime Minister FitzGerald has accepted this challenge and these risks and offered a plan which, I believe, could be the foundation on which a united Ireland is built.

Reactions to the FitzGerald proposals have been mixed in both the North and the South. Rev. Ian Paisley, the volatile northern Protestant leader, emphasized that the plan would "in no way weaken our resolve never to come under Dublin rule." The Protestant majority party in the North endorsed the idea of revision with the caveat that the North retained the right to say "no."

Sean Farren, chairman of the predominantly Catholic Social Democratic and Labor Party in Ulster, commented that:

Many changes, both in attitudes and in law, are needed if a meaningful agreement is to be achieved between the people of Ireland.

Spokesmen for the Northern Alliance Party endorsed the need for constitutional change but criticized the obsessional goal of unity. In the Republic, Charles Haughey, leader of the opposition party, Fianna Fail, stated that his party was neither inherently opposed to change or to forward movement. The Catholic Church, thus far, has offered no official reaction.

Undoubtedly, these reactions are not overwhelmingly favorable. However, I derive a glimmer of hope from the fact that there was no outright rejection of the plan.

Moreover, there appears to be agreement among many Catholic and Protestant leaders in the North and the South that constitutional and legal changes are necessary and desirable. In September, when Dr. FitzGerald first raised the possibility of these changes, Mr. Haughey totally rejected the idea.

Therefore, I am pleased that he has tempered his rejection because the support of the opposition party would add considerably to Dr. FitzGerald's chances of success.

It is my fondest hope that the political and church leaders in both the North and the South will further consider the FitzGerald proposals and come to regard them as a significant step toward resolution of the situation in Northern Ireland.

In my view, the British Government should work with political and governmental officials in Dublin and Belfast to generate support for the FitzGerald plan. If there is to be peace in Ireland, the people of Ireland cannot afford to reject such an important initiative by a courageous man.●

CHINA

● Mr. GRASSLEY. Mr. President, the People's Republic of China recently has called for the reunification of the Republic of China—Taiwan. In that light, I feel it is proper for this body to be aware that this call for reunification is not something new, but rather a call which has been made several times before.

I would, at this time, ask to be printed

in the RECORD an article published in the New York Times on Thursday, October 8, 1981, and an article published in the Wall Street Journal on Thursday, October 15, 1981.

The articles follow:

[From the New York Times, October 8, 1981]

CHINA, TAIWAN'S SUITOR

(By Jeremiah Novak)

STATE COLLEGE, Pa.—Behind Peking's new offensive to reunify China is a desperate desire to co-opt Taiwan's economy, for there is a growing realization that without an injection of some economic force, the 10-year, $250-billion modernization program announced by Deng Xiaoping in 1979 is doomed. Bluntly put, China's political leaders need Taiwan's economic success.

Although China has repeatedly called for reunification in the last 18 months, there has been a recent crescendo of such proposals. Peking has upped the ante by offering to share leadership with the Kuomintang Party, as well as to permit Taiwan to keep its political, military, and economic structures. Left unstated is how Taiwan's successful economy would be integrated into the mainland's troubled one.

China's centrally planned economy is in shambles. World Bank and Defense Intelligence Agency reports indicate that its approach to development is failing. Indeed, Mr. Deng's call for modernization was an implicit admission of China's backwardness.

Despite huge oil reserves, oil production is declining. According to the D.I.A., bottlenecks are appearing in all phases of industrial production, unemployment now affects 10 to 20 percent of the urban workforce, and inflation is running at 10 to 15 percent. A mainland Government report says that up to 100 million people may be malnourished. Because of the rigidity of the planned economy, more than 20 percent of total plant orders placed from overseas since 1978 have been canceled because of a lack of technical and managerial skills and necessary capital. After 32 years of development, China's annual per capita income is less than $300—this places it among the world's poorest nations, in a class with India.

But Taiwan's economy goes from strength to strength. The island is wealthy, with a per capita income of nearly $3,000—10 times that of the mainland. Taiwan's approach to development has resulted in an economy with virtually no unemployment; an export surplus; self-sufficiency in food; and financial, technological, educational, and managerial bases that have permitted Taiwan to survive as a world-class competitor since its expulsion, in 1979, from the World Bank and International Monetary Fund. In fact, Taiwan has been able to budget up to $3 billion to buy modern weapons from the United States.

From the mainland's viewpoint, Taiwan's $8 billion in foreign exchange, and especially its managerial and technological talent, would be more valuable than a score of World Bank or Euromarket loans, for merger with Taiwan would give China the skilled personnel it lacks.

Politically, Taiwan's success has affected the mainland's intellectual and military climate, for that success is a constant reminder of the Communists' failures. Peking no longer can mask the huge economic difference between the mainland and Taiwan. Many overseas Chinese now visit China. They have spread information about Taiwan's success, especially among the intellectual elite. Moreover, many mainland diplomats, scientists, Government officials, and students have met their Taiwanese counterparts. To their dismay, they have learned that during periods of chaos, from the "Great Leap Forward" in 1959 through the episode of the "Gang of Four," Taiwan entered the modern scientific age.

Moreover, Taiwan's success has been a growing source of unrest among Peking's military leaders, who chafe at the party's inability to finance a military buildup. Whereas the mainland has de-empasized military modernization in order to stimulate its long-stagnant economy, Taiwan has continuously modernized both. According to the D.I.A. a conflict between the military and the party is possible unless Mr. Deng can get the economy moving. His diplomatic overtures can be viewed as a way of silencing military critics.

In a sense, Mr. Deng's argument with the military places in stark relief all the basic issues of China's civil war. If the Communist system cannot provide modernity, will China be forced to move toward Taiwan's? Put another way, can Taiwan's economy be integrated successfully without radically altering the mainland's economic structure? Further, can Mr. Deng compromise with Taiwan without alienating millions of radical party members?

To reunify and to force Taiwan's economy into the Communists' system would be a catastrophe for Taiwan and would not benefit China, for it would reduce a prosperous economy to the level of the mainland's.

Because of the economic issues involved, Washington must not be too hasty in taking sides in what are essentially unresolved issues of the Chinese civil war. Although that war is now being fought diplomatically and politically, it remains an internal Chinese conflict in which Peking holds the political cards and Taipei the economic cards.

[From the Wall Street Journal, Oct. 15, 1981]

CHINESE ILLUSIONS

The other day the Communist government at Peking published yet another invitation designed to lure the Nationalists on Taiwan into rejoining the mainland. This caused a bit of excitement because the Communists went so far as to offer formally that Taiwan could retain some political autonomy, its own "socioeconomic system" and even its own army, while its leaders could "participate in running" the national government. Taiwan, however, promptly rejected the offer, much to the consternation of one-China optimists who saw it as a generous gesture. The New York Times, for example, held that by failing to discuss the proposal Taipei "forfeits the propaganda struggle."

This would be a small price, if true, considering what Taiwan stands to lose by taking the Peking offer seriously. What you had in China's offer wasn't any waking up to reality of the sort that occurred, say, when Anwar El-Sadat of Egypt finally agreed to talk with the Israelis, who had three times defeated his country at war. What we've just heard from Peking is more analogous to an offer by a large corporation in the midst of bankruptcy proceedings to acquire its most successful competitor and set it up as some kind of subsidiary.

It's an offer, in short, that doesn't make sense. Consider, for example, that Taiwan's per capita income stands at nearly $3,000 a year, among the highest in the developing world, while China's, at below $300 a year, ranks among the lowest. The gap between the rich and the poor is narrower in capitalistic Taiwan than in supposedly egalitarian and Communist China. And the two-way external trade carried on by Taiwan's 17 million people rivals that of the mainland, with its population of nearly a billion. China, in short, doesn't have the sort of economy into which Taiwan wants to be absorbed.

This is particularly true when no one, inside or outside of China, seems to be taking seriously Taiwan's own statements on the subject. It argues that the only way to bring about reunification is for the mainland to "abandon the Communist system." This would be, after all, the first prescript of any Taiwanese official asked to give advice on economic development policy. And development policy surely must be a key area in which the mainland's rulers want Taiwan's leaders to "participate in running" the nation.

Now it is of course true that Deng Xiaoping and his allies have sharply modified Mao's communism, introducing certain capitalist elements, such as joint ventures with foreign firms. But when they began making their overtures to Taiwan, K. T. Li, for many years Taipei's finance minister and an architect of its "economic miracle," pointed out the fundamental contradiction that faces not only Peking but any Communist regime as it contemplates economic reform. "If it adopts the pragmatic measures that proved so successful in Taiwan," he argued, "they will lead to the emergence of certain capitalistic elements that will erode the communist ideology and eventually destabilize the existing political system."

If you don't believe Mr. Li, take a trip today to Poland and see what he's talking about. The Chinese Communists have come a long way since the death of Mao and it's comforting to know they're tilting in our direction rather than toward the Soviets. But they haven't yet shown signs that they really understand the economic problem they face. And until they do Taiwan deserves nothing but support in its refusal to get sucked into their schemes.

These two articles illustrate additional considerations that should be taken into account as we discuss the issue of reunification of China.

Two other pieces of information that I feel are of great importance in understanding this recent gesture are the rebuttals offered in the text of Premier Sun Yun-Suan's reply to Legislator Jao Ying-Chi's interpellation of the Chinese Communists' United Front Statement and President Chiang Ching-Kuo's remarks to the Central Standing Committee of the Kuomintang of China in his capacity as chairman of the party.

For the sake of conserving time, space and the cost of having it published in the RECORD, Members may contact my office and I will have a copy made and forwarded to their office immediately.

The question of what role, if any, the United States should play in any move to unify China is certain to engender considerable controversy in the legislative and executive branches of the government. My hope is that my colleagues will take the time to study this matter so that any decisions made in Congress will be based on the facts and evidence.

I intend to continue my study of the matter and hope to gain some first hand impressions of the situation by visiting Taiwan at a later date.●

ORDERS FOR TUESDAY

ORDER FOR RECESS TODAY UNTIL 9 A.M.

Mr. McCLURE. Madam President, I ask unanimous consent that, when the Senate completes its business today, it stand in recess until the hour of 9 a.m. on Tuesday, October 27.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF CERTAIN SENATORS

Mr. McCLURE. Madam President, I ask unanimous consent that, following the recognition of the two leaders under the standing order tomorrow, the following Senators be recognized for special orders: Senator BOREN, Senator ROBERT C. BYRD, and Senator HUDDLESTON.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR LIMITATION OF 15 MINUTES ON SPECIAL ORDERS AND 3 MINUTES ON MORNING BUSINESS STATEMENTS

Mr. McCLURE. Madam President, I ask unanimous consent that the special orders for tomorrow be limited to 15 minutes each, and that there be a limitation on the time during which Senators may speak during morning business of not to exceed 3 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. McCLURE. Madam President, I ask unanimous consent that, following the special orders tomorrow, there be a period for the transaction of routine morning business not to extend beyond 10 a.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL TOMORROW AT 9 A.M.

Mr. McCLURE. Madam President, there being no further business to come before the Senate, I move in accordance with the previous order that the Senate stand in recess until 9 a.m. tomorrow.

The motion was agreed to; and at 6:47 p.m. the Senate recessed until tomorrow Tuesday, October 27, 1981, at 9 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate October 26, 1981:

DEPARTMENT OF LABOR

John F. Cogan, of California, to be an Assistant Secretary of Labor.

Lenora Cole-Alexander, of the District of Columbia, to be Director of the Women's Bureau, Department of Labor.

Ford Barney Ford, of California, to be Assistant Secretary of Labor for Mine Safety and Health.

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

Rosemary M. Collyer, of Colorado, to be a Member of the Federal Mine Safety and Health Review Commission for the term of 6 years expiring August 30, 1986.

DEPARTMENT OF EDUCATION

Jean Tufts, of New Hampshire, to be Assistant Secretary for Special Education and Rehabilitative Services, Department of Education.

CIVIL AERONAUTICS BOARD

Clinton Dan McKinnon, of California, to be a Member of the Civil Aeronautics Board for the remainder of the term expiring December 31, 1985, vice Marvin S. Cohen, resigned.

The above nominations were approved subject to the nominees' commitment to repond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

USELESS U.S. METRIC BOARD NEAR EXTINCTION

HON. ELDON RUDD
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. RUDD. Mr. Speaker, after spending at least $8 million in tax dollars over its 3 years of existence to travel around our Nation and promote an unpopular and unreasonable international system of metric measurement, it appears that the U.S. Metric Board has finally neared its last mile.

If Congress acts wisely and approves a Senate subcommittee's recommendation to terminate this useless Metric Board, effective March 31, 1982, a major victory will have been scored by the vast majority of American people who are against Government-imposed metrication.

But the fight does not end here.

There are presently metric coordination offices or departments within most of our major Federal agencies. The Commerce Department has a senseless plan to convert all of its department activities to the Franch-devised metric system by 1985. The Defense Department has stated that it is continuing to follow a timetable conversion by 1990. Other Federal agencies have already instituted metric requirements in their contracts issued to the private sector. An ad hoc creation of the U.S. Metric Board, the Interagency Committee on Metric Policy (ICMP), composed of agency representatives, publishes regulations in the Federal Register for all participating Federal agencies to follow in SI metric conversion. All of these actions add up to quasi-mandatory conversion. To the private sector, the consumers and American citizens, these actions constitute nothing less than imperial decree, something you would expect in a totalitarian government.

Of course, Congress never approved a mandate for SI metrics. Nor did it request timetables, deadlines, or anything else that would even suggest that the Federal bureaucracy take it upon itself to force this system of weights and measures upon the American people. It explicitly stated that any conversion be voluntary and that it be initiated by the private sector. Unfortunately, the 1975 Metric Conversion Act contained loose and presumptuous language that failed to establish a definitive and plain national policy on weights and measures.

It should be made clear to the unresponsive bureaucrats in Washington that the U.S. policy is to continue a successful system of customary—inches, pounds, gallons, et cetera—and metric measurement only if metric is desired. We must pursue a vigorous effort to avoid wherever possible undue or harmful socioeconomic dislocations as a result of Federal programs or actions, such as mandated metric programs.

It should be clear that the American people and private sector can dictate their own needs or desires on the question of metric or customary measurement usage. The Federal Government should not promote costly, unnecessary concepts, like metric conversion, which can result in tremendous costs in convenience and expense to the American people, and in overwhelming opposition by the people.

For these reasons, I urge my colleagues to enlist as cosponsors on by bill, H.R. 1660, to repeal the Metric Conversion Act.

There are two items I am inserting in the RECORD for perusal: the Wall Street Journal article on the Metric Board of October 26, 1981, and an excellent letter written by Dean Krakel, executive vice president of the Cowboy Hall of Fame, to the Department of Defense on DOD's ill-advised 1990 target date for metric conversion.

[From the Wall Street Journal, Oct. 26, 1981]

METRIC BOARD IS INCHES FROM EXTINCTION, ALTHOUGH IT FINALLY HAS SOME WORK TO DO

(By Arlen J. Large)

WASHINGTON.—Just as it's finally getting some real work to do, the U.S. Metric Board has been told by the Reagan administration to walk the last kilometer.

The White House has asked Congress to abolish the Metric Board by next March 31. That death sentence has been approved by a nine-member Senate appropriations subcommittee. The full 29-member Appropriations Committee will consider the matter on Wednesday before sending it to the Senate floor.

Congress created the Metric Board in 1975, in a truncated law that originally started as an ambitious plan to convert the nation mainly to metric measurement over a decade. As finally passed, the 1975 act omitted any reference to a deadline, or even an eventual commitment to U.S. metric conversion. The act simply created the 17-member board and told it to "coordinate the voluntary conversion to the metric system."

Not until 1977 did President Carter appoint the board members, part-timers from big and small business, unions, consumer groups and state experts on weights and measures. The board established a small staff in an office building across the Potomac River from Washington, and waited for metric "conversion" proposals to come in for coordination.

Embarrassingly, nothing came in. The Transportation Department floated a plan for switching highway signs from miles to kilometers, but an outcry from Congress prevented it from reaching the board for official consideration. Ditto for a plan by the National Weather Service to figure temperatures exclusively in Celsius instead of Fahrenheit, and barometric pressure in kilopascals instead of inches of mercury. The metric weather plan never reached the board for "coordination" and is dormant.

A primary conduit for funneling private industry's metric-switching plans to the board was to have been the American National Metric Council. It is a private, Washington-based group that's officially neutral about the metric system's merits, but actually a hotbed of metric converters. The council draws up timetables for synchronizing the details of conversion on an industry-by-industry basis. As early as 1974, the council began working on a plan for metric measurement of bulk chemicals. As the private council worked out each industrial sector plan, it was to submit the proposal to the new government board for public comment and endorsement.

Again, no plans came. Last year, the private council designed a how-to-do-it plan for oil companies wanting to sell gasoline by the liter, after most gasoline pumps could not register gasoline prices above $1 a gallon. The council did not send this plan to the government board, fearing criticism from its minority factor of metric critics.

With nothing to coordinate, the Metric Board contented itself with holding public meetings around the country, listening to frends and foes of the metric system. Last May, the board's executive director, Malcolm O'Hagan, a leading advocate, quit to take a job with a private trade association. And just lately, President Reagan's budget-cutters put the board on its list of agencies the government should do without.

By coincidence, everyone swears, the American National Metric Council has completed its conversion plans for both industrial chemicals and instruments, and wants to submit them to the government board for its very first try at "coordination." The council has set a 1984 target date for the packaging and billing of bulk chemicals in kilograms instead of pounds. It has also drawn up guidelines coaching makers of industrial instruments on how to go metric. The council is formally submitting these plans to the government board in hopes that public hearings will be held and the proposals will get wider attention.

The government board probably will discuss what to do with these plans at its January meeting. David Gorin, the private metric council's president, said the plans aren't being slyly submitted at this time to make the threatened board look suddenly busy and irreplaceable. "All along we've intended to see whether the board can make a positive contribution," said Mr. Gorin. "I don't think it will have any direct effect on congressional action."

The Senate appropriations subcommittee attached the board's death notice to a House-passed bill providing money for the State and Justice Departments, plus such

● This "bullet" symbol identifies statements or insertions which are not spoken by the Member on the floor.

smaller agencies as the Metric Board. Senate sources say this bill could die in the closing weeks of this year's session because of arguments about other matters, leaving the Metric Board legally alive, Then the administration would have to find another vehicle for abolishing the agency.

NATIONAL COWBOY HALL OF FAME
AND WESTERN HERITAGE CENTER,
Oklahoma City, Okla., October 1, 1981.

Mr. HOWARD B. ELLSWORTH,
Metric Coordinator, Office of the Deputy Secretary of Defense, Washington, D.C.

DEAR MR. ELLSWORTH: I have before me a copy of a letter you wrote outlining the "Department of Defense's Goal of 1990 for converting specifications and standards to the use of metric measurements." As you correctly state, Public Law 94-168 indicates that it is the declared policy of our country to "coordinate and plan the increasing use of the metric system on a voluntary basis" (Section Three of the Act).

Before I go further into the issue as you refer to the Department of Defense's relationship and our country's economy with the NATO forces, I dispute your reference to Public Law 94-168 in which—to repeat—you say it is the declared policy of our country to plan the increasing use of the metric system on a voluntary basis. We both know Doctor Louis F. Polk, Chairman, United States Metric Board, former Secretary of Commerce Maurice Stans, Doctor Ernest Ambler of the United States Bureau of Standards, and dozens of bureaucrats in Washington know—as we do—that the law passed by Congress, signed by President Gerald Ford in 1975, is not the declared policy of the American people! We know in a grass roots poll of America that 85% to 95% of our citizens are opposed to conversion. I know—and you must know—that the 1968 study titled "Report to the Congress, A Metric America," National Bureau of Standards Special Publication No. 345, was a biased, non-objective study conducted in a deceptive manner. The body of the text in this published study remains unsigned. Why is it unsigned? Because those who presented and distributed it to Congressmen and Senators know it was as big a misrepresentation as has ever been perpetrated in the name of high government administration.

Three years ago, I sent a trained historian to the Bureau of Standards to study those records created that reflected our country's attitude, to quote you again, "It is the declared policy of the country . . ." Those records, our researcher was told, had been destroyed. Why would such letters, surveys, and documents basic to a United States law be destroyed? There was obviously no way that Doctors Polk and Ambler could show that the majority of American people want metric!

Mr. Thomas A. Hannigan, a member of the United States National Metric Board, supported much of my criticism in a speech in Phoenix, Arizona. At a meeting held in Washington regarding conversion of gasoline pumps, I openly charged Doctor Polk of his attempts to mislead Congress and the American people. Not once has he answered my charges.

In expressing the policy of the Department of Defense in regard to weaponry, I see nothing "voluntary" about it. You are obviously there to tell the generals and admirals what to do about metric. You were picked to help carry out the Metric Conspiracy; "voluntary," when all Department of Defense contracts are required to be in metric. What, pray tell, has NATO really done for America? So the U.S. and NATO forces have interchangeable weapons and ammunition. America won two world wars using the English system. The fear that most citizens have is that metric weapons and ammunition, once converted, will play into the hands of the Russians. Our weapons systems and fighting equipment, when captured, could become the biggest and finest arsenal for the Communist world with no problems of conversion. Why is it that America must always submit to the foreigner's standard?

Sincerely,

DEAN KRAKEL,
Executive Vice President.

P.S.—I wonder if your plans for the Department of Defense include converting to metric the thousands of graves of United States soldiers who have died fighting to save European countries?●

CONGRESS OF RUSSIAN-AMERICANS, INC.

HON. JOEL PRITCHARD

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. PRITCHARD. Mr. Speaker, I would like to bring the following statement by the Congress of Russian-Americans to the attention of my colleagues. This statement expresses briefly and clearly the troubles the Soviet Union has caused the world, both in denying its own citizens their basic human rights and in endangering the rest of us through its aggressive foreign adventures.

STATEMENT OF THE CONGRESS OF RUSSIAN-AMERICANS, INC.

On November 7th the rulers of the Soviet Union will celebrate the 64th anniversary of the "Great October Socialist Revolution". On this tragic anniversary of the Bolshevik takeover in Russia, the Congress of Russian Americans reiterates its continued concern for the condition and destiny of all people living under Communist rule. Sixty four years ago a tragedy occurred which scarred not only the Russian nation but also the entire free would: Lenin and his minority party overthrew the democratic Provisional Government of Russia. Two months later the Bolsheviks dissolved the freely elected Constituent Assembly, in which they had polled only 25% of the vote and renamed the nation the Union of Soviet Socialist Republics.

Despite the bitter struggle waged in the ensuing Civil War, which lasted more than three years and was followed by numerous peasant and worker uprisings against Communist domination, Lenin and his successors were able to consolidate their iron hold over the people that make up the USSR. More over, since World War II, Communists leaders have added to their empire most of Eastern Europe, This tyranny has caused millions of deaths and untold suffering in the prisons and concentration camps of the Gulag Archipelago, and has kept life at a subsistence level for most of the population.

The Soviet build-up of armaments in conjunction with foreign policy aimed at spreading the Communist system wherever possible has caused the threat of world war to hang over the United States and the free world for several decades. Further more, unsolicited Soviet meddling in the affairs of the developing nations continues to cause serious foreign policy problems faced by the United States and its allies.

For sixty four years Russian immigrants have repeatedly warned the world of the dangers of Communism. Too often they have been not only misunderstood, but even mistaken for Communists. As a result, the word "Russian" has ironically become synonymous with the words "Soviet" and "Communist". Moreover, despite being the first and foremost victim of Communism, the Russian nation is not even included on the list of captive nations.

Thus, in light of the ever-increasing threat of Communist domination we appeal to all people of good will to join us in condemning the inhuman and evil nature of Communism, reminding ourselves of all the people deprived of their basic human rights, defending those persecuted for their religious beliefs, and praying for the souls of the millions of victims of Communist terror in all captive nations.●

U.N. VOTE ON AFGHANISTAN PROVES MARXISM HAS NO APPEAL

HON. JOHN LeBOUTILLIER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. LEBOUTILLIER. Mr. Speaker, Americans are beginning to feel that the Soviet invasion of Afghanistan is going the same way as the presence of Soviet combat troops in Cuba—moral outrage and rhetorical denunciation, followed by apathy and inaction by the U.S. Government.

Nonetheless, the Afghanistan issue remains highly volatile and is capable of dividing the Free World from the Communist bloc. In a recent vote in the United Nations, the United States and 110 other nations opposed 22 countries of the Communist bloc in condemning the Soviet invasion of Afghanistan.

In a recent essay, Dr. Juliana Pilon, a Heritage Foundation foreign policy analyst, notes that an upcoming United Nations session on Afghanistan is expected to end the same way.

Mr. Speaker, we should not view the outcome of these U.N. votes as but a hollow triumph. The invasion of Afghanistan has severely damaged the Soviet Union's international image and financial condition. Moreover, apart from such empirical effects, these U.N. resolutions are valuable insofar as they occasion Free Nations to defend what is right. As Dr. Pilon says:

* * * if the United Nations does nothing more than serve as a forum for righteous indignation against naked aggression—if we can speak from its platform on behalf of decency and the right of the people to decide their own destiny—we have one less reason for cynicism.

I commend the following essay to my colleagues as follows:

THE UNITED NATIONS AND AFGHANISTAN: A START, FOR HOPE

(By Juliana Pilon)

Small wonder the opening of the 36th session of the U.N. General Assembly on September 15 went largely unnoticed in the United States. Apathy bordering on cynicism is hardly an inappropriate reaction to the embarrassing atmosperics now legion at the United Nations. But a ray of hope is discernible even in the midst of the moral quagmire we have come to expect from that peculiar institution.

I have in mind the case of Afghanistan, which has occasioned a significant, if essentially rhetorical, victory for the cause of peace and decency. For it is surely not irrelevant that in January 1980 the United States was joined by 103 other countries, against a mere 18, in condemning the Soviet invasion of Afghanistan—an all too rare show of unity for our side, echoed by a resounding encore in November when 110 nations along with the United States opposed the 22 who supported the invader.

Nor is the performance yet over. An upcoming United Nations session of Afghanistan is expected to end the same way. To cite Fred Halliday of the Institute for Policy Studies, writing in the September 14 issue of the New York Times:

"The result (of that session), a condemnation of Soviet rule, is a foregone conclusion."

Halliday and other persistent critics of United States policy, however, feel obligated to temper any overly sanguine reaction to this state of affairs with the comment that—

"In practice, the vote will be hollow triumph. It is not going to alter the Soviet Union's policy or bring an Afghanistan solution one jot nearer."

"One cannot help but wonder why not? And even if Halliday and his sympathizers were right, what would they suggest we do? Abstain altogether from even recording our moral outrage?

No one, of course, imagines that another United Nations vote condemning the Afghan invasion will force a Soviet troop pull-out, complete with a letter of apology to the Afghan people signed "Sincerely, Leonid." But it would be equally—or perhaps more—naive to suppose that the Soviet Union is totally impervious to international criticism, particularly criticism of such spectacularly large proportions. As a recently released Special Report by the U.S. State Department notes:

"The Afghan adventure has been costly for the Soviet Union both in monetary terms and in terms of its relations with the rest of the world."

The report puts special emphasis on "the damage to the Soviet Union's international image," to say nothing of "the financial burden of maintaining its military presence and underwriting Afghanistan's rapidly deteriorating economy."

Categorically—and bluntly—Halliday and others disagree. The Russians, they tell us, are there to stay. The West would be foolish to demand the replacement of the current pro-Soviet regime: "The Russians will not let that happen." How, one must ask again, can we really know that? In fact, there is persuasive evidence that points very much in the opposite direction.

In fact, the same day Mr. Halliday's editorial appeared in The Times, Freedom House, a nonpartisan, nonpolitical organization based in New York, published the following:

"The Afghanistan Information Center of Freedom House today released excerpts from a letter recently smuggled out of Afghanistan. Dated July 22, the letter describes the growing frustration of Soviet occupation forces and the Kabul regime in the face of increasingly well-organized nationwide resistance. The letter, sent from Kabul to an Afghan refugee in the U.S., details the growing strength and boldness of the resistance in the capital city and the provinces. Its description of Russian efforts to recover rockets hijacked by the resistance in Kabul itself confirms press reports that the Soviets no longer trust government troops. It also confirms widespread reports that most of Afghanistan is free of any control by the Soviets and Kabul regime, and is in fact governed by independent resistance administrations; one of these, in northcentral Afghantistan, is described as being secure enough to embark on its own program of land reform."

Yet the amazing success of the Afghan freedom fighters (and that is surely an appropriate description of the men, women, and children trying to defend their homeland with astonishingly primitive weapons) is not, ultimately, decisive from a strictly moral point of view. For even if the cry of outrage were drowned by superior military hardware, it would not have been uttered in vain. For no protest is altogether hollow if it states a moral principle, if it defends what is right no matter how loud and deadly the opposition.

Ideally, of course, a protest also should be successful, for the moral universe to be set aright. Words, we all know, come cheap; besides, there is the danger than having made a rhetorical gesture one is left with the illusion that no more need be done—a situation far worse than no response at all. And surely much more is required at this point beyond words and empty gestures.

Immediately, the nearly two-and-a-half million Afghan refugees need food. But if the United Nations does nothing more than serve as a forum for righteous indignation against naked aggression—if we can speak from its platform on behalf of decency and the right of people to decide their own destiny—we have one less reason for cynicism.

THE DEATH OF PRESIDENT SADAT

HON. WILLIAM J. HUGHES

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. HUGHES. Mr. Speaker, Anwar el-Sadat liked to compare himself to an American hero, Abraham Lincoln, and in many respects this comparison holds true. Sadat rose from simple village origins to become a leader of a great land, a land faced with great troubles. He was a man who cherished peace, though his tenure as leader was a period of tension and war. And, he was a man who could look beyond the superficial differences of skin color or religion, to overcome long-standing hatreds, in order to pursue the transcendent values of peace and brotherly love.

One would not expect a man like Sadat to lead a land like Egypt. How could a man of small stature and simple origin, a man who was once thought to have no ambition or vision, lead a country so vast, so populous, so strife-torn and poverty-ridden as Egypt? Yet he quietly rose to be Vice President under Nasser and President upon Nasser's death. Without Nasser's grandiloquence, he managed to assert Egypt's independence from Soviet domination, make major strides toward assisting the poor and hungry, and, in his greatest achievement, smash the barrier of distrust and hostility which has frozen Egypt and Israel into a static pattern of intermittent warfare, wasting untold resources and taking thousands of human lives.

Sadat's boldness and courage captured the world's imagination. He accomplished what many thought was impossible when he traveled to Jerusalem, then to Camp David, and did what had to be done to bring peace. He gained the respect of Americans and Israelis, while maintaining the respect of his own people. In doing so he insured his place in history as a true "Prince of Peace."

That a small group of dissidents could rob Egyptians and the world of such a man is tragic and outrageous. That we should honor him in this body as few men are ever honored is appropriate and just. Let us all pay tribute to a man of visions, of peace, and of strength—Anwar el-Sadat.●

PROJECT TRUTH: USIA'S NEW PROGRAM, PART I

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. MICHEL. Mr. Speaker, the U.S. Information Agency, as it will soon be called again, after 4 years as the U.S. International Communications Agency, has been directed by President Reagan to begin a new program called project truth. This is how Charles Wick, Director of the Agency, describes the new program:

Through this project, we will seek to reveal Soviet disinformation efforts and to spread the truth about U.S. policy and objectives.

As part of project truth, USIA has initiated a new publication, "Soviet Propaganda Alert" which explains Soviet propaganda and techniques and themes.

I believe that "know your enemy" is the beginning of geopolitical wisdom. Learning the devices and techniques of Soviet propaganda is a good step in learning how to spread the truth. I would like to see USIA publish its own record of how it is combating the various Soviet propaganda strategies.

I insert in the RECORD at this time "Characteristics of Soviet External Propaganda" which is part 1 of the first issue of "Soviet Propaganda Alert," October 15, 1981, published by the Office of Research, International Communications Agency.

CHARACTERISTICS OF SOVIET EXTERNAL PROPAGANDA

In addition to the efforts underway of a complementary nature, this is the first in a monthly series of reports on Soviet external propaganda. The reports will be based on evaluations of cable reporting, primary source material, and secondary sources such as Foreign Broadcast Information Service (FBIS) publications. Because this report is the first, it contains more general and introductory material than will be included in updates.

Presented in this report are:

An overview of Soviet propaganda principles and techniques.

A list of major political-military propaganda themes and societal comparisons drawn between the U.S. and the USSR. Selected regional and country propaganda themes are also provided.

A case study of a Soviet propaganda campaign currently in progress; the anti-neutron weapon (ERW) campaign.

While the focus is on Soviet external propaganda, most of the themes are echoed in the domestic media. Thus, Soviet citizens do not in general get different messages than do foreign audiences.

I. CHARACTERISTICS OF SOVIET EXTERNAL PROPAGANDA

A. Soviet external propaganda[1]

Soviet external propaganda has two main purposes:

To represent the Soviet Union as dedicated to peace and detente, and

To show the Soviet Union as a just, fair, progressive society, worthy of admiration if not emulation.

For these purposes, Soviet propagandists follow several basic principles. The first of these is a systematic denigration of the U.S., its culture, political system, and belief structures. By showing that the U.S.—the acknowledged representative of all things Western—is a doomed, decadent, inherently evil society which opposes all progressive change, Soviet propagandists hope to persuade target audiences that it is not a fit model for their own countries.

The Soviet Union presents itself as the only alternative to the U.S. as a system of social organization. It portrays itself as the near-perfect society. Armed with an ideology that maintains that the Soviet form of society is the inevitable next step in human development, Soviet propagandists draw invidious comparisons between almost every aspect of American and Soviet life.

Another key feature of Soviet propaganda is the argument that while the U.S. and the West are doomed in historical terms, the U.S. is all the more dangerous because it will defend its way of life to the end, taking the rest of the world with it to destruction if need be.

By contrast, the Soviet Union arms only to defend itself and its allies. It does this reluctantly because its main goal is to perfect the social, cultural, and economic lives of its citizens; and armaments are a drain on that process.

From these basic principles flow the whole litany of Soviet propaganda and, for that matter, foreign policy:

Support for "national liberation" movements is justified in terms of putting them on the road to the higher plane of existence enjoyed by the Soviet Union.

The foreign and domestic policies of Western countries are criticized because they are dedicated to the preservation of the status quo and are opposed to progressive change.

Western military measures are portrayed as inherently aggressive because they are directed against the Soviet Union and progressive principles for which it stands.

Anti-imperialism (anti-Americanism) is claimed to be good because it represents a movement against the ancient regime and toward historical progress. The methods used in the anti-imperialist struggle are sometimes harsh but are justified by the ends.

The Soviet Union is the natural ally of Third World countries and all others who have freed themselves from imperialism (i.e., Eastern Europe).

B. Soviet propaganda techniques

Soviet propagandists employ a vast array of techniques, crude and sophisticated. As well as simply being very good at what they do, Soviet propagandists are not restrained by truth, honesty, and morality; rather, they are guided by a new morality, defined by Lenin as that which serves the good of the Party. Their ideology rationalizes the use of falsehood and deception by promising that the end—the perfect society—justifies all means and that shrinking from the use of all available means constitutes betrayal of the cause.

Soviet propagandists use selective information, half-truths, distortions, and innuendo, as well as outright lies. Many Soviet propagandists (such as Radio Moscow's Vladimir Pozner) have an excellent understanding of the American psyche and take advantage of American feelings about fair play to justify their own actions or call those of the West into question.

A favorite Soviet propaganda technique is indirection: an item from a Western or other non-Soviet source is cited in support of the Soviet position on an issue, the item sometimes having been planted by the Soviets. Ironically, the Soviets tend to think sources from the bourgeois West will have the greatest credibility, even among their own population. An alternative form of indirection is the inaccurate citation of a foreign source or the portrayal of the source as broadly representative of the larger society when it is not (i.e., frequent citations from the U.S. Communist Party newspaper, Daily Worker).

Disinformation is another technique. It is impossible to tell how widespread the practice is because good disinformation is usually not detected. One form of disinformation is the "revelation" of false information (such as a forged U.S. document), preferably in a foreign source that cannot be directly associated with the Soviet Union. Another disinformation technique is to draw attention to past covert actions by U.S. intelligence agencies and then to imply that the attempted assassination of the Pope or the bombings in Iran are similar types of activities. From here it is a short step to the suggestion that the U.S. could have been involved.

A most effective technique is imputing false motives to U.S. policy. The Soviets are quick to exploit any opening offered by a U.S. action by pointing out adverse consequences or offensive features to the countries affected. Thus, any U.S. action which can be interpreted to support Israel is portrayed as being anti-Arab in nature. U.S. attempts to achieve "balance" in situations such as the recent South African incursion into Angola are dismissed as hypocrisy.

Another technique is to debase the meaning of words. Soviet propaganda has succeeded in appropriating the word "socialist" as a synonym for the word "communist," and propagandists seldom refer to themselves or their East European allies as communist countries. In so doing, they acquire at least semantic legitimacy with groups and countries that consider themselves to be socialist but not communist. Perhaps the term most debased is "anti-Soviet": virtually every development in the world is seen as either pro- or anti-Soviet and whatever is not clearly "pro" is immediately labeled "anti." There is also the example of the application of "national liberation movement" to groups which seek the violent overthrow of governments unfriendly or neutral toward the Soviet Union.

Diversion is a technique used to blunt attacks on the USSR. When the USSR is criticized, Soviet propaganda responds with a barrage of countercharges, trying to turn the accusation made against the USSR against the accusers themselves. For example, Western charges of Soviet experimentation with biological warfare, arising in connection with the Sverdlovsk anthrax incident, were answered by a Soviet propaganda blitz on Western development of biological weapons. Soviet propagandists often concoct even the most absurd accusations in the belief that even these will help distract attention from the charges against the USSR.

This is not to say that everything that Soviet propagandists create is untrue or that Soviets necessarily disbelieve their own arguments even if they appear to be untrue in Western eyes. Because their ideology dictates the "correct" interpretation of most facts, Soviets may often read a vastly different meaning into a situation or action than would their Western counterparts. Over the years, Soviet ideologists have developed an array of philosophical rationalizations that make all Western actions appear to be threatening or malevolent regardless of their objective intent, while all Soviet actions are laudable, no matter how they might appear to the outside observer.●

[1] In the Soviet lexicon, the word "propaganda" does not carry the negative connotation that it does in the West.

EXPORT OF PROCESSED RATHER THAN RAW FARM COMMODITIES KEY TO ECONOMIC GROWTH

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. BEDELL. Mr. Speaker, I would like to call to the attention of the Members an excellent report released this month by the Department of Energy's Office of Alcohol Fuels. I think that the conclusions of this report give strong support to the arguments of those, such as myself, who for years have been urging this country to place more emphasis on exporting processed farm produce rather than raw agricultural commodities as a way of increas-

ing the value of our farm exports while at the same time increasing employment here at home.

This report, entitled "Economic Benefits of Producing Fuel Ethanol and Exporting Distillers Dried Grains," lists among its findings and conclusions the following:

Using mid-1981 prices, it was found that GNP would increase by $1.89 for each bushel of corn diverted from the export market to produce ethanol. To size the economic significance of DDG exports, if half the corn exports during the crop year 1979-80 had been diverted to fuel ethanol production (1.22 billion bushels, or about 16 percent of corn production), and the DDG exported as an animal feed supplement, GNP would have increased about $2.3 billion or 0.1 percent.

The net value of foreign trade would increase by $0.05 per bushel of corn processed.

I am certain, Mr. Speaker, that similar employment and income benefits could be demonstrated if we as a nation would begin to focus our agricultural export policy on the selling of processed goods abroad, whether those goods were produced from corn, wheat, soybeans, timber, or any other basic agricultural commodity.

I hope that other Members will request a copy of this report and recognize the significance of its findings as we look for ways to renew the economic vitality of this country.●

DECLINE IN EDUCATION—PART II

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. FUQUA. Mr. Speaker, last week I brought to my colleagues attention the first in a series of articles on the quality of American education in mathematics and sciences, written by Dr. Jessica Tuchman Mathews of the Washington Post.

As noted by Dr. Mathews:

The United States cannot compete in the world economy without a technically skilled work force, nor will any amount of money spent on weapons buy security without men and women capable of using them effectively.

I think the points made by Dr. Mathews are particularly important given the hard budgetary choices we will be making in the next several weeks.

I strongly recommend the full text for my colleagues to consider on this important issue:

DECLINE IN EDUCATION: (II) THE CAUSES

No one knows exactly what has caused the striking decline in the quality of American education, especially in science and mathematics. That a deterioration has been under way—perhaps for as long as two decades—is clear. That it has coincided with the opposite trend aboard is also beyond doubt. While American educators focus on the failure to learn "basic skills," the Soviet Union, Japan and many other countries are making great advances both in the proportion of students who complete secondary school and in the breadth, depth and rigor of what they are taught.

One factor in the United States dismal performance is unquestionably too much television. Seventy-five percent of last year's high school graduating class reported spending less than five hours per week on homework. Twenty-six percent of them reported four hours or more per day watching television. In a 1973 survey of science education in 19 European and Third World countries, the only measure on which American students scored above the mean was in hours spent watching television. The result is a pervasive intellectual passivity and a large number of students who never learn to read well enough to acquire the taste for it.

Another cause is the decline in the quality, and even availability, of teachers, especially in science and mathematics. Twenty-five years ago teaching was the only socially acceptable career for many bright, motivated women; today they have other options. Men and women with science training can earn far more than a teacher's pay working as computer programmers. Chronic vacancies for mathematics teachers—as high as 25 percent in some school districts—are filled by those without training in mathematics. There are 10,000 physics teachers in the nation's 16,000 school districts. Lack of public concern for the quality of education, lack of respect for teaching as a profession, lack of support systems to keep teachers up to date in their fields and appallingly low pay are all having the predictable result. Morale in the schools is spiraling downward, and college graduates going into teaching consistently come from the bottom of their classes.

Numerous studies have postulated other causes: too much violence and too little discipline in the schools, too much latitude in course selection, too much encouragement and opportunity for students to do things other than study, too much stress on basic skills that makes this minimal achievement the goal rather than the foundation for further learning, and so on.

But to a certain extent these phenomena must be symptoms rather than causes, for what happens in the schools is a reflection of the values and expectations of society at large. Alexander Astin, professor of education at UCLA, writes: "The schools are just less demanding then they use to be and [students] are lazy up and down the ability spectrum." What we seem to have suffered, in short, is a loss of appetite for the hard work of learning and an appreciation for the results.

This is not the first time American education has fallen behind. What is scary is that this time we as a nation don't seem to care—or care enough. When the launch of Sputnik in 1957 brought recognition that U.S. science education badly needed improvement, we responded with new courses, textbooks, teacher training and curricula. Though there were some problems, the effort did produce more an better-educated science and mathematics graduates. This time there has been no single jolting event, but evidence of a far worse slump is everywhere. And this year the federal budget cuts wiped out the agency responsible for the post-Sputnik science program—the only single focus for such an effort in the nation.

We ignore what is happening in the schools at our peril. The United States cannot compete in the world economy without a technically skilled work force, nor will any amount of money spent on weapons buy security without men and women capable of using them effectively. Far more important, we cannot hope to sustain a democracy, the most demanding form of government, without citizens capable of understanding the choices that have to be made.

Making up the lost ground, especially in science and mathematics, is going to require plenty of money, but without a well-educated populace what other investment is worth making? Most of all it will require a change in attitude—higher expectations of work and achievement. Years ago poor children on New York's Lower East Side were sent off to the first day of school with a gift of honey and nuts to symbolize the sweetness of learning. That attitude, and a school system that made knowledge available to everyone who wanted it, were what made this country great. It's not gone, it just needs to be recaptured.●

CAMDEN COUNTY OLD TIMERS SOFTBALL ASSOCIATION AWARDS

HON. JAMES J. FLORIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. FLORIO. Mr. Speaker, I would like to take this opportunity to congratulate two of my constituents who are receiving awards from the Camden County Old Timers Softball Association.

John P. Greeley, long active in union, civic, sports, and charitable causes, will receive the association's 1981 Humanitarian Award for his continuing efforts on behalf of his fellow man.

John has been a frontrunner in community affairs for many years. He has been a member of the Teamsters Local 676 for 38 years, John started as a driver and eventually worked his way up through the ranks and became a shop steward in 1956. He was later appointed organizer and in 1960 elected president. John is presently serving his eighth consecutive term. Under John's leadership, the local's membership has doubled.

Because of his dedication and sensitivity to their needs, John has become a champion among senior citizens. Thanks to John, the Teamsters Union was host for many a senior citizen recreational function, meeting or luncheon. In return, he was made a lifetime honorary member of the former Camden County Senior Citizen Center.

Some of John's notable achievements include: membership in the Camden County Economic Development Committee, past president of the Kiwanis Club, honorary trustee of Goodwill Industries, and chairman of the USO for Camden County. In addition, John has long been active in the Boy Scouts, YMCA, Cancer Founda-

tion, and the Martin Luther King Foundation.

He and his wife reside in Westville, N.J.

The Camden County Old Timers Softball Association has also unanimously selected Kathy McCahey to receive the 1981 Sportsman Award. Kathy is the first woman ever chosen to recieve this honor.

Kathy has just completed one of the finest athletic seasons in the history of LaSalle College. This year she became the first athlete, male or female, to be selected to two All-American teams in the same year.

The Blackwood, N.J. resident led LaSalle's field hockey team to the national championship. On the way there, Kathy established two all-time college records in scoring goals in one season and career goals.

Kathy's story does not stop here. Kathy also led the college's softball team to the college world series and was once again named All-American after leading her team in hitting and excelling in the center field.

Fittingly enough, last winter Kathy received an invitation to try out for the U.S. Olympic team. Not only did she make the team, but Kathy gained a first string position with our national team.

Kathy is the daughter of Mr. and Mrs. Charles McCahey of Blackwood, N.J.●

LEFTIST PRESS DISTORTS REALITY IN EL SALVADOR

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. RUDD. Mr. Speaker, one of the most enduring features of the Salvadoran Government of President Napoleon Duarte is its ability to withstand the continued barrage of slanted press coverage aimed at the realities in the Central American region.

The most successful and effective campaign by the left wing radicals has not been waged on the battlefield or in terrorist hits, but in the propaganda trenches. These same tactics, spurred on with the full support and assistance of Cuba and the Soviet Union, have already been successfully administered in the Communist takeover of Nicaragua. Other nations in the Central American region also are becoming victims of the same distortions as reported with venom in the leftist press of the revolutionary guerrillas.

A recent editorial in the Wall Street Journal makes this very point:

The propaganda is being orchestrated by something called the Democratic Revoutionary Front (FDR), which has been given the undivided attention lately of communist propaganda outposts throughout the world, including some of the groups in this country that once helped break down U.S. resistance to the Soviet conquest of Southeast Asia. The techniques—marches, demonstrations and blown-up photographs of maimed bodies (all of them naturally victims of the other side)—are the same ones propagandists have used for decades.

We must not allow ourselves to be enslaved by such distortions of the FDR. What is occurring in Central America, particularly El Salvador, involves more than the leftists' patented blame on a widespread peasant uprising. The people of El Salvador are faced with tremendous socioeconomic challenges. Brutalities being inflicted by both left and right extremists are claiming hundreds of innocent lives. Leftist insurgents organized and armed by Cuba and the Soviet Union are discrediting the moderate solutions of President Duarte through a broad political-military strategy. These so-called "popular armies" of revolutionaries have failed miserably in their attempts to attract popular support. Their failures have left them with the only weapons they know they can use: assassinations, bombings, burning buses, and of course, unfounded accusations and extensive propaganda.

The Duarte government has so far weathered these challenges from the extremes. A political solution is presently being given a trial. Elections are scheduled. Land reform has passed its initial stages, with the largest transfers underway. It should be understood that much more drastic changes could signal the end of the civilian government. But a political solution is in the works, and the United States and the rest of the Americans should offer the people of this tiny nation the opportunity for a peaceful transition.

But the facts are hard to read with propaganda being dispersed from all directions. Thus far, the United States has only sent a small team of advisers, along with supplies, to the Duarte government—the best chance the Salvadorans have in their quest for a stable transition government. As the Journal editorial concludes, the Reagan administration has an obligation to all Americans, North, Central, and South, to protect them from outside forces whose only objective is to repress individual liberty and install a Communist system.

I ask that that following editorial from the Wall Street Journal, October 19, 1981, be inserted in the RECORD.

[From the Wall Street Journal, Oct. 19, 1981]

FORGOTTEN TRABAJADORES

Thanks to a disturbingly effective left-wing propaganda campaign, the Reagan administration has been largely stalled in its efforts to gather public support for a U.S. counterattack against the Soviet-Cuban conquest of Central America. But it is far too early to give up the fight. The propaganda lies are by now so transparent that even the most liberal Congressmen, newspaper editors and churchmen surely cannot avoid recognizing them.

For example, can anyone still doubt that Nicaragua has been a victim of a Communist takeover? The Cuban-style "neighborhood committees" are in place, the secret police are being trained, La Prensa has been told it will be closed if it continues to speak up, Archbishop Obando y Bravo is being suppressed and a spectacular military buildup is under way. The Sandinistas are creating an army and militia of over 250,000, equivalent to a full one-tenth of the population, even though the country can't feed itself or pay its debts. Heavy equipment, including 30 T-55 tanks, has been pouring in from the Soviet bloc. The combined forces of Nicaragua and Cuba soon will dwarf any army south of the Rio Grande and drive a Soviet strategic wedge between North and South America.

Little Costa Rica, once a model democracy, has been destablilized and intimidated by the Nicaraguan buildup and internal subversion. The territory of Honduras is being used with impunity to funnel arms from Nicaragua to the Communist guerrilla army in El Salvador. An active terrorism campaign is under way in Guatemala, drawing the usual counter-terror from the right with its predictable additional contributions to destablilization.

In Panama, where domestic politics were thrown into disarray last summer by the air crash death of strongman Omar Torrijos, Castro's guerrillas are operating in the bush. The big prize, if they succeed, will be the Panama Canal.

The biggest current military and propaganda effort, of course, centers on El Salvador. The fighting is in the hands of the Cuban- and Soviet-supported Farabundo Marti Liberation Front (FMLN). The propaganda is being orchestrated by something called the Democratic Revoluntionary Front (FDR), which has been given the undivided attention lately of communist propaganda outposts throughout the world, including some of the groups in this country that once helped break down U.S. resistance to the Soviet conquest of Southeast Asia. The techniques—marches, demonstrations and blown-up photographs of maimed bodies (all of them naturally victims of the other side)—are the same ones propagandists have used for decades. Their effectiveness was demonstrated a few weeks ago when some brainwashed reporters and Congressmen came very close to publicly insulting the visiting Napoleon Duarte, Salvador's populist president, because of the sins the FDR has alleged against him.

But the Salvadoran government is proving harder to vanquish on the ground than in the North American press. We received a clue to why last week when four Salvadoran union leaders, including the secretary general of the equivalent to the AFL-CIO, and the head of the campesino or peasants union, visited New York. All are under daily threat of death and in fact have all succeeded men who were murdered. They were traveling under the auspices of the AFL-CIO but at the expense of their own unions.

Their message: The war in El Salvador did not result from an indigenous worker and peasant uprising, as Communist propaganda insists. "The war involves 10 percent of the people, with 90 percent in the middle," declared Jose Luis Grande Preza, the labor federation leader. It is true that the Salvadoran army has committed brutalities and the group would like U.S. military aid to be accompanied by greater U.S. efforts to train

Salvadoran troops in combating guerrillas, so as to avoid civilian casualties. But the five had no doubt that the origin of the killing was the campaign of destruction and terror conducted by the FMLN. The FMLN and FDR, so romantic sounding to the cocktail liberals of Washington are not loved by the trabajadores (workers) and campesinos of El Salvador who must brave their bombs and bullets each day. "They have the guns but they don't have the people," says the country director in El Salvador for the AFL-CIO's American Institute for Free Labor Development, which attempts to encourage formation of free labor unions.

There is a bitter irony in all this. the American government is not taking a more forceful role in Central America in part because so many Americans have been convinced that this would be making war on the common man. But representatives of the common man are pleading for help in driving out what they know full well is a foreign-backed army that will enslave them if it wins. As we said at the outset, the Reagan administration has an obligation to all Americans, North, Central and South, to not be so easily deflected. What's happening in Central America is by now so obvious that only knaves or fools can pretend not to understand it.●

DEMOCRACY AND ADULT SUFFRAGE IN SRI LANKA

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. SOLARZ. Mr. Speaker, this year marks the 50th anniversary of the establishment of universal adult suffrage in Sri Lanka, an event that is being commemorated throughout that country today.

In their 50 years, the people of Sri Lanka have exercised their right of suffrage with energy, maturity, and a high level of public participation. Since its independence in 1948, Sri Lanka has adhered to democratic principles with a constancy and determination that is rare in Asia or in the developing world. Power has changed hands peacefully following several national elections, which attests to the breadth and depth of the conviction in Sri Lanka that sovereignty resides in the people as a whole.

Sri Lanka impressive record has earned the admiration and respect of the American people. With our history of democracy we have a special appreciation of the significance of this achievement, and we join the people of Sri Lanka in celebrating the commitment to the democratic process that this anniversary represents.●

EXHIBITION "ITALY: A COUNTRY SHAPED BY MAN"

HON. LAWRENCE J. DeNARDIS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. DeNARDIS. Mr. Speaker, on Wednesday, October 21, 1981, the exhibition "Italy: A Country Shaped by Man" opened in the main lobby of the Hubert H. Humphrey Building, in Washington, D.C.

The program, sponsored by the Agnelli Foundation, aims to improve and nuture cultural relations with American countries * * * and, most especially, with Americans of Italian ancestry. It will also add immeasurably to the understanding of Italy and its culture of today and yesterday.

Contemporary Italy knows that Italo-Americans number in the millions * * * be they first, second, or third generation of Italian descent. It is important that we understand Italy of today * * * culturally, politically, and economically. The exhibition has been created with that goal.

I urge all Members to attend this program while it is in Washington so we all can learn more about Italy * * * and strengthen the important ties that bind our two countries.●

WORLD POPULATION EXPLOSION

HON. JOEL PRITCHARD

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. PRITCHARD. Mr. Speaker, the world population explosion remains one of the most serious problems which confront us today. The President's request for a substantial budget increase in funding for world population control indicates his understanding of the problem, and his concern that population pressure is a major cause of international instability.

The Olympian newspaper recently published an excellent editorial on this subject, and I would like to insert this article in the CONGRESSIONAL RECORD for the benefit of my colleagues.

POPULATION BOMB STILL TICKING AWAY

One of the places where the Reagan administration has proposed increasing rather than decreasing spending is the commitment toward world population control. Reagan has called for a 33 percent increase in the budget from $190 million to $253.4 million.

This is in line with Secretary of State Alexander Haig's warning that overpopulation threatens to cancel out development gains in the impoverished nations of the world.

Population problems overseas, however, have few domestic constituencies, and as budget-cutting grows more intense, there will be a tendency to slash money for the program.

Numerous "developing" nations, including Mexico, Thailand, Indonesia, Colombia and Costa Rica, have begun to experience significant declines in their fertility rates as family planning services becomes more available.

The U.S. government's (our) concern about population growth is based on both our traditional respect for human dignity and our self-serving interest in the economic and social development and political stability of the undeveloped nations.

Rapid population growth is a major obstacle to social and economic progress in much of the world. Ninety percent of the population growth between now and the end of the century will occur in the nations least able to support it. Along with the population growth comes food scarcities, malnutrition, depletion of natural resources and degradation of the productive environment, unemployment and underemployment, urban crowding and severe housing shortages and the diversion of resources from capital formation to support the growing population.

The statement that "population growth is the time bomb that can destroy the world" is hardly an exaggeration.

There is great danger that the funds for world population control will get mixed up in the current debate over the abortion issue. While this is one aspect of family planning, it is only one aspect. During the past decade and a half, the U.S. government has committed more than $2 billion to domestic and international family planning. Both opponents and advocates of legal abortion have voted in Congress for these expenditures.

We should do all we can to avoid the prospect of vast numbers of people facing severe famine, misery and slow death.

The funds for population control have had strong bipartisan support. This should continue.●

FACTS ON EXECUTIVE PAY: THE SERIOUS CONSEQUENCES OF CONTINUING THE PAY FREEZE

HON. FRANK R. WOLF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. WOLF. Mr. Speaker, in an effort to elevate congressional thinking and concern with regard to the pay cap, I would like to include a fact-sheet at this point in the RECORD which highlights some of my many concerns over the implications of the pay cap on Federal executives.

EXECUTIVE PAY: THE SERIOUS CONSEQUENCES OF THE CONTINUING FREEZE

1. Since 1977, senior officials in the executive branch have received only a 5.5 percent salary increase. During that period, the CPI has risen over 54 percent, with the result that the purchasing power of the senior executives has declined approximately 32 percent.

2. During this same period, federal retirement annuities have increased 42 percent, private sector pay 36 percent, and private sector executive salaries 49 percent.

3. Largely for the above reasons, 67 percent of the career employees at the pay ceil-

ing who were eligible to retire in 1980 did so (more than three times the retirement rate for that group in 1978).

4. The likelihood of losing highly qualified personnel in technological fields such as engineering, science, and medicine is even greater. For example, last year NASA lost more than two-thirds of its executives eligible to retire.

5. A recent survey by the Merit Systems Protection Board revealed that 46 percent of the Senior Executive Service plan to leave government within the next 2 years. As syndicated columnist Haynes Johnson has written, "the glue that keeps the government together may be coming unstuck." The average length of executive experience in the SES has dropped at least by 50 percent.

6. For appointive and noncareer SES positions, it is difficult to recruit qualified persons from the private sector, and to retain those who come for meaningful periods of service.

7. Because there is a ceiling on executive pay and because the salaries of General Schedule employees increase each year, there are presently over 48,000 employees functioning at eight different levels of responsibility that receive the same salary ($50,112). This contravenes every concept of sensible pay administration.

8. Many middle-managers and executives are reluctant to accept "promotions" when there is no additional salary. This is especially true when geographic moves are involved, creating serious problems for agencies with large field organizations.

9. The complete removal of the pay cap, allowing for a 22.4 percent pay raise for senior executives, is actually pay effective because of the cost of supporting a retired government executive in addition to paying for his replacement cost, a person kept from retiring by giving him a pay raise will save the government money.

10. The cost of the pay raise for senior executives will come from present appropriations for fiscal year 1982. It will be absorbed by each department at no added cost to the government and taxpayer.

11. Because senior executives are in the highest tax bracket, the $280 million cost of lifting the pay cap entirely would, in actuality, amount to a fraction of this cost because of the money withheld in taxes.●

HOUSE PAGES VICTORIOUS

HON. RAY KOGOVSEK

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. KOGOVSEK. Mr. Speaker, I would like to offer my congratulations to the House Pages on a job well done. Last Saturday in true bipartisan spirit, the House Pages engaged in a game of football with their Senate counterparts. This grudge match initiated by the Senate Pages started as a battle between the offensive and defensive lines. The House offensive attack was led by a crushing running attack and supported by an acrobatic aerial attack. The Senate was held to small gains on the ground and completely shutdown in the air by the House, which claimed 5 interceptions on the day. After a slow start, the House offense gained yardage and was able to score. In the final moments of the game, the House was able to score again and make the final score 14 to 0.●

IMPACT OF CUTS ON VIRGIN ISLANDS

HON. RON de LUGO

OF THE VIRGIN ISLANDS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. DE LUGO. Mr. Speaker, I would like to take this opportunity to commend Senator LOWELL WEICKER who recently chaired a hearing of the Senate Energy and Natural Resources Committee which focused attention on the severe impact of the Federal budget and tax cuts on the U.S. Virgin Islands. The specific purpose of the meeting was to consider S. 1674, the bill introduced by the Senator from Connecticut, that would amend the Revised Organic Act of the Virgin Islands to comply with the changes that will be made if the people of the Virgin Islands adopt our proposed Constitution. It would also authorize appropriations for budget and tax cut losses we have incurred and in so doing, will restore to the Congress the flexibility it must have to fulfill its constitutionally mandated responsibility for the territories.

Senator WEICKER emphasized this point very clearly in that hearing, and the testimony of the Department of Interior officials underscored his point on the urgency in securing to the Congress that critical flexibility. While the Department of the Interior was not able to define the impact of the recent budget and tax cuts on the territories, each territorial witness testifying before Senator WEICKER spelled out in dollars the severe economic damage that will ensue.

I would like to thank Senator WEICKER for focusing attention on the difficult economic situation in the Virgin Islands and the other territories of the United States. As he said to several representatives from the administration: "We're talking about human lives here."

Mr. Speaker, as that hearing brought out, while the territories are willing to accept their fair share of the burden entailed in the new national economic program, it is unfair to make a blanket extension of that program to the territories without assessing the potential and unique impact on the territories, and without correlating the program to any definable territorial policy.

Senator WEICKER echoed these sentiments when he said:

No consideration has been given to the effect of the budget and tax program on the territories . . . The federal government bears a special responsibility for the economic well-being of the territories (and) these responsibilities are not being met (nor) do I detect any recognition of them.

I would also like to express my appreciation at this time to Senator JAMES A. MCCLURE, the chairman of the Senate Energy and Natural Resources Committee, who has also voiced his concern on the floor of the Senate and in communications with the administration on the potential impact of the new national economic program on the territories.

I hope that their concern and the concern of many in both branches in Congress, on both sides of the aisles, will bring the administration to look into the plight of the territories—for they are valuable resources of the United States that must be protected.●

HOUSE SHOULD RETAIN CURRENT OUTSIDE EARNED INCOME LIMITATIONS

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. HAMILTON. Mr. Speaker, House rule 47 limits outside earned income for House Members to 15 percent of their congressional salary, and limits the amount from any single honorarium to $1,000 per speech, appearance, or article. The rule was added in 1977, along with several other ethical reforms, when we significantly tightened up the generally ineffective codes of conduct and financial disclosure rules adopted in 1968. The tightening up of congressional ethics followed a storm of public outcry in 1976 over congressional misconduct and scandals, such as the South Korean influence buying and the Wayne Hays affair. The reforms were the product of extensive work by the Obey Commission and three House committees, and the outside earned income limitations was accepted by an overwhelming vote of 344 to 79. House Resolution 251 would significantly liberalize House rule 47 by raising through 1983 the limit on outside earnings from 15 percent to 40 percent of the congressional salary. I oppose this change.

1. STRICT LIMITATIONS WERE ADOPTED FOR THREE MAIN REASONS

We adopted the outside earned income limitation for three very good reasons:

First, it minimizes the possibilities for conflicts of interest. Certainly the integrity of the legislative process is called into question when, for example, a committee chairman accepts thousands of dollars from groups with special interest in legislation before his committee, or when a Member

makes his services available for large legal or professional fees.

Second, it avoids time being taken away from congressional work. Being a Representative should be a full-time job. But that certainly was called into question when Members spent substantial time earning several times their congressional salary in outside work, as happened before House rule 47 went into effect.

Third, it avoids the appearance of cashing in on the congressional position. Receiving thousands of dollars in overpaid honoraria, in consulting fees for little work done, in salaries for adding one's name to a law firm—all strike the American citizen as someone trying to exploit his current status for financial gain.

On the basis of these arguments, we adopted the outside earned income limitations by a more than 4 to 1 margin. These reasons also, by the way, explain why we did not apply the rule also to unearned income. Two of these problems generally do not arise in typical cases of investment income: When a Member is simply receiving money from previous investments no exploitation of congressional stature is involved, nor is significant time taken away from congressional duties. So we applied the rule only to earned income where there is much more possibility for abuse.

2. PUBLIC DISCLOSURE IS NOT ENOUGH

We passed these rules to specifically limit certain outside earnings because we felt that mere public disclosure of the actions would not suffice. It will not do to tell a voter that if he thinks that a Congressman is engaged in improper outside earning activities, he should vote him out of office. In 434 of 435 possible cases, the voter simply cannot do that. Each American is affected by the actions of all Members of Congress, yet he can vote disapproval of only his own Representative's actions. It is little consolation to him to have only public disclosure that, for example, an influential committee chairman has accepted $25,000 in honoraria from groups with special interest in legislation before his committee. We need to assure each American that there are at least some minimal sorts of safeguards on the books trying to ensure that each committee chairman, each influential party leader, each Member of Congress making important decisions that affect him dearly, is not engaged in such abuses.

3. BASIC REASONS FOR LIMITATIONS HAVE NOT CHANGED

No one would maintain that this one rule is the cornerstone of all congressional ethics, the panacea for all congressional misconduct and impropriety. However, it is a significant and meaningful provision. As Speaker O'NEILL said during the 1977 floor debate, this limitation is "the heart and soul of the entire package." Moreover, the outside earnings limitations have been thought important enough to be applied to high-level officials of the executive and judicial branches.

House rule 47 is one step toward trying to insure that Members of Congress are in fact here working for the good of the American public, rather than for their own personal gain or for the good of high-paying special interests. I submit that whatever we can do to promote that ideal is worth pursuing.

House Resolution 251 would significantly weaken our ethical reforms of 1977. But as far as I can tell, the original reasons for adopting these limitations are just as valid today as they were 4 years ago:

I do not believe that in the past 4 years there has been any evidence showing a significant lessening of the possibility of abuse from outside earnings in terms of conflicts of interest, taking time away from congressional work, or cashing in on the congressional position.

I do not believe that in the past 4 years this rule has led numerous competent Members to leave Congress, only to have them replaced with less competent individuals. On the contrary, I can detect no recent deterioration in the caliber of Members of Congress.

I do not believe that in the past 4 years there has been a significant change in the number of Members who would be affected by House rule 47. Estimates were that roughly 1 Member in 6 exceeded the limits before they went into effect, and a similar proportion of Members is approaching our current 15 percent limit. Then, as now, this rule affects primarily only a handful of Members of Congress.

I do not believe that in the past 4 years the American public has changed its thinking to now believe that House Members have less need of ethical reform than before. If anything, I would imagine that incidents of misconduct, from ABSCAM to payroll kickbacks, would make the American public think that there should be tougher restrictions on congressional conduct.

4. THE LIMITATIONS ARE AN ETHICAL, NOT A FINANCIAL MATTER

One major change over the past 4 years that proponents of H.R. 251 point to—which I think is correct—is the change in the buying power of congressional salaries. Salaries of Members have not nearly kept up with inflation. However, that is a totally financial matter that should be addressed by reviewing the process of pay increases for Members. It is not an ethical matter affecting our ethical codes. What House rule 47 involves is an ethical standard, and the ethical reasons for its adoption are just as valid today as when it was first adopted, if not stronger. Congressional pay problems should be resolved by altering congressional pay practices as apparently they have by provisions in the recently passed continuing resolution. They should not be resolved by overturning ethical reforms.

5. HOUSE SHOULD NOT BACKTRACK ON ETHICAL REFORM

Despite the mixed record of conduct by individual House Members in recent years, by almost any standard the House as an institution has made significant progress in its handling of congressional ethics. We have enacted tough new codes of conduct, set up a permanent ethics committee, punished far more Members for misconduct than ever before, and have given out tougher and more meaningful sanctions by overwhelming margins. It is not an overstatement to say that the past 10 to 15 years have marked the most significant period of institutional reform in the entire history of House ethics.

Given our impressive record of improvement, I would not like to see us take this first major step backtracking on ethical reform. In the past, the clear overall direction of our revisions in the House standards of official conduct has been one of toughening them up. But House Resolution 251, which almost triples the amount of allowable outside earned income, would represent the largest step backward that the House has ever taken to overturn one of its previously enacted ethical reforms. All Members voting for it should be aware of the unprecedented nature of their actions.

6. HOUSE SHOULD NOT SHOW EXCESSIVE CONCERN FOR MEMBERS' PERSONAL INCOME

Most of our tough new ethical reforms enacted in recent years have been generally accepted by most Members. But House rule 47 has cut into Members' personal income the most, and it is the one that has been fought the hardest: Members tried in 1978 to repeal it in the House even before it went into effect; Members have challenged it in the courts; many Members have openly stated that they would try to find various ways to skirt its provisions; on the Senate side, Members first voted to postpone the 15-percent limitation and then recently repealed the only remaining annual earned income limitation; and today House Members are trying to change the rules in midsession, after having been elected to Congress last fall with the clear understanding that there was to be a 15-percent limitation on outside earnings or honoraria. Such actions make many Americans think that the feeling on Capitol Hill is that ethical reform is fine, as long as it does not hurt Members' pocketbooks. Moreover, we have recently cut back various Federal services and benefits for the average citizen to unprecedent-

ed degrees. Nonetheless, H.R. 251 represents yet another attempt to provide additional financial benefits for Members. At a time of great sacrifice for American people, we should not tell them that the only sacrifice Members of Congress are willing to make is one of sacrificing ethical reform for personal gain.

CONCLUSION

To sum up, we should start backtracking from our strong past tradition of institutional ethical reform only for extremely strong and convincing reasons. The desire of a small percentage of Members for more money is not one of them. The basic ethical reasons for the ethical standards embodied in House rule 47 are as strong as ever. I urge the defeat of H.R. 251. ●

THE DISINFORMATION PROGRAM DIRECTED AT MSHA

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 26, 1981

● Mr. GAYDOS. Mr. Speaker, although the House is a jury in virtually all it does, we have no certain way of keeping the immaterial, irrelevant, or distorted from being put before us, as was the case in the debate on H.R. 4560, the fiscal 1982 appropriations bill for the Departments of Labor, Health and Human Services, Education, and related agencies.

For this reason, I want now to set straight the record on what was done last October 6 when an amendment was adopted to prohibit the Mine Safety and Health Administration from exercising its jurisdiction over the surface mining of stone, clay, colloidal phosphate, sand or gravel, and over surface construction activities at coal and other mines for fiscal year 1982.

Several Members of the House spoke in support of this amendment. They made statements unsupported by fact, but they should not be held responsible, nor do I consider their misstatement intentional or willful.

The fault in the statements is at the source of the disinformation; that is, the organizations whose members would benefit from the amendment which was adopted.

These groups are recognizable as the source because for the past 2½ years we have been subjected to the same stream of misinformation and disinformation concerning the Federal Mine Safety and Health Act and the activities of the Mine Safety and Health Administration. The Subcommittee on Health and Safety heard their peculiar interpretation of the facts thoroughly, and on September 9 and 10, 1980, inserted in the RECORD articles addressing this misinformation.

Nevertheless, the stream continued to flow and the myths and misstatements spilled over into the debate of last October 6, which was curtailed due to limitations on time. This constraint meant I was unable to respond fully then. But now I have some comments to direct to the more flagrant misrepresentations and distortions.

DISTORTION NO. 1

The surface mining of stone, clay colloidal phosphate, sand, and gravel was made subject to the Mine Safety and Health Act only by the 1977 law.

This is correct, as far as it goes, but false in that it suggested this type of mining was subject to OSHA prior thereto. These activities were subject to the Federal Metal and Non-Metallic Mine Safety Act of 1966, which was under the jurisdiction of the Department of Interior; coal mining was under the Federal Coal Mine Health and Safety Act of 1969. The 1977 amendments transferred the jurisdiction to the Department of Labor and joined in one Federal act jurisdiction for all mine safety and health. The Federal Metal and Non-Metallic Mine Safety Act of 1966 was repealed. But at no time were the types of mining singled out by the amendment under OSHA jurisdiction.

DISTORTION NO. 2

Following passage of the 1977 law, "sophisticated regulations designed for large and highly technical operations" were imposed on small businesses.

This is not true, except for the rules with respect to the training of miners. The regulations which MSHA implemented with respect to metal and nonmetallic mining activities were promulgated pursuant to the 1966 law. But in view of the fact that the 1966 law was something of a toothless tiger, it was easy for the affected mine operators to disregard these regulations with impunity.

DISTORTION NO. 3

The specific industries; for example surface stone, sand and gravel, clay, and colloidal phosphate are "not hazardous industries."

The basic data clearly contradict this, for example, for 1979, of a total of 106 fatalities in surface coal, metal, stone, and sand and gravel mines, 38 occurred in stone mines and 25 in sand and gravel mines. For 1980, of 103 fatalities in these various categories, 42 occurred in stone mines and 15 in sand and gravel mines. These specific types of mining operations are clearly more hazardous than surface coal or surface metal mines, based on the fatality incident rate per 200,000 employee hours worked. The following is a list of fatalities in sand and gravel, surface stone, and clay mines from January 4, 1980, to September 22, 1981.

Date	*Place (city, state)*
1980	
Jan. 4	Boswell, Pa.
Jan. 9	Marquette, Kans.
Jan. 15	New London, Wisc.
Jan. 17	Tyrone Forge, Pa.
Jan. 30	Niles, Calif.
Feb. 13	Streetman, Tex.
Feb. 23	Morgan City, La.
Feb. 28	San Juan Capistrano, Calif.
Mar. 6	Sylacauga, Ala.
Mar. 13	Holly Hill, S.C.
Mar. 14 (died Mar. 16).	Kingston, N.Y.
Mar. 23	Latrobe, Pa.
Apr. 4	Azusa, Calif.
Apr. 7	Duchesne, Utah.
Apr. 8	Milford, N.H.
Apr. 18	Mojave, Calif.
Apr. 18	Lowell, Fla.
Apr. 25	San Angelo, Tex.
May 12	Rockville, Va.
May 22	Falls City, Tex.
June 4	Langely, S.C.
June 14	Granite Falls, Wash.
June 16	Oxford Junction, Iowa.
June 17	Hialeah, Fla.
June 25	York, Pa.
June 26	Wake Forest, N.C.
July 1	Norton, Ohio.
July 2	St. Catherine, Fla.
July 12	Morrow, Ohio.
July 22	Marble Falls, Tex.
July 24	Dallas City, Ill.
Aug. 4	Delle, Utah.
Aug. 7	Barstow, Ill.
Aug. 27	San Antonio, Tex.
Sept. 5	South Congree, S.C.
Sept. 12	Holly Hill, S.C.
Sept. 12 (died Oct. 10).	Holly Hill, S.C.
Sept. 15	Little Rock, Ark.
Sept. 17	Calera, Ala.
Sept. 22	Liberty, Tenn.
Sept. 30	Campti, La.
Oct. 1	Renton, Wash.
Oct. 1	Wells, Nev.
Oct. 1	Slatedale, Pa.
Oct. 3	Victorville, Calif.
Oct. 7	Jackson, Wisc.
Oct. 7	Bath, Pa.
Oct. 9	Victoria, Tex.
Oct. 9	Bridgman, Mich.
Oct. 10	Collierville, Tenn.
Oct. 21	West Winfield, Pa.
Oct. 24	Bedford, Ind.
Oct. 24	Lewisburg, Ohio.
Oct. 29	Ragland, Ala.
Nov. 5	Fairborn, Ohio.
Nov. 5	Butler, Ky.
Nov. 14	Charlotte, N.C.
Nov. 21	Nashville, Tenn.
Nov. 24	Mitchell, Va.
Nov. 28	Jeffersonville, Ga.
Dec. 5	Knightdale, N.C.
1981	
Jan. 7	Blue Ridge, Va.
Feb. 14	Lecanto, Fla.
Feb. 17	Nazareth, Pa.
Apr. 10	Gantts Quarry, Ala.
Apr. 27	Jamestown, S.C.
May 10	San Manuel, Ariz.
May 17	Mobile, Ala.
May 27	Billings, N.Y.
June 18	Ragland, Ala.
June 16 (died July 1).	Trona, Calif.
July 7	McIntyre, Ga.
July 7 (died July 17).	Wausau, Wisc.

Date	Place (city, state)
July 9	Bethel, Miss.
July 21	Aberdeen, Miss.
July 28	Lilesville, N.C.
July 31	Great Bend, Kans.
Aug. 24	Irwindale, Calif.
Aug. 31	Hooksett, N.H.
Sept. 3	Ray's Community, Ala.
Sept. 17	Waco, Tex.
Sept. 22	Morehead, Ky.

DISTORTION NO. 4

If a road contractor negotiates with a farmer or rancher for the purchase of stone, sand, or gravel from a "borrow pit" on the property, the farmer and the contractor both become subject to the Mine Safety and Health Administration. The interagency agreement "reclassifies as mining some operations which have traditionally been regarded as construction."

This is just not so. In fact, the interagency agreement of March 29, 1979, provides,

That borrow pits are subject to OSHA jurisdiction except those borrow pits located on mine property or related to mining.

The interagency agreement, which I will discuss later, was not for the purpose of extending MSHA's jurisdiction, but rather to clearly set out the appropriate jurisdiction of both OSHA and MSHA, which had overlapped.

DISTORTION NO. 5

Surface stone, sand and gravel, clay, and colloidal phosphate are subject to the dual jurisdiction of OSHA and MSHA.

If this implies duplicate jurisdiction, it is not so. Prior to the passage of the 1977 act, there was certain confusion as to who had jurisdiction over "milling operations." In view of the fact that the Bureau of Mines and its successor, the Mining Enforcement and Safety Administration, were in the Department of the Interior, and OSHA was in the Department of Labor, there was possible duplication of enforcement with respect to the milling operations. The 1977 Amendments to the Federal Mine Safety and Health Act transferred jurisdiction over mine safety and health to the Department of Labor. It also directed the Secretary of Labor to make a determination as to the appropriate agency to assert jurisdiction over "mineral milling". The interagency agreement of March 29, 1979, was entered into pursuant to the statutory provision for the purpose of eliminating any possible duplication by both MSHA and OSHA.

Accordingly, if a mine operator is currently subject to the jurisdiction of both OSHA and MSHA, it is because the interagency agreement has given OSHA jurisdiction over milling operations which prior to 1972 were subject to the jurisdiction of the Mining Enforcement and Safety Administration. Needless to say, such a transfer should be acceptable to any affected operator, since it did resolve the prior condition of an overlapping jurisdiction between two Federal agencies. Finally, this statutory provision on resolving the question of "milling" jurisdiction was strongly urged and supported by the various industries, who prior to 1977, were faced with possible overlapping jurisdiction with two Federal agencies.

DISTORTION NO. 6

The Federal Mine Safety and Health Act does not provide for "compliance assistance".

While there is no specific reference to "compliance assistance" in the statute, the fact is that the Mine Safety and Health Administration instituted a Compliance Assistance Visit (CAV) program in 1979. The following figures indicate its use to date:

COMPLIANCE ASSISTANCE VISITS

	Fiscal year	
	1980	1981 [1]
Stone	645	658
Sand and gravel	1,123	1,180
Total	2,124	2,394

[1] Through August.

DISTORTION NO. 7

A Xerox machine operator or keypunch operator must undergo 24 hours of training.

This is just not so. It seems that the myth of a similar required training program for soft drink vendors, which circulated in 1979, has died, to be born again as the myth of the training of a Xerox operator or keypunch operator. There are no requirements that such person must receive 24 hours of training.

It is rather ironic that this misstatement is now so freely disseminated in view of the fact that the specific mining operations, surface stone, clay, sand and gravel, and colloidal phosphate, have for the last two fiscal years not been subject to the training standard, because of riders attached to the annual appropriations bills.

DISTORTION NO. 8

The Subcommittee on Health and Safety, which has jurisdiction over the Federal Mine Safety and Health Act, has been nonresponsive to industry's complaints.

The subcommittee conducted 23 days of oversight hearings in the 96th Congress. Initially, the hearings were convened because of the concerns of the stone and sand and gravel mining industries with the MSHA training regulations. As the hearings progressed, witnesses representing various types of mining operations in addition to stone and sand and gravel, testified before the subcommittee. The Mine Safety and Health Administration responded to their criticisms and suggestions by: First, clarifying the intent of the training requirements; second, providing compliance assistance visits; third, initiating a review of the citation and assessment procedure; fourth, promulgating standards for independent contractors on July 1, 1980; and fifth, initiating a review of all standards applicable to noncoal operations.

Furthermore, on February 25, 1981, the National Sand and Gravel Association directed a letter to me requesting that the subcommittee favorably report H.R. 1603 or "some other bill that will rectify these problems." H.R. 1603 contained similar but not identical provisions to the amendment adopted to the Labor-HHS appropriation bill. It would have excluded,

Any surface sand or gravel mine, any stone mine, or any clay mine; or any structure, facility, private way, or road constructed on the surface of any area of land (during the period of such construction), if the employees carrying out such construction do not engage in any handling or processing of minerals extracted from such area of land.

On March 5, 1981, I responded to the National Sand and Gravel Association and stated,

In the 96th Congress, the subcommittee did conduct extensive oversight hearings on the Federal Mine Safety and Health Act of 1977. During the hearings there were certain criticisms and concerns expressed about the act. However, I do not believe a compelling case was made to exclude specific types of mining activities from the jurisdiction of the Federal Mine Safety and Health Act of 1977.

You refer to, "some other bill that will rectify these problems." The subcommittee is certainly interested in learning of your thoughts in this regard.

To date, I have heard nothing further from this organization with respect to its "other bill."

Furthermore, there are no bills which have been referred to the Subcommittee on Health and Safety with respect to stone, sand and gravel, clay and colloidal phosphate mining, other than H.R. 1603 and its companion bills, which would exclude such operations from the jurisdiction of MSHA.

Finally, as a matter of interest, the current MSHA administration opposes the exclusionary amendment that was adopted by the House. The administration's report to the Senate Appropriations Subcommittee on Labor, Health and Human Services, Education and Related Agencies, provides in pertinent part:

MSHA also strongly recommends reconsideration of the amendment prohibiting MSHA from expending funds to enforce safety and health standards at surface sand and gravel and stone mines. First of all, serious legal questions are raised as to whether OSHA has the authority to inspect sand and gravel and surface stone mining operations. Section 4(B)(1) of the OSH Act provides that OSHA does not apply to operations over which other Federal agencies exercise statutory authority to prescribe or enforce safety and health standards. The pro-

visions of the Mine Act and MSHA's standards and regulations applicable to these operations are neither repealed nor amended by the Senate action. Only the expenditure of funds to enforce them is temporarily prohibited. Under these circumstances, it is unclear whether section 4(B)(1) would preclude OSHA from exercising its authority with regard to the affected operations. Because of this uncertainty, OSHA's authority to inspect these operations will likely be challenged in courts. This could leave the miners at the affected operations without any health and safety protection pending the outcome of litigation.

From a practical standpoint, exemption of these operations does not logically follow. Like surface coal and other surface metal and nonmetallic mining, sand and gravel and stone operations use traditional mining methods and equipment. The materials extracted at those operations have historically been considered minerals. They have been covered by Federal mine safety legislation since 1966 when the Federal Metal and Nonmetallic Mine Safety Act become law. Prior to 1966, a study was conducted by the Department of the Interior, at the request of Congress, to determine which industries should be covered by a Federal mine safety law. That study specifically indicated that sand and gravel and stone should be covered, along with other metal and nonmetal mining operations. Moreover, MSHA statistics show that sand and gravel and surface stone mining operations are more hazardous than surface bituminous coal mining operations. For example, in 1978, there were 17 fatals at surface bituminous coal mines, resulting in a rate of .3; 25 fatals at sand and gravel mines, with a rate of .08; and 46 fatals at surface stone and mills, with a rate of .06. In addition, in each year since 1974, the sand and gravel and stone mines have accounted for approximately one-half the fatals in the metal and nonmetal mining industry. The relevant statistics for 1979 and 1980 are as follows:

	No. of injuries [1]		Incidence rates per 200,000 employee-hours worked	
	Fatal	NFDL [2]	Fatal	NFDL [2]
1979				
Surface bituminous coal mines	15	2,333	.02	3.47
Surface metal mines	14	2,765	.02	4.53
Surface nonmetal mines	14	1,732	.04	4.88
Surface stone mines and mills	38	4,259	.05	5.06
Sand and gravel mines	25	1,196	.08	3.62
1980				
Surface coal mines	23	2,267	.03	3.40
Surface metal mines	11	2,352	.02	4.08
Surface nonmetal mines	12	1,452	.04	4.25
Surface stone mines	42	3,375	.05	4.24
Sand and gravel mines	15	924	.05	3.10

[1] Excludes office workers.
[2] NFDL—nonfatal days lost injuries and incidence rates.

Finally, the administration is deeply concerned about the precedent being set by attempting to formulate mine safety and health legislation through the appropriation process. Currently, there are legislative proposals before Congress to substantively amend the Mine Act. The administration has been closely monitoring these activities. This administration will continue to have as its paramount concern, the protection of the safety and health of the Nation's miners. However, we believe that any changes to the Mine Act should encompass the concerns expressed by all segments of the mining industry, rather than the "patchwork" attempt of prohibiting the expenditure of funds in an appropriation rider.

All of this is what would have gone to the jury in the interest of a good and true verdict on mine safety had time allowed.●

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Tuesday, October 27, 1981, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

OCTOBER 28

9:00 a.m.
Joint Economic
Monetary and Fiscal Policy Subcommittee
To hold hearings on Government competition with small business.
6226 Dirksen Building

9:30 a.m.
Banking, Housing, and Urban Affairs
To continue hearings on S. 1686, S. 1703, S. 1720, and S. 1721, bills promoting competition among certain financial institutions, expanding their range of services, and protecting the depositors and creditors of such institutions.
5302 Dirksen Building
Foreign Relations
International Economic Policy Subcommittee
To hold hearings on international investment policy.
4221 Dirksen Building
*Labor and Human Resources
Business meeting, to consider the nomination of C. Everett Koop, of Pennsylvania, to be Medical Director in the Regular Corps of the Public Health Service, and to be Surgeon General of the Public Health Service.
4232 Dirksen Building
Select on Intelligence
Collection and Foreign Operations Subcommittee
To hold a closed briefing on intelligence matters.
Room S-407, Capitol

10:00 a.m.
Appropriations
Business meeting, to mark up H.R. 4169, appropriating funds for fiscal year 1982 for the Departments of Commerce, Justice, and State, the Judiciary, and related agencies, and to continue markup of proposed legislation appropriating funds for fiscal year 1982 for foreign assistance programs.
1114 Dirksen Building
Energy and Natural Resources
Business meeting to consider pending calendar business.
3110 Dirksen Building
*Governmental Affairs
To hold hearings on S. 864, to require each Federal agency to submit an annual report to the President on the adequacy of its internal accounting and administrative control systems.
357 Russell Building
Governmental Affairs
*Permanent Subcommittee on Investigations
To resume hearings on alleged corruption in the International Longshoremen's Association's influence and control over the waterfront industry along the east and gulf coasts.
3302 Dirksen Building
Judiciary
*Juvenile Justice Subcommittee
To hold oversight hearings on activities of the Office of Justice Assistance, Research, and Statistics, Department of Justice, focusing on Federal assistance to State and local law enforcement.
2228 Dirksen Building
*Labor and Human Resources
Labor Subcommittee
Business meeting, to consider S. 1182, improving the administration of the Longshoremen's and Harbor Workers' Compensation Act by removing certain inequities, reducing incentives for fraud and abuse, and assuring immediate compensation benefits and competent medical treatment for injured employees.
4232 Dirksen Building

11:00 a.m.
Agriculture, Nutrition, and Forestry
To hold hearings on administration recommendations for a comprehensive soil and water resources conservation program to increase America's food production capability.
324 Russell Building

2:00 p.m.
Select on Ethics
To hold a closed business meeting on pending committee business.
6228 Dirksen Building

OCTOBER 29

9:30 a.m.
Banking, Housing, and Urban Affairs
To continue hearings on S. 1686, S. 1703, S. 1720, and S. 1721, bills promoting competition among certain financial institutions, expanding their range of services, and protecting the depositors and creditors of such institutions.
5302 Dirksen Building
Commerce, Science, and Transportation
Business, Trade and Tourism Subcommittee
To hold hearings on S. 1256, to regulate interstate commerce by protecting the

rights of consumers, dealers, and end users.
235 Russell Building

Judiciary
Courts Subcommittee
To hold hearings on the future income of individuals claiming bankruptcy.
5110 Dirksen Building

Labor and Human Resources
Education Subcommittee
To hold oversight hearings on title III of the Higher Education Act (Public Law 96-374), relating to developing institutions.
4232 Dirksen Building

Special on Aging
To hold hearings on the Federal role in promoting greater opportunities for older workers
6226 Dirksen Building

10:00 a.m.
Energy and Natural Resources
Public Lands and Reserved Water Subcommittee
To hold hearings on S. 625, revising the boundary of Voyageurs National Park in the State of Minnesota.
3110 Dirksen Building

Environment and Public Works
To hold hearings on S. 1706, S. 1709, and S. 1718, bills strengthening environmental protection laws.
4200 Dirksen Building

Foreign Relations
To hold hearings on the foreign policy and arms control implications of the President's strategic weapons proposals.
4221 Dirksen Building

Governmental Affairs
To resume oversight hearings on the congressional budget process.
3302 Dirksen Building

*Governmental Affairs
Permanent Subcommittee on Investigations
To continue hearings on alleged corruption in the International Longshoremen's Association's influence and control over the waterfront industry along the east and gulf coasts.
224 Russell Building

Judiciary
*Immigration and Refugee Policy Subcommittee
To hold hearings on granting amnesty to certain illegal aliens.
2228 Dirksen Building

Joint Economic
Economic Goals and Intergovernmental Policy Subcommittee
To resume hearings on the effects of the administration's defense spending program on the American economy.
2247 Rayburn Building

2:00 p.m.
Energy and Natural Resources
*Energy Regulation Subcommittee and Water and Power Subcommittee
To resume joint oversight hearings on hydroelectric development and related licensing procedures.
3110 Dirksen Building

2:30 p.m.
Labor and Human Resources
Education Subcommittee
To hold hearings on the proposed Pell grant family contribution schedule, providing assistance to college students from low-income families.
4232 Dirksen Building

OCTOBER 30

9:00 a.m.
Governmental Affairs
Permanent Subcommittee on Investigations
To continue hearings on alleged corruption in the International Longshoreman's Association influence and control over the waterfront industry along the east and gulf coasts, and to review the Department of Labor's investigation into the Teamsters' Central States Pension Fund.
3302 Dirksen Building

9:30 a.m.
Banking, Housing, and Urban Affairs
To continue hearings on S. 1686, S. 1703, S. 1720, and S. 1721, bills promoting competition among certain financial institutions, expanding their range of services, and protecting the depositors and creditors of such institutions.
5302 Dirksen Building

Commerce, Science, and Transportation
To hold hearings on the nomination of F. Keith Adkinson, of West Virginia, to be a Federal Trade Commissioner.
235 Russell Building

Finance
Taxation and Debt Management Subcommittee
To hold hearings on miscellaneous tax proposals.
2221 Dirksen Building

10:00 a.m.
Environment and Public Works
Water Resources Subcommittee
Business meeting, to resume markup of S. 1692, providing for the operation, maintenance, and construction of deep-draft channels and national harbors.
4200 Dirksen Building

10:30 a.m.
Commerce, Science, and Transportation
*Consumer Subcommittee
To hold hearings on Senate Concurrent Resolution 33, disapproving the Federal Trade Commission Trade Regulation Rule relating to the sale of used motor vehicles.
235 Russell Building

Foreign Relations
To hold hearings on the nomination of L. Ebersole Gaines, of Idaho, to be Executive Vice President of the Overseas Private Investment Corporation (OPIC).
4221 Dirksen Building

NOVEMBER 3

9:30 a.m.
Banking, Housing, and Urban Affairs
To hold hearings on the proposed pipeline transporting natural gas from the Soviet Union's Yamal gas fields to Western Europe, focusing on the role for U.S. export controls.
5302 Dirksen Building

Labor and Human Resources
Investigations and General Oversight Subcommittee
To hold oversight hearings on the activities of the National Cancer Institute.
4232 Dirksen Building

10:00 a.m.
Environmental and Public Works
Business meeting, to consider proposed amendments to the Clean Air Act.
4200 Dirksen Building

Judiciary
Business meeting, to consider pending calendar business.
2228 Dirksen Building

NOVEMBER 4

9:00 a.m.
Governmental Affairs
Intergovernmental Affairs Subcommittee
To resume oversight hearings on fiscal disparities within the Federal budget system.
357 Russell Building

Labor and Human Resources
*Labor Subcommittee
To hold hearings on S. 1541, proposed Retirement Income Incentives and Administrative Simplification Act.
4232 Dirksen Building

9:30 a.m.
Finance
Estate and Gift Taxation Subcommittee
To hold hearings on S. 1695, repealing the generation-skipping transfer tax, S. 649, amending current estate tax laws to ease the burden of inheritance taxes for the heirs of artists, and reversing the decline in donations of art to nonprofit institutions; S. 851 and S. 852, bills increasing the amount artists may deduct in taxes for their charitable contributions; and S. 1733, providing a procedure for determining the fair market value of certain assets for estate tax purposes, and providing for declaratory judgments relating to installment payment of estate tax.
2221 Dirksen Building

*Judiciary
Constitution Subcommittee
To resume hearings on Senate Joint Resolution 110, Senate Joint Resolution 17, Senate Joint Resolution 18, and Senate Joint Resolution 19, measures amending the Constitution to establish legislative authority in the Congress and the States with respect to abortion.
6226 Dirksen Building

Judiciary
Criminal Law Subcommittee
To hold hearings on S. 613, amending the Federal Criminal Code to revise the scope of, and penalties under the Hobbs Act, prohibiting interference by any group or person with commerce by threat or violence.
2228 Dirksen Building

10:00 a.m.
Energy and Natural Resources
Business meeting to consider pending calendar business.
3110 Dirksen Building

Small Business
Advocacy and the Future of Small Business Subcommittee
To resume hearings to examine effects of government competition on small business.
424 Russell Building

NOVEMBER 5

9:00 a.m.
Commerce, Science, and Transportation
To hold hearings on S. 709, requiring a refund value for certain beverage containers, and prohibiting the sale of metal beverage containers with detachable openings.
235 Russell Building

Governmental Affairs
To resume hearings to examine the acquisition process of the Department of Defense.
3302 Dirksen Building

9:30 a.m.
Veterans' Affairs
To hold oversight hearings on the VA's Department of Medicine and Surgery's implementation of the Office of Management and Budget's circular A-76, providing for the contracting out of certain government services.
412 Russell Building

10:00 a.m.
*Energy and Natural Resources
To hold oversight hearings on the implementation of title I, establishing wellhead prices for natural gas, of the Natural Gas Policy Act (Public Law 95-621).
3110 Dirksen Building

*Judiciary
Constitution Subcommittee
To resume hearings on Senate Joint Resolution 110, Senate Joint Resolution 17, Senate Joint Resolution 18, and Senate Joint Resolution 19, measures amending the Constitution to establish legislative authority in the Congress and the State with respect to abortion.
2228 Dirksen Building

Judiciary
Juvenile Justice Subcommittee
To hold hearings to examine the impact of media on juveniles.
6226 Dirksen Building

NOVEMBER 6

10:00 a.m.
*Energy and National Resources
To continue oversight hearings on the implementation of title I, establishing wellhead prices for natural gas, of the Natural Gas Policy Act (Public Law 95-621).
3110 Dirksen Building

Labor and Human Resources
Investigations and General Oversight Subcommittee
To resume oversight hearings on the activities of the Natural Cancer Institute.
4232 Dirksen Building

10:30 a.m.
Judiciary
Courts Subcommittee
To hold hearings to examine the role of the State and Federal criminal justice system in controlling drunk driving.
2228 Dirksen Building

NOVEMBER 9

9:30 a.m.
Banking, Housing, and Urban Affairs
International Finance Subcommittee
To hold oversight hearings on barriers to U.S. trade.
5302 Dirksen Building

Labor and Human Resources
Labor Subcommittee
To resume hearings on S. 1541, proposed Retirement Income Incentives and Administrative Simplification Act.
4232 Dirksen Building

NOVEMBER 10

8:30 a.m.
Energy and Natural Resources
Energy and Mineral Resources Subcommittee
To hold oversight hearings on America's role in the world coal export market.
3110 Dirksen Building

9:30 a.m.
Commerce, Science, and Transportation
Surface Transportation Subcommittee
To hold oversight hearings on the implementation and effects of the Staggers Rail Act of 1980 (Public Law 96-448), reducing ICC regulations of the railroad industries and providing opportunities for railroads to improve their financial viability.
1318 Dirksen Building

Finance
Estate and Gift Taxation Subcommittee
To resume hearings on S. 1695, repealing the generation-skipping transfer tax, S. 649, amending current estate tax laws to ease the burden of inheritance taxes for the heirs of artists, and reversing the decline in donations of art to nonprofit institutions; S. 851 and S. 852, bills increasing the amount artists may deduct in taxes for their charitable contributions; and S. 1733, providing a procedure for determining the fair market value of certain assets for estate tax purposes, and providing for declaratory judgments relating to installment payment of estate tax.
2221 Dirksen Building

Labor and Human Resources
To resume hearings on S. 234, to encourage the establishment of home health care programs and to provide expanded coverage of home health services under the medicare and medicaid programs.
4232 Dirksen Building

10:00 a.m.
Environment and Public Works
Business meeting, to consider pending calendar business.
4200 Dirksen Building

*Governmental Affairs
Energy, Nuclear Proliferation, and Government Processes Subcommittee
To hold hearings on S. 1226, establishing the National Nuclear Property Insurance Corporation, and providing supplemental insurance coverage for certain cleanup costs following damage to nuclear powerplants.
Room to be announced

Judiciary
Business meeting, to consider pending calendar business.
2228 Dirksen Building

NOVEMBER 11

10:00 a.m.
Energy and Natural Resources
Business meeting, to consider pending calendar business.
3110 Dirksen Building

NOVEMBER 12

9:30 a.m.
Judiciary
Constitution Subcommittee
To resume hearings on Senate Joint Resolution 110, Senate Joint Resolution 17, Senate Joint Resolution 18, and Senate Joint Resolution 19, measures amending the Constitution to establish legislative authority in the Congress and the States with respect to abortion.
2228 Dirksen Building

Labor and Human Resources
Labor Subcommittee
To resume hearings on S. 1541, proposed Retirement Income Incentives and Administrative Simplification Act.
4232 Dirksen Building

10:00 a.m.
Energy and Natural Resources
To hold hearings on Senate Joint Resolution 111, consenting to an extension and renewal of the interstate compact to conserve oil and gas.
3110 Dirksen Building

Judiciary
Criminal Law Subcommittee
To resume hearings on S. 101 and S. 751, bills to eliminate or establish an alternative to the exclusionary rule in Federal Criminal proceedings.
5110 Dirksen Building

1:30 p.m.
Judiciary
Constitution Subcommittee
To resume oversight hearings on the implementation of the Freedom of Information Act, and to hold hearings on S. 1247, S. 1235, and S. 587, bills providing for the exception of certain confidential information from disclosure requirements of the Freedom of Information Act.
2228 Dirksen Building

NOVEMBER 13

9:30 a.m.
Judiciary
Agency Administration Subcommittee
To resume hearings on S. 267, making the Federal tort claims procedure the exclusive remedy in medical malpractice actions resulting from federally authorized National Guard training activities.
5110 Dirksen Building

Judiciary
Courts Subcommittee
To hold hearings on S. 653, proposed Habeas Corpus Procedures Amendments Act.
2228 Dirksen Building

10:00 a.m.
Energy and Natural Resources
*Energy and Mineral Resources Subcommittee
To resume oversight hearings on America's role in the world coal export market.
3110 Dirksen Building

NOVEMBER 16

9:30 a.m.
Judiciary
Courts Subcommittee
To hold hearings on S. 1529, proposed National Court of Appeals Act.

HOUSE OF REPRESENTATIVES—*Tuesday, October 27, 1981*

The House met at 12 o'clock noon.

Rabbi Jacob Sodden, Van Cortlandt Jewish Center, the Bronx, N.Y., offered the following prayer:

In these days of incredible challenge and change, may the eternal G-d light our path to the destiny He has inscribed for our beloved country.

May He ever remind us of the difference between the sacred and the profane—to cherish the good and oppose all that is evil.

May He put low the arrogant and raise up the humble.

May He make this America a beacon of hope and promise for all.

May He bless us with leadership that does not yield to doubt nor despair and is ever mindful of the inherent greatness and capacities of America.

May He ever renew in all our hearts and souls the special sense of mission and purpose that is our heritage from our inspired forefathers. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 1196. An act to amend the Foreign Assistance Act of 1961 and the Arms Export Control Act to authorize appropriations for development and security assistance programs for the fiscal year 1982, to authorize appropriations for the Peace Corps for the fiscal year 1982, and for other purposes.

RABBI JACOB SODDEN

(Mr. BINGHAM asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BINGHAM. Mr. Speaker, it is my privilege and pleasure to welcome to the House today Rabbi Jacob Sodden of Bronx, N.Y., who has just opened our session with a beautiful opening prayer.

Rabbi Sodden is a distinguished New Yorker. He received a B.A. from Brooklyn College and an M.A. and a Ph. D. from New York University. Since 1947, he has been spiritual leader of Van Cortlandt Jewish Center.

In addition he has been extremely active in our community, particularly in the field of transportation, having been chairman of the Transportation Committee of the community planning board in our area for a number of years.

He has taught sociology at C. W. Post, Saint Johns, and New York University and currently at Touro College in Manhattan.

He is the representative of the Bronx Borough President on the Permanent Citizens Advisory Committee on the MTA, and is a member of the committee known as ORBIT, the Orange - Rockland - Bergen - Interstate Transportation Committee. He represents Orange County, N.Y., on that committee.

Among his many other activities, he is engaged in marriage counseling at Middletown, N.Y.

Apart from these distinguished achievements and his outstanding role in the community, I am proud to call Rabbi Sodden my friend and counselor of many years.

UNIDENTIFIED TAX INCREASES SHOULD BE EXPOSED

(Mr. WRIGHT asked and was given permission to address the House for 1 minute.)

Mr. WRIGHT. Mr. Speaker, evidence continues to mount that the administration and the Republican leadership in the Senate are planning certain unidentified tax increases.

Budget Director Stockman elliptically refers to these mysterious increases, presumably planned to take effect in 1983 and 1984, as "revenue enhancement measures."

Apparently under consideration is an entire range of sales and excise taxes, the most regressive forms of taxation, including additional taxes on gasoline and beverages as well as other consumer commodities. It also reportedly is planned to do away with the tax deduction of the interest payments which average families must make upon their home mortgages.

The ostensible purpose of these tax increases would be to replace the revenue lost through the Kemp-Roth tax cut, 35 percent of which goes to the wealthiest 5 percent of America's families, and fully 10 percent of which goes to the two-tenths of 1 percent with incomes above $200,000 annually.

Thus the design seems clearly to put new taxes on the backs of middle-income and low-income Americans, those who can least afford higher taxes, in order to pay for the benefits Kemp-Roth lavished upon the wealthiest members of our society who need the tax cuts the least.

The American people are entitled to know just what surprises David Stockman and the Senate Finance Committee have in store for them. If this indeed is the plan, it deserves to be exposed and abandoned.

PRESIDENT SHOULD DEAL WITH THE ISSUES AT HOME

(Mr. PEYSER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PEYSER. Mr. Speaker, tomorrow the Senate will vote on the AWACS. The House of Representatives in its wisdom defeated it by nearly 3 to 1. The President is saying to the Senate that the prestige of the Presidency and the ability to handle foreign affairs are at stake. I do not happen to believe that.

But if it is really true, then the President ought to withdraw the AWACS motion from the Senate.

If the White House were as involved with us here in the Congress on the problems that are really important to the future of the United States, the problem of high interest rates and inflation, if they were working with us as they are now trying to work on the AWACS issue, a lot of these problems could be solved.

Mr. Speaker, I hope the President realizes today that the AWACS issue is lost and now maybe we can get on with the issues that are really important to the country today.

NEW MEDICARE NUMBERS AND SOCIAL SECURITY CRISES

(Mr. PICKLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PICKLE. Mr. Speaker, recent stories which have appeared in the press are discomforting even to those of us who have steadily urged decisive action to handle the problems facing social security. Based on actual expenditures under the medicare program for fiscal 1981, the actuaries report that under the Senate-passed social security bill, the medicare fund

will be reduced from a 7-percent reserve to a 4-percent reserve in 1984, and to a negative reserve in 1985.

More importantly, this small and normally insignificant 3 percent change in the medicare cost figures pulls the overall combined social security reserve levels below that necessary to pay benefits 2 years earlier than before even under intermediate or "rosie" projections. There is no longer any question of whether we can make it through the decade with interfund borrowing or some other patchwork procedure. We cannot.

Mr. Speaker, we are playing with fire here and we are all going to be burned. The decisions will only get more difficult because adequate leadtime is all important in social security changes of any stripe. We all are hesitant to tackle this issue in the current climate. But we cannot escape it—and it is looking more and more like we cannot escape it before 1983.

I call once again on the leadership of this Congress to allow us to go forward now to try to address the problems we face in social security.

SOCIAL SECURITY RECIPIENTS MAY HAVE MISPLACED CONFIDENCE IN THE PRESIDENT

(Mr. VENTO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VENTO. Mr. Speaker, in 1980 many of the one-time "Youth for Roosevelt" became senior citizens for Ronald Reagan because they believed his promise not to cut social security.

But for all his harkening back to the words of F. D. R., Ronald Reagan is betraying precisely these people. His proposals to cut social security mark the first attempt ever made to break the sacred compact between the Government and the people that has characterized social security since its founding in 1935. For 46 years, workers have faithfully paid into the social security system because they believed in the Government's commitment to the program.

Time and again, throughout the history of the social security system, radical Republicans have tried to block bipartisan efforts to improve social security. But in 1980, then conservative Republican candidate Reagan promised he would be different.

People knew he had attacked social security in 1976, but in 1980 people believed his promise that he had changed.

But, sadly enough, as soon as Ronald Reagan had gotten the votes of senior citizens and was safely in the White House, he began his assault on the elderly's most important program. The President's favored terms, "safety net" and "truly needy" cannot mask his true motive of balancing the budget on the back of social security recipients.

Herbert Hoover, Alf Landon, Bob Taft, and BARRY GOLDWATER had the courage of their convictions and working people knew where they stood.

Franklin Roosevelt would turn over in his grave if he were to hear the words he spoke being used to justify social security cuts.

Well, sadly, some of the "Youth for Roosevelt" may have misplaced their confidence in Ronald Reagan in 1980, but few are so gullible as to ever again trust President Reagan and the Republican Party on social security.

WE ARE PAYING MORE THAN WE BARGAINED FOR

(Mr. McCURDY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. McCURDY. Mr. Speaker, Congress and American taxpayers have been paying far more than the original, estimated price for new defense weapons. Some examples are the 200-percent cost growth for the M-1 tank and the 300-plus-percent cost growth for the Black Hawk helicopter.

Cost figures submitted last week by the Congressional Budget Office are even more startling and should alert this Congress to a problem that can no longer go unchecked.

In testimony before the Armed Services Committee's Special Panel on Defense Procurement, which I chair, the CBO said they found a unit cost growth of over $4.3 billion in 37 defense programs that were included in the 1982 fiscal budget submitted last March. That is unanticipated cost growth. In just 1 year, we are talking about a 24-percent cost increase after adjusting for inflation.

We on the Special Defense Procurement Panel will complete 4 months of hearings Wednesday with the testimony of Deputy Secretary of Defense Frank Carlucci. He will be asked to tell us what the administration is doing about these cost growth problems. I invite all interested Members to attend.

ADMINISTRATION OPPOSED TO ENERGY AFFILIATE AT WORLD BANK

(Mr. BEDELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BEDELL. Mr. Speaker, last week DICK OTTINGER and I cochaired a joint hearing on the U.S. posture toward helping developing nations meet their energy needs.

The Reagan administration stands alone in the world in its opposition to establishing an energy affiliate at the World Bank. One of the explanations offered by our Government is that we are opposing the creation of any new international structures. They also cite the possible cost to the U.S. Treasury as a reason for resisting the proposal.

Fortunately, Robert McNamara, the former President of the World Bank, was present to set the record straight last week. He stated that creation of the energy affiliate at the World Bank would not involve the creation of any new organization or bureaucracy.

He stated further that the proposed energy affiliate would not necessarily require any additional U.S. contribution to the World Bank.

A witness from the State Department responded that the Reagan administration would oppose the energy affiliate even if its creation does not require a new bureaucracy and does not require any additional U.S. funding of the World Bank.

Thus, the administration has been telling the public that it opposes that idea because, they say, it would create a new international bureaucracy and would cost us money. Yet, in last week's hearing it became clear that these points may not be true and that they are not the real basis for our position anyway.

Mr. Speaker, it is bad enough that this administration has chosen to pursue a solitary course in world affairs that is so clearly contrary to our national interests. But to attempt to deceive the American public as to the facts of the matter just compounds the error.

PRESIDENT REAGAN ADMITS THERE IS A SLIGHT RECESSION

(Mr. BONKER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BONKER. Mr. Speaker, last Sunday President Reagan admitted that the U.S. economy was in what he termed "a slight recession."

In so doing, Mr. Reagan acknowledged what most economists have been saying for months.

While I commend the President for this keen insight into our Nation's economic situation, there are two very important points that ought to be made, and two points which he has ignored.

First. While he has finally admitted that we as a nation are suffering from recession, he seems oblivious to the fact that in the Pacific Northwest it is much deeper than a recession. It borders on a depression.

There are currently eight counties in my district which are suffering from unemployment levels over 20 percent.

Throughout the Northwest, more than 50 percent of the men and women in the lumber and wood-products industries were out of work or

forced to work drastically reduced shifts because of mill closures or slowdowns.

The woes of the wood-products industry have affected every other industry in our area, devastating entire communities and plunging the State of Washington into a fiscal crisis due to lost revenues.

Second. The President continues to ignore the root of the problem: Punishingly high interest rates. Until the President lays aside this counterproductive policy, we will not get people out of the unemployment lines in the Pacific Northwest, and we will not emerge from the President's slight recession.

NO DISSENTING OPINIONS IN WHITE HOUSE CONFERENCE ON AGING

(Mr. AuCOIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. AuCOIN. Mr. Speaker, it is indeed illuminating to watch the Republican National Committee working to insure the success of the White House Conference on Aging. It was nice of Secretary Schweiker to lend a helping hand so that the Republican National Committee had easy access to the delegates, complete with a list of all of their names and all their telephone numbers.

Certainly the Republican National Committee's inquiries pertaining to, oh, the delegates' views of the President and his proposals, their own party affiliation, their ties to other organizations, I think all of this will assist the Republican committee in assuring that the 1981 Conference proceeds smoothly.

I do not know about my colleagues, but I want to say that I think it is a comfort to know that the administration would go to such extraordinary lengths to further the free flow of ideas between delegates.

In fact, I think, thanks to the administration's painstaking efforts, there is almost no chance that the Conference will be marred by any dissenting opinions. Given the White House position on social security, and issues for the elderly, I think the White House can breathe a sigh of relief.

MR. TANK

(Mr. NICHOLS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NICHOLS. Mr, Speaker, in the annals of tank warfare probably the two greatest American commanders are Gen. George Patton and General Abrams. Though military history books will hail the achievements of these great military leaders little will be said of a civil servant in Anniston, Ala., who in his arena of tank development has made just as important a contribution.

Known as Mr. Tank throughout the world, Mr. Dave Stanley has worked on American tanks for nearly 30 years. Dave Stanley has advised military leaders in Europe, Asia, the Middle East, and other strategic locations on their armored needs and requirements. He is probably the greatest single authority on the evolution of tank development and the capabilities of our armored assets. For his outstanding leadership and work at the Anniston Army Depot he has been awarded the Decoration of Exceptional Civilian Service. But to fully appreciate the admiration for his work you need only ask a commander or serviceman in an armored division what Dave Stanley has done for them.

This month Dave Stanley will retire from civil service to his home just a few miles from Anniston Army Depot. His expertise and ability will be missed by the depot. He was a person unafraid to tell it like it is and who felt obligated to provide the serviceman with the best tank possible while saving the taxpayers money. The heritage of devoted civil service he leaves behind will long be remembered by our American serviceman and our allies around the world.

DOES ANYONE WANT U.S. BASES?

(Mr. SOLOMON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SOLOMON. Mr. Speaker, one of the major arguments used by opponents of Presidents Carter's and Reagan's plan to sell AWACS to Saudi Arabia is that the Saudis do not want U.S. bases on their territory.

An Associated Press story, printed in the Friday, October 23, issue of the Los Angeles Times, reports that Israeli public opinion is almost evenly divided over whether the United States should set up military bases in Israel.

While 48.7 percent favored the idea, 45.5 percent opposed such basing.

If, after 30 years of friendship and aid by the United States, half of the Israeli population does not want U.S. bases on Israeli soil, how can we use Saudi reluctance to accept U.S. bases as a reason to refuse to sell AWACS?

Mr. Speaker, a nation's refusal to accept U.S. bases should not be used as an excuse to deny that nation aid.

The story referred to follows:

[From the Los Angeles Times, Oct. 23, 1981]

ISRAELI DIVIDED ON U.S. BASES, POLL SHOWS

TEL AVIV.—Israeli public opinion is almostly evenly divided over whether the United States should set up military bases here, according to a poll published Thursday in the Jerusalem Post.

The survey of 1,240 people by the independent Modiin Ezrachi Applied Research Center found that 48.7 percent favored the idea, 45.5 percent were opposed and 5.8 percent undecided.

The possible establishment of U.S. bases here was raised when President Reagan and Prime Minister Menachem Begin met last month.

PARRIS URGES THE CONGRESS TO SUPPORT FEDERAL RETIREES

(Mr. PARRIS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PARRIS. Mr. Speaker, 2 months ago, a vast majority in the House voted to restore the minimum social security benefit. I joined my colleagues at that time to correct an inequity which would have adversely affected 3 million senior citizens. Last week, the Senate approved legislation which would also restore the minimum benefit. The Senate added some language, however, which would be just as devastating as eliminating the minimum benefit.

Under the Senate proposal, Federal retirees would have their social security benefits reduced because they receive Government pensions. These Government retirees would be required to have their social security benefits offset, dollar for dollar, when their Government pension exceeds $300 a month.

This is an unjust proposal which unfairly penalizes about 350,000 senior citizens who have contributed greatly to their country. They should not be asked to bear the burden of the social security system's financial problems.

These individuals took their jobs and planned their retirements with their social security and Government pensions in mind. By changing the rules in the middle of the game, the Federal Government would be breaking a commitment to provide these earned benefits.

There is no need to discriminate against a particular group of elderly persons when there are more reasonable alternatives available. If a change in this area must be made, I feel it should be phased in over a period of years and not directed toward those individuals who are retired or about to retire.

When the House considers this legislation again, I urge my colleagues to reject the Senate language and to support the original intent of the House to restore the minimum social security benefit for all senior citizens.

CHUTZPAH OF THE YEAR AWARD

(Mr. RITTER asked and was given permission to address the House for 1

minute and to revise and extend his remarks.)

Mr. RITTER. Mr. Speaker, for those who were not here yesterday, I took the well to advance the Chutzpah of the Year Award.

I asked the question: "Who could compete favorably with the designer of the *Titanic*, today proposing another world's first unsinkable ship for the Chutzpah of the Year Award?"

The answer is former Vice President Walter Mondale, when he stated Sunday on "Meet the Press" that current interest rates with the prime at 18 percent are the result of President Reagan's program.

The fact is that when the economic wizardry of Carter-Mondale and their unhinging of the American economy ended in December of 1980, the prime interest rate was at 21.5 percent; and, for those of us who have not studied arithmetic at Princeton, that is 3½ percentage points higher than the present rate. Only the Good Lord and perhaps the tooth fairy know whether the Carter-Mondale Federal budget hemorrhage, their unmistakable hallmark, would have given us rates today of 25 to 30 percent had they still been in power.

Perhaps Chutzpah of the Year Award is not enough. Perhaps we need a new award, the Fool All of the American People All of the Time Award. Again, the winner would be that cocatalyst of economic decline, Walter Mondale.

The American people, however, are not so stupid as it seems Mr. Mondale believes. They will see through his clouded utterances to the clear bankruptcy of his alternatives.

FEDERAL-STATE PARTNERSHIP NEEDED TO INSURE SUFFICIENT PRISON CAPACITY

(Mr. PORTER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PORTER. Mr. Speaker, all across this land, convicted felons—inmates of State correctional facilities—are being released because Federal courts have found those facilities so overcrowded or substandard that incarceration in them amounts to cruel and unusual punishment.

The effect is not only to unleash those from whom society should be protected, but to discourage our trial judges from ordering prison terms for many who deserve them.

Today State officials find themselves bound to court-ordered reform decrees, but with little prospect of being able to comply.

For this reason, I recently introduced H.R. 4620, providing a Federal-State partnership to address this serious criminal justice problem.

Under this legislation, States will submit a 7-year plan for constructing new or modernizing old correctional facilities.

Approved plans will be considered for demonstration grants and a 5-percent interest subsidy on criminal justice facility construction bonds.

I urge my colleagues in the House to join me in this important measure to strengthen our criminal justice system, as well as to meet our constitutional responsibilities.

PERSONAL EXPLANATION

(Mr. RUSSO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RUSSO. Mr. Speaker, on last Thursday, October 22, after the passage by voice vote of H.R. 3603 the Agriculture and Food Act of 1981, I left the Chamber on the assurance that there would be no further votes. Shortly thereafter a recorded vote (roll call No. 278) was demanded on the passage of the Senate companion bill as amended by the House provisions. I opposed this legislation and would have voted "no." I ask unanimous consent that this statement appear in the permanent RECORD.

The SPEAKER pro tempore (Mr. VENTO). Is there objection to the request of the gentleman from Illinois (Mr. RUSSO)?

There was no objection.

CONGRESSMAN MURPHY PROPOSES ANWAR EL-SADAT PEACE MEDAL

(Mr. MURPHY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MURPHY. Mr. Speaker, on October 6, 1981, an assassin killed President Anwar el-Sadat of Egypt. Anwar Sadat was a man of vision, courage, determination, and faith. He was also a man of peace. In October 1978, along with Menahem Begin, Anwar Sadat was awarded the Nobel Peace Prize for inititating efforts toward a lasting peace in the Middle East. In so doing, he transcended the boundaries of enmity and pride that often limit the actions of ordinary men, and truly became a leader in the service of mankind.

The legislation that I offer here today is meant to honor his memory by honoring those who continue his work. I propose that we authorize the establishment of the "Anwar el-Sadat Peace Medal" to be awarded annually to the person who has made the most significant contribution to world peace during the preceding year. In this way, we reaffirm the values that we associate with President Sadat, and express our appreciation in a meaningful way to those whose contributions merit such recognition.

I urge support for the legislation.

HAITIANS ACCEPTED ONLY IN DEATH

(Mr. GARCIA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GARCIA. Mr. Speaker, I have just this weekend visited several of the Haitian refugee camps located in Chrome, Fla., just outside of Miami. I find it sad that our famous slogan, "Give me your tired, your poor, your huddled masses yearning to breathe free." As we know, Mr. Speaker, these are the words on the Statue of Liberty which welcomed many of our parents, grandparents, and great-grandparents.

Within this past week, however, this administration effectively littered this inspirational message with the following graffiti: "except for Cubans, Haitians, Mexicans, and others who do not reflect our unique vision of what America is all about."

Now we have the tragedy of 32 Haitian refugees drowning while attempting to escape to the land of liberty. How ironic that the country that they escaped to in life accepted them only in death.

□ 1230

EXTENDING AUTHORITY PROVIDED UNDER JUSTICE DEPARTMENT AUTHORIZATION ACT OF 1980

Mr. KASTENMEIER. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 4608) to continue in effect any authority provided under the Department of Justice Appropriation Authorization Act, Fiscal Year 1980, for a certain period, and for other purposes, with a Senate amendment thereto, that the House recede from its disagreement to the Senate amendment, and concur therein with an amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 2, line 1, strike out "April 1, 1982" and insert "November 1, 1981".

The Clerk read the House amendment to the Senate amendment, as follows:

Strike out the matter proposed to be inserted by the Senate amendment and insert in lieu thereof "February 1, 1982".

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

Mr. McCLORY. Mr. Speaker, reserving the right to object, I reserve the right to object in order that the gentleman from Wisconsin can explain what this action does, what this unanimous-consent request signifies.

Mr. KASTENMEIER. Mr. Speaker, will the gentleman from Illinois yield under his reservation?

Mr. McCLORY. I yield to the gentleman from Wisconsin.

Mr. KASTENMEIER. Mr. Speaker, as the gentleman from Illinois knows, this is a continuing resolution for authorization for the Department of Justice to continue its normal operations for a period of 4 months, during which time we hope that the other body can resolve its difficulties in processing the Department of Justice authorization.

We finally were able to agree with the Senate that a period of 4 months would be appropriate for this continuing authorization. As the gentleman from Illinois will remember, 4 weeks ago, on September 29, the House passed a 6-month continuing authorization for the Department of Justice. The Department must have this authorization to continue certain aspects of its day-to-day operations. There is no doubt about that.

But the Senate did not originally agree with us. They sent us a mere 30-day extension. Eventually we were able to get a 4-month agreement with them, and that is what is contained in this request.

Mr. McCLORY. Further reserving the right to object, Mr. Speaker, I would like to point out that the Department of Justice authorization bill was passed by this body some months ago and is languishing over in the other body. What we are trying to do here today is to provide authority under which the Department of Justice and all of its multiple activities can be continued. It is vital to the operation of the FBI and the other worthy activities which come under the jurisdiction of the Department of Justice.

We would like to see the bill for fiscal year 1982 passed as soon as possible. But, in the meantime, this continuing resolution is the best we can do.

Mr. WALKER. Mr. Speaker, will the gentleman yield to me?

Mr. McCLORY. I yield to the gentleman from Pennsylvania.

Mr. WALKER. I thank the gentleman for yielding.

Mr. Speaker, the problem I am just having conceptually with what we are doing—I agree with him that the bill ought to be passed; the authorization ought to get on the books; but I do not understand if the other body is holding up the legislation, and they proposed a 1-month extension, why did we not go along with their 1-month extension, thereby putting extra pressure on them to go ahead and pass the bill? Why are we offering a 4- or a 6-month extension, which would seem to me to put a lot less pressure on them to get about the bill.

As I understand it, one of the hangups is the busing amendment that the House put in it. I think we ought to be putting some pressure on them to act on that busing amendment.

Mr. McCLORY. Mr. Speaker, the other body permits its Members to conduct what is known as a filibuster. The threat of a filibuster in the other body has delayed action on the authorization bill. Because of this situation, the best we can do right now is to get a 4-month extension.

I think those that have negotiated this compromise on the part of this body have done very, very well.

Mr. WALKER. Mr. Speaker, will the gentleman yield further?

Mr. McCLORY. I yield to the gentleman from Pennsylvania.

Mr. WALKER. I am still having this problem. Why is it we want to go 6 months and now compromise at 4 if the Senate says they can resolve their difficulties within 1 month and get a bill passed?

Mr. McCLORY. The other body cannot resolve its difficulties at this point because of the problem I mentioned. This continuing authorization will provide a little time to deal with that problem. We want this continuing authorization to see if we cannot resolve the problem during the next few months.

Mr. WALKER. I thank the gentleman.

Mr. McCLORY. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON RULES TO FILE TWO PRIVILEGED REPORTS

Mr. MOAKLEY. Mr. Speaker, I ask unanimous consent that the Committee on Rules have until midnight tonight to file two privileged reports for printing under the rules.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

PROVIDING FOR CONSIDERATION OF H.R. 4503, FEDERAL WATER POLLUTION CONTROL ACT AMENDMENTS OF 1981

Mr. MOAKLEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 247 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 247

Resolved, That upon the adoption of this resolution it shall be in order to move, section 402(a) of the Congressional Budget Act of 1974 (Public Law 93-344) to the contrary notwithstanding, that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4503) to amend the Federal Water Pollution Control Act to authorize funds for fiscal year 1982, and for other purposes, and the first reading of the bill shall be dispensed with. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Public Works and Transportation, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Public Works and Transportation now printed in the bill as an original bill for the purpose of amendment, and all points of order against said substitute for failure to comply with the provisions of clause 5, rule XXI are hereby waived. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER pro tempore. The gentleman from Massachusetts (Mr. MOAKLEY) is recognized for 1 hour.

Mr. MOAKLEY. Mr. Speaker, I yield the usual 30 minutes, for purposes of debate, to the gentleman from Tennessee (Mr. QUILLEN), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 247 provides for the consideration of H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981. The rule is an open one which provides for 1 hour of general debate and waives section 402(a) of the Budget Act. The waiver is necessary because the bill authorizes appropriations for fiscal year 1982 but was not reported out prior to May 15, 1981, as required by the Budget Act. In addition to this, the rule makes in order the committee amendment in the nature of a substitute which will be treated as an original bill for the purposes of amendment. The prohibition against appropriations in a legislative bill, contained in clause 5 of rule XXI, is also waived against the substitute. The rule further provides for one motion to recommit with or without instructions.

Mr. Speaker, H.R. 4503 represents a reasonable compromise achieved by the Committee on Public Works and Transportation which balances the need to continue improving the quality of water with the equally compelling need to impose reasonable limitations on the financial liability of the Federal Government for these programs. The goals established by the Federal Water Pollution Act amendments—namely fishable and swimma-

ble waters and reduction of polluted discharges into navigable waters—will be facilitated by enactment of this measure.

Mr. Speaker, H.R. 4503 serves the goals of the original landmark legislation by making necessary changes to the EPA's construction grants program. The bill takes a fiscally sound approach to the revisions in the grants program and authorizes the exact amount which the Omnibus Reconciliation Act allocated for this purpose.

Mr. Speaker, although there are some limitations imposed by the bill, the Committee on Public Works has retained many of the innovative provisions of the existing act. H.R. 4503 would mandate that at least 3 percent of the funds allocated to each State be used to explore novel approaches to water treatment and permits each Governor to expend up to 5 percent on such programs. While recognizing the need for creativity in the environmental area, this bill would permit up to 30 percent of each State's funds to be used for the rehabilitation of sewage systems and the correction of infiltration and inflow problems which plague our older cities.

Mr. Speaker, I strongly believe that H.R. 4503 will serve to make necessary savings of Federal dollars but without totally disrupting projects presently under design and construction in our cities. Without the continued support of the Federal Government, our communities, which had relied on Federal commitments when they undertook their programs, would be forced to enter the bond market to raise funding for projects already underway. Even with the grandfathering in of existing projects, the total Federal exposure under the grants program is reduced by over 50 percent.

Mr. Speaker, the bill, which will be considered if this rule is adopted, will permit funding for the construction of reserve treatment capacity which will meet community needs projected over a 10-year period. Moreover, rather than forcing communities to build costly secondary treatment facilities, the bill permits coastal localities to apply to the EPA Administrator for permission to dump partially treated wastes in ocean waters, provided environmental safeguards are met.

Mr. Speaker, H.R. 4503 is a responsible attempt on the part of the Committee on Public Works and Transportation to meet the Nation's environmental needs but within our current budgetary contraints. Mr. Speaker, I urge the adoption of this rule to permit consideration of this important legislation.

Mr. QUILLEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the gentleman from Massachusetts (Mr. MOAKLEY) has described the provisions of the rule very ably, and also the provisions of the bill.

The administration does not support the bill as it is drafted. They prefer the provisions of H.R. 3703. But under the rule, amendments can be offered to bring this bill into line.

We all know that when EPA was created, it was a bureaucratic nightmare. I would like to see its wings clipped. I would like to see more water pollution control, but with reasonableness. Also, Mr. Speaker, I would like to see EPA work with dedication for the cause for which it was created. It should work not only with private industry, with the different communities and cities and municipalities and counties throughout this country, but do the job that it was created to do without all the bureaucrats downtown coming out with regulations that no one can live with.

This is a good rule. I urge its adoption.

Mr. Speaker, I have no requests for time, and I yield back the balance of my time.

Mr. MOAKLEY. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR THE CONSIDERATION OF H.R. 4603, DEPOSIT INSURANCE FLEXIBILITY ACT

Mr. MOAKLEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 253 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 253

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4603) to provide flexibility to the Federal Deposit Insurance Corporation, the Federal Savings and Loan Insurance Corporation, and the Federal supervisory agencies to deal with financially distressed depository institutions, and the first reading of the bill shall be dispensed with. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking, Finance and Urban Affairs, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment in the nature of a substitute recommended by the Committee on Banking, Finance and Urban Affairs now printed in the bill as an original bill for the purpose of amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the committee amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

□ 1245

The SPEAKER pro tempore. The gentleman from Massachusetts (Mr. MOAKLEY) is recognized for 1 hour.

Mr. MOAKLEY. Mr. Speaker, I yield the usual 30 minutes to the gentleman from Missouri (Mr. TAYLOR), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 253 is the rule providing for the consideration of H.R. 4603, the Deposit Insurance Flexibility Act. The rule is an open one, providing for 1 hour of general debate which is to be divided and controlled by the chairman and ranking minority member of the Committee on Banking, Finance and Urban Affairs. In addition, the rule makes in order the committee amendment, in the nature of a substitute, as an original bill for purposes of amendment. The rule also provides for one motion to recommit with or without instructions.

Mr. Speaker, the legislation, which will be considered if this rule is adopted, will provide temporary, additional authority to a number of Federal regulatory agencies having jurisdiction over depository institutions. This authority would provide agencies such as the Federal Deposit Insurance Corporation and the Federal Savings and Loan Insurance Corporation with additional options to choose from when assisting banks and other thrift institutions to mitigate their financial difficulties caused by soaring interest rates. H.R. 4603 is necessary in order to insure the fiscal soundness of these institutions so that the substantial risk to Federal depository insurance funds may be reduced.

Mr. Speaker, this legislation would expand the authority of the FDIC by permitting it to purchase the securities of troubled banks under its jurisdiction or to make contributions to prevent their failure. In addition, the FDIC would be permitted to approve mergers of larger savings banks, in FDIC receivership, with assets over $2 billion if a merger would ease the financial strain on the insured banks. The FDIC would also be authorized to intervene through capital infusion either to prevent a bank's insolvency, or to enable a bank to continue normal operations, or to reduce a risk or loss which is federally insured. At this time, the FDIC can only act in this manner if the bank is regarded as essential.

Mr. Speaker, our troubled savings and loans institutions are also assisted by this legislation. The emergency

powers of the FSLIC would substantially parallel those of the FDIC. Mergers and acquistions of S. & L.'s would be temporarily authorized. However, for both agencies, H.R. 4603 would set certain priorities to be followed when mergers and acquistions are being considered. Mergers of like institutions within individual States would be preferred over interstate combinations. Such a provision emphasizes the importance which the committee still places on intrastate banking and thrift institutions.

Mr. Speaker, H.R. 4603 would also empower the FSLIC to provide assistance at an earlier point in the financial crises of an institution. Rather than being forced to await the imminent default of an institution, the FSLIC could consider such factor as the financial stability of insured savings and loan institutions as well as risks to its own assets when it contemplates action.

Mr. Speaker, the Federal Home Bank Board and the National Credit Union Administration will also be assisted by this legislation. The Federal Home Loan Bank Board would be permitted to convert mutual institutions into Federal stock charter organizations. Stock charter organizations are traditionally easier to assist than mutual organizations. Furthermore, the Credit Union Administration's Insurance Fund will be allowed to borrow from the Central Liquidity Facility, under emergency conditions. H.R. 4603 attempts to preserve credit unions as distinct financial entities, although a purchase of such unions by other federally insured financial institutions would be allowed.

Mr. Speaker, this legislation is temporary in nature as underscored by its sunset provisions. It is designed to meet what all of us hope is a temporary strain on our financial institutions. The goal of the Committee on Banking, Finance and Urban Affairs is to provide maximum flexibility to the Federal Deposit insurance agencies. By increasing the number of options available to these agencies, such as capital infusion, mergers and acquisitions, a low-cost resolution of a particular problem is made more likely.

Mr. Speaker, the Federal Deposit Flexibility Act is a much needed piece of legislation which will enhance, temporarily, the powers of Federal agencies to deal with the current difficulties in the thrift industry. Mr. Speaker, I strongly urge adoption of this rule and support of this legislation.

Mr. TAYLOR. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 253 is a 1-hour, open rule under which the House will consider H.R. 4603, a bill that grants temporary emergency powers to the Federal agencies that insure the deposits in the Nation's thrift institutions in order to assist financially troubled institutions.

As the gentleman from Massachusetts (Mr. MOAKLEY) has noted, this rule makes the committee amendment in the nature of a substitute in order as an original bill for the purpose of amendment under the 5-minute rule, and provides one motion to recommit with or without instructions.

This is a simple, straightforward rule, and there was no controversy about it during our hearing in the Committee on Rules.

We did have considerable discussion about the necessity for this type of legislation in the committee, however, and we were led to believe there would be ample time for floor debate.

Mr. Speaker, H.R. 4603 permits the Federal Deposit Insurance Corporation, the Federal Savings and Loan Insurance Corporation, the Federal Home Loan Bank Board and the National Credit Union Administration to offer financial assistance to depository institutions adversely affected by severe economic conditions, if the assistance extended would reduce the potential cost to the deposit insurance funds.

This emergency authority would expire on September 30, 1982, and is designed to allow our Federal regulatory agencies to arrange charter conversions and mergers of troubled financial institutions.

As one Member who has previously expressed concern about rising interest rates and the high degree of concentration of assets in a few major banks and bank holding companies, I questioned the sponsors of this legislation at length during our committee hearing.

I was pleased to receive assurances from the gentlemen, Mr. ST GERMAIN, Mr. STANTON, and Mr. WYLIE, from the Banking Committee that any mergers across State lines and across industry lines will come only after every reasonable effort has been made by the Federal regulatory agencies to obtain an intrastate solution when faced with a problem institution.

We were assured that institutions of the same type in the same State have to be given the first opportunity to merge. After that, institutions of the same type but in different States; after that, institutions of a different type, but in the same State; and after that, institutions of a different type from different States.

Mr. Speaker, under the legislation we are about to consider, the Federal Deposit Insurance Corporation will be allowed to provide assistance to institutions that are in financial difficulty to lessen the FDIC's risk of loss. The point here is an attempt to avoid widespread failures of thrift institutions.

Mr. Speaker, there is no opposition to this rule, and there will be ample time for debate and amendments under the 5-minute rule, so I urge the House to adopt the rule and proceed to the consideration of the bill.

Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. MOAKLEY. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

FEDERAL WATER CONTROL POLLUTION ACT AMENDMENTS OF 1981

Mr. ROE. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4503) to amend the Federal Water Pollution Control Act to authorize funds for fiscal year 1982, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New Jersey (Mr. ROE).

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. WYLIE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 382, nays 4, answered "present" 1, not voting 46, as follows:

So the motion was agreed to.

The result of the vote was announced as above recorded.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 4503, with Mr. STRATTON in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. Pursuant to the rule, the first reading of the bill is dispensed with.

Under the rule, the gentleman from New Jersey (Mr. ROE) will be recognized for 30 minutes, and the gentleman from Arkansas (Mr. HAMMERSCHMIDT) will be recognized for 30 minutes.

The Chair recognizes the gentleman from New Jersey (Mr. ROE).

Mr. ROE. Mr. Chairman, I yield such time as he may consume to the distinguished chairman of the Committee on Public Works and Transportation, the gentleman from New Jersey (Mr. HOWARD).

Mr. HOWARD. Mr. Chairman, I rise in support of H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981.

The present program to improve the quality of our waters derives from the Federal Water Pollution Control Act Amendments of 1972. That act is one of the great landmarks of environmental legislation. It established as goals the reduction, and ultimately the elimination, of discharges of pollutants from municipal sewage systems and industrial plants. An interim goal, set for July 1, 1983, was to achieve, wherever attainable, fishable and swimmable water quality.

Two primary mechanisms were established to accomplish these goals. First, industries and municipalities were required to treat their wastes to clearly definable minimum levels based on the application of treatment technologies. Second, for municipalities, a program of 75 percent Federal grant assistance was established for treatment works. Since 1972 significant progress has been made in the removal of pollutants. With regard to municipal waste treatment over 20,000 grants have been awarded in approximately 10,000 sewage jurisdictions. However, fewer than 3,000 projects have been completed. The majority of funds have gone to projects which are still under design and construction. For this reason we can expect substantial further improvements in water quality as all of these plants are completed.

The administration has proposed that the program be drastically changed in essentially three respects. Grants would be made only for secondary and more advanced treatment and new interceptor sewers. No grants would be made for reserve capacity in projects. And finally, States would be directed to give the highest priority to projects in urban-industrial areas.

The bill reported by our committee represents the culmination of the fine efforts of the chairman of our water resources subcommittee, the gentleman from New Jersey, Mr. ROBERT A. ROE; the ranking minority member of that subcommittee, the gentleman from Arkansas, Mr. JOHN PAUL HAMMERSCHMIDT; and the other subcommittee members. I also want to express my appreciation to the ranking minority member of the full committee, the gentleman from California, Mr. DON H. CLAUSEN, for his usual fine efforts in enabling us to achieve a truly bipartisan bill in the great tradition of our committee.

H.R. 4503 represents a responsible approach to the need for changes in the grants program brought about by existing budgetary constraints. It provides for a reduced Federal role in the construction of new treatment projects. It authorizes the appropriation of only $2.4 billion in 1982, a figure consistent with the reconciliation act and the administration's position. It also recognizes the absolute necessity of avoiding total disruption in the case of projects under design and construction. It does this by grandfathering these projects with regard to grant eligibility. Without such a provision, communities would be forced to enter the bond market to raise funding for projects already under way in order to make up for a cutback in Federal funding. Our bill gives communities the necessary time to adjust.

Mr. Chairman, H.R. 4503 ia a good bill and a responsible bill which meets the needs both of the Federal Water Pollution Control Act and current budgetary consideration.

I urge passage of the bill.

□ 1315

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, I wish to compliment the distinguished gentleman from New Jersey (Mr. HOWARD) as chairman of the committee, for bringing this bill to the floor. This legislation is needed and deserves the support of the entire membership of this committee.

I also would like to compliment the gentleman from New Jersey (Mr. ROE), the chairman of the subcommittee.

This is deserving legislation and should be passed.

Mr. DICKS. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. I yield to the gentleman from Washington.

Mr. DICKS. Mr. Chairman, I want to commend the chairman of the full committee and the distinguished chairman of the subcommittee and the ranking members for an outstanding bill. I have been deeply concerned about the fact that we did not have anything in the budget for 1982 for the construction grants program. I think the gentleman's statement clearly indicates the concern of this committee, and the Members' interest in rectifying that omission. I hope the Appropriations Committee can move quickly after this bill is authorized to get an appropriation bill in place for 1982 or we are going to do substantial damage around the country.

Most of you have heard me speak before on the issue facing us today. I have long been concerned that we move quickly to reauthorize and fund the construction grants program.

We have the chance today to adopt the first step in that process. I hope you will join me in supporting the committee's bill.

This bill provides the administration's requested $2.4 billion funding level. It achieves this goal by making some timely and necessary reductions in the scope of the program. But it maintains our national commitment to clean water.

We began our efforts to clean up America's rivers, lakes, and streams with the Federal Water Pollution Control Act of 1972, and we have made real progress since that time.

The program has been modified and improved to give States more control and a greater number of options in meeting the federally mandated water quality standards since its adoption in 1972.

Unfortunately, the program has been subject to many stops and starts along the way. Many of the problems associated with the construction grants program can be traced to the uncertain nature of its funding and its changing eligibility requirements.

There is no question that we must provide wastewater treatment capacity to communities in order to allow them to grow. Though sewers are not an exciting topic, without them, there can be no local development. And wide fluctuations in the program severly hamper the planning efforts of those communities.

Towns and cities across the Nation are experiencing delays in building necessary treatment facilities because of a lack of action here in Congress in reauthorizing and refunding the construction grants program. As of September 30, more than 30 States had exhausted virtually all of their Federal construction allotment. Costly delays are occurring in many of our districts. We need to act soon to prevent further interruption at the State level.

Quick action is all the more necessary when you realize that this bill is just the first of three difficult and time-consuming steps which must be taken before localities will have money to spend. The step we take today will reauthorize the construction grants program. It restricts eligibility, and therefore cuts the total cost of the program.

Following this step, we must act on a supplemental appropriation of $2.4 billion, and must raise the budget ceiling to accommodate that funding.

Neither of these steps will be easy in the current budgetary climate.

But they are necessary if we are to provide important Federal assistance to local communities to construct the wastewater treatment systems which are vital to their futures.

I hope you will join me today in approving the committee's bill, so we can move on in the process of helping communities meet Federal water quality standards.

Mr. HOWARD. I thank the gentleman for his remarks. I would say the gentleman is absolutely correct. There were no funds included in the first budget resolution or Reconciliation Act for this program. We were told by the administration there could be $2.4 billion, which is a decrease from past years, provided that certain "reforms" were made. The committee members on both sides did an extremely commendable job in trying to balance the few dollars that we have, comparatively, for water pollution control in this country and to bring this bill to the floor. I thank the gentleman for his comments.

Mr. HAMMERSCHMIDT. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I am very pleased to give my strong support for H.R. 4503 as reported by the Committee on Public Works and Transportation. This legislation is the result of many days of hearings and extensive efforts by members of the Committee on Public Works and Transportation and its water resources subcommittee. The chairman of the subcommittee, the gentleman from New Jersey, has provided outstanding leadership during the development of H.R. 4503. I greatly appreciate the bipartisan cooperation at both the subcommittee and the full committee level and am confident that the same strong bipartisan support will be shown for the bill here in the House.

H.R. 4503 makes valuable changes in the construction grants program and authorizes the $2.4 billion that the President desires for this program in fiscal year 1982.

The incentive to develop this legislation comes directly from the administration, and for that, they are strongly to be commended. By requiring legislative action before continued funding and by submitting substantive proposals earlier this year, an excellent basis for review was provided. From these administration initiatives, the bill before us has been developed using input from agencies, States, municipalities, and many knowledgeable organizations and individuals, during numerous hearings.

The construction grants program is an important cornerstone of the Water Pollution Control Act. It provides Federal assistance to aid municipalities in meeting the rigorous and worthwhile goals of that act. Since 1972, $5 billion per year has been authorized for the construction grants program. About $3 billion per year has actually been appropriated. This funding has been used to provide 75 percent Federal grants for water pollution control projects throughout the Nation.

Many positive contributions have resulted from the expenditure of these funds. Since 1972 there has been a 65-percent improvement in the amount of pollutants removed from the Nation's wastewater. This has cut dramatically the pollution of our rivers and lakes. Many of the projects which have begun under this program have yet to be completed. When they are, the rivers and lakes of America will show even higher water quality.

I want to be clear, however, that there are problems which have plagued the program since its inception. Some of the problems date back prior to the Water Pollution Control Act Amendments of 1972, but others are a result of burdensome and often unneeded regulations and procedures which have created a bureaucratic quagmire that has bogged down progress. Some changes can be made administratively, and regulatory reform is underway at EPA to make these improvements. Even with better management of the program, other changes need to be made through legislation.

The construction grants program was originally meant as short-term aid to municipalities to help them reach the stringent goals of the Water Pollution Control Act. Because of funding and other program delays, the end of the program is not yet in sight. Changes which have been made since 1972 and changes which are contained in H.R. 4503 will enable States and municipalities eventually to take back their preeminent role in providing wastewater treatment.

H.R. 4503 represents the changes that the Committee on Public Works and Transportation recommends in order to make $2.4 billion available to the program as soon as possible during fiscal year 1982. I am especially pleased that the bill limits the authorization to only $2.4 billion for 1 year as the President has requested.

I must clarify one point which has, in some cases, been confused as a budget or program implication of H.R. 4503. It is not. I am afraid there has been some misunderstanding about the term "Federal exposure". It must be understood from the outset that this is not Federal cost, not Federal authorization, not Federal obligation, not even Federal commitment. It is an estimate, based on figures over which there is a good deal of disagreement, of the national needs for water pollution control works that could be eligible for Federal funding up to 20 years in the future. The figures are based on a needs survey conducted by EPA every 2 years.

States and localities estimate the amount of treatment works that they need now and in the near future. It is not directly related to water quality concerns and is, in fact, primarily an accounting procedure.

Nonetheless, it is important to avoid giving States and municipalities the impression that Federal funding will be available in perpetuity to meet all of these localities' described needs. Therefore, there has been a desire to reduce as much as possible the total exposure, as it has been called. This exposure has been reduced in H.R. 4503 by about half. There are several reasons that it is difficult to reduce the exposure much further, although we will continue to seek equitable ways to do so. The most important one is that States and municipalities need flexibility in determining which types of projects are most needed to meet their particular needs. By giving this kind of flexibility in how funds are used, it is inevitable that the potential exposure is larger. I think this is acceptable, and in fact desirable, so long as it is made clear to all concerned that there should be no false expectations of perpetual Federal appropriations for the program. The fact is that the Congressional Budget Office confirms that the total cost, the only cost, of H.R. 4503 is $2.4 billion, exactly what the President has requested and less than half the annual authorized amount of the past 10 years.

I believe that, on a somewhat lighter side, we may all learn a valuable lesson from the following, which is a most accurate yet amusing "exposure" of this issue. It is by an anonymous, but keenly thoughtful, poet:

ODE TO EXPOSURE

Just when we thought we'd mastered the terms
Of the budgeting process, a mean can of worms,
With budget authority, not to mention outlays,
And reconciliation to plague us these days,
Along comes a new word, a standard, a test,
For a bill to be held to along with the rest.
Exposure, it's called, and if that's imprecise,
It's a way of condemning a new form of vice.
If a program's to run for a number of years,
Exposure's the term to conjure up fears,
Though a measure will fit with the budget resolution,
As does our bill on water pollution.
If we don't pare the program and options foreclose,
Some day down the road we'll indecently expose
The national treasury to ruin, disaster,
To the drain of each dollar, sou, pfennig, piaster.
The scenario's awesome, that much I'll allow,
Though exposure exponents don't tell us just how,
The one-year bill our committee's just writ,
Will in profligate fashion the nation commit
To spend one thin dime more than we oughter,
To finish the job of assuring clean water.
Exposure is not a Federal cost.
You can do it for years, not a cent will be lost.
Not a cent does it authorize or appropriate,
Commit, reserve, expend, obligate.
"Exposure to what," one with reason might query.
The answer: "An estimate, an odds-maker's theory."
EPA asks the states what they need for what use,
And the numbers come in, as a dunce would deduce,
Somewhat inflated, in a single word "high,"
In hopes of a bigger piece of the pie.
In gross terms they're useful, I'll freely grant that,
But they don't make a peg where I'd hang my best hat.
We've tried in our bill the program to pare,
Though not in response to the exposure scare,
But instead recognition, sensible and sound,
That in future there'll be fewer Federal bucks going round.
So in casting your vote, weigh the merits, results,
Leaving games of exposure to consenting adults.

I would like to mention several provisions of H.R. 4503 that I believe are especially important.

In 1977 the formula by which States receive funds was developed after extensive compromise. There has been no substantive objection to the formula by any State, and I believe this formula has shown itself to be equitable and fair. H.R. 4503 maintains the existing formula for the distribution of funds.

The special needs of small communities, many of which cannot afford to maintain and operate conventional, centralized wastewater systems, are addressed by the continuation of the 4 percent set-aside by States with significant rural population. In addition, the innovative and alternative set-aside program is continued and expanded. This program allows new, less expensive, and more energy efficient systems to receive priority consideration.

The bill increases the percentage of funding to assist States which have been delegated responsibility for administering part of the program. As delegation of responsibility to States increases, State management programs will become increasingly important, especially in times of reduced program funding. With a reduced authorization level, the higher percentage is needed to maintain funding near the current level.

A provision of great importance provides project funding flexibility which is needed because of reduced funding levels. Under the provision, for new projects, up to 30 percent of a State's funds can be used for water pollution treatment needs that would be otherwise ineligible for Federal funding. For example, collector sewers and combined sewers would no longer be eligible for funding unless a grant has been previously received. The 30 percent flexibility can be used at the discretion of a Governor of a State to help meet needs such as these which many States have. This flexibility, combined with grandfathering provisions, provides, I believe, an appropriate transition for the program.

H.R. 4503 contains repeal of the industrial cost exclusion (ICE) provision of the Clean Water Act. The House passed this repeal as part of H.R. 2957 in May of this year. It is included again to insure that it is made part of the construction grants reforms. A report on the effects of the industrial cost exclusion was submitted in March 1981 by the Environmental Protection Agency. That report and hearings held this spring by the Water Resources Subcommittee of the Public Works and Transportation Committee provided a litany of terrible effects this provision would have if allowed to go into effect in November of this year.

The objectionable aspects of ICE and its farreaching negative impacts are clear. Up to 1985, some of the potential effects discussed in the report are:

Four hundred and two communities are affected, mostly older cities and small towns;

Food and kindred products is the major industry affected;

The potential non-Federal share increases by 60 percent on the average;

Instead of eliminating inequities, the ICE provision creates new or worsens existing inequities; and

Small communities will likely suffer the greatest ICE-induced financial burdens.

EPA concludes that ICE will delay construction of wastewater treatment facilities from 1 to 3 years to permit replanning and new financing and that any delay beyond 2 years will result in cost increases greater than the amount which might be saved through ICE. Comments received by EPA on ICE from industries, municipalities, and others have been almost totally (approximately 95 percent) against retaining ICE.

The longer we delay, the longer planning and construction of municipal plants will be delayed and the longer industries will delay decisions on treatment. It is clear that ICE will increase the cost of wastewater treatment facilities because of these delays. At least as important, ICE will probably further delay meeting water quality objectives.

During 2 days of hearings earlier this year, witnesses from municipalities, industries, and organizations provided further substantiation of negative effects of the provision. I am particularly concerned by the fact that it is smaller communities which are most severely harmed. These are communities least able to take on this burden.

I would like to provide a couple of examples from Arkansas, where the potential negative impacts are greater than the national average. The EPA report on ICE notes an $89-per-household cost average for taking over the industrial cost burden. In Arkansas the average is $137 per household. In some communities it is much higher. Fayetteville would have a $255-per-household burden. In Clinton the burden would be more than $2,000 per household, and this is in a community which has an unemployment rate higher than both the State and national rate. Clearly, this burden cannot be tolerated.

It must be emphasized that the great preponderance of evidence that we have received indicates that not repealing ICE will cost Federal, State, and local communities more than it would save. Not repealing ICE creates numerous inequities because municipalities and industries already having joint treatment facilities are not affected by ICE. Not repealing ICE will delay attaining water quality goals. Based on EPA's own report and the extensive testimony our subcommittee received, repeal of ICE is, therefore, in the best interest of the clean water program.

The legislation before us makes a significant addition which can help municipalities deal with their long-term wastewater treatment needs. The new provision provides necessary encouragement and assistance to applicants for development of capital financing plans. The construction grants program helps fund the building of sewage treatment facilities. However, the operation, maintenance, and replacement of these facilities have been and remain the responsibility of municipalities. The municipalities need help to forecast long-term capital needs and plan for future financing to meet the needs. Many local revenue systems only repay past obligations and cover current operating costs. Consideration of major system improvements and rehabilitation must be made, and only long-term financial planning can permit economic self-sufficiency for local sewage treatment programs. The provision directs EPA to cooperate and encourage this planning and to provide appropriate technical assistance. It is an excellent and forward-thinking provision.

H.R. 4503 creates a new set-aside which will improve water quality management planning capability in each State. One percent of each State's allotment, or $100,000, whichever is greater, will be used by each State to identify, plan, and help implement comprehensive facility and nonpoint source programs. The State would have basic control over the funding and will carry out water quality management planning through entities in the States as much as possible.

It is my understanding that EPA would be expected to provide support and assistance in the program, but would not be able to either withhold funds or dictate procedures. The funding is not discretionary with EPA, but is required to be set aside for water quality management planning. The funds set aside would remain available until expended.

States will develop a plan for the program in cooperation with local, regional and interstate entities and will give funding priority to local and regional comprehensive planning organizations. These organizations, nearest to the planning needs, are often most capable of effectively using these funds. In some States, effective programs exist at the State level that deserve consideration.

There are many water quality problems that cannot be solved by expanded wastewater treatment facilities alone. Coordination and areawide review of new facilities is needed, and nonpoint sources and groundwater problems must be addressed. H.R. 4503 provides support for water quality management planning which is needed to coordinate pollution control efforts and deal with water pollution problems beyond sewage treatment.

Section 15 of H.R. 4503 states a policy that projects should, in the estimation of the State, achieve optimum water quality management consistent with the public health and water quality goals and requirements of the act. This is, of course, most desirable.

It must be stressed that, as was agreed when this amendment was accepted, and as it clearly states, the States are the sole determiner of all aspects of the provision. In no way does this direct new priority list requirements on the State. In addition, EPA shall not use this provision to dictate to the States any requirements. The provision is directed to the States alone, and no regulations, rules, or directives are to be developed or implemented regarding the provision by EPA. The States will use the provision to meet their own public health and water quality needs as they see them.

A very important provision of H.R. 4503 has the potential for very great savings. In 1977, modifications of secondary treatment requirements were allowed in the case of certain coastal communities discharging treated wastewater through ocean outfalls into marine waters. Very stringent environmental safeguards had to be complied with before such modifications could be granted. The provision applied for a very short period of time. Based on hearings by the Committee on Public Works and Transportation, H.R. 4503 removes the limitations while maintaining the environmental safeguards to insure protection of marine ecosystems and public health. GAO in a report on this subject dated May 22, 1981, estimates that up to $10 billion could be saved through expanded use of ocean discharge. EPA itself, in the last week, has estimated up to $6.3 billion in savings from the provision in H.R. 4503.

It is clearly an important program and one which, with the environmental safeguards, will help meet the goals of the Water Pollution Control Act in an an economically rational way.

I again want to commend my colleagues on the Public Works Committee for the excellent job that has been done in developing H.R. 4503. I truly believe this legislation is vital to the districts of each and every Member of Congress and that each of us can and should vote for its passage.

Mr. Chairman, I yield such time as he may consume to the distinguished ranking minority member of the full Committee on Public Works and Transportation, the gentleman from California (Mr. CLAUSEN).

Mr. CLAUSEN. Mr. Chairman, I rise in strong support of H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981. This legislation reauthorizes and reforms one of the Nation's most important environmental programs, a program designed to protect and enhance the quality of the water on which so much of our collec-

79-059 O-85-25 (Pt. 19)

tive well-being depends. The bill is the product of a cooperative and in-depth effort on the part of virtually all of the Public Works Committee's members. It was thus no accident that H.R. 4503 was favorably reported by voice vote of the full committee with no voices raised in opposition.

The chairman of our Public Works Committee, the gentleman from New Jersey (Mr. HOWARD), is to be complimented on the encouragement and leadership that he has once again shown with respect to important legislation like H.R. 4503. Special recognition is warranted for the chairman of our Subcommittee on Water Resources, the gentleman from New Jersey (Mr. ROE), and his ranking Republican counterpart, the gentleman from Arkansas (Mr. HAMMERSCHMIDT). These two very conscientious and capable legislators have spent innumerable hours researching the issues, questioning witnesses, studying options, and crafting the specific provisions that make up H.R. 4503. They have done a remarkably creditable job.

And recognition should also be given to the chairman of our Investigations and Oversight Subcommittee, the gentleman from Georgia (Mr. LEVITAS), and his ranking Republican counterpart, my colleague from California (Mr. GOLDWATER), for the thorough and most productive oversight hearings that they recently completed on EPA's construction grants program.

Mr. Chairman, H.R. 4503 represents a major step forward in our efforts to fashion a reformed, more efficient, more cost-effective construction grants program. Before I discuss some of the specifics of the committee's bill, I would like to make a couple of general statements about why I believe the committee has taken some of the positions in H.R. 4503 that it has.

First, the administration sent up its construction grants program reform proposals in mid-April. It became apparent that many of the administration proposals were in need of refinement from the standpoint of achieving the program streamlining and reduction in Federal program involvement that were described as the proposals' goals. As the many days of hearings progressed and countless witnesses from all over the Nation testified on the legislation, it become apparent that, while there was general support for moving the program in the direction sought by the administration, there was also a strong consensus among the committee members, that many of the administration's proposals required a measure of modification before being enacted into law. Therefore, the committee worked to adopt the thrust of the administration's proposals while at the same time providing for an adequate level of transition and flexibility for the States and municipalities that are being expected to assume the additional program funding requirements.

The administration's initiative establishing zero fundings for the fiscal year 1982 construction grants program, until enactment of reform legislation, has greatly focused congressional attention on the need to bring our construction grants program more in line with current budget reality and the need to increase State and local roles in the implementation of this program.

The second general point I would like to make is that the committee approached its assignment to fashion construction grants program reforms in a spirit of bipartisanship and cooperation, seeking to develop meaningful program reforms that will strike the necessary balance between important economic and environmental goals. There is no doubt in my mind that we have made major progress in our efforts to achieve that objective.

Permit me now to comment on some of the specifics of H.R. 4503 and to relate those to the administration's proposals in each area.

The committee bill has the effect of substantially reducing the authorization level for fiscal year 1982 for the construction grants program. The administration requested that the $5 billion fiscal year 1982 authorization level for this program, first, be eliminated—which occurred in connection with the reconciliation process—and subsequently increased to $2.4 billion upon enactment of reform legislation. The committee bill authorizes for fiscal year 1982 the exact amount requested by the administration, $2.4 billion. The Senate counterpart bill, by comparison, authorizes $2.4 billion for fiscal year 1982 but $2.6 billion a year for each of fiscal years 1983 through 1985.

The administration asked for a 1-year construction grants program bill in order to be in a position next year to examine the entire Clean Water Act. The committee has responded to that request by authorizing continuation of this program at this time for only 1 year.

The administration proposed total elimination of Federal grant assistance for construction of reserve capacity beyond 1980 population levels. Currently, approximately 20 years reserve capacity is grant fundable for treatment plants and as much as 40 years of reserve capacity can be funded for interceptors. The committee bill strikes a compromise in this area. For projects which are currently in the pipeline and have received either a step II design or step II construction grant, current rules on reserve capacity will continue to apply. For other projects, only 10 years of reserve capacity will be eligible for Federal grant assistance under the construction grants program.

In a similar but different area, the administration proposed total elimination of grant eligibility for a number of currently eligible treatment works categories. These include infiltration/inflow correction, major sewer rehabilitation, collector sewer installation, and correction of combined sewer overflow problems. The committee bill takes a major step toward moving the program in the direction desired by the administration while still providing a level of flexibility and transition believed to be both appropriate and necessary. The committee compromise would permit projects currently receiving construction grants program assistance to continue to operate under current rules for eligible categories. For other projects, the committee accepts the administration's proposal to focus funding on treatment plant and interceptor construction. However, H.R. 4503 permits up to 30 percent of a State's allotment for any given year to be used to construct any category of currently eligible cost-effective treatment works. Under this provision, a State's Governor would retain a necessary measure of discretion to address all types of legitimate water quality problems.

The administration proposed that the act's innovative and alternative set-aside provision be made discretionary rather than mandatory as is currently required. Again, the committee attempted to strike a middle ground designed to continue the necessary emphasis on perfecting innovative and alternative technologies while at the same time providing for an increased level of State discretion. H.R. 4503 permits the Governor of a State to choose what level between 3 and 5 percent is desired to be set aside to encourage and fund innovative and alternative technologies.

With respect to project prioritization, the administration proposal would have put the Federal Government in the position of telling the States what their water quality problems are and how to address them. The committee instead opted to leave unchanged the current provision of the Clean Water Act which states that—

> Notwithstanding any other provision of this act, the determination of the priority to be given to each category for construction of publicly owned treatment works within each State shall be made solely by that State.

Another provision in the committee bill, an amendment adopted during the subcommittee markup, offers great promise of increasing construction grants program cost effectiveness. It provides that water efficiency measures and devices, that is, conservation devices, are to be considered along with other alternatives in determining what overall wastewater treatment

system is most cost effective. This provision is designed to encourage examination and optimum use of devices and technologies, like water-saving shower heads and toilets, which use up to 90 percent less water—in some cases—than conventional models. In this way we can better avoid building—and, therefore, paying for—wastewater treatment plants that are larger than they need be.

There are numerous other instances in this legislation in which the committee has attempted to recognize the legitimate concerns that have been raised by the administration with respect to reforming the construction grants program. I am hopeful and even confident that our efforts will be successful in making this important water quality program more cost effective and efficient and that we will be in a position shortly to present legislation to the President of which we will all be proud.

Before closing, allow me to leave you with two thoughts. First, as H.R. 4503 and its counterpart legislation in the Senate have proceeded to move down the legislative track, the two bills have become more similar, not less so. Amendments were offered by the Environment and Public Works Committee, a few by Senator PETE DOMENICI, chairman of the Senate Budget Committee, to perfect some of the administration's proposals dealing with reserve capacity and collector sewer eligibility. In the Public Works and Transportation Committee, amendments were similarly offered and adopted reducing the differences in the two bills. I am confident that this trend will continue as we move into and out of conference on this year's contruction grants program reform legislation.

Second, it must be remembered that, in addition to enactment of reform legislation, there is also the need to have the construction grants program appropriated for fiscal year 1982 and also to have room in the final budget resolution to accommodate the appropriation. The latter two steps await completion of our reform legislation and so it is extremely important that we expedite this effort as much as possible.

Mr. Chairman, H.R. 4503 is a good bill. It reforms the construction grants program while at the same time providing for the necessary transition and flexibility for purposes of phasing in these reforms. I am pleased to be able to urge all of our colleagues here today to join in passing this major environmental legislation.

Mr. ROE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I am pleased to bring to the floor today H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981.

This bill is the result of very extensive hearings and deliberation by our Subcommittee on the Construction Grants Program of the Environmental Protection Agency. It is truly a bipartisan effort and I wish to commend the ranking minority member of the subcommittee, the gentleman from Arkansas (Mr. HAMMERSCHMIDT) for his usual fine support. I also wish to express my deep appreciation to the gentleman from New Jersey, the chairman of the full committee (Mr. HOWARD) for his excellent leadership and the ranking minority member of the full committee, the gentleman from California (Mr. CLAUSEN) for his excellent contributions and support.

Public Law 92-500, the Federal Water Pollution Control Act Amendments of 1972 is one of the most important pieces of environmental legislation ever passed by the Congress. It provided for an intensive effort to reduce and ultimately eliminate the discharge of pollutants into our Nation's waters. To accomplish this, it set increasingly stringent standards for discharges of industrial and municipal wastes. For municipal wastes, it required secondary treatment by 1977 and the application of best practicable waste water treatment technology by 1983. The 1977 date for secondary treatment was later extended to 1983 for those communities which were unable to meet the date because of a lack of Federal funding. In connection with these new requirements for secondary and best practicable treatment, the act provided a 75-percent Federal grant share for construction of publicly owned treatment works. The grants were to be available for such categories as secondary treatment, more stringent treatment, infiltration/inflow correction, major sewer system rehabilitation, new collector sewers and appurtenances, and correction of combined sewer overflows.

Since 1972, significant progress has been made in the removal of pollutants from municipal discharges. In the next few years even more improvements will be seen since the majority of the construction grants funds to date have gone to projects which are still under design and construction. The continuation of our efforts to control the pollution of our waters is vital not only to the health and well-being of our citizens, but to our Nation's economy as well.

Earlier this year, the administration proposed drastic changes in the construction grants program. This was coupled with an announcement that fiscal year 1982 funding would not be supported unless the Congress passed legislation making changes in the program. Also, as part of this process, the Reconciliation Act reduced the fiscal year 1982 funding to zero with the provision that $2.4 billion would be authorized in the event that legislative changes are enacted into law.

The administration's bill would modify the program in three basic respects. First, it would limit Federal grant assistance to secondary and more advanced treatment and new interceptor sewers. Second, it would eliminate grant assistance for the inclusion of reserve capacity in a treatment system while leaving unchanged the requirement in the law for inclusion of such capacity. Finally, States would be directed to give the highest priority to projects in urban-industrial areas.

Mr. Chairman, we have prepared a chart which shows the reductions in the amount of Federal participation, expressed as a percentage of each State's total needs as shown in the 1980 EPA needs survey, under the administration's proposal. I ask unanimous consent that this table be inserted into the RECORD at this point in my remarks.

ADMINISTRATION PROPOSAL—EPA CONSTRUCTION GRANTS PROGRAM STATE NEEDS AND REAL FEDERAL SHARES

[Dollars in millions]

	1	2	3	4	5	6	7	8

Note.—I—secondary treatment, II—more advanced treatment, III—infiltration/inflow correction, replacement and rehabilitation, IVA—collector sewers, IVB—interceptor sewers, and V—combined sewer overflow correction.

Roman numerals in the table represent the various categories of treatment works presently eligible for grant assistance. Category I is secondary treatment; category II is advanced treatment; category III is infiltration/inflow correction and sewer replacement and rehabilitation; category IV(A) is new collector sewers; category IV(B) is new interceptor sewers; and category V is correction of combined sewer overflow problems. Column 1 indicates each State's total needs. Column 2 indicates the total needs for the categories which would be eligible for grant assistance under the administration bill. Column 3 indicates the backlog included in the figures in column 2. Backlog represents the needs for 1980 population levels, without reserve capacity. Column 4 shows the 75-percent Federal share for all categories under existing law. Column 5 shows the 75-percent Federal share for categories I, II and IV(B), including reserve capacity. Column 6 shows the Federal share of the backlog associated with categories I, II and IV(B)—excluding reserve capacity. Column 7 shows what the Federal share would be if only categories I, II and IV(B) were eligible for assistance, including reserve capacity. Finally, column 8, which is the most important column, shows what the actual Federal grant percentage of the State's needs would be under the administration proposal with only categories I, II and IV(B) eligible for assistance and with reserve capacity not eligible for assistance. This table demonstrates vividly the amount of the cost of this program which would be transferred to State and local governments.

Enactment of such a proposal would cause untold hardship in communities throughout the country. The reason for this is that EPA does not award a single grant for an entire project, rather grants are awarded for segments of projects. In addition, separate grants are given for step 1, planning; step 2, design; and step 3, construction. It is not at all unusual for a project to have a step 3 grant for construction of a particular element, such as an outlet works, and also have a step 2 grant for design of other parts of the system. A change in grant eligibilities without an appropriate transition period would place communities in a position of having immediately to raise additional revenues to make up for a cutback in Federal assistance in order to complete unfinished projects.

Our committee is not prepared to accept such a situation. We feel it is imperative that a reduction in Federal assistance be fashioned in such a manner as to avoid total disruption in the construction of vitally needed treatment works. For this reason, our bill grandfathers projects which are presently receiving assistance under the Federal Water Pollution Control Act. For new projects our bill limits the eligible reserve capacity to 10 years, as opposed to the minimum of 20 years now generally accepted. It also reduces grant assistance for categories other than treatment plants and interceptor sewers for new projects. It does, however, continue grant eligibility for correction of infiltration/inflow problems where this is shown to be the most cost-effective approach and allows a Governor, at his discretion, to use up to 30 percent of a State's total allotment on other categories of treatment works. This provides necessary flexibility to the States in meeting their particular sewer treatment problems.

Following is a section-by-section analysis of the bill:

SECTION-BY-SECTION ANALYSIS

Section 1 provides that the act may be cited as the "Federal Water Pollution Control Act Amendments of 1981".

Section 2 amends Section 201(g)(5) of the Federal Water Pollution Control Act. This section provides that the Administrator of EPA, shall not make any grants for the construction of treatment works unless the grant applicant has demonstrated that innovative and alternative waste water treatment processes and techniques have been fully studied and evaluated by the applicant. The techniques which must be studied and evaluated include the reclaiming and reuse of water, recycling technologies, land treatment and the confined disposal of pollutants so that pollutants will not migrate to cause water or other environmental pollution.

Section 2 adds the requirement that grant applicants also study and evaluate the net cost of potable water and sewer service to the consumer which would result from innovative and alternative technologies which would provide potable drinking water as part of the wastewater treatment process.

Section 3 repeals Section 201(k) of the Federal Water Pollution Control Act. Section 201(k) is the Industrial Cost Exclusion provison which eliminates federal grant assistance for treatment plant capacity to treat the flow of any industrial user in excess of a flow per day equivalent to 50,000 gallons per day of sanitary waste. Repeal of Section 201(k) was included in H.R. 2957 which passed the House on May 28, 1981.

Section 4 directs the Administrator to encourage and assist applicants for grant assistance to develop and file with the Administrator capital financing plans which, at a minimum, will project the applicant's requirements for waste treatment for 10 years; project the nature, extent, timing and costs of necessary expansion and reconstruction of treatment works within the applicant's jurisdiction; and set forth the manner in which the applicant intends to finance such expansion and reconstruction.

Section 5 in subsection (a) provides that the Fiscal Year 1982 grant funds shall be allotted by the Administrator not later than the tenth day after the date of enactment of this act.

Subsection (b) extends the existing formula for allotment of construction grant funds among the States through Fiscal Year 1982.

Subsection (c) extends through fiscal year 1982 the provision that no State shall receive less than one-half of one percentum of the total allotment.

Section 6 provides that for fiscal year 1982 not to exceed 4 percent of the total amount authorized for construction grants ($2.4 billion) is authorized to be reserved for making grants to States for the costs of administering provisions of the Act relating to the grants program which have been delegated to the States. Existing law provided for a reservation of 2 percent of the total authorization ($5 billion) which came out to $100 million a year for administration. The percentage for Fiscal Year 1982 is changed to 4 percent to reflect the reduced funding level of $2.4 billion for that year and to assure that close to $100 million per year will still be available in order to allow continued management of the program by participating States at a stable level.

Section 7 extends the set-aside for increasing the federal grant share from 75 to 85 percent for innovative and alternative technology through fiscal year 1982. It also amends the existing 3 percent mandatory set-aside to provide that the set-aside shall be not less than 3 percent nor more than 5 percent. The amount of the increase between 3 and 5 percent will be at the determination of the Governor of the State.

Subsection (b) of Section 7 extends the authority for the increased federal share for innovative and alternative technology through fiscal year 1982. It also amends the innovative and alternative technology provision to provide that any component of a treatment project is eligible for the increased share if that component is innovative. The law presently requires that a significant portion of the treatment works utilize innovative and alternative technology. The purpose of the amendment is to encourage development of innovative and alternative components.

Subsection (c) of Section 7 removes the existing prohibition in the law against providing the higher federal grant share for innovative and alternative technology relating to collector and interceptor sewers, major sewer rehabilitation, and combined storm and sanitary sewers. This prohibition discourages the development of innovative and alternative technology in these areas and is, therefore, considered inappropriate.

Section 8 modifies the requirement that two brand names or equal be listed in a proprietary specification for bids by providing that when it is impractical or uneconomical to make a clear and accurate description of the technical requirements, a brand name or equal description may be used.

Section 9 directs the Administrator to reserve, each fiscal year, not to exceed 1 percent of the amount authorized for construction grants, or $100,000, whichever amount is greater. These reserved sums are to be used by the Administrator to make grants to the States to carry out water quality management planning. This planning is to include, but not be limited to, the identification of cost effective and locally acceptable facility and nonpoint measures to meet and maintain water quality standards; the development of an implementation plan to obtain State and local financial commitments to implement these measures; and a determination of the nature, extent and causes of water quality problems in various areas of the State.

Section 10 directs the Administrator to allot to the State of New York from fiscal year 1982 funds an amount necessary to pay the cost of conveying sewage from the Convention Center of the City of New York to the Newtown Sewage Treatment Plant in Brooklyn. This provision was included in H.R. 2957 which passed the House May 28, 1981.

Section 11 provides an authorization of $2.4 billion for the construction grants program for Fiscal Year 1982.

Section 12 provides that field testing of innovative and alternative waste water treatment processes and techniques shall be eligible for grant assistance under the Act in order to encourage the development of such processes and techniques and to better insure that they will perform as planned.

Section 13 expresses the policy of Congress that a project for waste treatment and management undertaken with financial assistance under the Federal Water Pollution Control Act shall be considered as an overall waste treatment system for waste treatment and management and shall be that system which constitutes the most economical and cost effective combination of treatment works to meet the requirements of the Act. It also provides that water efficiency measures and devices (conservation measures) are to be considered along with all other alternatives in determining what overall system is most cost effective.

It provides that the Administrator, before approving any Step 3 construction grant for treatment works, must determine that the overall project of which the treatment works are a part is the most cost effective combination of treatment works to meet the requirements of the Act. This section applies to new projects which have not yet received any Federal assistance and to projects which are in the Step 1 planning phase. It does not apply in cases where a Step 2 engineering design or a Step 3 construction grant has been approved.

Section 14 is designed to expedite the consideration of grant applications and to eliminate duplication of effort by EPA and the States. It provides that where a State has been delegated sufficient authority to administer the construction grants program under Title II, the Governor may certify to the Administrator that a grant application meets applicable requirement of State and Federal law. In such a case the Administrator must approve or disapprove the grant application within 30 days. If it is disapproved, the reasons for disapproval must be set forth in writing. If no action at all is taken within 30 days, the grant application is deemed to be approved. This provision should also have the effect of encouraging States to seek increased delegation of administration of Title II of the Act in order to be eligible for the expedited grant approval process.

Section 15 states that it is the policy of Congress that projects for waste water treatment and management undertaken with Federal financial assistance under the Water Pollution Control Act shall be projects which, in the estimation of the State, are designed to achieve optimum water quality management consistent with the public health and water quality goals and requirements of the Act.

Section 16 amends Section 301(h) of the Federal Water Pollution Control Act which relates to ocean discharges of municipal wastes. Presently Section 301(h) allows the Administrator, with the concurrence of the State, to issue a discharge permit under Section 402 of the Act which allows the discharge into ocean waters of effluent which has received less than secondary treatment. A number of limitations are included in this section which have decreased its effectiveness. It is applicable only to ocean outfalls existing at the time the 1977 amendments were adopted and for which a permit was applied for within 270 days after the date of enactment of the 1977 amendments.

This section of the bill removes the limitation that the outfall must have existed as of the date of enactment of the 1977 amendments. It also, in connection with this, removes the requirement that application for a permit be made within 270 days after the enactment of the 1977 Act.

In addition, Section 16 removes as redundant a requirement in Section 301(h)(8) that grant funds be used consistent with requirements in Title II by a community receiving a variance. Finally, the bill restates the original Congressional intent that communities which have achieved secondary treatment are eligible to apply for and receive the variance.

Section 17 deals with reserve capacity. Under existing law, adequate reserve capacity, generally 20 years, is required to be included in publicly owned treatment works

and this reserve capacity is eligible for grant assistance. The Administration has recommended the elimination of grant assistance for reserve capacity. Its proposal would limit Federal assistance to treatment capacity required to meet 1980 population levels.

This section would retain existing grant assistance for reserve capacity in those projects which are presently receiving Step 2 design or Step 3 construction grant assistance. For projects which have not yet received any grant assistance, or are in Step 1 planning, it would limit such assistance to a reserve capacity representing 10 years of projected growth. The 10 years would be measured from the date of the first application for grant assistance.

Section 18 deals with categories of treatment works which are eligible for grant assistance. Present law provides assistance for treatment plants, interceptor and collector sewers, correction of inflow/infiltration problems, rehabilitation of sewers, and correction of combined sewer overflow problems. The Administration's proposal would limit grant assistance to treatment plants and interceptor sewers.

This section retains federal grant assistance for presently eligible categories for all projects currently receiving assistance under the Act. For new projects which have not yet received any Federal assistance, up to 30 percent of a State's yearly allotment under the Act, as determined by the Governor, could be used for categories such as correction of combined sewer overflow problems, and sewer rehabilitation. For all projects, correction of infiltration/inflow problems would remain grant eligible. This would provide increased discretion to the States in deciding how their money should be spent to meet their particular problems.

Section 19 states that it is the sense of Congress that judicial notice be taken of the amendments to the Federal Water Pollution Control Act and the other provisions contained in H.R. 4503, and that the parties to Federal consent decrees establishing a schedule for construction of publicly owned treatment works are encouraged to reexamine the provisions of such consent decrees and, where required by equity, to make appropriate adjustments in such provisions. This is designed to encourage consideration of the impact of reduced funding levels on the scheduled completion dates of projects under a consent decree.

Section 20 directs the Administrator of EPA to submit to Congress not later than June 30, 1982, a new report of the costs of meeting the requirements of the Federal Water Pollution Control Act for discharges of municipal waste as amended by our bill. This is the so-called "needs" survey which EPA is required to submit to Congress every two years. This section will provide Congress with a revised estimate of needs reflecting the changes in the program made by the bill. In preparing this report, the Administrator is to give emphasis to the provisions of Section 8 of the bill in addressing water quality needs adequately and appropriately.

Section 21 provides that the project for publicly owned treatment works for Bath Township, Michigan, shall be eligible for payments from sums allotted to the State of Michigan in an amount equal to the amount such works would be eligible for under the Act if the project had been constructed with Federal grant assistance. Bath Township was compelled to proceed with this project by court order with its own funds at a time when Federal funds were being impounded. Had it not been for these most unusual circumstances, the project would have been constructed with the usual 75-percent Federal share. This section is designed to correct this inequity.

Mr. Chairman, this bill is a 1-year bill so that we may examine the program in greater detail next year. It appropriates $2.4 billion for fiscal year 1982, an amount consistent with the Reconciliation Act and the administration's position. It recognizes the need to reduce Federal involvement in the program while maintaining stability and avoiding unnecessary disruption. It is a sound bill and a responsible one. I urge passage of the bill.

□ 1330

Mr. HAMMERSCHMIDT. Mr. Chairman, I yield 4 minutes to the gentleman from Pennsylvania (Mr. CLINGER), a member of the committee.

Mr. CLINGER. I rise in support of H.R. 4503, and I would like to also extend my congratulations to my chairman, the gentleman from New Jersey (Mr. ROE), the ranking minority member, the gentleman from Arkansas (Mr. HAMMERSCHMIDT), as well as the chairman of the full committee, the gentleman from New Jersey (Mr. HOWARD), and the ranking minority member, the gentleman from California (Mr. CLAUSEN), for what I think is a well-crafted and outstandingly good bill, which is going to continue the commitment of this country to cleaning up the Nation's waters.

Mr. Chairman, the Federal Water Pollution Control Act Amendments of 1981, H.R. 4503, restructures the program to aid the construction of sewage treatment projects.

Under current law, five categories of projects are eligible for construction grants providing a 75-percent Federal share. The legislation we are now considering continues this commitment for projects now in the planning, design, and construction stages.

In the future, however, under the administrative proposal several categories involving new projects would not be eligibile for the Federal share. In particular, projects involving collector systems would be constructed without benefit of construction grants program aid.

Mr. Chairman, in our deliberations on this bill in both the Subcommittee on Water Resources and the Committee on Public Works and Transportation, we discussed thoroughly the demands for sewage treatment facilities in the future. The point was made that rural areas rely heavily on collector systems, and that the construction grants to modernize these systems are just now showing results.

Under H.R. 4503, the mandatory 4-percent set-aside for States with significant rural populations will be continued to allow small and rural communities to develop less costly alternatives to conventional treatment works. In addition, the existing 3-percent set-aside that States must spend on innovative and alternative technologies could be increased up to 5 percent by the Governor of a State.

Nevertheless, I think attention must be drawn to the special needs of rural areas. We have heard a great deal about the intention to direct the reduced Federal aid toward urban areas. Indeed, those categories that remain eligibile for the 75-percent Federal share suggest that this trend is in the making.

Mr. Chairman, in this regard, it must be made clear that economic development ranks high on the agenda of rural areas. But according to a recent National Governors Association publication entitled "America in Ruins," a survey of 6,870 communities reveals that nearly half of the wastewater treatment plants are operating at 80-percent capacity or higher. As a rule of thumb, writes author Pat Choate:

> When a community wastewater treatment system is operating at 80-percent capacity, that community will not be able to add additional industrial load. This is particularly true for smaller communities where the 20 percent of excess capacity will, in quantitative terms, represent limited treatment abilities.

The point is this: If we are to rely on economic development to bolster growth and create jobs, underlying ability to expand must be provided. An adequate sewage treatment facility is integral to any such expansion.

H.R. 4503 would continue eligibility for a 75-percent share to construct collector systems, through its provision allowing up to 30 percent of a State's allotment to be used for any currently eligible categories. A high priority should be given to allocating the State allotment toward meeting rural needs.

The need for adequate sewage treatment facilities in rural areas is critical; an evenhanded approach in apportioning discretionary funds under the construction grant program is necessary to balance the trend of favoring urban areas.

Mr. ROE. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. Mr. Chairman, I rise in strong support of this legislation, and I want to pay special tribute to the chairman of the subcommittee and the ranking minority member, who have done so much and brought so much knowledge and information to bear on this very vital subject of providing the necessary funds and improvements in a program which lies at the heart of maintaining our quality of life and the environmental protection which the people of his country need. I would also like to commend the leadership of the chairman of the full committee, the gentleman from New Jersey (Mr. HOWARD), and the

ranking minority member, the gentleman from California (Mr. CLAUSEN), who have demonstrated their commitment to the importance of this program.

Mr. Chairman, there are few things which we Americans take more for granted than the opportunity to drink clean water and the belief that our streams and rivers and lakes should be free from pollution, because it is fundamental to our quality of life. And yet we do take it for granted. But the American people know that it does not come automatically. It takes programs such as the one we are considering today to make it possible.

I think the committee, by formulating a 1-year bill, has made a move in the right direction. Most of the work that has been done in the past has been successful. Nevertheless, as our oversight investigations have shown, there is room for improvements, and those improvements and changes can be made. And when we come back next year to deal with this program, this committee will bring out a bill that will provide the long-term, long-range, predictable funding that is necessary. But in the meantime, we cannot bring a halt to those plants which are under construction and need to go forward to clean up our rivers and our streams and our lakes in order to enhance the environmental quality of this Nation.

Therefore, Mr. Chairman, we have got to recognize that, simply eliminating funding, or even dramatically reducing funding, does not make the pollution disappear. We certainly do not want to see additional property taxes and rates skyrocket, yet we might if we do not pass this legislation. This legislation is important for the people of America. It is not this committee's bill; it is not Mr. ROE's bill; it is not Mr. HAMMERSCHMIDT's bill. It is the bill that will provide the necessities of life for the people of America. No administration, whether it is this one or any former or future administration, can hold hostage legislation which is devoted to cleaning up the waters of this Nation.

Therefore, Mr. Chairman, I hope that the Members of this House will give not just support but overwhelming and resounding endorsement of this important piece of legislation and the excellently crafted bill which has been reported to the House.

Mr. ROE. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from California, Hon. GLENN ANDERSON.

Mr. ANDERSON. Mr. Chairman, I rise to join with my colleagues in expressing my strong support for this significant piece of legislation, H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981.

As you know, this important measure would authorize $2.4 billion for fiscal year 1982 for the Federal wastewater treatment plant construction program. I commend our Water Resources Subcommittee chairman, Hon. ROBERT A. ROE, and our ranking minority member of the subcommittee, Hon. JOHN PAUL HAMMERSCHMIDT, for their tireless efforts in producing such a fine bill. And, of course, commendations are in order for our full committee chairman, Hon. JIM HOWARD, and the ranking member of the full committee, Hon. DON CLAUSEN, for their many contributions to this legislation.

Of particular interest to me is language contained in sections 2 and 16 of the bill.

Section 2 amends section 201(g)(5) of the Federal Water Pollution Control Act. As stated in the committee report for H.R. 4503, section 201(g)(5) provides that—

The Administrator of EPA shall not make any grants for the construction of treatment works unless the grant applicant has demonstrated that innovative and alternative wastewater treatment processes and techniques have been fully studied and evaluated by the applicant. The techniques which must be studied and evaluated include the reclaiming and reuse of water, recycling technologies, land treatment and the confined disposal of pollutants so that pollutants will not mitigate to cause water or other environmental pollution. In studying and evaluating these technologies, the applicant is to take into account and provide for, to the extent practical, the more efficient use of energy and resources. Section 2 modifies this provision to require the applicant to study and evaluate these various innovative and alternative technologies taking into account and providing for, to the extent practical, the most efficient use of energy and resources which will result in the lowest net cost of water and sewer service to the consumer.

Mr. Chairman, this consumer-oriented language was submitted by the city of San Diego because of its need to import nearly 100 percent of its water. The cost, and as importantly, the diminishing supply of ground and river water in California, has led San Diego to plan for a wastewater-to-potable water recycle system. The city's research shows that traditional secondary treatment is less expensive than other more advanced techniques of effluent treatment. And, that the vascular plant, reverse osmosis technology that San Diego proposes for its recycle system will be more expensive. Yet, the product of the recycle system will be not only treated sewage, but also potable water. And this water will be much less expensive to the consumer than that currently imported. The point is that while the sewage treatment side of San Diego's recycle system will be more costly than conventional secondary treatment, the potable water side will be much cheaper, and the net result will be very economical for the consumer. This section of the bill requires that applicants from communities which rely on costly imported water conduct studies and evaluate wastewater treatment systems which not only are energy and resource efficient but will also give the consumer a financial break.

Section 16 clarifies original congressional intent that eligible applicants for ocean discharge waivers include communities which have achieved secondary treatment capability. Briefly, the Clean Water Act of 1977 allows the Environmental Protection Agency—EPA—to grant waivers to publicly owned wastewater treatment facilities so that they can discharge primary treated municipal waste into the marine environment when it can be shown that costly secondary treatment is not necessary. The EPA, however, misinterpreted congressional intent on this matter by excluding communities from obtaining a waiver if they were already meeting secondary treatment requirements—even in cases where primary treatment is both cost effective and environmentally sound.

The city of Avalon, which happens to be located within my congressional district, is one such community that was forbidden to apply for an EPA waiver because they were already achieving secondary treatment. A May 22 Government Accounting Office—GAO—report to the Congress entitled, "Billions Could Be Saved Through Waivers for Coastal Wastewater Treatment Plants," states that Avalon "appears to be ideally suited for a waiver and could sutstantially benefit from the resulting reduced O. & M. expenses." In its recommendations to Congress, the GAO believes that we should "indicate that the waiver provision is not intended to preclude communities already achieving secondary treatment from obtaining waivers in cases where primary treatment is both cost effective and environmentally sound."

It is important to note that on page 17 of the committee report (No. 97-270) it states that—

With respect to communities which have achieved secondary treatment, the legislative history of (sic) 1977 Act clearly demonstrates that such communities were to be eligible to apply for and receive variances under section 301(h). EPA's regulations denying eligibility to such communities were successfully challenged in one U.S. Court of Appeals. Section 16 of the bill affirms the original congressional intent with regard to this matter. This will remove any doubt as to the eligibility of communities such as Avalon, California, which, as noted by GAO, "appears to be ideally suited for a waiver and could substantially benefit from the resulting reduced O. & M. costs."

□ 1345

Mr. ROE. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Minnesota (Mr. OBERSTAR).

Mr. OBERSTAR. Mr. Chairman, during markup of this bill, the com-

mittee approved an amendment I offered, section 9, to set aside 1 percent of the construction grant funds for State and areawide water quality management activities. The purpose and the specific language of section 9 is to build upon the over 200 water quality management plans now in existence, which EPA has approved over the past several years.

These plans were developed at considerable expense to Federal, State, and local governments, plans which have proven extremely useful in defining the extent and nature of water pollution problems, and in developing the intergovernmental cooperation necessary to begin solving them.

I offered the amendment for two reasons:

First, to underscore the need for continued planning. Planning is necessary not only when we have an abundance of Federal funds, as we have had in the past several years, but especially is it necessary in times of reduced Federal budgets and reduced availability of funding for pollution control activities. Then more than ever do we need to plan to use those funds wisely and the most effectively.

The 1-percent set-aside would be used by local planning agencies to help determine the most cost-effective, most efficient pollution control measures for both point and nonpoint sources.

It would help States and localities move more toward self-sufficiency in implementing such pollution abatement activities and help them identify the precise nature and causes of pollution in various areas and the solutions to those problems.

Second, I believe very strongly that we have to do this kind of planning at the local government level where the problems are, where the solutions must be devised and carried out, and where the planning expertise exists.

Section 9 recognizes that goal and provides local public comprehensive planning organizations the financial means of setting priorities in water quality management.

I want to emphasize that this area of wastewater management planning is not a new program. It is not something that we have invented. It is an activity that has been carried on intensively for the past 10 years, and more than that, going back to the initial program in 1956.

Area wastewater planning agencies have been doing this work and doing it effectively and successfully. I just feel that in the future we are going to need more work of this kind because more of the burden of pollution control is going to be shifted to the State and local government level.

If that is going to happen, then we must provide those agencies with the financial tools necessary to carry out that very considerable role.

With less than half the original construction grant funds authorization to be available in future years, now is not the time to zero out our support for planning; in fact, we need responsible planning and priority setting more than ever, and I am pleased that local planning authority and funding have been reestablished in this bill.

In conclusion, I want to commend the chairman of the subcommittee, the gentleman from New Jersey (Mr. ROE), a recognized national expert in the field of water pollution abatement for the splendid job he has done literally living with this legislation since the beginning of the year, skillfully guiding it to this point on the floor.

There were occasions when it looked as though perhaps we were not going to have a pollution control program for the future and I commend the gentleman for his relentless efforts and leadership to assure that the program will survive.

Mr. ROE. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Pennsylvania (Mr. EDGAR).

Mr. EDGAR. Mr. Chairman, I would like to commend the ranking minority member and the ranking majority member of the Subcommittee on Water Resources for their excellent work on this piece of legislation.

Let me, in the limited time I have, make four observations about this bill, H.R. 4503, to amend the Water Pollution Control Act amendments.

I believe that the water issue is the next major crisis that our Nation will face, and with the limitation of Federal dollars and State dollars, I think it is important for us to recognize that we need to develop a national policy as it relates to not only water pollution control, but water supply, the infrastructure needs of our cities, and all of the future needs for water resources.

I think this bill today gives us our first opportunity in the construction grants area to deal with a very important issue that will lead us in future days to additional discussions on what the Nation's water policy needs are.

The second point that I would like to make is that in this legislation, through the efforts of the committee and an amendment which I offered, we provide a study of the need for flexibility. When we addressed the administration's proposal for arbitrary elimination of certain eligible categories, the subcommittee retained eligibility for all funded projects in currently eligible categories while providing up to 30 percent of the States' construction grant funds for certain categories in the future.

No one is sure whether the 30-percent figure of flexibility is the appropriate one, so I offered a further provision directing EPA to study the category needs question in compiling a new needs survey mandated by H.R. 4503.

Another major critical issue and my third point is the fact that this legislation, while it provides funding of $2.4 billion of authorization, will not be sufficient to meet all of our desires in a number of critical areas. We must target these funds to critical needs.

I was successful in placing language within the bill to provide that we target these limited funds to address the public health and water quality needs of our Nation. I think anytime when we have limited Federal dollars they must be used both flexibly in areas of need, in the Northeast and Midwest for reconstruction and rehabilitation, in the Sun Belt areas for new cities and new communities, and new basic infrastructure needs, but they must also be targeted to address current water quality needs and public health requirements.

Finally, just a word about the administration's proposal. President Reagan said he would not request any sewer construction grant funds unless there was basic reform. I think this legislation is reform. I think environmentalists, the committee, the construction industry can be proud that they have joined together in putting a piece of legislation together that I hope the administration can accept and to which it can commit the $2.4 billion of appropriations.

Mr. HAMMERSCHMIDT. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Pennsylvania (Mr. COUGHLIN), a member of the Appropriations Committee and a member who has had a keen interest for a long time about cleaning up the waters of this Nation.

Mr. COUGHLIN. Mr. Chairman, I commend the Members of the House Public Works Committee for bringing H.R. 4503 to the House floor. The members of the committee have worked long and hard on these needed amendments.

As all of us in the Chamber realize, the wastewater treatment construction program is, for all practical purposes, out of money today. Several weeks into this new fiscal year, many States throughout the Nation are without any funds to continue the design or construction of wastewater treatment plants. Other States are left without sufficient funds to continue their wastewater treatment efforts.

The need for this legislation is, therefore, imperative. It must be expeditiously passed and a compromise formulated with the Senate to insure that a final bill is sent to the President for his signature.

As a member of the House Appropriations Subcommittee on HUD/Independent Agencies, I am very well acquainted with the problems associated with this program. At the same time, however, I am aware of the impact zero-funding in fiscal year 1982 will

have on our Nation's commitment to clean its waters. Our subcommittee has pledged to provide the administration's announced $2.4 billion in wastewater treatment funds once needed reforms are signed into law. In fact, as part of the fiscal year 1982 continuing appropriations resolution, the conferees inserted language in the report affirming their intention to use the first legislative vehicle available to provide adequate funding for this needed program.

I remain concerned that a disruptive and costly funding lapse might occur if appropriate authorizing legislation is not enacted promptly and followed immediately by appropriations. I reaffirm my commitment and offer my assistance in any way possible to insure that an authorization and an appropriation bill are enacted. The Congress must not abandon its historic support for our Nation's clean waters or for the program it formulated to clean up these waters.

Mr. HAMMERSCHMIDT. Mr. Chairman, I reserve the balance of my time.

Mr. ROE. Mr. Chairman, I yield 2 minutes to the gentleman from Illinois (Mr. FARY).

Mr. FARY. Mr. Chairman, I rise today in strong support of the Public Work's efforts of behalf of the clean water program. Through the work of both the Oversight and Investigation and the Water Resources Subcommittees, we have, what I consider to be a very effective bill. I commend both our chairman, Mr. ROE and our ranking minority member, Mr. HAMMERSCHMIDT, for their able leadership in guiding this bill forward in such a timely manner. Given the challenge put to us by the administration, I feel confident that this bill reflects the President's fiscal concerns, while retaining the essential strength of the program. I join with my colleagues on the committee in asking for your support of this bill as reported out of the Public Works Committee.

This bill has a national focus, rather than a regional one. It addresses the concerns of both urban and rural communities in a host of ways. For example, this bill extends Federal grants for limited capacity to meet growing population needs. It also encourages the expansion of innovative and alternative technologies to meet out pollution problems. However, the primary focus of this legislation is cost effectiveness. If there was only one issue that our committee regarded as necessary, it was that whatever technology a community chose, it should be a cost-effective system, that will meet the requirements of the act. In these days of austerity, a more reasonable premise would be difficult to find.

It is my understanding that the Environmental Protection Agency is currently redefining the category of secondary treatment. I heartily encourage that activity. We must get back to a practical approach in the treatement of wastewater. I suggest that there is a correlation between our cost-effective focus and a redefinition of secondary treatment. Here, we have the opportunity to make water pollution control attainable by encouraging different technologies.

Probably the most important provision in this bill is the continuance of Federal grant assistance for presently eligible categories, for those projects currently receiving assistance under the act. This continuity, that is the backbone of our bill is desperately needed by all the States. Without this grandfathering provision, local communities and States simply could not absorb the costs of completing those projects in the works.

In the city of Chicago, the tunnel and reservoir project of the Metropolitan Sanitary District of Greater Chicago, which has an approved step 2 grant, has received $1.2 biilion. Yet the project still needs another million in Federal funds. This project will be a boon to the Chicago land area, capturing 80 percent of the raw sewage in underground tunnels, for treatment after a storm, rather than dumping these pollutants into the waterways. If the grandfathering section was not included in our legislation, the financial investment in this project would be lost. Alone, the city of Chicago could not afford this ambitious effort. Mr. Chairman, Chicago is not alone in this regard. There are literally hundreds of cities who have acted in reliance on our Federal commitment to water pollution control. If we change the rules now, the advances we have made will be lost.

I would strongly urge my colleagues to retain this grandfather provision and to support the bill in its entirety in order to maintain the integrity of our commitment and to continue the progress in cleaning up our waters.

Mr. ROE. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Louisiana (Mr. ROEMER).

Mr. ROEMER. Mr. Chairman, I strongly support H.R. 4305 and urge my colleagues to vote in its favor. The construction grants program is a huge budget item rightly targeted for reform by President Reagan and further improvements beyond the scope of this bill could still be made. However, our committee has sweated over this reform package, we have come up with a good bill, and we are now down to the wire. For the sake of the hard-pressed managers of sewer systems in our districts, if no one else, we should get this bill to conference and into law.

H.R. 4305 offers us the flexibility of making further refinements next year, it minimizes disruption in construction now underway, and it emphasizes cost-effective treatment. Most important of all, this bill is based on a sensible appraisal of what effect our reforms will have on the actual real-world implementation of the program.

In this regard, I am pleased that H.R. 4305 preserves the grant-eligible status of infiltration/inflow correction (known as infiltration/inflow correction) for those projects not yet in the design stage. Unlike the Senate, the House Public Works Committee benefited from substantial testimony on this serious issue. Although the EPA recommended that infiltration/inflow correction be removed from the categories eligible for Federal funding, groups as diverse as the Association of Metropolitan Sewerage Agencies, the National Utility Contractors Association, and eighty environmental groups supported maintaining current law as it related to inflitration/inflow correction and appears in H.R. 4305.

Infiltration/inflow is basically a clean water problem. Infiltration is the seepage of groundwater into sewer collection systems through leaks, breaks, and faulty joints. Inflow refers to fresh water that enters the system through other routes, notably roof and storm drains connected to the system. Although infiltration/inflow problems are commonly thought of in connection with the older cities of the Northeast, substantial infiltration/inflow problems exist nationwide.

For systems with infiltration/inflow problems, the difference between normal and peak flows can be extreme. After sudden rains, 400-percent flow increases are not uncommon—but even during dry spells, about half the flow to treatment plants is estimated to be infiltration: clean water, not sewage.

Unfortunately, it is not just expensively wasteful to transport and treat infiltration/inflow. Excessive infiltration/inflow has been found to be one of the major causes of plant performance failures, either by the flushing out of the micro-organisms that activate secondary treatment or by the diluting of pollutant strength below effective levels. Worse, excessive infiltration/inflow can result in total bypass of the treatment plant and the dumping of raw sewage into our rivers and lakes.

Infiltration/inflow correction is possible and in fact offers the simplest and most cost effective solution to many of the financing and performance problems that bedevil the construction grants program. The technology is just now coming into its own.

The need for rehabilitation can be more precisely measured and diagnosed, repairs are less costly and require fewer excavations than in the past. And the cost/benefit ratios of infiltration/inflow correction can be five

to six times that of additional treatment plant construction.

Although the cost of infiltration/inflow diagnosis and correction is a fraction of the cost of constructing additional treatment facilities, I fear that without Federal funding eligibility it would be too easy for financially strapped municipalities to ignore their infiltration/inflow problem and instead look to the Federal Government for large, peak capacity plants. A strong incentive for infiltration/inflow correction insures that we will not be wasting vast sums of money to treat unpolluted water and risking repeated permit violations in the future.

One of the major goals of the administration's reform legislation was to minimize Federal exposure. As a fiscal conservative, I have actively supported the majority of President Reagan's inititives in holding down Government spending. However, in this case, I believed, and the majority of the committee agreed, that the administration was setting out on a path that would be pennywise and pound foolish.

In short, the committee bill is a reasonable approach to reform and to good public policy. It provides the incentives and the measure of stability needed to help local governments meet the vital goals of the Clean Water Act.

Mr. HAMMERSCHMIDT. Mr. Chairman, I yield 5 minutes of the minority time to the gentleman from New Jersey (Mr. ROE).

Mr. ROE. I thank the distinguished gentleman from Arkansas and Mr. Chairman, I yield 3 minutes to the gentlewoman from New York (Ms. FERRARO).

Ms. FERRARO. Mr. Chairman, I rise in support of H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981. I want to congratulate Chairman ROE and the gentleman from Arkansas (Mr. HAMMERSCHMIDT), the ranking minority member of the Water Resources Subcommittee, for their outstanding work in bringing this bill to the floor so the House can act to get this vital program moving again.

Mr. Chairman, there is one provision of this bill that is of particular interest to me and to the city I represent. Section 19, which was added as a result of an amendment I offered in full committee, addresses the problem facing New York City and other municipalities which have entered into Federal consent decrees establishing construction schedules for wastewater treatment plants.

The section simply states that it is the sense of Congress that judicial notice be taken of the reduced funding levels in this bill for the purpose of reexamining the provisions of Federal consent decrees.

Many State and local governments have in the past few years entered into consent decrees with EPA dictating construction schedules for the completion of treatment works. In many cases, those construction schedules were based on an expected Federal funding level much higher than that authorized in this bill. If no adjustments are made in the construction schedules, States and local governments will be required to make up the lost Federal funds, in some cases hundreds of millions of dollars, with their own funds or stand in violation of the consent decrees.

Section 19 recognizes this reality and expresses the sense of Congress that courts take judicial notice of the reduced funding when considering changes in consent decrees.

It was never the intention of the Congress to heap enormous cost burdens on State and local governments in this program. This amendment is an attempt to maintain that important principle.

I believe the bill is a good bill and I urge its adoption.

□ 1400

Mr. ROE. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Michigan, the Honorable BOB TRAXLER.

Mr. TRAXLER. Mr. Chairman, I thank the gentleman for yielding these 3 minutes to me and to my distinguished minority member for allowing us to have that time.

Under the circumstances this is, indeed, a remarkable bill, the circumstances being the budget constraints and the reconciliation resolution and the position of the administration.

I wish to commend both the majority members of the subcommittee and the full committee and the minority members of the subcommittee and the full committee.

Certainly the pressures were great to do something other than what they have done.

In the limited time available to me, I would like to make some comparisons, if I may, between the 1972 act as amended, H.R. 4503, and the Senate bill, S. 1617. My recollection is that under the existing act, the one that is expiring or parts of it expire October 1, that there is an up to $5 billion per year authorization with up to 75 percent Federal and the rest being local and State funding of the individual projects at a runout cost of perhaps $90 billion in total. Compare that with S. 1617, which the Senate is scheduled to take up this afternoon. That is a $23 billion runout cost compared to the House bill, H.R. 4503, $50 billion.

The Senate has ultimately a 55-percent Federal contribution per project and the House version that we are now considering maintains the 75-percent Federal contribution.

As a general statement, I think it is fair to say that the recommendations that are contained in the Senate bill, S. 1617, do not represent reform, but represent a retreat, a retreat from this Nation's commitment to cleaning up our waters. Coming from a State that is surrounded by the largest fresh body of waters in the world, we have a keen and a valuable interest in maintaining the purity and restoring the purity of those waters and rivers.

The subcommittee and the full committee has done yeoman service in years gone by to achieve that goal. I want to commend them.

I hope at the appropriate time in conference that the gentleman's good views and the commonsense the gentleman has demonstrated here and the concern for the future of untold generations of Americans who are going to benefit so much from H.R. 4503 and the concepts and the principles that are there, I hope that every effort will be made in the conference to maintain our position.

I must say that I know for many of you, H.R. 4503 is not the closest thing to your hearts, but given the circumstances and the restraints under which you had to work, it is indeed a remarkable achievement. I do commend all of you.

Mr. HAMMERSCHMIDT. Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. PORTER).

Mr. PORTER. Mr. Chairman, twice this summer, my district suffered through the experience of having their basements flooded with a combination of storm-water and raw sewage. I think you can imagine their anguish—as well as the number of letters and phone calls I have received asking for relief from this terrible problem.

Sewers in my district were built decades ago when it was common to combine storm water runoff and sewage into one combined sewer system. The system works fairly well in moderate rainfall but spells sure disaster when heavy rainfall occurs. Heavy rains produce runoffs beyond the capacity of the sewers, forcing the storm waters—now mixed with raw sewage—to back up into basements.

Basement flooding with storm water alone would be bad enough. But the mixture of the water with a huge volume of organic waste was more than a nuisance: It did property damage of an irreparable nature, it created a public health risk for the large urban and suburban populations exposed to the flooding, and it polluted Lake Michigan and a long stretch of our beaches.

In the debate on the Water Pollution Act amendments, there are those who would have us believe that flood control and pollution control are mu-

tually exclusive. Indeed, the very nature of funding under the act has placed a primacy upon so-called pollution control projects and ignored so-called flood control projects.

The distinction is one which cannot be supported by engineering realities for more than half of the sewer systems in this country. As in my district, most of the sewer systems in this country, particularly those which are more than a few decades old, are combined storm overflow and sanitary systems.

The committee has recognized this fact. It has included combined sewers for funding in the bill before us today; the other body has not seen fit to do so.

In supporting the House version before us, we are establishing our fundamental understanding of the problem. We are saying that we recognize the greatest needs of the entire Nation and not just those of newly developing portions—those who can most afford to bear the costs because of expanding tax bases and also most able to take advantage of the latest technologies. We are saying that we recognize the need to help communities overcome the effects of age in order to negate the effects of water pollution. We are also recognizing that the greatest risk of such pollution occurs just where it is potentially most injurious to the public health—in the densely populated older areas of the country.

We recognized these problems in the past. We recognized them when we initially authorized the program's growth. We also recognized the limitations of funding and resources for the Federal Government and of the problems created if the Federal Government were to get into the business of building sewers for each community in the Nation.

Accordingly, we developed incentives for regional cooperation. In the Chicago area, such incentives led many suburban municipalities to enter into a cooperative agreement with the Metropolitan Sanitary District to build the tunnel and reservoir project, also known as TARP or deep tunnel.

That project has created much controversy in the press, among budgeteers, and among engineers. Many years into construction, there still appears to be doubt about just how much pollution will be stopped if the project is completed. Perhaps it will dry out all of the afflicted basements in the Chicago area; perhaps it will dry out none of the basements. More likely, it will help some but not help others very much.

In any event, the effect of a failure to proceed, at least to the completion of phase I, is clear: The situation will worsen, Lake Michigan will be threatened and people's health will be threatened. And if we do not reauthorize that portion of the act which provides funding for CSO's, we will do something far worse. For those communities who have followed Congress incentives and entered into cooperative regional agreements under that portion of the act, we will be saying "you missed your chance; there is no money for you because you did not already have an approved project."

Mr. Chairman, I very strongly urge the Members' support of H.R. 4503 and particularly commend to their attention that portion which deals with combined sanitary and overflow systems. I further urge that when this bill goes to conference with the other body, that the Members from the House stand firm in continuing to authorize funding for CSO's and continuing to authorize the development of regional cooperative agreements.

If this is done, the Federal Government will have kept faith with those communities who have planned, over the last decade, to resolve their pollution problems, while at the same time reminding those communities that they, too, have a responsibility to provide their fair share of the cost.

Mr. HAMMERSCHMIDT. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I want to commend the chairman of the full committee, the gentleman from New Jersey (Mr. HOWARD) and the ranking minority member of the full committee, the gentleman from California (Mr. CLAUSEN), for the contributions they have made to this legislation, but I particularly want to commend the gentleman from New Jersey who has provided outstanding leadership during the development of H.R. 4503. The bill has been pretty well explained and I think everyone fully understands what we are going to be voting on.

This legislation is the result of many days of hearing and extensive efforts by members of the Committee on Public Works and Transportation and its Water Resources Subcommittee. The chairman of the subcommittee, the gentleman from New Jersey, has provided outstanding leadership during the development of H.R. 4503. I greatly appreciate the bipartisan cooperation at both the subcommittee and the full committee level and am confident that the same strong bipartisan support will be shown for the bill here in the House.

H.R. 4503 makes valuable changes in the construction grants program and authorizes the $2.4 billion that the President desires for this program in fiscal year 1982.

The incentive to develop this legislation comes directly from the administration, and for that, they are strongly to be commended. By requiring legislative action before continued funding and by submitting substantive proposals earlier this year, an excellent basis for review was provided. From these administration initiatives, the bill before us has been developed using input from agencies, States, municipalities, and many knowledgeable organizations and individuals, during numerous hearings.

H.R. 4503 represents the changes that the Committee on Public Works and Transportation recommends in order to make $2.4 billion available to the program as soon as possible during fiscal year 1982. I am especially pleased that the bill limits the authorization to only $2.4 billion for 1 year as the President has requested.

I again want to commend my colleagues on the Public Works Committee for the excellent job that has been done in developing H.R. 4503. I truly believe this legislation is vital to the districts of each and every Member of Congress and that each of us can and should vote for its passage.

Mr. ROE. Mr. Chairman, will the gentleman from Arkansas yield?

Mr. HAMMERSCHMIDT. I am pleased to yield to my distinguished colleague.

Mr. ROE. Mr. Chairman, I know that I am out of time. The gentleman from California would like to be recognized.

Mr. HAMMERSCHMIDT. Mr. Chairman, I yield such time as he may consume to the gentleman from California (Mr. MINETA).

Mr. MINETA. Mr. Chairman, I thank the gentleman for yielding.

I would like to rise in support of H.R. 4503 and to commend the subcommittee chairman and the ranking minority member, the gentleman from Arkansas, for their great work on this.

I know that this bill has had the bipartisan support of the members of our committee.

I would again like to thank the chairman of the full committee, as well as my dear colleague, the gentleman from California (Mr. CLAUSEN) for their work on this bill and commend the passage of this bill to the Whole House.

Mr. Chairman, I too wish to rise in support of H.R. 4503, a bill to amend the Federal Water Pollution Control Act, and to provide critically needed grants program.

Last year, the House Public Works and Transportation Subcommittee on Investigations and Oversight, which I had the privilege of chairing during the last Congress, examined the grants program to determine why it has been so difficult to complete waste water treatment plant construction projects—that are needed to clean up the sewage that is being discharged from thousands of communities all across the country.

Probably the most important finding that came from that review was that the continuing uncertainty that many local officials have about Congress

willingness to fund this program, coupled with the frequent changes in the law made by the Congress itself, have most often been the root cause of these delays. And probably the most significant, and critically needed recommendation we made was that this program be given a period of stability and continuity.

Mr. Chairman, I believe that this bill, H.R. 4503, by reauthorizing funds for fiscal 1982, and by retaining certain eligibilities, and phasing out others, rather than abrubtly changing the rules in midstream as others would have us do, will provide an interim period of stability and continuity that is paramount, if we are to reassure local officials and the public that the Congress has not walked away from its commitment to cleaning up the Nation's waters.

Mr. Chairman, this bill will also allow us to carefully examine what must be done to meet this program's long-term needs.

Changes are needed, but as prior oversight has clearly established, they must be gradual changes, and I believe that the recent work of the Investigations and Oversight Subcommittee, now under the able leadership of the gentleman from Georgia (Mr. LEVITAS), and the hearings on this bill, held by the Water Resources Subcommittee, chaired by Congressman ROE of New Jersey, continue to underscore that need, and has provided us, as well, with a considerable and comprehensive body of knowledge that will allow us to address not only our water quality concerns, but our efforts to responsibly reduce Federal spending, and to live within the budget we establish.

Mr. Chairman, when the budget was developed earlier this year, It was done so with the knowledge that when revisions were made to the clean water law's construction grants program's requirements, room would be found to provide for a $2.4 billion authorization for this program. I have recently spoken with our colleague, Mr. JONES of Oklahoma, and he has pledged to work with me to provide for this funding.

Mr. Chairman, I want to urge all of my colleagues today, to rise with me in support of this bill, of this 1 year reauthorization, of this signal to the President, and to the American public that the House of Representatives of this 97th Congress still believes that clean water is important. We must not turn our back on that national mandate established almost a decade ago to clean up the Nation's waters.

The job is much too important to walk away from, and we have far to go before we can say we have achieved our goals.

Thank you.

Mr. WEISS. Mr. Chairman, I rise in support of H.R. 4503, a sorely needed authorization for our waste water treatment construction grants program. The Water Resources subcommittee, under the leadership of the gentleman from New Jersey (Mr. ROE). and the full committee, under another distinguished member from New Jersey (Mr. HOWARD), deserve the commendation of this House and every American concerned about eliminating pollution from our Nation's waters.

This authorization has been reported under fiscal restraints imposed by the administration, restraints that in themselves will severely hamper this program. This bill makes the best possible effort to maintain the program under these unreasonable restraints. Without directing or intending any criticism of the bill, let me briefly state how its terribly low funding level will affect waste water treatment efforts in just one congressional district, my own 20th Congressional District in New York City.

For 40 years now, a sewage treatment plant has been planned for the Upper West Side of Manhattan. After decades of debate and speculation, a site at 135th Street and the Hudson River was approved in the late 1950's. Construction finally began in the late 1960's on the interceptors, and in the early 1970's on the North River plant itself. Progress was slow, so the U.S. Environmental Protection Agency and the city and State of New York agreed in a Federal consent decree 4 years ago to a schedule for construction. Now the overly restrictive funding limits imposed by an often blindly cost-cutting administration will delay this plant still further.

No one knows yet exactly how much delay will result. But it is certain that the North River plant, a $1.29 billion undertaking, is critically needed. Near the site where it lies partially built, raw sewage continues to flow into the Hudson. In an age when gleaming buildings dot the Manhattan skyline, in the largest metropolis in the world, this backward and unhealthful situation must be corrected as soon as possible. Clearly it has been allowed to persist for far too long.

Again, I commend the subcommittee and the full committee for a fine bill, a bill which makes the best of a bad situation. Next year, I hope we will be able to vote on a bill that has the added benefit of the larger authorization that is needed. The administration must recognize the need for truly adequate funding for our efforts to combat water pollution, and to safeguard the public health.

Mrs. BOUQUARD. Mr. Chairman, I wish to commend the chairman of the full committee, the gentleman from New Jersey, and the subcommittee chairman, the other gentleman from New Jersey for their work in bringing a responsible and constructive bill before the House. There are in particular two provisions which I believe are important, and which pertain directly to a crucial project the Mocasin Bend facility in the city of Chattanooga, Tenn.

First, the grandfather clause for projects already underway is crucial for this particular facility. To alter the guidelines at this point could cost the city millions of dollars and offer no improvement in water quality.

Second, the direction to the Governors of those States certified by EPA to ward funding in accordance with the State water quality plan will help to avoid the unfortunate situation where some States might seek to use these funds to pay for smaller projects that could be completed within the fiscal year, and trust to the Federal Government to provide additional funds for ongoing projects.

I commend both the gentlemen from New Jersey, and I urge the passage of the Federal Water Pollution Control Act Amendments of 1981.

● Mr. DUNN. Mr. Chairman, I rise today in support of H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981. I would like to thank the committee and subcommittee chairmen, the gentlemen from New Jersey, Mr. HOWARD and Mr. ROE, and the ranking members, Mr. CLAUSEN and Mr. HAMMERSCHMIDT, for their fine leadership in bringing this legislation to the floor. These gentlemen and their colleagues on the Committee on Public Works and Transportation were particularly helpful to me in resolving a longstanding problem in my home State of Michigan.

Bath Township, Mich., has been in the process of applying for an EPA construction grant since 1972. After receiving a State order to begin construction, Bath accepted a State grant and had every intention to begin construction by the fall of 1972. During this period, Bath would have received EPA funds for which it was fully eligible had not an executive impoundment shut off the money flow. Congress later recognized this problem and the inequity it created and provided retroactive funding within the 1977 Clean Water Act for those projects affected by the impoundment. Unfortunately, a unique set of circumstances, including conflicting State and Federal regulations, and delaying law suits, forced Bath out of the eligibility category under the 1977 correcting legislation.

In essence, Mr. Chairman, Bath Township was caught in a classic catch-22. In complying with lawful orders and requirements, it had lost the funding that it deserved and badly needed. Since that time, Bath Township has been having serious difficulties in making the bond payments to finance this project. Had the township

received EPA grant moneys, this financial problem would not exist today.

The Committee on Public Works and Transportation has demonstrated a keen sense of fairness and understanding by having included in this legislation a remedy for this township's unique problem. I believe this solution is a fair and reasonable approach in concluding this matter and urge my colleagues to join me in support of this bill and of the fine work of the committee.●

● Mr. CORRADA. Mr. Chairman, I rise in support of H.R. 4503, legislation reported by the House Committee on Public Works and Transportation as the Federal Water Pollution Control Act Amendments of 1981.

The bill, as reported by the committee, is generally in line with the administration's proposed funding level of $2.4 billion to continue, in fiscal year 1982, the construction of water treatment plants and the programs authorized in the original Federal Water Pollution Control Act and the so-called Clean Water Act.

They are sound programs. They will continue to help the vital infrastructure development—in every State of the Union and in Puerto Rico—of projects so necessary to sustain the sound environmental quality to help improve the quality of our life.

I wish to commend the distinguished chairman of the House Public Works and Transportation Committee, Mr. HOWARD, and the chairman of the Water Resources Subcommittee, Mr. ROE, for their considerable diligence and perseverance in the task of reviewing any proposals to restrict the construction of municipal sewage treatment plants in the fiscal year which we are now in. They have reported an important and realistic bill.

The committee bill continues a larger Federal participation in these construction activities for State and local governments but it did, however, accept the cut in Federal grant authority for fiscal year 1982 from $5 billion to $2.4 billion.

The figures are still, I would like to note, considerably below official Environmental Protection Agency estimates of the needs required to achieve the goals of the water cleanup program.

The bill contains other provisions important to the future of clean water. States are granted more discretion and more authority in administering their cleanup programs and for new projects, Governors can use up to 30 percent of a State's allotment for cost-effective treatment works, other than treatment plants and interceptors.

In addition, one particular provision repeals the industrial cost exclusion (ICE) provision of the existing law. Previously, Federal grants for construction of municipal treatment plants with the capacity to treat industrial discharges of more than 50,000 gallons per day were prohibited.

This is very important to Puerto Rico since the ICE provision presented an undue burden on the ability of our municipalities to realistically address the problem of industrial discharges and water pollution.

It seems to me, Mr. Chairman, that there are some national standards, some uniform rules, that should be applied in many areas of legislative activity. The empty rhetoric of deregulation and laws to unleash the private sector which abounds in many quarters today flies in the face of reality of the need to provide all U.S. citizens—no matter where they reside—for a safe and sound living environment, one free from the horrors of polluted waters, toxic chemicals, or other hazardous substances.

The continuation of the existing EPA programs are vital in this regard. They are not—as both of my distinguished colleagues Mr. HOWARD and Mr. ROE well know—as visible or as politically damaging as cutbacks in social security, or other programs of individual benefits which so many of us oppose.

But cutbacks in the area of the environment are no less important. In providing for future wastewater treatment needs in a realistic manner, given today's fiscal restraints, this bill addresses problems that certainly benefit all U.S. citizens, in a manner not as visible or obvious as the other areas mentioned.

The vision of this legislation is one which, years from now, will be as important as it is today, and the continuance of EPA programs is another tool in our national cleanup campaign in which Puerto Rico is a proud partner.

I hope H.R. 4503 passes and is speedily implemented. I join with the committee in support of this bill.●

● Mr. FIELDS. Mr. Chairman, I am very glad to see us proceeding with consideration of this important environmental legislation. I believe our committee chairman, Mr. HOWARD, our able ranking minority member, Mr. CLAUSEN, and our subcommittee leaders, Mr. ROE and Mr. HAMMERSCHMIDT, should be commended for the very solid bill that is being brought before us here today.

While I have consistently supported President Reagan's efforts to control Federal spending, I believe it is incumbent upon this Congress to reduce Federal participation in this important program in a realistic manner. Our bill accomplishes that goal by significantly reducing the Federal Government's financial exposure, while providing assurances to those local communities which are now attempting to comply with the provisions of the Federal Water Pollution Control Act.

Additionally, our bill is superior to its Senate counterpart in several important ways. One of the most important, I believe, is the manner in which our bill treats the allocation of funds to the States. I am well aware that the administration would have had us throw out completely the allocation approach that has been followed in this program for years and substitute for it an approach based solely on a State's so-called backlog needs.

Mr. Chairman, I believe our bill is correct in rejecting this proposal by the administration and maintaining the existing formula for allocating funds to the States. Let me say that Texas' experience with the EPA regarding the calculation of these so-called backlog needs is sufficient evidence alone to reject the administration's total reliance on such figures as the basis for allocating funds.

Briefly, Mr. Chairman, our water resources department in Texas followed EPA's own methodology and concluded that Texas' backlog needs under the EPA definition were actually twice that attributed to the State by the EPA, a difference of some $650 million. Texas submitted a project-by-project recalculation that proved this $650 million in additional needs to the EPA and the EPA was unable to: First, prove any of Texas' figures to be wrong; or second, prove any of Texas' use of the EPA methodology to be wrong. Therefore, it is now clear and documented that Texas has been shortchanged by a factor of 100 percent in the backlog needs figures that EPA is asking us to use in the administration-backed formula. I wonder, Mr. Chairman, how many other States might vary in their real needs by plus or minus 100 percent. Since EPA's backlog estimates are clearly in question, I cannot imagine that we would want to allocate funds to States solely on the basis of these figures as it is asking us to do.

A second key difference concerns the issue of reserve capacity. While the Senate bill calls for the elimination of Federal grant money for this purpose, our bill provides for ongoing reserve capacity for both step 2 and step 3 wastewater treatment projects. In addition, it allows for 10 years reserve capacity for any new project receiving Federal assistance following the enactment of this legislation.

Mr. Chairman, as a representative of one of the fastest growing metropolitan areas in this Nation, I feel we must build wastewater treatment plants based on realistic population estimates. In my judgment, to build a new wastewater treatment plant in Houston, Tex., or any rapidly growing community based on 1980 population figures makes absolutely no sense, for such a project would soon be obsolete.

It is my firm belief that we must recognize the unique problems facing fast growing regions of our country and I believe that in the long run both local communities and the Federal Government would save substantial amounts of money by allowing projects to be built with reserve capacity.

I am confident that this body will work hard to see its approach on this and on other important points in our bill ultimately prevail in a House-Senate conference committee. Thank you, Mr. Chairman, and let me add that I am proud to have participated in the development of this bill and I look forward to lending my support to its passage.●

● Mr. MOFFETT. Mr. Chairman, I rise today to voice my concern over language in H.R. 4503, section 16(a). That language removes the current requirement that only marine outfalls in existence when the 1977 Clean Water Act amendments were enacted can qualify for a waiver of secondary treatment requirements. Mr. Chairman, I am concerned about this provision because it could lead to a major increase in the discharge of wastes into our coastal waters. This alleged cost saving action could, over the years, result in significant additional costs to the economy and the Federal Government through environmental and marine life damage to our coastal areas. The approach that the Committee on Public Works has adopted could significantly accelerate ocean pollution. I think that would be an unfortunate mistake.

I believe the better route would have been to defer action on this section and consider it when the committee marks up amendments to the Federal Water Pollution Control Act next session. I do not think that we should encourage municipalities to increase their ocean discharge without a more thorough review of the potential impact of such a step and without further consideration of whether this is in fact the best way to cut costs. I note, for example, that this provision goes beyond simply grandfathering-in municipalities which already discharge to our oceans. This new provision would allow other municipalities to switch to this form of wastewater disposal. The cumulative impact on the environment of hundreds of new ocean discharges into sensitive nearshore waters could be highly adverse.

In a very significant May General Accounting Office report on this topic, the GAO acknowledges that the present statutory framework is not "overly restrictive for large communities with industrial wastes" and that "secondary treatment it likely justified" for communities which "discharge wastes into bays and estuaries." Yet H.R. 4503, in its current form, holds open the possibility of a secondary treatment waiver for all present or possible marine discharges for the foreseeable future.

In addition. I am concerned that cuts proposed by the administration in the Environmental Protection Agency and other Federal and State water enforcement and monitoring funds and cuts in research will prevent us from recognizing or preventing environmental harm from these new discharges before they cause significant, perhaps irreversible damage. I heartily concur with the additional views expressed by my colleagues, Mr. OBERSTAR and Mr. EDGAR, in the committee report on this legislation. I think we should not move ahead with the proposed changes in section 16(a).

I urge my colleagues on the Public Works Committee to review this matter in a more thorough manner next session.●

● Mr. GOLDWATER. Mr. Chairman, I am pleased to rise in support of H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981, as a worthwhile bill in its own right, as a prerequisite for continued funding of the construction grants program, and as a forerunner of further reforms when the Clean Water Act undergoes further modification next year.

As to funding, its construction grants authorization of $2.4 billion for fiscal year 1982 is modest indeed in comparison with the $4 billion, $5 billion and even $6 billion in annual authorizations during the early years of the program under Public Law 92-500. The Committee on Public Works and Transportation has been responsive to legitimate budgetary concerns in this regard.

H.R. 4503 is not, however, a mere simple extension of existing law, much less a pared-down version of business as usual. In fact, it contains a number of provisions to improve the performance of the construction grants program and the wastewater treatment works which it produces.

I would cite in particular the provisions dealing with the following:

Innovative and alternative technology, strengthening the incentives for processes and equipment that are cheaper, simpler and more energy efficient; continued eligibility for projects to correct sewer system infiltration and inflow as a cost-effective alternative to construction of larger treatment works; procurement of treatment processes and equipment, by the removal of a statutory restriction which serves to discourage innovation on the part of equipment manufacturers and to undercut responsibility of municipalities and their engineering consultants for the performance of treatment works constructed under the program; strengthening of the role of the States in managing the construction grants program, achieved by providing greater stability in funding.

These provisions in particular are supported by the record of hearings of the Subcommittee on Investigations and Oversight, on which I serve as ranking minority member. Under the leadership of my friend from Georgia, Mr. LEVITAS, we have just concluded the most thorough investigation ever undertaken into the performance of wastewater treatment works constructed with Federal assistance. The record of those hearings, conducted in a completely bipartisan manner, strongly supports the provisions of H.R. 4503 which I have cited. Thus, from an oversight perspective, it supports the work of Chairman BOB ROE of the Water Resources Subcommittee and his minority counterpart, JOHN PAUL HAMMERSCHMIDT.

With particular respect to innovative and alternative technology, I appreciate the full committee's acceptance of a modest amendment which I offered to help overcome reluctance on the part of grantees and their design engineers to consider innovative and alternative processes and components. In recognition of the fact that many promising ideas have had the benefit of only laboratory simulation or limited pilot testing, this provision makes more extensive field testing grant eligible to provide the missing element of verification as to performance capability.

All these aside, however, the bill would be justified if only by its amendments dealing with the issue of waivers from secondary treatment requirements for communities discharging their treated wastewater into marine waters through ocean outfalls. If it makes sense from an environmental and economic standpoint for communities with existing ocean discharges to treat to a degree lesser than full secondary, there is absolutely no rationale for denying this option to others provided they meet the same stringent water quality requirements.

The provisions of H.R. 4503 dealing with ocean waivers in fact closely parallel those of my own bill, H.R. 4466, which I introduced following an oversight hearing focused principally on the ocean discharge issue, held at my request in Los Angeles on September 8.

Mr. Chairman, none of us would argue that H.R. 4503 is a comprehensive bill providing all needed changes in the Clean Water Act. It does not even purport to deal with all the problems we have identified in the construction grants program.

But the committee has chosen to move in a more limited manner at this time, responding to concerns expressed by the administration and the other body, while properly preserving the constructive policy positions which the House has asserted for the past decade and more.

I urge my colleagues to support H.R. 4503 in its present form at this time, so we can move into conference with the Senate and seek to fashion a bill that will provide a basis for funding of the construction grants program through fiscal year 1982. Then we can turn our efforts to the task of crafting longer term amendments to both the regulatory and the construction grants aspects of the law which ultimately will be necessary if it is to do the job we all intend.●

● Mr. WALGREN. Mr. Chairman, I earnestly hope the House today will approve, H.R. 4503, the Federal Water Pollution Control Act Amendments of 1981. This bill would continue for 1 year the program that provides funds to every State on a 75-percent Federal, 25-percent State and local matching basis to construct and upgrade sewer and wastewater treatment facilities.

It is simply not fair to keep putting local communities through so much uncertainty in this program. Fluctuations in funding levels, impoundments in the early years, proposed reforms, rescissions, and deferrals of funds—all have created too much uncertainty for local officials, many of whom have begun expensive planning studies in anticipation of future funding for construction. While this bill only continues the current program for 1 year, it will, I hope, be successful in triggering the 1982 appropriations that are needed by many towns and municipalities across the country.

The funding level of this bill also creates uncertainties for local officials, since Congress previously went along with the $2.4 billion funding level requested by the Reagan administration. The public is often under the impression that President Reagan is preventing growth in Government spending, but the administration's action in this case was a 50-percent cut, from $5 billion to $2.4, in a very essential program.

President Reagan proposed sweeping changes. Some changes can no doubt be made in light of the Nation's water needs, and I understand that our House Public Works Committee will look at those changes in a comprehensive fashion next year. The complicated needs of both municipal systems and industrial problems, should be addressed together, since they are so closely related. We certainly need to examine the appropriate State and Federal roles. I support an overall review of the program and the needs of our communities. In the meantime, we need this bill to keep funding going in the current year.

In addition to taking the steps necessary to guarantee funding for fiscal 1982, I have two other concerns. First, to meet the clean water requirements of current law, communities can receive grants to construct, upgrade, and enlarge sewage treatment plants. Additionally, funds are authorized for rehabilitating sewer lines or replacing old lines with new ones. The Northeast-Midwest coalition found that the allocation formula weighs new construction needs more heavily than replacement or rehabilitation needs. Many of our systems in western Pennsylvania were built in the 1940's and some even 50 to 80 years ago when the Federal clean water requirements were not in effect. We must make sure that the law is not biased against these older communities. I understand that the administration's proposal, which is not included in this bill, eliminates rehabilitation projects for funding.

My second concern is the issue of reserve capacity. Reserve capacity is used to accommodate future population growth. Current law requires new plants to build reserves of 20 years, and the administration has proposed to eliminate this requirement. The House bill before us would allow for 10 years population growth. The House provision heads us in the right direction and will give us time to look at this more closely.

The Nation's public health and water quality needs are complex. We must do all we can to make sure we have clean water. Today we must act to make sure this program is continued so that funds will continue to be available to communities that have critical water quality problems.●

● Mr. HUGHES. Mr. Chairman, I would like to add my support to the committee amendment offered by Congressman ROE to H.R. 4503 which would place a 1-year moratorium on the implementation of the section 301(h) ocean outfall waiver provisions which would otherwise have been greatly expanded by section 16(a) of this bill.

As you know, when Congress amended the Clean Water Act in 1977, we provided a mechanism by which communities with existing ocean outfalls could apply for a waiver of the secondary treatment requirements provided certain environmental safeguards enumerated in the act were complied with. Despite the fact that the 1977 amendments allowed 270 days for the filing of applications for ocean outfall waivers, a number of communities claimed to have been frustrated in their attempt to obtain waivers due to EPA's failure to issue suitable guidelines and regulations in a timely fashion.

That does not mean, however, that Congress should now go back and open up that waiver process which was envisioned to apply only to preexisting outfalls, nor does the fact that the GAO has estimated that billions could be saved by broadening the waiver provisions mean that we should now make substantive changes to the Nation's fundamental water pollution control law—changes that have the potential to encourage the further degradation of our coastal waters.

Although the drafters of H.R. 4503 believe that significant safeguards exist within the Clean Water Act to assure the qualty of coastal waters is maintained, I believe that the EPA, following the lead of the administration, has demonstrated its intentions to ease up on environmental protection initiatives—especially where cost savings can be achieved and where potential environmental harm can be downplayed.

I am also concerned that the 301(h) waiver provisions of H.R. 4503, as reported from committee, would open the door for hundreds of coastal communities to pursue the ocean outfall option rather than comply with the secondary treatment requirement mandated by the Clean Water Act. As you know, the GAO has estimated that approximately 800 additional communities could be eligible for the 301(h) treatment if the waiver provision was broadened. All of this at a time when EPA's budget and permit review staff is being significantly cutback.

It is clear to me that any expansion of the ocean outfall waiver provisions constitutes another in a series of actions which could result in the further degradation of our resource-rich coastal waters. EPA has already demonstrated its intent not to enforce the 1981 deadlines on the ocean dumping of sewage sludge despite Congress mandate to end the ocean disposal of harmful sewage sludge by the end of this year. Expanding the 301(h) waiver provisions to allow hundreds of additional coastal communities to avoid the secondary treatment requirement would be a definite step backwards, a step I urge Congress not to take.

I support the committee's amendment to place a 1-year moratorium on the expansion of the 301(h) waiver provision. The moratorium will give Congress additional time to study the consequences of such actions while providing an opportunity for additional public input on the matter.

A moratorium on the expansion of the waiver provisions will also go a long way in making it clear to the Nation that Congress does not intend to open up the oceans again as the final dumping ground of our country's wastes. I urge those of you who are concerned about the future of our coastal waters and the marine environment to oppose the expansion of the ocean outfall wavier provisions.

Thank you.●

Mr. HAMMERSCHMIDT. Mr. Chairman, I have no further requests for time.

Mr. ROE. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. All time has expired.

Pursuant to the rule, the Clerk will now read the amendment in the nature of a substitute recommended by the Committee on Public Works and Transportation now printed in the reported bill as an original bill for the purpose of amendment.

The Clerk read as follows:

H.R. 4503

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Water Pollution Control Act Amendments of 1981".

SEC. 2. Section 201(g)(5) of the Federal Water Polution Control Act is amended by striking out "more efficient use of energy and resources." and inserting in lieu thereof "most efficient use of energy and resources which will result in the lowest net cost of water and sewer service to the consumer.".

SEC. 3. Section 201(k) of the Federal Water Pollution Control Act (33 U.S.C. 1281(k)) is hereby repealed.

SEC. 4. Section 201 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following:

"(k) The Administrator shall encourage and assist applicants for grant assistance under this title to develop and file with the Administrator a capital financing plan which, at a minimum—

"(1) projects the future requirements for waste treatment services within the applicant's jurisdiction for a period of no less than ten years;

"(2) projects the nature, extent, timing, and costs of future expansion and reconstruction of treatment works which will be necessary to satisfy the applicant's projected future requirements for waste treatment services; and

"(3) sets forth with specificity the manner in which the applicant intends to finance such future expansion and reconstruction.".

SEC. 5. (a) Section 205(c) of the Federal Water Pollution Control Act is amended by inserting after the first sentence the following: "Sums authorized to be appropriated pursuant to section 207 for the fiscal year ending September 30, 1982, shall be allotted for such fiscal year by the Administrator not later than the tenth day which begins after the date of enactment of the Federal Water Pollution Control Act Amendments of 1981.".

(b) Section 205(c) of the Federal Water Pollution Control Act is amended by striking out "and September 30, 1981," and inserting in lieu thereof "September 30, 1981, and September 30, 1982,".

(c) Section 205(e) of the Federal Water Pollution Control Act is amended by striking out "and 1981" each of the two places it appears and inserting in lieu thereof at each such place "1981, and 1982".

SEC. 6. (a) The first sentence of section 205(g)(1) of the Federal Water Pollution Control Act is amended by inserting immediately after "October 1, 1977," the following: "except in the case of the fiscal year beginning October 1, 1981, in which case the percentage authorized to be reserved shall not exceed 4 per centum,".

(b) Section 205(g)(1) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new sentence: "Sums authorized to be reserved by this paragraph shall be in addition to and not in lieu of any other funds which may be authorized to carry out this subsection.".

SEC. 7. (a) Section 205(i) of the Federal Water Pollution Control Act is amended by striking out "and September 30, 1981," in the first sentence and inserting in lieu thereof "September 30, 1981, and September 30, 1982," and by adding at the end thereof the following: "Including the expenditures authorized by the first sentence of this subsection, a total (as determined by the Governor of the State) of not less than 3 per centum nor more than 5 per centum of the funds allotted to such State for the fiscal year ending September 30, 1982, under subsection (c) of this section shall be expended only for increasing the Federal share of grants for construction of treatment works pursuant to section 202(a)(2) of this Act.".

(b) Section 202(a)(2) of the Federal Water Pollution Control Act is amended by striking out "1981" and inserting in lieu thereof "1982" and by striking out "significant portion" and inserting in lieu thereof "any component".

(c) Section 202(a)(4) of the Federal Water Pollution Control Act is amended by striking out "and September 30, 1981." and inserting in lieu thereof "September 30, 1981, and September 30, 1982." and by striking out the last sentence.

SEC. 8. Section 204(a)(6) of the Federal Water Pollution Control Act is amended by striking out ", or at least two brand names or trade names of comparable quality or utility are listed and are followed by the words 'or equal' " and by adding at the end thereof the following: "When in the judgment of the grantee, it is impractical or uneconomical to make a clear and accurate description of the technical requirements, a 'brand name or equal' description may be used as a means to define the performance or other salient requirements of a procurement, and in doing so the grantee need not establish the existence of any source other than the brand or source so named."

SEC. 9. Section 205 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(j)(1) The Administrator shall reserve each fiscal year not to exceed 1 per centum of the amount authorized under section 207 of this title for purposes of the allotment made to each State under this section on or after October 1, 1981, or $100,000, which ever amount is the greater.

"(2) Such sums shall be used by the Administrator to make grants to the States to carry out water quality management planning, including, but not limited to,

"(A) identifying most cost effective and locally acceptable facility and non-point measures to meet and maintain water quality standards;

"(B) developing an implementation plan to obtain State and local financial and regulatory commitments to implement measures developed under subparagraph (A); and

"(C) determining the nature, extent, and causes of water quality problems in various areas of the State and interstate region, reporting on these annually.

"(3) In carrying out planning with grants made under paragraph (2) of this subsection, a State shall develop jointly with local, regional, and interstate entities, a plan for carrying out the program and give funding priority to such entities and designated or undesignated public comprehensive planning organizations to carry out the purposes of this subsection.

"(4) All activities undertaken under this subsection shall be in coordination with other related provisions of this Act.".

SEC. 10. Section 205 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(k) The Administrator shall allot to the State of New York from sums authorized to be appropriated for the fiscal year ending September 30, 1982, an amount necessary to pay the entire cost of conveying sewage from the Convention Center of the city of New York to the Newtown sewage treatment plant, Brooklyn-Queens area, New York. The amount allotted under this subsection shall be in addition to and not in lieu of any other amounts authorized to be allotted to such State under this Act.".

SEC. 11. Section 207 of the Federal Water Pollution Control Act is amended by striking out all that follows "September 30, 1982," and inserting in lieu thereof "not to exceed $2,400,000,000.".

SEC. 12. Section 212(1) of the Federal Water Pollution Control Act is amended by inserting after "procedures," the following: "field testing of innovative or alternative waste water treatment processes and techniques meeting guidelines promulgated under section 304(d)(3) of this Act,".

SEC. 13. Title II of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new section:

"COST EFFECTIVENESS

"SEC. 218. (a) It is the policy of Congress that a project for waste treatment and management undertaken with Federal financial assistance under this Act by any State, municipality, or intermunicipal or interstate agency shall be considered as an overall waste treatment system for waste treatment and management, and shall be that system which constitutes the most economical and cost-effective combination of devices and systems used in the storage, treatment, recycling, and reclamation of municipal sewage or industrial wastes of a liquid nature to implement section 201 of this Act, or necessary to recycle or reuse water at the most economical cost over the estimated life of the works, including intercepting sewers, outfall sewers, sewage collection systems, pumping power, and other equipment, and their appurtenances; extension, improvements, remodeling, additions, and alterations thereof; elements essential to provide a reliable recycled supply such as standby treatment units and clear well facilities; and any works, including site acquisition of the land that will be an integral part of the treatment process (including land use for the storage of treated wastewater in land treatment systems prior to land application) of which is used for ultimate disposal of residues resulting from such treatment; and water efficiency measures and devices; and any other method or system for preventing abating, reducing, storing, treating, separating, or disposing of municipal waste, including storm water runoff, or industrial waste, including waste in combined storm water and sanitary sewer systems; to meet the requirements of this Act.

"(b) In accordance with the policy set forth in subsection (a) of this section, before the Administrator approves any grant to any State, municipality, or intermunicipal or interstate agency for the erection, building, acquisition, alteration, remodeling, improvement, or extension of any treatment works the Administrator shall determine that the facilities plan of which such treatment works are a part constitutes the most economical and cost-effective combination of treatment works over the life of the proj-

ect to meet the requirements of this Act, including, but not limited to, consideration of construction costs, operation, maintenance, and replacement costs.

"(c) This section applies to projects for waste treatment and management for which no treatment works included in a facilities plan for such project have received Federal financial assistance for the preparation of construction plans and specifications under the Federal Water Pollution Control Act before the date of enactment of this section.".

SEC. 14. Title II of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new section:

"STATE CERTIFICATION OF PROJECTS

"SEC. 219. Whenever the Governor of a State which has been delegated sufficient authority to administer the construction grant program under this title in that State certifies to the Administrator that a grant application meets applicable requirements of Federal and State law for assistance under this title, the Administrator shall approve or disapprove such application within thirty days of the date of receipt of such application. If the Administrator does not approve or disapprove such application within thirty days of receipt, the application shall be deemed approved. If the Administrator disapproves such application the Administrator shall state in writing the reasons for such disapproval. Any grant approved or deemed approved under this section shall be subject to amounts provided in appropriation Acts.".

SEC. 15. Title II of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new section:

"PUBLIC HEALTH AND WATER QUALITY BENEFITS

"SEC. 220. It is the policy of Congress that projects for wastewater treatment and management undertaken with Federal financial assistance under this Act by any State, municipality, or intermunicipal or interstate agency shall be projects which, in the estimation of the State, are designed to achieve optimum water quality management, consistent with the public health and water quality goals and requirements of the Act.".

SEC. 16. (a) Section 301(h) of the Federal Water Pollution Control Act is amended in the portion preceding paragraph (1) by striking out "in an existing discharge" and by inserting after "subsection (b)(1)(B)" the following: "or subsection (b)(2)(B), or both such subsections,".

(b) Such section 301(h) is amended by striking out the semicolon at the end of paragraph (7) and inserting in lieu thereof a period and by striking out paragraph (8).

(c) Such section 301(h) is further amended by adding at the end thereof the following: "A municipality which applies secondary treatment shall be eligible to receive a permit pursuant to this subsection which modifies the requirements of subsection (b)(1)(B) or (b)(2)(B) of this section with respect to the discharge of any pollutant from any treatment works owned by such municipality into marine waters.".

(d) Section 301(j)(1) of the Federal Water Pollution Control Act is amended to read as follows:

"(j)(1) Any application filed under this section for a modification of the provisions of subsection (b)(2)(A) as it applies to pollutants identified in subsection (b)(2)(F) shall be filed not later than two hundred and seventy days after the date of promulgation of an applicable effluent guideline under section 304 or not later than two hundred and seventy days after the date of enactment of the Clean Water Act of 1977, whichever is later.".

SEC. 17. Notwithstanding section 204(a)(5) of the Federal Water Pollution Control Act, before approving grants under section 201(g) of such Act for any project for treatment works to which this section applies, the Administrator of the Environmental Protection Agency shall determine that the size and capacity of such works relate to the needs to be served by such works including sufficient reserve capacity, except that no grant, other than for facility planning and the preparation of construction plans and specifications, shall be made under title II of such Act to construct that portion of such treatment works providing reserve capacity in excess of projected needs for a period of ten years after receipt of the first application for Federal financial assistance under this Act with respect to such treatment works. This section applies to treatment works which have not received Federal financial assistance under the Federal Water Pollution Control Act for the preparation of construction plans and specifications or for the erection, building, acquisition, alteration, remodeling, improvement, or extension of treatment works before the date of enactment of this section and to treatment works which have received such assistance and have been entirely completed before the date of enactment of this Act. This section does not apply to any treatment works not completed on the date of enactment of this section which has been funded entirely by State and local financing and which, if it had been applied for, would have been eligible for Federal financial assistance under this Act.

SEC. 18. Notwithstanding any provision of the Federal Water Pollution Control Act, except as otherwise provided in this section, in the case of any treatment works eligible to receive Federal financial assistance under such Act which has not received any such assistance before the date of enactment of this section, and in the case of any treatment works which has received such assistance and has been entirely completed, the Administrator of the Environmental Protection Agency shall make grants under such Act only for projects for secondary treatment or more stringent treatment, or any cost-effective alternative thereto, new interceptors and appurtenances, sewer system evaluation studies under section 201(g)(4) of such Act, and infiltration-in-flow correction. The Administrator is authorized to make grants for such works for any project within the definition set out in section 212(2) of such Act, other than for a project referred to in the preceding sentence, except that not more than 30 per centum (as determined by the Governor of such State) of the amount allotted to a State under section 205 of such Act shall be obligated in such State under authority of this sentence. This section does not apply to any treatment works not completed on the date of enactment of this section which has been funded entirely by State and local financing and which, if it had been applied for, would have been eligible for Federal financial assistance under this Act.

SEC. 19. It is the sense of Congress that judicial notice should be taken of this Act and of the amendments to the Federal Water Pollution Control Act made by this Act, including reduced authorization levels under section 207 of such Act, and that the parties to Federal consent decrees establishing a deadline, schedule, or timetable for the construction of publicly owned treatment works are encouraged to reexamine the provisions of such consent decrees and, where required by equity, to make appropriate adjustments in such provisions.

SEC. 20. The Administrator of the Environmental Protection Agency shall submit to the Congress, not later than June 30, 1982, a report containing the detailed estimates, comprehensive study, and comprehensive analysis required by section 516(b) of the Federal Water Pollution Control Act. Such report shall be prepared in the same manner as is required by such section and shall reflect the changes made in the Federal water pollution control program by this Act and the amendments made by this Act. In preparing this report, the Administrator shall give emphasis to the effects of the provisions of section 18 of this Act in addressing water quality needs adequately and appropriately.

SEC. 21. For purposes of the Federal Water Pollution Control Act, the project for publicly owned treatment works for Bath Township, Michigan, shall be eligible for payments from sums allocated to the State of Michigan under such Act in an amount equal to the amount such works would be eligible for under section 202 of such Act if such works were to be constructed after the date of enactment of this Act, at the original construction cost.

Mr. ROE (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

AMENDMENT OFFERED BY MR. CLAUSEN

Mr. CLAUSEN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CLAUSEN: Page 15, after line 5, insert the following:

SEC. 22. Notwithstanding any other provision of the Federal Water Pollution Control Act, the Administrator of the Environmental Protection Agency shall make a grant to mitigate adverse impacts arising from the construction of a grant eligible treatment works from any funds allotted to a State under such Act if (1) the State no later than February 1, 1981, has made at least a preliminary determination that (A) the proposed works were a reasonable, necessary, and appropriate means of mitigation of impacts associated with the construction of grant eligible treatment works, and (B) the cost of the proposed works are grant eligible, and (2) the Step II construction grant on the underlying grant eligible treatment works was made no later than February 1, 1981.

Mr. CLAUSEN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California.

There was no objection.

Mr. CLAUSEN. Mr. Chairman, my amendment has been developed with the committee leadership and is really

a carryover from our full committee markup. It is a clarifying amendment designed to emphasize that certain costs incurred for environmental mitigation purposes are intended to be grant eligible under the construction grants program. The amendment requires that, for certain projects already in EPA's construction grants pipeline, the Administrator is required to treat as grant eligible the costs to mitigate adverse impacts arising from the construction of qualifying treatment works when the State involved has already made a determination that the costs in question are both grant eligible and reasonable and necessary. The amendment in no way increases the amount of funds authorized for the construction grants program. Neither does it change any State's share of whatever construction grants funds are appropriated. It merely assures that a State will receive grant assistance for mitigation costs which the State has already determined are both grant eligible and reasonable and necessary.

Mr. Chairman, the amendment is designed to address situations like the two that have recently been brought to the committee's attention.

The first involves the expansion of the Southeast Sewage Treatment Plant located in the Bayview/Hunter's Point area of San Francisco. In order to mitigate the odors, noise, and visual impacts, and other adverse effects on the community identified in EPA's environmental evaluation of the proposed plant expansion, it was agreed that a greenhouse/skills training center would be constructed adjacent to the Southeast Sewage Treatment Plant. The center is to be connected to the plant by pipes which will carry methane to heat the center. In addition sludge from the treatment plant will be used as fertilizer for the greenhouse.

A favorable grant eligibility determination and commitment to a $15 million greenhouse/skills training projects was made on January 22, 1981, by the California State Water Resources Control Board, which acts as EPA's representative in determining grant eligibility in the State of California. However, although EPA was fully aware of CSWRCB's decisions, it was not until several months ago that EPA informed San Francisco that the greenhouse/skills center would not be eligible for grant funding under the Clean Water Act. In the meantime, the city and county of San Francisco had begun construction of the expansion to the Southeast Sewage Treatment Plant.

The second matter intended to be covered by this amendment involves the Greater Eureka wastewater treatment project. In the Eureka project, approximately 139 acres of property adjacent to the proposed Eureka treatment plant are considered to be environmental mitigation for siting of the proposed treatment plant and holding pond on 16 acres of wetland. The 139-acre site is to be dedicated as permanent open space and maintained and managed as a wetland/wildlife area, having the dual purpose of acting as a demonstration project to improve water quality while at the same time insuring restoration and enhancement of habitat values of a substantial wetland area. On November 21, 1980, the California State Water Resources Control Board issued its concept approval letter informing the city of Eureka and the U.S. Environmental Protection Agency of its determination that the purchase of the 139 acres was grant eligible. A little less than 2 weeks later, on December 3, the city of Eureka's mayor signed and accepted a step II grant award. Subsequently EPA—incorrectly, we believe—overturned CSWRCB's determination and advised the city that acquisition of the 139 acres was not eligible for Federal grant funds.

Both of these cases involve U.S. EPA's refusal to abide by the grant eligibility determination made by the duly appointed agency of a State having construction grants program delegation responsibilities. Both involve mitigation measures arising from the construction of a grant eligible treatment works.

Both situtations involve costs associated with an integral part of the underlying grant eligible treatment works. In both instances, we believe EPA should abide by the CSWRCB's grant eligibility determination.

Mr. Chairman, the amendment is drafted narrowly to allay fears that it could unintentionally lead to the creation of some new grant eligible category. It is not at all our intention to create such a situation. Instead, we only intend to clarify that the costs associated with the environmental mitigation measures just described should be considered to be grant eligible under the Federal Water Pollution Control Act's current language and, therefore, the Administration of EPA is required to award Federal grants to cover 75 percent of those costs.

Mr. Chairman, I urge adoption of the amendment.

Mr. ROE. Mr. Chairman, will the gentleman yield?

Mr. CLAUSEN. I yield to the distinguished gentleman from New Jersey.

Mr. ROE. Mr. Chairman, we have reviewed this amendment on our side. It is a splendid amendment and it does speak to exactly what the bill was designed to achieve. It is a necessary element for the San Francisco and Eureka areas.

We have no objection to the gentleman's amendment.

Mr. CLAUSEN. Mr. Chairman, I thank the gentleman.

Mr. HAMMERSCHMIDT. Mr. Chairman, will the gentleman yield?

Mr. CLAUSEN. I yield to the gentleman from Arkansas.

Mr. HAMMERSCHMIDT. Mr. Chairman, I have reviewed the amendment also. I am sure we have unanimous agreement on our side to support it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. CLAUSEN).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. ROE

Mr. ROE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROE: Page 11, after line 22, insert the following:

(e) The amendments made by this section shall take effect on the date of enactment of this Act, except that no applicant, other than the city of Avalon, California, who applies after the date of enactment of this Act for a permit pursuant to subsection (h) of section 301 of the Federal Water Pollution Control Act which modifies the requirements of subsection (b)(1)(B) or (b)(2)(B) of section 301 of such Act shall receive such permit during the one-year period which begins on the date of enactment of this Act.

Mr. ROE (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the requests of the gentleman from New Jersey?

There was no objection.

Mr. ROE. Mr. Chairman, this amendment, in effect, achieves the goal of setting aside for a 1-year period of time the provision of the bill that would provide for a permit to be issued to an applicant applying after the date of enactment of H.R. 4503. This will give the committee a chance to continue to study the effect of ocean discharges. The information contained in the permit applications will be particularly helpful in that it will give us the precise details as to which communities are seriously interested in pursuing the option of ocean discharge.

I wish to point out that those applicants which are eligible for 301(h) waivers under existing law are not affected by this amendment. They will continue to remain eligible. Only new applicants are covered under this particular amendment.

I think for clarity's sake, if the gentleman from Arkansas would exchange some views with me, the committee has worked very, very hard on the whole precept, along with the very distinguished gentleman from Minnesota who offered an amendment in committee on this issue. We do feel that there is room for additional review of this entire matter; but it is not the intent of our committee to slow down or forestall any of the eligibilities that are now available under the existing law.

Mr. HAMMERSCHMIDT. Mr. Chairman, will the gentleman yield?

Mr. ROE. Yes, of course.

Mr. HAMMERSCHMIDT. Mr. Chairman, it is my understanding that the ocean discharge waiver provision has the potential to save many billions of dollars and to help us reach our Nation's clean water goals in an economic fashion with necessary environmental safeguards.

Mr. ROE. That is correct.

Mr. HAMMERSCHMIDT. I know that the gentleman from New Jersey has worked closely with the gentleman from California, because both gentlemen have particular coastal interests as it pertains to the Nation's clean waters.

Mr. ROE. That is right.

Mr. HAMMERSCHMIDT. Mr. Chairman, I rise in support of the gentleman's amendment. The ocean discharge waiver provision has the potential to save many billions of dollars and to help us reach our Nation's clean water goals in an economic fashion with necessary environmental safeguards. The amendment will permit new applications for new dischargers to be developed, submitted, and reviewed by EPA. The final decision on these new applications, with the exception of a specific site, would be delayed from 1 year of enactment. Those applications now pending with the Agency will remain eligible for final decision by EPA. At any time, I support the amendment and urge my colleagues to join me.

Mr. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. ROE. I yield to the gentleman from California.

Mr. CLAUSEN. Mr. Chairman, I want to compliment the gentleman for crafting this amendment, because it takes care of the exception that we were concerned about with regard to the Avalon area that the gentleman from California and I brought to your attention as the result of our hearings in Los Angeles.

Mr. ROE. Yes, a very important area.

Mr. CLAUSEN. Finally, it will permit new applications for waivers to go forward, but none of those waivers would, in fact, be approved for the 1 year, which will protect the concerns that have been expressed on the east coast during our dialog.

Mr. ROE. That is correct. I think basically what we are attempting to achieve, for members of the committee, is that there will be a very thorough reexamination of the entire ocean dumping permits. We want to protect our ocean waters. We want to protect our estuaries, but we do want to make it clear that there is room for flexibility in the program and that is the direction in which we are moving.

Mr. CLAUSEN. Mr. Chairman, will the gentleman yield further?

Mr. ROE. Yes, of course.

Mr. CLAUSEN. As the gentleman knows, the EPA itself is going through a major reevaluation of this. Of course, we in our committee have been holding hearings, as we did with the Oversight Committee in Los Angeles, that focuses attention on this.

There can be, as has been stated, billions of dollars saved, but we want to make sure it only applies to those areas where it is frankly environmentally acceptable.

Mr. ROE. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. ROE).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. LEVITAS

Mr. LEVITAS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LEVITAS: Page 11, after line 22, insert the following:

SEC. 17. Title V of the Federal Water Pollution Control Act is amended by redesignating section 518 (and all references thereto) as section 519 and by inserting after section 517 the following new section:

"LEGISLATIVE VETO

"SEC. 518. (a)(1) Simultaneously with promulgation or repromulgation of any rule under this Act, including an emergency rule, the Administrator shall transmit a copy thereof to the Secretary of the Senate and the Clerk of the House of Representatives. Except as provided in paragraph (2), rules other than emergency rule shall not become effective, if—

"(A) within 90 calendar days of continuous session of Congress after the date of promulgation, both Houses of Congress adopt a concurrent resolution, the matter after the resolving clause of which is as follows: 'That Congress disapproves the rule promulgated by the Administrator of the Environmental Protection Agency dealing with the matter of ————, which rule was transmitted to Congress on ————.', the first blank begin filled with the title of the rule and such further description as may be necessary to identify it, and the second being filled with the date of transmittal of the rule to Congress; or

"(B) within 60 calendar days of continuous session of Congress after the date of promulgation, one House of Congress adopts such a concurrent resolution and transmits such resolution to the other House, and such resolution is not disapproved by such other House within 30 calendar days of continuous session of Congress after such transmittal.

"(2) If at the end of 60 calendar days of continuous session of Congress after the date of promulgation of a rule, other than an emergency rule, no committee of either House of Congress has reported or been discharged from further consideration of a concurrent resolution disapproving the rule, and neither House has adopted such a resolution, the rule may go into effect immediately. If, within such 60 calendar days, such a committee has reported or been discharged from further consideration of such a resolution, or either House has adopted such a resolution, the rule may go into effect not sooner than 90 calendar days of continuous session of Congress after its promulgation unless disapproved as provided in paragraph (1).

"(b)(1) The Administrator may not promulgate a new rule or an emergency rule identical to one disapproved pursuant to this section unless a statute is adopted affecting the Administrator's powers with respect to the subject matter of the rule.

"(2) If the Administrator proposes a new rule dealing with the same subject matter as a disapproved rule, the Administrator shall comply with the procedures required for the issuance of a new rule, except that if less than 12 months have passed since the date of such disapproval, such procedures may be limited to changes in the rule.

"(c) The definitions set forth in section 551 of title 5, United States Code, shall apply to this section except that—

"(1) the terms 'rule' and 'emergency rule' shall not include—

"(A) rules of agency organization, practice, and procedure,

"(B) rules relating to agency management and personnel,

"(C) rules granting or recognizing an exception or relieving a restriction, or

"(D) rules adopted without public notice and comment pursuant to a valid agency finding that such notice and comment were unnecessary due to the routine nature or insignificant impact of the rule; and

"(2) the term 'promulgation' means filing with the Office of the Federal Register for publication.

"(d) For the purpose of this section—

"(1) continuity of session is broken only by an adjournment sine die; and

"(2) the days on which either House is not in session because of adjournment of more than 3 days to a day certain are excluded in the computation of calendar days of continuous session.

"(e)(1) The provisions of this subsection are enacted by Congress—

"(A) as an exercise of the rule making power of the Senate and the House of Representatives, respectively, and as such they are deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of resolutions described by subsection (a) of this section; and they supersede other rules only to the extent that they are inconsistent therewith; and

"(B) with full recognition of the constitutional right of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner and to the same extent as in the case of any other rule of that House.

"(2)(A) Resolutions of disapproval of a rule shall, upon introduction or receipt from the other House of Congress be immediately referred by the presiding officer of the Senate or of the House of Representatives to the Committee on Environment and Public Works of the Senate or the Committee on Public Works and Transportation of the House of Representatives, as the case may be; and such resolutions shall not be referred to any other committee.

"(B) If a committee to which is referred a resolution which has not been adopted by the other House of Congress does not report out such resolution within 45 calendar days of continuous session of Congress after referral it shall be in order to move to discharge such committee from further consideration of such resolution.

"(C) If a committee to which is referred a resolution which has been adopted by the other House of Congress does not report out

such resolution within 15 calendar days of continuous session of Congress after referral, it shall be in order to move to discharge such committee from further consideration of such resolution.

"(D) Such motion to discharge must be supported by one-fifth of the Members of the House of Congress involved, and is highly privileged in the House and privileged in the Senate (except that it may not be made after the committee has reported a resolution of disapproval or for reconsideration with respect to the same rule); and debate thereon shall be limited to not more than one hour, the time to be divided in the House equally between those favoring and those opposing the motion to discharge and to be divided in the Senate equally between, and controlled by, the majority leader and the minority leader or their designees. An amendment to the motion is not in order, and it is not in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(3)(A) Except as provided in subparagraphs (B) and (C) of this subsection, consideration of a resolution of disapproval shall be in accord with the rules of the Senate and of the House of Representatives, respectively.

"(B) When a committee has reported or has been discharged from further consideration of a resolution with respect to a rule, it shall be in order at any time thereafter (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the resolution. The motion is highly privileged and is not debatable. An amendment to the motion is not in order, and it is not in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(C) Debate on the resolution shall be limited to not more than two hours, which shall be divided equally between those favoring and those opposing the resolution. A motion further to limit debate is not debatable. An amendment to, or motion to recommit, the resolution is not in order and it is not in order to move to reconsider the vote by which the resolution is agreed or disagreed to.

"(f) Congressional inaction on or rejection of a resolution of disapproval shall not be deemed an expression of approval of such rule.".

Redesignate succeeding sections accordingly.

Mr. LEVITAS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. LEVITAS. Mr. Chairman, this amendment is the so-called legislative veto amendment. It is in the same form as is incorporated in H.R. 1776, which over 230 Members of this House have already cosponsored.

In effect, what it does, is let the Congress of the United States review the regulations issued by the Environmental Protection Agency under this program.

Mr. ROE. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I will be happy to yield.

Mr. ROE. Mr. Chairman, the gentleman in my judgment has offered an extraordinarily important amendment to our bill. I know the gentleman has continuously followed these types of reviews by the Congress, which I have supported on every single occasion.

Having discussed this with my colleagues on this side of the aisle, we have no objection to the gentleman's amendment.

Mr. LEVITAS. I thank my colleague for that statement. The gentleman has been one of the most loyal and stalwart supporters of this concept to restore to the people control of the regulatory process.

Mr. HAMMERSCHMIDT. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I would be happy to yield to the gentleman from Arkansas.

Mr. HAMMERSCHMIDT. Mr. Chairman, I have also examined the gentleman's amendment. Of course, I am very familiar with it, having supported it on other legislation many times in the past and we support it on this side of the aisle.

Mr. LEVITAS. Well, I thank my colleague, the gentleman from Arkansas, for that, because the gentleman has been a loyal supporter of this concept and it demonstrates the bipartisan support which this concept has without regard to what party happens to be in the oval office.

Mr. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I am happy to yield to my colleague.

Mr. CLAUSEN. Mr. Chairman, I want to associate myself with the remarks of the gentleman from Georgia, as well as the other Members, because this has been a traditional effort on the part of the committee to bring about the kind of legislative veto that will permit us to execute some sort of check and balance on the regulatory process.

I am proud to be associated with the gentleman.

Mr. LEVITAS. Mr. Chairman, I thank my friend, the gentleman from California, for that. The gentleman was one of the earliest cosponsors of this legislation.

Again, I think it demonstrates the wide broad-based support in Congress for this concept.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia (Mr. LEVITAS).

The amendment was agreed to.

□ 1415

AMENDMENT OFFERED BY MS. FERRARO

Ms. FERRARO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Ms. FERRARO: Page 9, after line 10, add the following:

"(c) In furtherance of the policy set forth in subsection (a) of this section, the Administrator shall require value engineering review in connection with any treatment works, prior to approval of any grant for the erection, building, acquisition, alteration, remodeling, improvement, or extension of such treatment works, in any case in which the cost of such erection, building, acquisition, alteration, remodeling, improvement, or extension is projected to be in excess of $10,000,000. For purposes of this subsection, the term 'value engineering review' means a specialized cost control technique which uses a systematic and creative approach to identify and to focus on unnecessarily high cost in a project in order to arrive at a cost saving without sacrificing the reliability or efficiency of the project.

Page 9, line 11, strike out "(c)" and insert in lieu thereof "(d)".

Ms. FERRARO (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Ms. FERRARO. Mr. Chairman, I rise as a member of the committee to offer an amendment. The amendment is at the desk.

This amendment directs the Administrator of EPA to require that value engineering be used on any treatment works with a total cost of greater than $10,000,000.

The amendment establishes as a matter of law a procedure that the EPA has mandated by regulation, with great success, since 1977.

Value engineering is a systematic, multidisciplinary, functional analysis of a project's design which is used to determine least cost alternatives without sacrificing the reliability or efficiency of the project.

The process was first devised by General Electric in World War II to deal with materials shortages, and was first introduced into Government in the early sixties by Robert McNamara at the Defense Department. My understanding is that the Corps of Engineers has used it for years on some projects with total savings estimated at $750 million. The Federal Highway Administration has also used VE since 1975.

EPA first introduced value engineering, by regulation, as a voluntary measure on construction grant projects in 1975. The decision to adopt VE was made in response to a congressional directive, much like the one in section 13 of H.R. 4503, that the most cost-effective means be employed in the construction of sewage treatment plants.

In 1975–76, used voluntarily on eight projects, VE saved some $16 million. This success led EPA, again by regulation, in 1977 to make VE mandatory for any project with a total construction cost exceeding $10 million. In the 4 fiscal years 1977–80, on projects that

have been reported to EPA, VE has resulted in net savings of $156 million.

This program, I should add, is operated with very low administrative overhead, with not a single EPA staff person assigned to deal with it full time.

Despite the program's tremendous success, EPA had planned to change VE back to a voluntary program. As I understand it, the change was to have been proposed, as part of an agency-wide regulatory review, in regulations EPA expects to publish in early November.

This morning, however, I learned that the decision to drop VE has apparently been reversed in recognition of the success of the program and the concern it generated in Congress.

Clearly, in this time when the funding for construction grant program is being slashed, we cannot afford to abandon proven cost-saving techniques. If we are serious about the fight against waste in Federal spending, value engineering is one of the best weapons we have.

The argument—in fact, the only argument—that has been raised against making VE mandatory by law, is that such a move may be unnecessary. If VE is such a good technique, the argument goes, then surely the States and cities will use it regardless of whether we mandate it.

The problem, though, is that while the States will make the decision on whether to use VE, because of the construction grant program's funding formula, most of the savings accrue to the Federal Government.

VE saves an average of 5 to 10 percent of total project costs. Since States are only paying a maximum of 25 percent, and frequently less, of a project's costs, their savings are only 5 percent of the 25 percent of the project costs, which is not a huge amount of money, especially on an individual State basis. The savings to the Federal Government, which pays 75 percent of the project costs, however, are considerable, establishing a substantial Federal interest in mandating the use of VE.

In these times of reduced Federal budgets, we need to make the best use of limited Federal dollars. In fact, as I have stated, section 13 of H.R. 4503 requires the use of the most economical and cost-effective combination of treatment works be used to meet the requirements of the act. VE is a valuable tool in achieving this goal.

I think the case is clear. Value engineering has been used successfully to reduce costs in this program. I have spoken with EPA, and with the Association of Metropolitan Sewer Agencies, and with various others with an interest in this issue, and have found no opposition to value engineering.

In the interests of efficient Government, and to help in the fight against waste in Federal spending, I urge your support for this amendment.

Mr. HAMMERSCHMIDT. Mr. Chairman, will the gentlewoman yield?

Ms. FERRARO. I will be happy to yield.

Mr. Chairman, I rise in support of the amendment. I have been informed that the value engineering program of the construction grants program has provided a good means of saving money and improving the design of wastewater treatment plants. Value engineering is especially important in larger projects. For those over $10 million, the return in savings can be substantial. I do support the amendment and urge my colleagues to vote for it as well. I thank the gentleman.

Mr. ROE. Mr. Chairman, will the gentlewoman yield?

Ms. FERRARO. I yield to the gentleman from New Jersey.

Mr. ROE. Mr. Chairman, I share the observation of the distinguished gentleman from Arkansas. We, too, have reviewed the context of this amendment. It is splendid. It adds to the substance of the act, and we have no objection on this side of the aisle.

Ms. FERRARO. Mr. Chairman, I am delighted by the support of the committee for the amendment. I believe it is in the interests of efficient Government and will help in the fight against waste and Federal spending.

The CHAIRMAN. The question is on the amendment offered by the gentlewoman from New York (Ms. FERRARO).

The amendment was agreed to.

Mr. HALL of Ohio. Mr. Chairman, I move to strike the last word.

Mr. Chairman; I am aware that the bill before us today, H.R. 4503, deals expressly with those provisions of the Federal Water Pollution Control Act establishing a program of sewage construction grants. Still, I would like to take this opportunity to bring forth my concerns—concerns which I have discussed in great detail with the members of the Public Works and Transportation Committee—on section 404 of the Federal Water Pollution Control Act.

The Rules Committee, on which I sit, last week granted the rule for the consideration of H.R. 4503. I had intended, during these proceedings, to request a waiver of the germaneness clause on an amendment to H.R. 4503. In short, my amendment called for an exemption of the Miami Conservancy District from the permit requirements mandated by section 404.

I had originally chosen to amend H.R. 4503 because during the Rules Committee considerations, and as of yet, no definite schedule for reviewing section 404 has been made. My water conservancy district has endured a series of frustrating encounters with the U.S. Corps of Engineers and its system of administering the 404 program. I simply feel that the time has come to resolve these problems.

The Miami Conservancy District was created on June 28, 1915. It has developed one of the most comprehensive flood control systems in the Nation. The total system provides flood protection for nine cities in the great Miami River basin in southwestern Ohio. The Conservancy District has enjoyed a long history of responsible action in maintaining the waters within its jurisdiction free from flood-causing obstructions and in constructing dams and other projects where necessary to temper the destructive forces posed by flood water.

The Federal regulations promulgated by the Corps of Engineers have caused the Conservancy District difficulty in accomplishing total maintenance responsibilities assigned under Ohio law. In addition, these regulations have resulted in long delays, in project completions. I would like to cite an example which I believe clearly establishes this point. The Miami Conservancy District applied for a general maintenance permit from the corps in February, 1978. On August 10, 1981 it received partial approval from the corps to undertake activities requested in the application. I cannot even begin to estimate how long it will be before action is completed on the remaining request. What I do know is that after close to 3½ years, the corps has been unable to make total response to this application request.

The Miami Conservancy District operates entirely on local funds. No Federal moneys are used to facilitate its projects. The people of the Miami Valley who pay the total cost to maintain the local flood protection system, in this particular instance, can only wait for the corps' decision on this project. To say the least, it is particularly disheartening when a responsible, widely respected, locally financed agency is prevented from accomplishing its legally mandated functions because of incompetence and redtape at the Federal level by the agency administering the 404 program.

Another point which I would like to raise, Mr. Chairman, is the Corps of Engineers' jurisdiction over navigable waters as pertains to the Miami Conservancy District. Since 1899, the corps has had jurisdiction over navigable waters of the United States. The definition of "navigable waters" covers those waters which are, in the past were, or in the future could likely be used for commercial water transportation. The body of water falling under the responsibility of the Miami Conservancy District meets none of these criteria. In fact, Judge Carl Rubin for the U.S. District Court in the southern district of Ohio recently held that "the Great Miami River and its tributaries are not navigable."

Mr. Chairman, I strongly support the objectives of the Federal Water Pollution Control Act. Its goals are commendable and should be pursued. I do not seek to subvert these objectives, I seek only to resolve the problems plaguing the operations of the Miami Conservancy District.

I should like to take this time to share the text of an editorial which appeared in one of my district's newspapers. I think this editorial summarizes quite well the concerns I have expressed here today.

Mr. Chairman, the editorial follows:

[From the Dayton Daily News, May 20, 1981]

IN CONFLICT: OUR OWN RIVER AGENCY V. ENGINEERS CORPS

The Miami Conservancy District is the 20th century prototype of modern river management. The U.S. Army Engineers Corps is the archetype of federal bureaucracy.

As confrontation drama, their jurisdictional conflict isn't a patch on "Little Red Riding Hood." Yet the clash itself, and how the district resolves it, is important to the valley that pioneered in 1919 a river engineering model the Corps said at the time wouldn't work.

We—not Washington—invented a flood control agency. We financed its dams, levees, flood plain safeguards against a repeat of 1913's disaster. We pay for their maintenance. Whatever runs up Conservancy District operating costs—always frugally managed—comes out of pockets here.

In recent years, as federal law and court rulings broadened Engineers Corps control over waterways, permit requirements began to hamper the district's custodial work. Half the handcuff—Corps jurisdiction over structural work on "navigable" streams—was struck off in U.S. District Court Feb. 20. Judge Carl Rubin ruled the Great Miami system never had been commercially navigable. The Corps may appeal.

For relief from the rest of the handcuff—Corps jurisdiction over dredge and fill operations—the district requested in 1978 a general permit for routine flood control maintenance. The Corps has refused.

To free itself to do what it must, the Dayton-based agency now turns to Congress. Rep. Tony Hall (D-Dayton) will try to get a Public Works bill amendment exempting the Great Miami River Basin from the 1972 Clean Waters Act, Section 404.

This permit program gives the Corps authority over dredging and filling along major and minor watercourses and requires analysis of environmental impact by the Corps, the EPA and the Fish and Wildlife Service. Except where it interferes with the work of an agency with a known concern for the public interest, Section 404 is good law.

It has protected vital U.S. shorelands, waterways and wetlands against pollution, ill-advised flood plain development, channelization that lowers water tables, destruction of fish and bird life-cycle habitats—a range of conversion follies. Nationwide anti-regulatory and environment-be-damned sentiment unfortunately has targeted its repeal.

In electing to go it alone, seeking only its own exemption from 404 permits, the Conservancy District takes the difficult course, but the wise one. It has been ahead of its time in every movement linking life-quality to the natural environment—flood control, pollution abatement, open space reserves, the urban-suburban amenities of river rediscovery. The agency's do-it-yourself spirit is vanguard still.

Mr. HALL of Ohio. Mr. Chairman, I strongly support the objectives of this bill. I think it is an excellent bill, and at this time, if I may, I would like to ask a few questions of the distinguished subcommittee chairman.

Mr. Chairman, during the Rules Committee hearings on the rule for H.R. 4503, I had urged the chairman to schedule hearings on section 404. Will such a schedule be set?

Mr. ROE. Mr. Chairman, if the gentleman will yield, I want to compliment the gentleman from Ohio. I know he has been pursuing a resolution to a very legitimate problem that exists in his State and in his district. I feel very sympathetic toward that, and as soon as time permits within the immediate future, we will be holding a set of hearings on section 404.

Mr. HAMMERSCHMIDT. Mr. Chairman, will the gentleman yield?

Mr. HALL of Ohio. I will be glad to yield.

Mr. HAMMERSCHMIDT. Mr. Chairman, I want to thank the gentleman for his explanation, for his remarks, and associate myself with the remarks of the distinguished chairman of the subcommittee and promise our full cooperation with the gentleman in the well.

Mr. HALL of Ohio. I thank the gentleman. If I may, I would like to ask another question. Will it be permitted at this time, when this particular section will come up in subcommittee, to have representatives from the conservancy district and myself appear before the subcommittee and explain this problem in detail?

Mr. ROE. We would welcome that opportunity because I think that kind of exchange adds a great deal to the knowledge of the committee. It might even be—and I talked about it with Mr. CLAUSEN, Mr. HOWARD, and Mr. HAMMERSCHMIDT—that it would be to the gentleman's people's needs for us perhaps to journey to Ohio. That would give more people a chance to participate. We would be pleased to hold a hearing at the gentleman's convenience.

Mr. HALL of Ohio. I have one final question.

Mr. Chairman, does the subcommittee intend to consider legislation to address the problems of this section 404, the permit procedures?

Mr. ROE. By all means; yes.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent, Mr. HALL of Ohio was allowed to proceed for 1 additional minute.)

Mr. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. HALL of Ohio. I yield to the gentleman from California (Mr. CLAUSEN).

Mr. CLAUSEN. Mr. Chairman, I was just going to say that I have discussed this matter with not only the gentleman from Ohio, but that the Miami Conservancy District is one of the finest total water management concepts in place, I think, in the Nation. As a matter of fact, it is a model, so I think what the gentleman is suggesting certainly does have legitimacy. To me, as far as I am concerned, I would want to take a look at this in the context of the overall 404 program. I will join my colleague, the ranking minority member, Mr. HAMMERSCHMIDT, and the gentleman from New Jersey in working with the gentleman from Ohio.

Mr. HALL of Ohio. I thank the gentleman for his comments.

AMENDMENT OFFERED BY MR. EVANS OF IOWA

Mr. EVANS of Iowa. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. EVANS of Iowa: Page 3, after line 3, add the following new subsection (1):

(1) In administering those provisions of section 201 which require applicants to consider a variety of design alternatives, the Administrator shall ensure that planning and design efforts to comply with those provisions are conducted in a manner that leads to sound design decisions at reasonable cost. Administrative, procedural and technical requirements of the Agency shall:

(1) Discourage duplicative or repetitive studies and reviews;

(2) Encourage use of engineering and economic data and conclusions in existence from other similar projects;

(3) Encourage procedures that allow unattractive options to be eliminated early in the design process;

(4) Take such other actions as will ensure that study and design costs are reasonable and in line with engineering and industry standards for comparable work.

Mr. EVANS of Iowa (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. EVANS of Iowa. Mr. Chairman, this amendment addresses the problem that, in our clean water program, in my judgment we spend far too large a share of our scarce source of engineering funds on studies and on design and in supervision of construction as opposed to the actual construction of facilities. I say that as a registered civil engineer and member of the profession that reaps most of the financial benefits of our generous funding for our engineering services for our clean water program.

To illustrate the problem, there is extensive data that shows that complete engineering services, including planning and design and construction supervision, should cost from 7 to 9

percent of the total project cost for waste water treatment systems and for similar facilities. Yet, all the records indicate that engineering services for new waste water treatment systems constructed under this act today average perhaps 25 percent of the total project cost. On construction that is modification of existing plans, the engineering services can go to 30 percent or beyond, and I am sure it is clear to all of us that the difference between 7 to 9 percent and 25 to 30 percent of the cost of cleaning up this Nation's water amounts to many billions of dollars at a time when billions of dollars are in extremely short supply.

The amendment attempts to get at that problem. What it does is, it instructs the agency that in administering provisions which require applicants to consider a variety of design alternatives—and that is what we usually do—the administrator shall insist that planning and design efforts are conducted in a manner that leads to some design decisions at reasonable cost. Under this amendment, we would ask the agency to do four things:

First, to discourage duplicative or repetitive studies and reviews, and we have many of those.

Second, to encourage the use of engineering and economic data and conclusions in existence from other similar projects, and there is much of that data available.

Third, to encourage projects that allow unattractive suggestions to be eliminated early in the design process.

Fourth, to take such other actions that are necessary that study and design costs are reasonable and in line with engineering and industry standards for comparable work.

Mr. Chairman, I understand that the committee is reluctant to accept an amendment of this type at this time. I am prepared to withdraw the amendment. However, I would like to hear the views of the subcommittee chairman on the attitude of the committee on this particular subject.

Mr. ROE. Mr. Chairman, if the gentleman will yield, I think he makes several excellent points which I wholeheartedly agree with. I have had the opportunity to discuss this amendment, as the gentleman knows, with the distinguished gentleman from Iowa, and I think many of the points and constraints he has suggested in his proposed amendment are worthwhile.

I think that we have to put the feet to the fire, if you like, of the Environmental Protection Agency, to use every available opportunity to reduce costs. This is certainly a field in which the gentleman is highly knowledgeable, and I am sure can be helpful.

I would guarantee the gentleman that what we will do, and having discussed this with my counterpart on the other side of the aisle, we will include his observations and discussions in the report that will go with this legislation, and direct the EPA to follow the thoughts and suggestions the gentleman has projected.

Mr. EVANS of Iowa. I thank the gentleman. I would add these remarks, if I may: That the specific wording of the act does not really encourage this sort of economy at the present time. I would strongly urge that the subcommittee, at its convenience, examine the desirability of making some changes in the law that would accomplish this goal.

Mr. ROE. If the gentleman will yield further, we definitely think the gentleman is absolutely on the right track. We will take this up as a very viable part of these hearings, which are going to start very shortly.

Mr. EVANS of Iowa. I appreciate the gentleman's cooperation.

Mr. Chairman, I ask unanimous consent to withdraw the amendment.

The CHAIRMAN. Is there objection of the gentleman from Iowa?

There was no objection.

Mr. LAGOMARSINO. Mr. Chairman, I move to strike the last world.

Mr. Chairman, I take this time to engage the managers of this bill in a colloquy on a matter of great importance to my district and, for that matter, to the entire Nation.

□ 1430

I would like to ask my good friend, the distinguished ranking Republican member, the gentleman from Arkansas (Mr. HAMMERSCHMIDT), if he would answer a question that I will pose to him.

Mr. HAMMERSCHMIDT. I will be pleased to respond to my good friend and colleague, the gentleman from California.

Mr. LAGOMARSINO. I would like to clarify a matter that relates to my district, as I said. The city of Lompoc, Calif., which has a population of just over 25,000, is adjacent to Vandenberg Air Force Base. Vandenberg is the center of activity for a number of important new national defense programs, most notably the Space Shuttle and MX missile test program. The personnel requirements associated with these programs have created the need to construct a new interceptor sewer north of the city to provide wastewater treatment service to the new area residents.

Would the city of Lompoc be eligible under H.R. 4503 to receive 75 percent Federal grant assistance to construct its interceptor sewer?

Mr. HAMMERSCHMIDT. Mr. Chairman, will the gentleman yield?

Mr. LAGOMARSINO. I yield to the gentleman from Arkansas.

Mr. HAMMERSCHMIDT. Mr. Chairman, I assure the gentleman that under the current provisions of the committee bill the city of Lompoc would indeed be eligible to receive construction grants program funding equal to 75 percent of the cost to construct the interceptor sewer in question. In a situation such as this, where other Federal programs result in a heavy infrastructure burden being placed on a local community, it seems especially appropriate that assistance under the construction grants program be available to offset some of the cost associated with building the necessary wastewater treatment infrastructure.

Mr. ROE. Mr. Chairman, will the gentleman yield?

Mr. LAGOMARSINO. I yield to the gentleman from New Jersey.

Mr. ROE. Mr. Chairman I want to identify and associate myself with the remarks of my distinguished friend, the gentleman from Arkansas, and I support the position that he has just described.

Mr. LAGOMARSINO. Mr. Chairman, I thank the managers of the bill for their comments.

It is my understanding, then, that there is support for construction grants program assistance for the city of Lompoc's interceptor sewer project.

Mr. HAMMERSCHMIDT. Mr. Chairman, if the gentleman will yield further, I assure the gentleman that there is support on the committee for the Lompoc project.

Mr. CLAUSEN. Mr. Chairman, will the gentleman yield?

Mr. LAGOMARSINO. I yield to the gentleman from California.

Mr. CLAUSEN. Mr. Chairman, as further amplification of the colloquy that has taken place, I really believe that what is involved here is a matter of prioritization for the State of California as well. As has been indicated, this would be a grants eligible project under this legislation, as the gentleman from California has pointed out and as stated by the gentleman from Arkansas and the gentleman from New Jersey.

So I would certainly work with the gentleman, because I know the urgency of the matter, in order to see if we can get the project sponsors to work more closely with the State of California and those who have the authority over the actual prioritization.

Mr. Chairman, I certainly want to thank the gentleman for bringing this matter to our attention, and I assure him of my support.

Mr. GUNDERSON. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take time to engage my distinguished colleague from Arkansas, the ranking minority member on the subcommittee, in a colloquy on this important legislation.

Mr. Chairman, with the passage of the Federal Water Pollution Control Act in 1972, the Congress established a national priority to assure fishable

and swimmable lakes, rivers, and streams for present and future generations. An interim date of July 1, 1983, was set for the attainment of that goal and the country embarked on a campaign to clean up its waters.

The work has continued up to this point through the joint efforts of Federal, State, and local governments with the Federal Government providing 75 percent of project funding.

However, due to recent budget cutbacks, the Federal share in these projects has been significantly reduced and the financial burden for completion shifted onto the local communities. It is a sudden expense none of the towns anticipated and are ill prepared to accept. While these communities have every intention of complying with the act, the 1983 deadline has become an impossibility.

The National Governors Association recognizing this problem has proposed a modification in the program which would extend the deadline for compliance to 1990.

In my own district I have more than a dozen towns and villages which are willing but unable to comply with the 1983 deadline. As a result, I introduced H.R. 4668 to extend the deadline to 1990.

Mr. Chairman, such an extension would allow these hard pressed communities the time to raise necessary funds for completion of municipal sewage treatment projects.

Mr. SHAW. Mr. Chairman, will the gentleman yield?

Mr. GUNDERSON. I yield to the gentleman from Florida.

Mr. SHAW. Mr. Chairman, our distinguished colleague from Wisconsin (Mr. GUNDERSON) raises an issue that I have been concerned about and one which I have discussed with the committee leadership. As the committee knows, in my own district, the current 1983 municipal compliance deadline is causing a measure of disruption. One of the city of Fort Lauderdale's wastewater treatment plants is being forced to divert its flow into the Broward County Central Regional Wastewater Treatment Plant, before the latter will be able to handle that flow. The resultant overload to the regional plant could preclude any additional flow to it and result in a sewer hookup moratorium that would bring downtown Fort Lauderdale's development to a standstill.

Mr. Chairman, it is my understanding that hundreds of communities nationwide could have problems similar to ours in Fort Lauderdale. Our colleague from Wisconsin's description of the situation in his district would seem to bear this out. It would, therefore, seem appropriate that the Committee address this important issue.

Mr. HAMMERSCHMIDT. Mr. Chairman, will the gentleman yield?

Mr. GUNDERSON. I yield to the gentleman from Arkansas.

Mr. HAMMERSCHMIDT. Mr. Chairman, both of these gentlemen have spoken to us about an issue that is an extremely important one. It is also an issue that I believe may see substantial support for being resolved along the lines they seek; that is, extending the current municipal deadlines. In fact, last year when the Public Works Committee developed its ICR-repeal bill, H.R. 6667, the bill contained a municipal compliance deadline extension provision. Unfortunately, that provision was rejected by our 96th Congress Senate counterparts.

The legislation before us today, H.R. 4503, deals only with EPA's construction grants program. We have purposefully attempted to save other Clean Water Act issues—like the industrial portions of the act, the permit provisions, and municipal compliance deadlines—until next year when we plan to examine the entire act.

Mr. GUNDERSON. I appreciate the remarks of the gentleman. Does the gentleman agree that these communities face serious hardships brought on by the sudden reduction in funds?

Mr. HAMMERSCHMIDT. The gentleman is correct. Many communities are likely to find it more difficult to meet the current statutory compliance deadlines.

Mr. GUNDERSON. Do we have the gentleman's assurance that he will support full consideration of a municipal deadline extension in future water pollution control legislation?

Mr. HAMMERSCHMIDT. The gentlemen have my assurance and are to be complimented for raising this issue, on behalf of their constituents here today.

Mr. GUNDERSON. Mr. Chairman, I thank the gentleman for this diligent work and sincere concerns in this area.

The CHAIRMAN. The question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. MCHUGH) having assumed the chair, Mr. STRATTON, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4503) to amend the Federal Water Pollution Control Act to authorize funds for fiscal year 1982, and for other purposes, pursuant to House Resolution 247, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. HOWARD. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 382, nays 18, not voting 33, as follows:

□ 1445

The Clerk announced the following pairs:

Mr. Fary with Mr. Marlenee.
Mr. Richmond with Mr. Bethune.
Mr. Udall with Mr. Shuster.
Mr. Biaggi with Mr. Smith of Pennsylvania.
Mr. Early with Mr. Beard.
Mr. Gray with Mr. Pashayan.
Mr. Jones of North Carolina with Mr. Lowery of California.
Mr. Leland with Mr. LeBoutillier.
Mr. Stark with Mr. Dougherty.
Mr. Clay with Mr. Campbell.
Mr. Crockett with Mr. Hansen of Utah.
Mr. Dingell with Mr. Goldwater.
Mr. Edwards of California with Mr. Savage.
Mr. Moffett with Mr. John L. Burton.
Mr. Florio with Mr. Foley.
Mr. Fuqua with Mr. Fithian.

Mr. SMITH of Oregon changed his vote from "yea" to "nay."

Messrs. DECKARD, WORTLEY, and MARTIN of New York changed their votes from "nay" to "yea."

So, the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

DEPOSIT INSURANCE FLEXIBILITY ACT

Mr. ST GERMAIN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4603) to provide flexibility to the Federal Deposit Insurance Corporation, the Federal Savings and Loan Insurance Corporation, and the Federal Supervisory agencies to deal with financially distressed depository institutions.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Rhode Island (Mr. ST GERMAIN).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 4603, with Mr. PEYSER in the chair.

The Clerk read the title of the bill.

□ 1500

The CHAIRMAN. Pursuant to the rule, the first reading of the bill is dispensed with.

Under the rule, the gentleman from Rhode Island (Mr. ST GERMAIN) will be recognized for 30 minutes, and the gentleman from Ohio (Mr. WYLIE) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Rhode Island (Mr. ST GERMAIN).

Mr. ST GERMAIN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, your Banking, Finance, and Urban Affairs Committee by voice vote on October 5 recommended that the House adopt H.R. 4603, as amended, responding to the request of the independent regulators and insurers of our financial institutions.

After a thorough consideration of the regulators' request the committee concluded that simple prudence demands that we provide our regulators with maximum flexibility in the administration of existing deposit insurance funds to minimize impact on these funds and at the same time provide maximum assistance based upon the circumstances involved in each case to those institutions, primarily thrift institutions, experiencing declining net worth problems during this period of extreme financial stress, largely due to persistent double-digit inflation.

H.R. 4603, as amended by the committee, provides for increased flexibility in the administration of existing deposit insurance funds; for the provision of transitional assistance to thrift institutions during this period of financial stress; and for broadened merger possibilities designed to minimize the cost impact on the individual insurance funds while at the same time assisting the maximum number of institutions. These changes affect the Federal Deposit Insurance Corporation, the Federal Home Loan Bank Board and its Federal Savings and Loan Insurance Corporation, and the National Credit Union Administration and its National Credit Union Share Insurance Fund.

In order to respond to those who mistakenly charge that the committee leadership has rushed the bill through both subcommittee and full committee, a somewhat detailed history of the events leading up to the committee's favorable action by voice vote on October 6 will be of interest to the House.

Well over 1 year ago the committee leadership began meeting with regulators, individually and collectively, as it became increasingly apparent that thrift institutions with their low-yield portfolios and sustained high borrowing costs were experiencing rapidly declining net worth problems and that simple prudence dictated that a workable contingency plan be adopted should the economic situation hold constant or even worsen, as has been the case. The regulators at the request of the committee leadership were encouraged to prepare concensus draft legislation which was done. This draft legislation was discussed by Members and staff thoroughly at numerous meetings beginning last spring. The legislation before you today, H.R. 4603, remains essentially the bill which was drafted by the regulators.

During this period, numerous meetings were held as well with representatives of the administration, primarily Department of Treasury officials and the Economic Council. To assist my colleagues in attempting to understand the administration's position on the provisions of H.R. 4603 which has, and continues to cause confusion, I want to place in the RECORD the exchange of correspondence which took place with the Department of Treasury, several committee releases furnished to each committee member as well as correspondence with Housing Subcommittee Chairman GONZALEZ which took place after Assistant Secretary Mehle's appearance before the committee during our monetary policy hearings on July 23.

As stated previously, formal hearings began on the draft regulators' bill on July 14 in connection with the committee's semiannual monetary policy hearings held pursuant to the Full Employment and Balanced Growth Act of 1978. Those hearings were opened with the following remarks by the Chair in part as follows:

For most of 1980, and for all of 1981, interest rates have been at intolerably high double-digit levels. As a result, mutual savings banks and savings and loan associations, and some banks and credit unions, are suffering serious reductions in their ability to extend needed credit to important sectors of our Nation's economy. Their financial soundness may also be falling into jeopardy. It is this aspect of the conduct of monetary policy that will be explored in today's hearing, the first of several by the House Committee on Banking, Finance and Urban Affairs in its semiannual monetary policy hearings held pursuant to the Full Employment and Balanced Growth Act of 1978.

Almost every day now I see press reports on the plight of the thrift industry. Rumors and conflicting statements abound, and in some instances, aggravate public concern and confusion. This spring, this committee stood ready to act quickly in a full bipartisan manner to consider solutions to the thrift industry problem.

At that time, this committee was asked, in the most urgent terms, by the Federal Reserve, Federal Deposit Insurance Corporation, Federal Home Loan Bank Board, and the National Credit Union Administration, to consider statutory changes to broaden their merger and acquisition authorities, and to expand the resources of the Federal deposit insurance funds. Mr. Stanton and I met on several occasions with the regulators individually, the Chairman of the Federal Reserve, and informally with newly appointed administration officials, beginning with Secretary Regan, and with our counterparts in the Senate, concerning draft legislation.

COMMITTEE ON BANKING,
FINANCE AND URBAN AFFAIRS,
Washington, D.C., March 26, 1981.

Hon. DONALD REGAN,
Secretary, Department of the Treasury, Washington, D.C.

DEAR MR. SECRETARY: Yesterday I had the opportunity to meet with your Deputy Secretary, Mr. R. T. McNamar. We discussed many of the legislative items you and I had discussed previously at our meeting on March 18, 1981, including funding for the National Consumer Cooperative Bank. As with you, much of the time spent with your Deputy Secretary was consumed discussing the current status of the thrift industry. As you know, since last winter, I have met with a number of representatives of the thrift industry, savings and loans and mutual savings banks, Federal and state banking regulators, members of the Federal Reserve Board and others concerning this problem.

Many believe the magnitude of the problems within the thrift industry and their possible ripple effect are underestimated by some within the Administration. I tend to agree there is validity to this observation. In my opinion, time is of the essence. I believe whatever legislative proposals the Administration wishes to discuss with the Congress, and ultimately submit formally, must be done in the immediate future.

I repeat my commitment to you. I stand ready to assist you in seeking immediately a solution to the current problem of the thrifts. I will work with my Committee, with our sister Committee in the Senate and my counterpart, Chairman Jake Garn, and with whomever else is necessary to make sure the thrift industry remains viable to perform its vital Congressionally-imposed objective in providing home mortgage funds to the American people.

Sincerely,

FERNAND J. ST GERMAIN,
Chairman.

THE SECRETARY OF THE TREASURY
Washington, D.C., April 21, 1981.

Hon. FERNAND J. ST GERMAIN,
Chairman, Committee on Banking, Finance and Urban Affairs, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I would like to thank you for your letter of March 26, 1981 concerning the plight of the thrift industry. I appreciate your offer to be of assistance in working to solve the industry's problems.

The Administration believes the President's economic program is the best remedy for the current ills of mutual savings banks and savings and loan associations. The program's combined budget, tax and monetary policy features should reduce inflation and interest rates and produce a normal yield curve. As the budget and tax programs advance in Congress, public confidence in these efforts should increase and inflationary expectations should subside, causing some easing of interest rates. The industry's main problems are high interest rates and an inverted yield curve.

Over the longer term, I will be urging the regulatory agencies and Congress to liberalize the asset powers of thrift institutions to make these organizations more competitive in every type of economic environment.

In the meantime, I would like to reassure you that the Administration is taking thrift industry problems seriously. We are aware of the vital role this industry plays in financing new home construction and in providing for consumer savings, and we understand the need for public confidence in all our financial institutions.

Best wishes.

Sincerely,

DONALD T. REGAN.

APRIL 28, 1981.

Hon. DONALD T. REGAN,
Secretary of the Treasury, Washington, D.C.

DEAR MR. SECRETARY: Your letter of April 21, 1981 provided the position of the Administration on the problems confronting the thrift industry today. Basically, the Executive believes that enactment of the basic economic recovery program will, in the long run, solve the major problems of the industry—the inflationary and high interest rate environment which makes thrift asset portfilios untenable. In the short run, it is argued that the depository institution regulatory agencies can, with the proper tools, handle any special institution problems.

As you know, the agencies, with the Board of Governors providing the coordinating role, have proposed several changes in existing law to facilitate case-by-case problem institution resolution. These changes include authority to provide assistance if emergency circumstances prevail, to allow thrift acquisitions across state lines and to allow such acquisitions by bank holding companies. In order to continue the frank discussions which we have had on this subject, it would be appreciated if you would review the attached draft legislation suggested by the agencies and provide at the earliest possible time the Administration's views on the principles involved in the proposals.

Sincerely,

FERNAND J. ST GERMAIN,
Chairman.

WASHINGTON D.C.
May 29, 1981.

Hon. FERNAND J. ST GERMAIN,
Chairman, Committee on Banking, Finance, and Urban Affairs, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This letter is in response to your letter of April 28 requesting the Administration's views on the financial institutions regulators' draft legislation to assist thrift institutions. We have reviewed the legislation as you forwarded it, together with subsequent changes that were made by the regulators. Before and since your letter, members of the Cabinet Council on Economic Affairs and I have been given the problems of the thrift industry very careful study and have given the regulators' draft bill equally careful scrutiny in that connection.

INTERSTATE AND INTERINDUSTRY MERGERS

The Administration has no objection to the regulators' proposals for interstate and interindustry mergers and consolidations. We are sympathetic to what appears to be a competitive free market means of dealing with a failing depository institition. Expanding the geographic market to reach more potential bidders for a distressed firm could reduce the amount of financial assistance the Federal deposit insurance agencies might have to provide in order to facilitate the merger of a failing institution. If the regulators believe that interstate and interindustry mergers and consolidations would significantly increase their options in assisting the thrift industry, we have no difficulty with these proposals.

FINANCIAL ASSISTANCE POWERS

The Administration does oppose the regulators proposals to increase their financial assistance powers and their borrowing lines at the Treasury Department. We believe the legislation requested in this area is unnecessary at this time and does not address the industry's difficulty. While the thrift industry is suffering temporarily from an earnings problem, it is clear that the industry (whose assets have increased approximately $9 billion since January of this year) does not face cash difficulties. Measures necessary to offset the temporary decline in the

industry's net worth as a result of its earnings difficulties can be taken without the need for any extraordinary financial assistance. We expect that the President's economic program with its balanced tax, budgetary and monetary policy features designed to work in concert to reduce inflation will also reduce short-term interest rates. This would be the best possible solution to the thrift industry's earnings problems. I therefore hope that the Congress will continue its favorable action on the program as expeditiously as possible.

As to any cash problems that some thrift institutions may encounter, in our opinion the Federal deposit insurance agencies already have the resources and financial powers to aid these institutions. They have in fact the substance of the authority they are requesting. We would prefer to have existing programs and resources utilized carefully before new powers and money are provided. If the insurance agencies appear to us to need new authority or resources, we will propose or endorse proposals to meet these specific needs.

In any event, the most important element of enabling thrift institutions to retain their deposit funds is a removal of restrictive limits on the amount of interest they can pay on their deposit liabilities. As Chairman of the Depository Institutions Deregulation Committee, I expect, as I have stated in the past, to act expeditiously to permit the industry to become more competitive in this regard.

In closing, let me reiterate the Administration's confidence in the viability of the thrift industry and in its ability to adapt to temporarily adverse market conditions. We are certain that it can cope with high inflation and high interest rates for the time being and that the Federal government's deposit insurance agencies can fully protect the public should some institutions have difficulties.

I would look forward to further discussion of the Administrations' viewpoint with you at any time.

Sincerely,

DONALD T. REGAN.

COMMITTEE ON BANKING,
FINANCE AND URBAN AFFAIRS,
Washington, D.C.

WASHINGTON, D.C., May 29.—Chairman Fernand J. St Germain of the House Committee on Banking, Finance and Urban Affairs, was informed today by the Office of the Secretary of the Treasury that they will oppose assistance legislation for the thrift industry.

"I must assume," Mr. St Germain said, "that this decision was based on an analysis of all of the detailed information concerning the thrift industry to which the Administration is privy but which, obviously, I have not seen. As the Administration knows, I have had a number of meetings and discussions on these issues since last October and I have offered my complete services in an attempt to draft and have enacted necessary legislation to provide whatever assistnace might be needed for the thrift industry. With the opposition evidenced by the Administration, there appears to be little or no reason to proceed to discuss assistance legislation for the thrift industry in the context in which it has been proposed to date by the Federal Reserve, and other depository institutions regulators."

"I, of course, continue to stand ready to listen to any proposals which might be made by the Administration concerning these matters; but it must be concluded that they feel that no assistance is needed at this time except to allow the full force of the marketplace to operate," the Banking Committee Chairman said.

COMMITTEE ON BANKING,
FINANCE AND URBAN AFFAIRS,
Washington, D.C., July 29, 1981.

Hon. RICHARD MCNAMAR,
Deputy Secretary, Department of the Treasury, Washington, D.C.

DEAR MR. SECRETARY: During its recent review of the conduct of monetary policy, the House Banking Committee heard from numerous witnesses about the condition of the thrift industry—in the past, the major source of mortgage funds. The Chairman of the thrift insuring and regulatory agencies, in particular, warned that continued high interest rates would seriously impair thrift institution safety and soundness. Asked whether we should look for rates to decline soon, Federal Reserve Chairman Paul Volcker said that such expectations would be "imprudent".

Interest rates are high now, and many financial market experts, in contrast with the Administration, expect the rates to remain high. Some highly respected financial analysts even predict interest rates may rise somewhat from present levels as a result of government deficits significantly larger than the Administration now contemplates. The refusal of the Administration to recognize the possibility that interest rates may remain at high levels longer than it expects is, in my view, an error in judgment of potentially very serious consequences.

Three months ago, I was asked in the most urgent terms by the Federal Reserve, Federal Deposit Insurance Corporation, Federal Home Loan Bank Board and the National Credit Union Administration, to obtain Banking Committee consideration of legislation to broaden their merger and acquisition authorities and expand their insurance fund resources to assist in preserving financial services to local communities. As you know, legislation drafting and briefings began immediately on a full bi-partisan basis. As you also know, further consideration of the "Regulators' Bill" was terminated by the Administration's decision to oppose its enactment in the belief that interest rates will decline in the near future.

I was particularly distressed to hear Assistant Treasury Secretary Mehle say, when he appeared before the Banking Committee on July 23, that the Administration has no thrift institution contingency plan. Your recent public statement that if such a plan were needed, it could be instituted "virtually overnight" is also disturbing to me.

You should be aware that any effort to expand deposit insurance fund resources would require action by the House and Senate Appropriations and Budget Committees, as well as the Banking Committees. While I have no doubt these Committees would act quickly in an emergency, you must understand that (1) the emergency which would necessitate "overnight" action would be the failure of several large thrift institutions, causing a decline in public confidence, and (2) the very act of Congressional consideration would, in the judgment of some experts, further impair public and financial market confidence because of the potential for adverse deficit and monetary growth effect. Indeed, the Administration's decision to not act when it could have, two months ago, may ultimately cause the public cost of assisting the thrift industry to be far greater than it otherwise would have been.

The position of the Federal Reserve and the agencies responsible for supervising and insuring thrift institutions is in conflict with the Department of Treasury and the Administration. This conflict concerns me very much. If the regulators' assessment of risk is accurate, and we must take their evaluation very seriously because of their intimate knowledge of thrift industry conditions, the Administration is subjecting the thrift industry and its support institutions to serious and needless risks.

I urge you in the strongest terms to reconsider your current opposition to enactment of legislation deemed necessary by the Federal Deposit Insurance Corporation, Federal Home Loan Bank Board, National Credit Union Administration and the Federal Reserve. Such a reconsideration would be consistent with a prudent sense of the inherent uncertainties of economic life and a realistic understanding of the acute financial pressures that accompany the Administration's policy of unrelenting monetary discipline.

Sincerely,

FERNAND J. ST GERMAIN, *Chairman.*

DEPUTY SECRETARY OF THE TREASURY,
Washington, D.C., August 3, 1981.

Hon. FERNAND J. ST GERMAIN,
Chairman, Committee on Banking, Finance, and Urban Affairs, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I am concerned by the statements in your letter of July 29 to the effect that you perceived that the Administration is not responding adequately to the problems of thrift institutions. Let me assure you that we recognize the difficulties this industry is having with high inflation and high interest rates and to that end, have proposed an Economic Recovery Program to bring down inflation. The decline in interest rates that we anticipate as the President's Economic Recovery Program takes effect will substantially alleviate the industry's current earnings problem.

While the thrift industry's current problems are of concern, we believe they are temporary and manageable and that the industry will recover satisfactorily and resume a leading role in housing finance. While individual institutions may be in difficulty, it is clear that as a whole the industry, whose assets have increased approximately $16.3 billion since January of this year, does not face a cash shortage.

We do recognize that in the interim the thrift industry may need some general assistance and individual thrift institutions may need more specialized assistance. I would like to point out some of the currently available means of such assistance:

(1) Under existing legislation, the Federal Home Loan banks and Federal Reserve banks can make funds available to individual thrift institutions with liquidity problems. The Federal Savings and Loan Insurance Corporation (FSLIC) and the Federal Deposit Insurance Corporation (FDIC) can provide other types of assistance, particularly to address a serious decline in a thrift institution's net worth. For example, in recent years the role of the FDIC in the First Pennsylvania and Bank of Commonwealth situations demonstrates the scope of existing FDIC powers. The same authority exists to assist troubled mutual savings banks. The powers of the FSLIC are even more broad;

(2) The Congress is currently completing work on tax legislation that includes liberal-

ized Keogh and IRA provisions and an "All Savers" program that would provide the thrifts with more cash flow from lower cost deposits. These funds would offset some of the recent loss of deposits by thrift institutions, and the lower cost tax-exempt feature of "All Savers" would aid the institutions' earnings;

(3) As of August 1, depository institutions were permitted to pay approximately market rates of interest on deposits with maturities of two and one-half to four years, in addition to other deposits which already have near market rates. The two and one-half to four year authority was granted by the Depository Institutions Deregulation Committee at its public meeting on June 25. This action will enhance the ability of thrift institutions to compete for funds.

Taken together, these forms of general and special assistance are far reaching. Moreover, the new legislative and DIDC actions have not yet had time to take effect, and many of the institutional programs have not yet been called upon to provide any significant assistance. It is in this context that Assistant Secretary Mehle noted in his testimony before your Committee that the Administration feels that no further assistance "plan" is warranted at this time. As to my statement that "overnight" a "plan" could be implemented, it was in response to a narrow question—the ability to authorize the expansion of the FSLIC $750 million borrowing line from the Treasury. I indicated that this expansion could be accomplished virtually overnight, and I believe that in fact this is true. The speed with which your Committee has proposed to act on the thrift legislation introduced Friday is evidence of the Congress' ability to act quickly.

Although we have not yet seen it, we understand that this legislation contains many feature of the original so-called "Regulators' Bill," on which the Administration communicated its position to you in a letter from Secretary Regan on May 29 (see enclosure). Specifically, we understand that the legislation would permit the interstate and interindustry acquisition of troubled thrift institutions by other thrifts and by commercial banks or bank holding companies, and would permit the FSLIC and FDIC to give financial assistance to troubled depository institutions. However, it is our understanding, that the bill does not contain increased borrowing lines from the Treasury Department for the FSLIC, FDIC or the National Credit Union Share Insurance Fund.

Our reaction to this legislation is basically the same as our reaction to the previous "Regulators' Bill," that is:

(1) The Administration believes the regulators' proposals for interstate and interindustry mergers and consolidations have considerable merit. Expanding the geographic market to reach more potential bidders for a distressed firm could reduce the amount of financial assistance the Federal deposit insurance agencies might have to provide in order to facilitate the merger of a failing institution. Interstate and interindustry mergers and consolidations would significantly increase the regulators' options in assisting the thrift industry in a pro-competitive way, and we have no difficulty with these proposals;

(2) The Administration opposes the proposals to increase the regulators' financial assistance powers. We believe the legislation requested in this area does not address the industry's fundamental problems. In our opinion, the Federal deposit insurance agencies already have the resources and financial powers to aid these institutions. They have in fact the substance of the authority they are requesting. We would prefer to have existing programs and resources more fully utilized before additional new powers and money are provided. If the insurance agencies appear to us to need new authority or resources, we will quickly propose or endorse proposals to meet any such specific needs.

More importantly, however, and of strong influence on our thinking, the Federal Home Loan Bank Board is currently developing legislation that would far better address the fundamental problems causing the industry's earnings problems. The Administration is currently in the process of reviewing preliminary drafts of this proposal, and favors its overall approach and a number of its provisions, which include the merger provisions of its predecessors and increased asset powers that are important to the industry's long-term vitality.

We believe that this new proposal is likely to be far superior to the current proposed bill in meeting both the industry's current and long-term needs. Given the adequacy of the regulators' powers, and because the new proposal will be available for consideration by your Committee after the Congress returns, we feel it would be more appropriate to deal with the industry's fundamental problems rather than to proceed with legislation that we feel is inadequate and incomplete.

In closing, let me reiterate the Administration's confidence in the viability of the thrift industry and in its ability to adapt to temporarily adverse market conditions. We are certain that it can cope with high inflation and high interest rates for the time being and that the Federal Government's deposit insurance agencies can fully protect the public should some institutions have difficulties.

I would look forward to further discussion of the Administration's viewpoint with you at any time. You and the Congress can rest assured that we are ready to act promptly in proposing or endorsing legislation that might be necessary to deal with the problems of thrift institutions in a period of transition.

Sincerely,

R. T. McNAMAR.

COMMITTEE ON BANKING,
FINANCE AND URBAN AFFAIRS,
Washington, D.C., August 3, 1981.

STATEMENT OF CHAIRMAN FERNAND J. ST GERMAIN OF THE HOUSE BANKING, FINANCE AND URBAN AFFAIRS COMMITTEE IN RESPONSE TO TREASURY DEPARTMENT LETTER OF AUGUST 3, RE ASSISTANCE LEGISLATION FOR THE THRIFT INDUSTRY

The Administration's answer is simply more of the same; a warmed-over, slightly more verbose version of their May 29 letter of inaction.

In May the Administration had high hopes of lower interest rates. In August, the same wishful though is put forward, the doubts of the Federal Reserve and economic realities notwithstanding.

I remain convinced that it is good public policy to have mechanisms in place so that regulatory bodies can move in a flexible manner if problems persist and grow—and if the Administration's rosy economic projections prove wrong. While you always hope nothing happens, you buy insurance before—not after—the fire. The door of this Committee has remained open for consideration of any legislation on which there is a semblance of agreement between the Administration and the financial regulators.

Clearly, the views of key regulatory and the Administration are at odds—a spectacle not likely to enhance confidence in the financial industry or the Reagan Administration.

HOUSE OF REPRESENTATIVES,
Washington, D.C., August 3, 1981.

Hon. FERNAND ST GERMAIN,
Chairman, House Committee on Banking, Finance and Urban Affairs, Rayburn House Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Week before last, after you asked me to chair during the presentation of testimony by Assistant Secretary of the Treasury Mehle (I believe), a strange, contradictory, and ominous, series of events occurred.

Mehle's testimony flatly contradicted the previous testimony presented by Chairman Pratt and two other regulators.

You will recall that Chairman Pratt stated that unless "the Congress (meaning us) acted quickly and expeditiously," dire things would happen to the savings institutions though he did not specify what legislation would be needed.

Mehle categorically denied any emergency and made, what to me, are astounding dogmatic pronunciamentos of "no crisis."

Both of these men cannot be correct.

However, I believe that Congress has to respond and take action immediately; otherwise, once again, we will be the patsy for the Reagan Administration ploys against the Democrats.

You and I know what the representatives of the savings industry are telling us in anguishing cries.

We cannot turn our backs on them, and the Secretary of the Treasury says he will not lift a finger to help them.

I respectfully urge that you summon all the individuals involved instanter before the committee, even if it means prolonging or shortening the recess.

With warmest regards, I remain

Sincerely,

HENRY B. GONZALEZ,
Member of Congress.

U.S. HOUSE OF REPRESENTATIVES,
COMMITTEE ON BANKING,
FINANCE AND URBAN AFFAIRS,
Washington, D.C., August 14, 1981.

Hon. HENRY B. GONZALEZ,
U.S. House of Representatives, Washington, D.C.

DEAR HENRY: Thank you for your letter expressing your deep concerns over the discrepancy between the views of the Treasury Department and the depository institution regulatory agencies on the condition of the thrift industry today.

Certainly, I share your concerns that this divergence of views has great implications for public policy and for our financial markets. The thrift industry plays a vital role in our economy by providing a source of credit for the housing industry and for homeowners and a means of encouraging individuals to save and invest. The regulators clearly have close and expert knowledge on which to base their assessments of the condition of the industry and the need for legislation to provide them with more flexible tools with which to provide solutions to problem institutions in a manner which maintains public

confidence in the depository institutions of the nation. The Administration, through the Treasury Department, continues to oppose that legislation.

As you know, I have been concerned since last fall that the agencies might require in the very near future more flexible powers. To that end, I met with the heads of the deposit insurance agencies, the Chairman of the Federal Reserve Board, representatives of the thrift industry, with Secretary Regan, and other officials of the Treasury Department, and with Members of our Committee to determine what legislation was needed. I still believe that it makes good common sense to have an insurance policy in place rather than waiting for the emergency to happen before seeking protection. With insurance one hopes that nothing happens; however, should the worst happen the policy provides a degree of protection that would not be there otherwise.

For your information, I am enclosing several documents which indicate the extent of the Committee's involvement in this issue. The position of the Administration is also described in depth by the correspondence from the Treasury Department on the so-called "Regulators' Bill". The most recent statement reiterates the testimony of Assistant Secretary of the Treasury Mehle to which you refer.

On July 30, 1981 I introduced, along with Mr. Stanton and Mr. Wylie, the "Regulators' Bill". Clearly the Administration precluded action on the bill before the recess and again clouds the outlook for such legislation. At this time, I am reviewing all of the material that I can on the condition of the thrift industry and am planning the agenda of the Subcommittee on Financial Institutions for the return in September including the probable inclusion of early hearings on that bill.

Certainly, I hope that this information provides you with data to further assess the situation that we confront. I want to reiterate that I too share your deep concerns over this matter, and I appreciate your making your views on this known to myself and our colleagues on the Banking Committee.

Sincerely,

FERNAND J. ST GERMAIN,
Chairman.

COMMITTEE ON BANKING,
FINANCE AND URBAN AFFAIRS,
Washington, D.C.

WASHINGTON, D.C., September 24.—Chairman Fernand J. St Germain of the House Banking, Finance and Urban Affairs Committee announced today a two-tier approach to financial legislation, separating emergency assistance from proposals for long-range structural changes in the financial industry.

Hearings on the assistance package will open at 9 a.m. Tuesday before the Committee's Financial Institutions Subcommittee. The Committee and Subcommittee markups are scheduled for later in the week.

The legislation—drafted originally by the financial regulators—enhances the ability of regulators to use the Federal Deposit Insurance Corporation and the Federal Savings and Loan Insurance Corporation to assist problem institutions and authorizes interstate and intra-industry mergers to save failing institutions.

Separately, the Committee will open hearings on proposals to restructure the financial community, remove various statutory restrictions, broaden powers and improve delivery of credit. A discussion outline of the proposals is being drafted and will form the format for the hearings. The hearings will begin next month.

Mr. St Germain said the two-tier approach will provide the Committee a better opportunity to give proper consideration to the "far-ranging issues that are involved in any major restructuring of the powers and responsibilities of the various financial institutions."

"So long as the questions remain about what might be needed on an immediate basis to deal with emergency financial problems, we face the possibility of being rushed to hasty judgments on the broader questions that deserve more than a cursory look," Mr. St Germain said. "With the emergency powers behind us, we can proceed in an orderly manner on these other issues."

Mr. St. Germain said the emergency powers would expire on December 31, 1982.

"By that time the Congress will have had an opportunity to deal with the long-range questions," he said.

THE SECRETARY OF THE TREASURY,
Washington, D.C., September 30, 1981.

Hon. FERNAND J. ST GERMAIN,
Chairman, Subcommittee on Financial Institutions Supervision, Regulation and Insurance, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I would like to take this opportunity to withdraw the Department of Treasury's request to testify before your Committee on H.R. 4603, the Deposit Insurance Flexibility Act.

The Department would prefer not to address this bill in isolation of the other issues affecting the thrift industry. Therefore, we would like to refrain from testifying until your Committee begins comprehensive hearings on financial institutions which I understand will occur in mid-October. At that time we will have completed our review of a number of issues that impact on the thrift industry and would welcome the opportunity to share our views with your Committee.

Sincerely,

DONALD T. REGAN.

Mr. STANTON and I arranged for full briefings of committee members and staff by agency representatives on the so-called regulators' bill. Given the circumstances facing depository institutions, as they were explained to me, the regulators' bill seemed to contain needed statutory changes. Unfortunately, inflammatory statements by high-ranking administration officials culminated in a Treasury Department veto. This, combined with trade association turf battles and the inability of the agencies concerned to stay together, halted further consideration of the legislation.

Further confusing the matter is the Federal Home Loan Bank Board's latest draft legislation. Rather than addressing the shortrun problem, the bill would bring about a long-term restructuring of thrifts overnight, destroying the last vestige of a specialized mortgage finance supplier. I look forward to a full exploration of the rationale for this changed emphasis, in the weeks and months ahead.

As the heads of the Federal deposit insuring agencies, gentlemen, you have been asked to report to this committee on the present condition of the institutions under your respective jurisdictions, and provide us your best judgment as to the impact of current and projected monetary policy on the conditions of those institutions. Because interest rate levels will be a critical determinant of depository institution well-being, and since you have little control over future rates, we have asked you to evaluate future safety and soundness in the context of the three interest rate scenarios developed by the Banking Committee staff. These include: A high rate scenario, in which the 6-month Treasury bill rate is assumed to rise from its present level to 16 percent by yearend, decline to 14 percent in 1982, and continue to average 14 percent through 1983; a second scenario which assumes the 6-month Treasury bill rate declines to 12 percent by yearend 1981, and averages 12 percent through 1982; and a euphoric scenario, in which the 6-month Treasury bill rate declined to 7.5 percent by yearend 1981, and averages 7.5 percent through 1983.

Lastly, we would appreciate hearing an explanation of your contingency plans and your recommendations as to how the problems facing depository institutions in a tight money, high interest rate environment should be dealt with by the present administration.

Hearings continued at the full committee level on July 21, 22, and 23. Assistant Secretary Mehle appeared on July 23 in opposition to the regulators' bill primarily on the grounds that the legislation was considered unnecessary inasmuch as the administration at that point was still predicting an early and significant drop in interest rates, which I must point out still has not happened as we near the first of November. In addition, Assistant Secretary Mehle disagreed with FDIC Chairman Isaac's view as to the necessity for a statutory amendment waiving the essentiality requirement for 13(c) capital infusion. I submit that the regulatory agency is better qualified to interpret its operation statutes than is the Treasury Department. Following these hearings and after further discussions with the administration, Congressmen STANTON, WYLIE, and I introduced H.R. 4361 on July 31 enabling all interested parties to consider the regulators' request during the August recess. After further discussions and correspondence with the administration on September 24, the committee leadership announced our intention to separate emergency assistance, requested by the regulators, from proposals for long-range structural changes in the financial industry, including broadened powers for the savings and loan industry.

The Subcommittee on Financial Institutions Supervision, Regulation,

and Insurance held hearings on the provisions of H.R. 4603 on September 30 and October 1. On September 30 representatives of the American Bankers Association, the Conference of State Bank Supervisors, the Independent Bankers Association, the National Association of Mutual Savings Banks, and the U.S. League of Savings Associations testifed. In addition, the committee received written statements from the Independent Insurance Agents, the National Association of State Savings & Loan Supervisors, and the National Governors' Association. On October 1, the committee received testimony from the Chairman of the Federal Reserve Board, Paul Volcker, on behalf of the regulators. The Federal Reserve Board served as the coordinator for the regulators during the extensive deliberations which have taken place during the past year. Chairman Volcker clearly and succinctly presented the case for immediate consideration of H.R. 4603 by stating:

I also want to emphasize at the outset that I consider the acute problems of the thrift industry to be transitional in nature. . . . The bill before you, drafted largely by the supervisory agencies, provides no fundamental change in the authority or role of those agencies. Rather, it simply provides the FDIC and FSLIC, under specified conditions, with more flexibility either to provide transitional assistance to thrift institutions that can survive during a period of financial stress or to broaden merger possibilities. . . . The past record and interest of the supervisory agencies seems to me to provide assurances that this additional margin of flexibility will be utilized with great care and prudence, and with appropriate safeguards to the public interest; it is not a generalized "bail out," and should not be viewed as such. . . . The assistance would be provided only in circumstances in which it would, in fact, avoid large potential drains on the insurance funds themselves that would arise in the event otherwise sound institutions needed to be merged or liquidated.

Following Chairman Volcker's testimony on October 1, the subcommittee adopted H.R. 4603, as amended, by a rollcall vote of 15 ayes to 9 nays. The full committee on October 2 began the consideration of H.R. 4603, as amended. The committee received additional information from the regulators on October 2 in executive session. On October 6 the committee completed markup of H.R. 4603 and by voice vote reported the bill as amended.

Having set forth the history of the regulators' request for assistance, I will now highlight the bill's principal provisions. It is important to emphasize the bill's limited transitional purpose—hence the sunset date of September 30, 1982—and to emphasize that the committee leadership has no intention of seeing this limited emergency bill used as a basis for creation of an omnibus package of proposals providing powers for financial institutions.

Unfortunately there are those who, in seeking more comprehensive banking legislation such as expanded thrift powers, Glass-Steagall amendments, McFadden-Douglas (branching) amendments, have sought to hold the bill hostage in order to compel debate and final action prematurely, shortcircuiting the type review these subjects deserve. This had contributed to some of the confusion over H.R. 4603. The committee, by its voice vote adoption of H.R. 4603, accepted the recommendation of Mr. STANTON and myself to separate emergency assistance from proposals for long-range structural changes in the financial industry. We have no intention of being rushed to hasty judgments on the broader questions of banking reform that deserve more than a cursory look. As stated previously, it is our intention to proceed with comprehensive hearings on a number of important questions relating to the most efficient and effective environment for the provisions of financial services, to municipalities and the individual consumer.

Before highlighting the bill's principal provisions, I must say I agree with BILL STANTON's description of the bill when at the opening of the full committee markup he stated:

I don't remember in my 17 years here when I have ever seen a bill that is more greatly misunderstood than this legislation.

In general terms, H.R. 4603 permits the regulators to offer financial assistance to depository institutions adversely affected by severe economic conditions, if the assistance extended would reduce the potential cost to the deposit insurance funds. Authority is also provided under carefully prescribed circumstances for the regulators to arrange charter conversions and mergers of troubled institutions, including mergers across State lines and industry lines after every reasonable effort is made to obtain an intrastate solution with like institutions before seeking an interstate cross industry solution.

Principal additional provisions in summary form are as follows:

First. Establish parallel treatment by FDIC and FSLIC by waiving the existing essentiality requirement for FDIC financial aid;

Second. Expand the types of aid FSLIC can offer to FSLIC institutions;

Third. Allow FDIC, as receiver of a closed insured bank with assets of $2 billion and above, to sell assets to a subsidiary of an out-of-State bank or holding company, subject to the State bank branching laws of the failed bank;

Fourth. Provides a statutory procedure for FSLIC mergers;

Fifth. Permits conversions from a mutual to stock form as an aid to merger;

Sixth. Permits FDIC to offer limited merger-related assistance to an acquiring institution insured by FSLIC and requires FDIC indemnification of FSLIC for up to 5 years when conversion to FSLIC-insured stock saving banks occurs;

Seventh. Permits NCUA to approve mergers between credit unions or other financial institutions;

Eighth. Authorizes FSLIC borrowing from Federal Home Loan Banks;

Ninth. Expands dividend distribution powers of Federal Home Loan Banks under severe financial conditions;

Tenth. Authorizes fund advances from NCUA Central Liquidity Facility to the National Credit Union Share Insurance Fund.

Finally, a brief comment on the position of the administration and the Federal Home Loan Bank Board will be helpful in view of the misinformation that is being circulated.

Treasury, after first asking to testify on H.R. 4603, withdrew its request by letter dated September 30, 1981, stating:

The Department would prefer not to address this bill in isolation of the other issues affecting the thrift industry * * *.

In testimony before the Senate Banking Committee on October 19, Secretary Regan stated the following:

This legislation contains very important provisions authorizing emergency interstate and interindustry mergers and acquisitions to rescue troubled commercial banks and thrift institutions. These provisions would greatly assist the regulatory agencies in coping with problem organizations. We therefore regard the provisions for interindustry and interstate mergers and acquisitions as an essential element of any legislative assistance to the thrift industry.

S. 1720 would provide broader language regarding the ability of the Federal Deposit Insurance Corporation to provide assistance to an insured institution." * * *.

However, in the context of this proposed legislation, which addresses the thrift industry's long-term structural difficulties, we would not object to the new language regarding the conditions under which the FDIC may assist a troubled institution. * * *

The provisions of H.R. 4603 appear almost identically as a part of S. 1720.

Federal Home Loan Bank Board Chairman Pratt testified in support of the regulators bill during full committee monetary policy hearings on July 14 and reiterated that support in this letter of October 2 to the committee as follows:

Because of the current wording of the Home Owners' Loan Act and the National Housing Act, there are a number of significant gaps in our existing authority to deal with failing institutions. The regulators' bill would fill those gaps.

In conclusion I know of no better way to sum up the case for H.R. 4603 than to quote from those who have sought this legislation, the regulators, in whom we have entrusted enormous responsibility for the regulation and supervision of this Nation's financial

institutions. Former Federal Deposit Insurance Corporation Chairman Irvine Sprague in his testimony before the committee urged the approval of H.R. 4603 as follows:

We have proposed to the Congress and solicit your active and aggressive support for legislation . . . to modify the statutory Section 13(c) test to enable us to make capital infusions more easily, particularly in the New York thrifts, and to permit FDIC as the Receiver of a large failed FDIC-insured bank to arrange a Section 13(e) purchase and assumption transaction with an out-of-state institution, but only if the failed bank had $2 billion or more in assets. . . . We are talking today about emergency legislation to meet a specific need.

Newly confirmed FDIC Chairman William Isaac wholeheartedly supports this endorsement of H.R. 4603 and continues to cooperate with the committee in our efforts to advance the bill.

Notwithstanding Federal Home Loan Bank Board Chairman Pratt's preference for broader legislation, providing expanded powers for savings and loans, he stated in his testimony the following:

There are a number of legislative steps that, if taken, would greatly enhance the Corporation's ability to carry out its responsibilities in a cost-effective manner. Given the enormous pressures on the insurance fund, and the direct connection we perceive between the integrity of the fund and public confidence in the financial system generally, we believe the importance of removing barriers to low-cost resolutions of problem cases cannot be overstated.

National Credit Union Administration Chairman Lawrence Connell joined in endorsing H.R. 4603 in the following manner:

Returning to the matter of flexibility, Mr. Chairman, I would emphasize for the Committee the necessity for immediate action on increasing both the regulatory flexibility of NCUA and its Central Liquidity Facility and the operational flexibility of credit unions in light of anticipated persistent high interest rates. . . . I ask that the Committee act favorably toward our request for additional statutory provisions to meet the demands of the future.

Finally, Paul Volcker, Chairman of the Board of Governors of the Federal Reserve System speaking for all of the regulators, in his appearance before the Subcommittee on Financial Institutions Supervision, Regulation and Insurance on October 1, stated the case for the bill as follows:

I also know that to some this bill appears too narrow in scope and short in duration to deal with the basic problem of the thrifts or structural change in the financial industry. That is true; it is not designed to do so. . . . But you realize, those issues are unavoidably complex and contentious and they will, in my judgment, not be resolved easily. As important as they are, I would strongly urge that the Congress not wait for their resolution to address the pressing, yet transitional, problems before the regulators. In my judgment, the legislation before you, limited in objective, modest in scope, and temporary in duration, is needed now, but in no way should prejudice your further examination of more fundamental issues.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. ST GERMAIN. I yield to the gentleman from Kentucky.

Mr. PERKINS. First, let me state that I realize the savings and loan associations are in trouble and need assistance, but I am wondering why the intrastate banks cannot serve the same function as interstate banks in this situation.

Mr. ST GERMAIN. There is a very simple reason. In many instances, this is why we had foreign banks that have taken over commercial banks in this country and in some of the major money centers of this country. In many instances, there are not institutions within the given States that can indeed take over or merge with the institutions that are in jeopardy.

We have seen an example of it within the past 3 to 4 weeks, where an institution in the State of California that is owned by a steel corporation, a holding company, took over and merged into it a savings and loan association in New York City, Westside Federal, and with a savings and loan association in Miami, Fla., known as Washington Federal.

That is the answer to the gentleman's question.

Mr. PERKINS. If the gentleman will yield further, if that be the case, why not propose legislation in lieu of interstate banking that would prohibit and restrict these mergers that the gentleman is speaking of and all of these disastrous situations that have been brought about in the country? Why do we not bring legislation to the floor addressing that one point?

Mr. ST GERMAIN. I am having difficulty understanding what it is the gentleman is proposing.

Mr. PERKINS. I am wondering if you are not giving the large banks——

Mr. ST GERMAIN. I am trying to understand what the gentleman is getting at.

Mr. PERKINS. You are just giving the large banks of the country the power to gobble up the small banks and savings and loan institutions all over the country.

Mr. ST GERMAIN. With all due respect—and I do have a geat deal of respect for the chairman of the Committee on Education—when the gentleman says we are giving the large banks the power to gobble up small banks, that is a fiction that has been spread about this legislation.

Mr. PERKINS. Well, I am talking about——

Mr. ST GERMAIN. The gentleman asked me a question. Please, let me answer it.

Mr. PERKINS. Well, why do not——

Mr. ST GERMAIN. I have not yielded further.

It is a fiction that has been spread by some of the small banks around this country through misunderstanding. The legislation, as explained by the Rules Committee when they brought it to the floor earlier this afternoon, applies to institutions of $2 billion or more in assets that are failing or are jeopardized as a result of severe financial conditions. To say that the large banks are going to gobble up small banks is a lot of hogwash and a fiction that has been spread by those who should know better.

Mr. PERKINS. If the gentleman will yield further——

Mr. ST GERMAIN. I will yield for one further question, because I would like my Republican colleagues to have a little time, as well.

Mr. PERKINS. The bill expressly provides flexibility to the Federal Deposit Insurance Corporation and the Federal supervisory agencies, to deal with financially distressed depository institutions, and, on page 12 and 13, interstate banks can take over any bank or institution in any State in the Union, the way I read this language.

Mr. ST GERMAIN. The gentleman is not reading the bill properly.

In the case of commercial banks, it is not any. The commercial bank in question that is failing must have assets of $2 billion—or more. This does not affect your typical country hometown bank. They are not included in this legislation.

Mr. PERKINS. Well, it says, on page 13:

"(3) The Corporation may provide any person acquiring control of, merging with, consolidating with or acquiring the assets of an insured institution under section 408(m) of this Act with such financial assistance as it could provide an insured institution under this subsection."

Mr. ST GERMAIN. Excuse me. I do not intend to yield further. The gentleman asked me a question, and I answered it. I would expect that the gentleman would have for me the respect I always have for him. When he gives an interpretation and an explanation of the legislation he brings to the floor, I take his word for it. I am not up here to delude or to deceive anyone when I say to you that a commerical bank, has to have $2 billion or more in assets and be in a severe depressed financial condition for it to become subject to this legislation. I am reporting this fact actually and accurately to the gentleman in response to his questions.

Mr. MITCHELL of Maryland. Mr. Chairman, will the gentleman yield?

Mr. ST GERMAIN. I yield to the gentleman from Maryland.

□ 1515

Mr. MITCHELL of Maryland. Just very briefly, Mr. Chairman, I am unfortunately not a member of the gentleman's subcommittee but I recall during the discussion of the markup in the full committee some statements

were made to the effect that the Federal Deposit Insurance Corporation and the Federal Savings and Loan Insurance Corporation already possess the authority and the power to do almost everything that is in this legislation; is that correct.

Mr. ST GERMAIN. Yes, sir.

Mr. MITCHELL of Maryland. It may sound naive, then why do we need the legislation?

Mr. ST GERMAIN. Had the gentleman stayed a little further and heard the balance of the statement, the reason for it is that absent this legislation there is flexibility in certain areas that the FDIC does not have in order to go in and assist the failing institution to insure its continued existence.

In addition, without this legislation, they must rely on individual agency interpretation of existing law as to the full scope of their powers in certain instances. We in this legislation circumscribe it. We design parameters. What we want to do is preclude a situation where they can take a mutual savings bank in New York State and overnight convert it from a mutual to stock form and at the same time convert it to a retail bank operation and allow McDonald Hamburgers, Exxon, the Bank of Tushiba, Japan, or Hong Kong to come in and pick it up.

Mr. MITCHELL of Maryland. I thank the gentleman for his explanation.

If the gentleman will yield further, what is the role of Mr. Volcker and the Federal Reserve in all of this?

Mr. ST GERMAIN. As the gentleman knows, the role of the Fed is very limited in this particular instance. However, as a result of a request by the committee leadership and the other regulators, the Federal Reserve Board, through Mr. Volcker and his staff, coordinated the other drafting of this legislation to address the severe financial crisis that exists in many of our financial institutions.

Mr. MITCHELL of Maryland. I thank the chairman for his explanation of both of my questions.

Mr. ST GERMAIN. Mr. Chairman, at this point I would reserve the balance of my time.

Mr. WYLIE. Mr. Chairman, I yield 5 minutes to the ranking minority member of the committee, the gentleman from Ohio (Mr. STANTON).

Mr. STANTON of Ohio. Mr. Chairman, I strongly support this legislation. I commend the chairman, Mr. ST GERMAIN, and the ranking Republican on the Financial Institutions Subcommittee, Mr. WYLIE, for their excellent work in shepherding this bill through our committee.

As many Members know, H.R. 4603 is primarily the product of the financial institutions regulators' draftsmanship. Over the course of several months, members and staff of the committee and of the agencies held numerous meetings on the several drafts of this legislation. Our discussions were successful in outlining the need for this legislation and in explaining many of its complexities.

As the committee report shows, each of the three deposit insurance funds faces serious problems in the next year. The losses of the mutual savings banks insured by the FDIC are such that some of the largest ones, with aggregate assets of over $25 billion, may reach a net worth of less than 1 percent in the next year. According to the Federal Home Loan Bank Board, some savings and loan associations, with aggregate assets of $29 billion, will reach a zero net worth in the coming year. Over 1,000 credit unions are classified as problems by the National Credit Union Administration. Credit union liquidations in 1981 will exceed those of 1980, a year which saw an increase of 41.4 percent in liquidations over the prior year.

The regulators are united in their view of the necessity of emergency assistance along the lines of H.R. 4603. The committee report includes statements from each of the financial institutions regulators in support of this legislation. At least one, Mr. Pratt of the FHLBB, supports the assistance provisions while urging broad asset powers revisions. I agree with Mr. Pratt and the others who assert that the asset powers of the thrift industry should be expanded although I do not agree that emergency assistance and asset powers are inextricably tied together.

We, as a committee, have determined that the questions of the powers of financial institutions and industry structure must be handled in a separate procedure. This bill, H.R. 4603, is directly tied to that procedure as part 1 of a two-part process. We intend to move to part 2 shortly, and I hope we can begin hearings early next month.

I cannot emphasize enough that H.R. 4603 is emergency legislation which will terminate in less than 1 year. It is narrow in scope and designed, at the request of the regulators, to respond in a limited way to a short-term emergency in the financial institutions industries. The bill would permit interstate and interindustry mergers and acquisitions, but only under extremely limited circumstances. And, as a result of amendments adopted by the committee, these circumstances have become even more limited than originally proposed. By no stretch of the imagination is it in any way a complete disavowal of the McFadden Act or the Douglas amendment to the Bank Holding Company Act.

The administration opposes none of the provisions of H.R. 4603. Secretary Regan appeared before the Senate Banking Committee on October 19 to describe the administration's position on banking legislation pending there. On the two key ideas common to H.R. 4603 and Senator GARN's bill, S. 1720, Secretary Regan strongly agreed with the substance of our committee's bill. On interstate and interindustry mergers, he said:

> Allowing interstate and interindustry mergers would open the bidding for troubled institutions to more participants. This would promote a free market form of assistance to such organizations so all possible forms of private help could be exhausted before government assistance is extended. We therefore regard the provisions for interindustry and interstate mergers and acquisitions as an essential element of any legislative assistance to the thrift industry.

On measures providing short-term financial assistance, the Secretary reiterated a preference for linkage with asset legislation. He did support provisions appearing in H.R. 4603 allowing FSLIC to borrow from the FHLBB and allowing the National Credit Union Share Insurance Fund to borrow from the Central Liquidity facility. He supported a provision increasing FSLIC's flexibility in controlling refunds of the secondary reserve. He also approved of a provision giving FDIC more flexibility in assisting a troubledquiinstitution.

Because of the possible confusion caused by the administration's preference for more sweeping legislation, I have asked for a clarification from the Treasury Department. The response I received follows:

> The administration does not favor H.R. 4603 as separate legislation because the bill does not address the thrift industry's long-term structural difficulties. However, the administration will not object to consideration of the bill since legislation, which the administration does favor, is pending in the Senate that incorporates provisions similar to that of H.R. 4603 and broadens the lending and investment powers of thrift institutions.

I am sure this bill will be hotly debated. I urge my colleagues to review the bill and report carefully, for I am sure they will see that this bill has a narrow intent and a very short lifespan if it is enacted. No proponent of the bill will disagree that it can have some interstate and interindustry effects. The questions Members must answer is how they view those effects.

Opponents of the bill will say H.R. 4603 opens the door to interstate banking. In my view, the only thing left of that door is its hinges. The recent activities of American Express, Sears, Merrill Lynch, Gulf + Western, and National Steel have underscored that point. If we want to rebuild a door, enact H.R. 4603. I continue to believe that this bill provides more controls over the mergers, acquisitions, and interstate banking than are currently in effect.

We will be considering amendments to this bill during the course of the debate. I urge rejection of all substantive amendments, for we have achieved a fair balance in this bill. The industries and insurance funds have what they require to respond to this emergency. We cannot, for example, exclude commercial banking from the bill's merger provisions on the theory that at this hour we know of few problems in the commercial banking industry. There may be some unexpected problems which occur in the next 11 months which will require the assistance this bill is designed to provide. When that time comes, Congress will not be able to act fast enough either to prevent an acquisition by a foreign bank or the FDIC's closing of the ailing bank. I am sure Members would prefer to have a domestic bank—even if it is from another State—rather than a foreign-owned bank or no bank at all.

I hope my colleagues will consider these points as we debate the bill. It is both necessary and limited legislation. I urge its passage.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. STANTON of Ohio. I yield to the gentleman from Kentucky.

Mr. PERKINS. I thank the gentleman for yielding.

Let me say, in my judgment, what the gentleman is doing in this piece of legislation—and I wish all of the Members in this Chamber would read this bill—is bringing about interstate banking and giving more authority to the larger banks of the country. I do not think we have to go that far to give the savings and loan institutions of this country relief.

I think we can do it through intrastate banking within their own States. But by divesting ourselves of this authority and not doing anything about medium-income families wanting to own homes, small farmers, and small business people, when the Constitution expressly gives Congress the power to coin money and regulate the value thereof, we are going in the opposite direction to bring about higher interest rates and establish monopolies. I think we are going in the wrong direction and somebody somewhere has got to call some shots and bring some legislation to the floor to protect the middle-class people of this country and the small business people.

If we pass this legislation we are going to see all kinds of repercussions of interstate banking.

If we give them more authority at this time, in the condition that this country is at the present time, I just do not know what the people back home are going to say about the U.S. Congress.

I would like the gentleman to comment on that.

Mr. STANTON of Ohio. The gentleman from Kentucky (Mr. PERKINS) has to make up his own mind how he will vote on this legislation, and obviously, he has a preconceived notion.

I as one Member of this Congress will vote for this legislation because coming down the road one can take the word of the chairman or my word or none of our words because it will be an absolute fact that in the next several months there are going to be many institutions that need this legislation in our country.

I will say this to the gentleman from Kentucky or his colleague that in the State of Kentucky at the moment there are two institutions, commercial banks that will be affected.

I do not think the gentleman was listening to the chairman of the full committee when he said, No. 1, a bank has to be in default. Second, the bank has to be of $2 billion or larger before another bank from out of State can come in and buy it.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. STANTON) has expired.

Mr. WYLIE. Mr. Chairman, I yield 2 additional minutes to the gentleman from Ohio (Mr. STANTON).

Mr. STANTON of Ohio. All I can do is say that some of the State bank supervisors were originally against this legislation. They have obviously talked to the gentleman. Some of the other State bank supervisors now have come around to the point of view, "We want this legislation and we do not want the legislation that follows in the other body." There is adequate room for misunderstanding.

Mr. Chairman, all I can assure the gentleman is that down the road when these problems come along and the gentleman says he voted against this legislation, he is going to have an awful lot more to explain to his constituents than I do.

Mr. BARNARD. Mr. Chairman, will the gentleman yield?

Mr. STANTON of Ohio. I yield to the gentleman from Georgia (Mr. BARNARD).

Mr. BARNARD. I thank the gentleman for yielding.

During consideration of this bill, what was brought out as to the need that we can talk about? I mean, what did develop that we have serious considerations in the country with failing institutions? This bill did not just develop out of a blue sky; it came from the regulators who are experiencing very difficult situations today.

Mr. STANTON of Ohio. Well, what the gentleman might be alluding to is the loss of mutual savings banks insured by FDIC; such knowledge that the larger ones with aggregate assets of $25 billion will reach a net worth of 1 percent in the next year.

According to the Home Loan Bank Board, over 100 savings and loan associations with aggregate assets of $29 million will reach a zero net worth in the coming year. Over 1,000 are classified as problems before the National Credit Union Administration.

Mr. Chairman, this bill is no panacea of success that these failures will be stopped bacause of this legislation, but these are additional tools in here.

Very little is said of this. This was strongly aggressively fought for by the chairman of the Credit Union Association and the chairman of the committee responsible for the regulation of credit unions, combined, Mr. Chairman.

Mr. WYLIE. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I rise in very strong support of this legislation. This legislation has not been considered on the House floor previously, but this bill has been around for a long time, as has been suggested earlier.

Dr. Arthur Burns, when he was Chairman of the Federal Reserve Board, advanced this concept as a way to avoid foreign bank takeovers of U.S. banks. I hope the gentleman from Kentucky (Mr. PERKINS) is listening, because I have heard his questions and I want him to listen to me for 1 minute.

The concept of this bill was originally advanced as a way to avoid foreign bank takeovers of U.S. banks that were failing.

The concept has expanded, but it is still valid. We have added a new dimension to the original proposal in this bill, by granting more flexibility to the FDIC to provide assistance to open institutions where such assistance is likely to prevent failure and to offer a cheaper alternative than liquidation.

First, it has to be in a failing posture, a failing savings and loan, a failing savings bank or failing commercial bank.

Now, in the case of a merger of a failing bank, as has been mentioned previously, the bank has to have at least $2 billion in assets or more before there could be any intervention under this bill.

It would allow the FSLIC and the FDIC to assist financially troubled institutions, financial institutions that are in the process of failing. It would give them the power to infuse capital to avoid liquidation and in the process save money for the insurance funds.

Chairman Volcker said in his testimony before our committee, in response to a question which I asked:

> I think you are talking in terms of hundreds of millions of dollars in savings to the Federal Savings and Loan Insurance Corporation fund here and FDIC fund within the purpose of this bill.

Alice Rivlin, the Director of the Congressional Budget Office, said:

I think that we could concede that over the next several years that there is a potential savings to the FSLIC and FDIC of over a billion dollars in exposure which they might have if savings and loan and savings banks started to fail.

Mr. McKINNEY. Mr. Chairman, will the gentleman yield?

Mr. WYLIE. I yield to the gentleman from Connecticut.

Mr. McKINNEY. I thank the gentleman for yielding.

To add to the gentleman's point, is it not also true that there are certain of these institutions that could not possibly be restored or saved with Federal infusions? There are some that are so large that we have really no practical way to keep them going.

Mr. WYLIE. That is true. And we want to get the FSLIC involved along with the FDIC along to infuse additional money, under this bill, to keep them going so the FSLIC will not have to pay money out for a failure.

In addition the bill is designed, to prevent or preclude interstate, interindustry or foreign takeovers except as a last resort. My personal desire to prevent foreign takeovers. But, to prevent a bank or S. & L., from failing must be our first priority.

In the case of S. & L.'s, S. & L.'s can branch or merge interstate at the present time. Commerical banks cannot.

We saw a case here not long ago where an S. & L. in California, a large S. & L., Citizens, was allowed to merge with Westside Savings in New York and Washington in Miami which were in a failing posture. Westside and Washington were in the process of going belly up, believe me.

The Federal Home Loan Bank Board allowed the merger across State lines, the largest merger in history of three financial institutions.

□ 1530

Now, I think it was better to allow the merger and to allow Westside and Washington to open their doors the next day to customers. Than to allow those savings and loans to fail. Now, that is where we are.

Mr. DORGAN of North Dakota. Mr. Chairman, will the gentleman yield?

Mr. WYLIE. Yes, I will be glad to yield.

Mr. DORGAN of North Dakota. Mr. Chairman, the gentleman from Kentucky, raised a very important question about the small banks in the country, the small independent banks.

I am concerned that under this type of legislation large eastern banks could cross State lines and buy up savings and loan associations in States like North Dakota. Similar legislation, about which I just testified in the Senate, would give savings and loans banking privileges. You would end up with large banks into a State like North Dakota involved in branch banking through savings and loans.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. WYLIE. Mr. Chairman, I yield myself 1 additional minute.

Let me go through that once again. Before the gentleman jumps to that conclusion, first of all, in the case of the independent bankers, I do not understand their position on this. We have tried to work with them. Our State bank regulator in Ohio sent out the same scare message. I think he is in the process of trying to protect a little bit of his turf, but I think this bill goes farther in protecting his turf than present law. By protecting his turf I mean that if a large number of small independent hometown banks fail or rather if a large number of savings and loans fail, people may not distinguish between a savings and loan and a commercial or savings bank, then we are going to be in a very bad psychological posture. It would appear to in both the banks and their supervisors to prevent that from happening.

Furthermore very few commercial banks would be affected by the merger provisions. First of all, the independent bank has to be failing in order to be subject to interstate merger. That is defined in the bill.

Second, it has to be larger than $2 billion in assets before a merger can take place.

Now, there can be an infusion of some assets from the FDIC in order to avoid exposure to a failure; but those two things have to happen before the small hometown, so-called independent bank is involved in this.

Now, that is not true in the case of the savings and loans, but they have merger powers at the present time, as I just pointed out.

Finally, those who object on the ground the bill goes too far seem to blame this proposal for the recent spate of interstate, interindustry mergers which they believe could lead to basic changes in the character of the banking and thrift industries by promoting interstate banking and the acquisition of thrift institutions by bank holding companies. What these objectors should realize is that the mergers have occurred without this legislation and that the bill contains safeguards designed to insure that the regulators will pursue interstate and interindustry mergers only as a last resort.

Mr. ST GERMAIN. Mr. Chairman, I yield such time as he may consume to the gentleman from New York (Mr. LAFALCE).

Mr. LAFALCE. Mr. Chairman, regardless of our disposition on this bill, let us at least realize that we have a severe problem on our hands. There are a finite number of financial institutions in the United States of America right now that are in terrible difficulty. They are bordering on insolvency, perhaps bankruptcy. They might well fail. We have got to do something about that problem.

Now, we can sit back and do nothing and let them fail. We can sit back and do nothing and perhaps a foregin bank can come in and acquire them, or perhaps the National Steel Corp. could come in, or perhaps there are loopholes in the law that could be exercised by the FDIC whereby we could have large scale interstate banking without any guidelines, or perhaps the Chairman of the Federal Reserve Board could invoke the power that he has under existing law to permit interstate banking and mergers and acquisitions without any limitations whatsoever. Perhaps that is the approach we want to take, defeat this bill and then just let the banks fail, or let the other activities presently permissible under law operate.

I do not think that is the rational way to proceed. I think the rational way to proceed is as follows: First of all, facilitate the ability of the regulatory agencies to infuse capital into the failing institutions. That is the first and most important part of this bill. It is especially necessary for the FDIC, which does not have powers right now that are equal in nature to those of the FSLIC. That would be corrected under our bill.

Second, in permitting interstate mergers and acquisitions, and they are presently permitted under law, but in permitting them under this bill we would define how the authorities could operate under law. To a certain extent then we would be making explicit and delineating the authority they say they now have, and the manner in which it can be exercised.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. LAFALCE. I will now yield; yes.

Mr. PERKINS. Well, I want to state to the gentleman that I have been acquainted with intrastate banking for a long time.

If we pass this bill, we are going to let the standards be set on all the little independent banks in the country, and it will just be a question of time until it is going to add on to higher interest rates.

Mr. WYLIE. Mr. Chairman, I yield 3 minutes to the gentleman from Connecticut (Mr. McKINNEY).

Mr. McKINNEY. Mr. Chairman, I really want to talk about the aspects of this bill individually, because they are not, I thought, totally understood.

In the first place, the independent bankers have nothing to worry about unless their assets are over $2 billion. I do not really worry about a bank that is over $2 billion.

Second, we changed this law to require that any takeover must go through intercommunity, intrastate, and then interstate procedures.

I would suggest to my good friend who has spoken previously that no one worries more about interstate banking than STEWART MCKINNEY. I represent the southwestern tip of Connecticut with 32 of Fortune's 500 corporate headquarters that have moved in since I became a Congressman with every New York City bank from Manny-Hanny to Citibank dying to come across the State line and destroy our local banking business.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. MCKINNEY. For a few seconds, I have very little time.

Mr. PERKINS. If we enact this legislation, within 2 or 3 years we will see interest rates high in this country.

Mr. MCKINNEY. Mr. Chairman, I have served only 11 years with the gentleman from Kentucky. I am a great respector of the gentleman's opinion.

I would suggest to the gentleman just the opposite scenario.

Now, this Congress, according to the Speaker, will adjourn on the 18th of December, not to come back until the 21st of January. I would say to the Chairman that the magnitude of failures facing this country among the depository institutions are of the type that cannot stand this timespan.

I really cannot give the gentleman any more time, because I told my boss, Mr. WYLIE, that I would only take 3 minutes.

I want to talk about something else.

Mr. PERKINS. Mr. Chairman, if the gentleman will yield, those savings and loans are all insured and at the same time intrastate banks, cooperating with the FDIC, can solve this problem. The Congress should not let these big banks have all this authority to come in and gobble up all these institutions, and create a monopoly.

Mr. MCKINNEY. Mr. Chairman, I move to take back my time. I think if the gentleman would have a staff member check back through my Banking Committee statements, I am probably the least fond of money center banks of any Congressman standing in this well. I have been insulting to them——

Mr. PERKINS. Mr. Chairman, if the gentleman will yield further, when are we going to come in with some legislation to do something about the middle-income people in this country that want money to build houses?

The CHAIRMAN. The time of the gentleman from Connecticut has again expired.

Mr. WYLIE. Mr. Chairman, I yield 2 additional minutes to the gentleman.

Mr. MCKINNEY. I will not allow any further interruptions.

This bill is a hammer. This is simply a hammer, a bigger hammer for a bigger problem. If this bill is not passed, I will tell you who is going to run the banking business in this country. The people that are going to run the banking business in this country are going to be the Kuwaitis, the Arab Emirates, the Saudi Arabians, Exxon, Mobil, Texaco, they are going to run the banking business.

Right now, there is one company with the follow parts: Sears, Roebuck with 26 million credit card holders and 486 stores; Allstate Insurance with 20 million insurance policy owners; Coldwell Banker, the largest singly owned real estate company in the United States of America; Dean Witter, the fifth largest investment brokerage firm. Sear, Roebuck is in the banking business.

I would suggest to the independent bankers that they take a look around. It is wonderful to say that the thrift institutions are in trouble; but my good colleagues, I would not give you a dime for a small commercial bank within the next 5 to 10 years. For 11 years in this House of Representatives I have said in the Banking Committee:

Why don't you, the mortgage banker, the commercial banker, the S & L banker, the mutual savings banker, the credit unions, why don't you all stop fighting about regulation Q and a quarter of a percent, because 50 year old laws in this country are building the most evil financial institution this nation has ever seen. It is nonregulated, noncontrolled, nonperfected, noncommunity involved; it has no investment, no buildings that they have built and paid for, and no taxes they are paying.

All that Sears, Roebuck has to do is to move the hosiery counter over 5 feet, move the cashier's counter over 15 feet and say, "Come on in, whatever you need, we have it."

Forget it. There is no one that is better off. Do you know what the commercial banks are. In particular, the big commerical banks in this country right now are on the stern of the *Titanic*. They have the royal suite. They are not going to go down, not as fast. The small bankers are just halfway up the ship. They are all going to sink if we do not regulate the nonregulated.

Mr. ST GERMAIN. Mr. Chairman, I yield 3 minutes to the gentleman from Texas (Mr. MATTOX).

Mr. MATTOX. Mr. Chairman, I must admit that this is one of the most significant pieces of banking legislation that is going to come through this House in a long time. I think it is actually rather ridiculous that this matter is going to receive only 1 hour's worth of discussion.

I think the sum amount of time that is being allotted to the opponents of this bill is the 3 minutes that I have been granted; so let me say very quickly what I have to say.

Our last speaker, the gentleman from Connecticut talked about this bill being a bigger hammer for a bigger problem. The gentleman is absolutely right. It is a bigger hammer to flatten out the entire financial structure of this country.

The proponents of this legislation are making one of the most serious mistakes I think that could ever take place.

When this bill comes back from the Senate, you are going to see a Christmas tree bill like nothing we have ever seen. I have seen it repeatedly in the legislative pattern.

We say, "Well, it was not our intention to change it, but circumstances changed. They changed so drastically that we had to do it. We had to get this bill through to save the mutual savings banks of New York City."

It is with considerable reluctance that I rise to oppose H.R. 4603, the Deposit Insurance Flexibility Act. I am reticent because, as a member of the Banking Committee and an advocate of viable financial institutions, I am very aware that extraordinary economic conditions require appropriate remedies.

This bill does a lot of that. It allows the FDIC, the FSLIC and the NCUA unprecedented latitude to help troubled financial institutions, especially savings and loans and mutual savings banks. All this is desirable and necessary.

It allows regulators to step in when an institution is on the verge of failing and taking actions to protect the institution, its depositors, its shareholders, and Government interests.

Instead of leaving well enough alone, this bill goes further and becomes fatally flawed: It undermines the very foundation of our basic financial system by specifically authorizing interstate and interindustry acquisitions. This runs directly counter to primary protection of the financial system afforded by the McFadden Act and the Bank Holding Company Act. These protections are necessary to protect small and medium sized financial institutions of our decentralized system from predatory practices by giant institutions and giant nonbanking corporations.

Consistent with the bill's intent as emergency assistance, these exceptions would expire September 30. However, legislation is already being considered by the Senate Banking Committee that would capitalize on this bill and make the exceptions larger and permanent.

I would stress that this is not a partisan issue. Within the Banking Committee, these destructive provisions were opposed by many Republicans and Democrats, in fact nearly all subcommittee chairmen argued and voted against them. It is not regional, except that most of the beneficiaries, large financial institutions, are located in a few major cities. The potential victims, independent institutions, are located throughout the country.

Who are the intended beneficiaries? Supposedly, savings and loan institu-

tions, but the U.S. League of Savings and Loans testified against the bill because of these flawed provisions. Mutual savings institutions? They also need assistance but oppose this help if it includes interstate and interindustry authorization. The Conference of State Bank Supervisors appeared against the bill. The National Governors Association and the National Conference of State Legislatures oppose it.

The Chairman of the Federal Reserve Bank contends the Fed already has implied powers to approve interstate acquisitions as does the Chairman of the Federal Home Loan Bank Board contend the same for savings and loans. This bill would legitimize those assumptions.

Who does want this bill then? Certainly not the supposed beneficiaries. Certainly not nearly all financial institutions. Certainly not State banking officials.

Although well intentioned and with some good provisions, this bill is fatally flawed so long as it authorizes big banks to acquire savings and loans, so long as it allows thrifts to acquire banks, so long as it allows institutions in one State to take over institutions in other States, all destructive to the very foundations of our banking system. In authorizing such takeovers, this bill does far more harm than good and I urge my colleagues to vote against it.

Mr. ST GERMAIN. Mr. Chairman, if the gentleman will yield, the gentleman knows full well that I have made assurances that it will not change and I repeat it right here and now. If this bill comes back with anything extra on it, it goes to the committee and it dies right there, period, nothing. I do not care what happens.

Mr. MATTOX. Mr. Chairman, I like the gentleman's assurances; but I will say this. I have had assurances many times in the past, but because of the destitute problems of the mutual savings banks of New York City, I am afraid that the good of this country may prevail upon our good intentions; but I will say this, go down a little further.

The important thing about this thing is that the very people that we are trying to save, with the exception of mutual savings banks, do not want this legislation. They do not want it. They testified against it.

One of the regulators, Mr. Pratt, said—we asked him, "Do you really need this legislation?"

He said, "No, we do not really need it."

So the main regulator that we are trying to help says that he does not need it, either.

Let me tell you who needs it: the people that want to come in and gobble up all the little financial institutions all over this country; they want to reach across the State lines. Under the guise of some emergency legislation, they are reaching across State lines and are finally being able to get this Congress to, in effect, just pass away with 1 hour's debate the entire financial structure of this country.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. MATTOX. I yield to the gentleman from Kentucky.

Mr. PERKINS. This legislation will bring on a tighter money policy and higher interest rates. Am I correct in that statement?

Mr. MATTOX. The gentleman is absolutely right.

□ 1545

Mr. WYLIE. Mr. Chairman, I yield 2 minutes to the gentleman from Iowa (Mr. LEACH).

Mr. LEACH of Iowa. Mr. Chairman, I rise in support of this legislation and would just make several very quick points.

The first, is, while a number of the provisions are philosophically distasteful to some of us who oppose the notion of interstate banking, the fact of the matter is that the regulators have made a very persuasive case.

The most compelling point revolves around the dire circumstances faced by some financial institutions at this time, particularly the savings banks in New York. However, it should be stressed that this bill is neither a bailout nor New York oriented. Through depository insurance, the Congress has had "bailout legislation" on the books for decades.

More important, this bill is designed to reduce, not increase, federal liabilities. Bill Isaac, Chairman of the FDIC, estimates that failure to pass this bill would mean the loss of between $2 and $3 billion more than otherwise from the FDIC insurance fund. The ramifications of this additional cost would be borne by the entire financial system, and this would jeopardize rural State banks, especially those in States like Iowa and Kentucky which have small bank traditions.

Further, there is a general understanding that a run on any financial institution could cause panic that would affect all financial institutions. This also would jeopardize the financial stability of small banks.

Finally, let me just stress that while there are going to be some amendments presented that are very philosophically appealing, I would hope they would be rejected. They compromise the thrust of this legislation.

I commend the chairman of the committee for holding firm to a two-tiered approach, and the notion that we deal with the emergency first and look at broader legislation afterwards. I urge adoption of this bill.

Mr. WYLIE. Mr. Chairman, I yield 2 minutes to the gentleman from Delaware (Mr. EVANS).

Mr. EVANS of Delaware. Mr. Chairman, there are many problems facing our Nation's financial institutions, and they did not occur overnight. They are the result of policies of past administrations, past Congresses. The agencies and departments of the Federal Government have spent a rather long and gaudy night on the town, and now in the cold gray light of the morning after, I think it is time to assess the cost and pay our bills and get our fiscal practices back in order.

There is no magic formula as far as a solution is concerned. We are not going to correct the problems of the past overnight, but the solution begins with the proper exercise of our stewardship of the taxpayers' dollars, and this in the final analysis is the issue here.

In this case, I think the answer is not easy. There is very little in this world which is black or white. Most of it is gray, and that is the situation here. This bill does give additional powers to the regulators, and at the same time, it also places some restrictions on them. It does give the regulators some needed flexibility to prevent institutions from failing, and let there be no doubt about it, the ultimate cost of the failed institutions is borne by the American taxpayer.

In this instance, very few if any financial institutions have asked us to give that degree of flexibility to the regulators. Ordinarily I would be reluctant to ask these institutions to receive assistance that they have not asked for. However, I strongly believe that those of us in the Congress, as stewards of the taxpayers' dollars, have a responsibility to help preserve these scarce resources. Clearly, under our system where we have built-in safeguards to protect depositors, the ultimate liability for that protection is borne by the American taxpayer. That liability is escalating daily. Consequently I think we must act.

This bill is a cautious and responsible approach to deal with the present problems, and I urge my colleagues to support it.

Mr. ST GERMAIN. Mr. Chairman, I yield 3 minutes to the gentleman from Minnesota (Mr. VENTO).

Mr. VENTO. Mr. Chairman, I rise in support of H.R. 4603. The effect of the legislation has been widely misunderstood, and the intent of its authors and the Banking Committee has been misinterpreted.

It is kind of surprising to sit here and listen to the sort of litany of criticism. I want to assure the Members that this will not solve all the problems with the monetary system, or with our financial institutions. That is not the intent of H.R. 4603. The

intent, however, is to recognize that we have some financial institutions that have unique problems. We go to the regulators and they come to our committee and talk about the King's new suit. I am sure all the Members have heard the story about the new suit. The King walks down the avenue and everyone is admiring it and telling him how wonderful it is. Nobody wants to talk about the problem of financial institutions. The fact of the matter is, neither will someone pipe up and say "Your are not wearing anything." In other words, the King's new suit is invisible. That is sort of like the problem we face with financial institutions. Nobody wants to cause a stampede of people going into financial institutions, and so we do not talk about the problems and hope that they will go away. That is not the way we should function in terms of the reality of the situation.

Everyone would prefer that financial institutions would be more healthy today. The fact of the matter is because of the persistent high interest rates we have had, for whatever reason—one can blame whoever one wants to, there is enough blame to go around for all of us—the fact of the matter is, some institutions are in deep trouble, and there are some big institutions in trouble. The fact of the matter is, the Federal Reserve Board and the Federal Home Loan Bank Board had various authorities to take control of this situation and to provide for the mergers and infusion of funds by the Federal Government in order to protect the insurance funds that they manage. At one time in history it was deemed appropriate to provide various types of insurance to assure people that they would not lose their money in failed institutions, and as a consequence the U.S. Government picked up some liabilities.

Now the question is, because of the old portfolios of low-yield interest and perhaps bad investments made by financial institutions, what can the regulators do to protect those particular insurance funds?

The fact of the matter is, the Federal Reserve Board will take specific action. They do believe they have the authority, and if they do, they will do it in the absence of guidance from Congress. The purpose of this particular bill and the purpose of giving these regulators the power is really that we should have some voice in the issue we are talking about. Without this particular bill, we will have no voice, no guidance, as to where we are going or what public policy should be. We will have no say.

Naturally, involved in this action are some risks. Are we extending a power that we do not intend to extend in this particular bill? So, as a caution, the committee limited the life of the bill, a 1-year sunset provision has been inserted, but let there be no mistake, the regulators will take the action. Financial institutions will fail, and the only one that will be the loser will be the American people in this particular instance if we do not provide some safeguards and guidance.

So, it is important that we enact this measure. We bring this bill to the House because, as Member who work and study in this particular issue, we see a specific problem and we hope that this bill will remedy this particular problem. So let there be no misunderstanding however, about the problems, the very real problems faced by some financial institutions. It indeed is a serious circumstance unique in today's economy.

The general purpose of this legislation is to provide a definitive statement—to be understood by the financial community and the regulators themselves—of the powers granted to the FDIC, FSLIC, and the Federal Reserve to deal with the potential problems of troubled financial institutions. The legislation is very limited in scope and duration. It is the feeling of the committee that this is necessary legislation to have in place until the Congress can deal with the more fundamental problem facing financial institutions. In a real sense this legislation states and guides existing powers of the Federal Reserve Board, providing congressional policy for example for infusion of funds and the thresholds and priorities for the merging of similar and dissimilar financial institutions.

In many respects, this is preventive legislation. Current law allows the FDIC to assist a bank that is deemed essential to a community and that has failed or is in danger of closing. This legislation permits assistance before a bank faces imminent closure or to protect the solvency of the insurance fund when the number of troubled institutions may cause a substantial drain on the insurance fund.

The FSLIC is given increased flexibility to assist troubled thrifts. H.R. 4603 allows the FSLIC to make deposits in or purchase the securities of a troubled thrift before the institution is in imminent danger of closing.

The bill has been widely misunderstood to throw open the door to interstate banking. This is simply not the case. In the case of a failed commercial bank, only the assets of the largest of banks, those with assets over $2 billion, could be sold to other institutions. Even then the bill contains a set of priorities to be followed by the FDIC in selling the assets of the failed bank. These priorities place a great emphasis upon the regulators to approve an acquisition by an institution within the same State. Only as a very last resort could an out of State institution acquire a failed institution.

Similar safeguards also exist in the case of a failing thrift institution. A specific priority is given to the same type of institution within the same State. Only as a last resort could the FSLIC approve an acquisition of a troubled thrift institution by a commercial bank not located in the same State.

Mr. Chairman, I can sympathize with my colleagues' concern that this is just the camel's nose under the tent. However, the committee has gone to great length to indicate that this is not the intent nor will it be the effect of this legislation. The fact remains that the Congress must provide temporary legislation to allow the regulators to deal with the very likely propability emergencies will arise in the near future and we must take this necessary action to protect the insurance funds. The committee will shortly begin hearings on more comprehensive legislation in the near future. I urge my colleagues to consider supporting this legislation; it puts in place the necessary mechanisms to deal with the situations we may face in the coming year and provides the Congress with the time needed to produce legislation which will address the more fundamental problems of financial institutions, positive actions to help reduce interest rates and invigorate our financial institutions.

Mr. Chairman, on a related note we have specifically no intention that this should be a vehicle for a host of other changes now under consideration in the House and Senate.

Hopefully those assurances by both the chairman and ranking members will put to rest those that harbor such a fear.

Mr. WYLIE. Mr. Chairman, I yield 2 minutes to the gentleman from California (Mr. SHUMWAY).

Mr. SHUMWAY. Mr. Chairman, I rise in opposition to H.R. 4603. As a member of the Banking Committee, I am well aware of the arguments put forth by proponents of this legislation—the most fundamental being that the Fed, the FDIC, and the Bank Board must have additional authority to deal with failing institutions on an emergency basis.

In an abstract sense, such legislation may not appear unreasonable. Unfortunately, however, the specific problems with the bill are even more apparent.

The regulators, even after extensive testimony, were unable to convincingly show that the cash infusion and merger authority provided for by this bill significantly differs from existing authority. Although supporting this legislation, Fed Chairman Paul Volcker, in a September 21 letter to the Chairman of the Senate Banking Committee, wrote:

In the absence of this legislation, the Board believes that the public interest may dictate that the Federal Reserve may soon need to use its existing, broader statutory authority to approve bank holding company acquisition of thrifts on a case-by-case basis.

If the Fed already has the authority to allow bank holding company-thrift mergers, why the urgent need for this legislation?

A second fundamental problem with H.R. 4603 is that it is far too broad in application. It is generally agreed that, if there are financial institutions in immediate danger of failing, such emergencies are limited to a few mutual savings banks located in the Northeastern part of the country. If this is genuinely emergency legislation, as its supporters claim, why then is it not limited specifically to such institutions, or to institutions that are actually failing? I am not convinced that a case can be made for granting broad interstate acquisition authority to the regulators under the guise of emergency legislation, and in this regard I urge my colleagues to support the limiting amendments to be offered by Mr. MCCOLLUM. To quote from the dissenting views of Mr. MCCOLLUM, Mr. HANSEN, and myself—

A matter as important and controversial as interstate banking, no matter how limited the context, should be dealt with * * * only in the most systematic and comprehensive manner possible.

Mr. Chairman, H.R. 4603 was rushed through committee, without the opportunity for deliberate consideration of the important structural issues raised, on the grounds that an emergency situation legitimately exists. If this were truly the case, I ask again—why is this bill so broadly drawn? Perhaps more importantly, why do Treasury and OMB not strongly support the bill? Why has the other body indicated that this legislation will, in all likelihood, not be taken up in the form considered here today? Why does nearly every relevant trade association, including those representing independent banks, savings and loans, and State bank supervisors, have problems with the bill? Why are the National Governors Association and the National Conference of State Legislators opposed?

The answers, Mr. Chairman, are simple. H.R. 4603, as reported by the Banking Committee, is reflective of an attempt by the regulators, with a perceived emergency providing the rationale, to have broad discretionary authority legitimized by Congress. At the same time, however, it is widely understood that the bill does not deal at all with the reasons for thrift industry problems, and that it goes into areas, such as interstate and interindustry mergers that required more direct discussion. For these reasons, I would urge that H.R. 4603 be defeated, and the the Banking Committee begin work on legislation that can be supported by the administration, Congress, and the financial industry alike.

Mr. WYLIE. Mr. Chairman, I yield 2 minutes to the gentleman from Texas (Mr. PAUL).

Mr. PAUL. Mr. Chairman, I rise in opposition to the bill H.R. 4603, the Deposit Insurance Flexibility Act. Even the title scares me.

The last thing I think we need is more flexibility. I think we need more restraints placed on the Congress and not more flexibility placed in the hands of the regulators. Generally speaking, the agencies we are dealing with here today are already able to make deposits in, loans to, and assume liabilities and give contributions to institutions that have failed. They are allowed to do this in an institution that has already failed, but this bill will permit them to do the same in an institution that seems to be failing or is liable to fail.

This is really opening up the door, the fact that we plan to do this. It is claimed that this will cost us less money. It is positively amazing to me why it is so critical that we have to have legislation to save money by telling the regulators that they have a lot more flexibility. I think it is going to cost us a lot more money. I think it is unknown what it is going to cost, and that it will be sort of like saving money with Chrysler. We give money to Chrysler because we do not want to pay the so-called consequences of a failed business. In the long run, the taxpayer pays, and he will have to suffer the consequences of the legislation as well.

In the Banking Committee it was argued that we should not support this legislation because it is opening up the door to interstate banking. I, as an advocate of the free market, have no qualms about interstate banking, but I have strong reservations about the interstate banking proposed in this bill. This has nothing to do with developing a free market banking climate. This has to do with a controlled, manipulated interstate banking which requires large infusions of cash. This is a Government-dictated interstate regulators bill. It has nothing to do with the free market.

Mr. DORGAN of North Dakota. Mr. Chairman, will the gentleman yield?

Mr. PAUL. I yield to the gentleman from North Dakota.

Mr. DORGAN of North Dakota. I think the point the gentleman is making is that he is concerned about the homogenization of our financial institutions. I am concerned about that too. Recognizing a problem is virtuous, but posing a solution that is wrong is of little benefit. I do not want to see a homogenization of our financial institutions over a period of time.

Mr. ST GERMAIN. Mr. Chairman, I yield 3 minutes to the gentleman from Georgia (Mr. BARNARD).

Mr. BARNARD. Mr. Chairman, we have heard much rhetoric up to this point about suggestions which are not really a part of this legislation. Let us for just a minute look at what we are talking about.

Perhaps all of those who have talked up to this time do not have a bank or a savings and loan association in their districts or in their towns that is in trouble. If they do not, then I can understand why they do not understand this legislation. I am glad to say that I do not have a savings and loan or a bank—and I represent mostly little, small, independent banks—I have none of them in trouble, but there are many communities in America today that do have savings and loans, the depository of people's life savings, that are in trouble.

Have the Members ever witnessed a run on a bank or a savings and loan? It is like watching a person die. It is a serious condition, and that is the serious condition that confronts us today. We are not coming here today with a proposal to take the wraps off interstate banking.

□ 1600

That is an emotionalism that has been brought up in this bill that does not exist. The only reason that interstate provisions are put in this bill is for two reasons. We have a limit of $4 billion—think about that—only $4 billion in the FSLIC reserve.

How far will that carry us with failing threats? We have a total of $11 billion in the FDIC, and when we think of million-dollar banks and mutual savings banks insured by the FDIC in the Northeast, when we think about the fact that we have that little money to help bail out those institutions, we ask, what else can we do? Well, this is what else we can do.

This bill does clarify what the FDIC and the FSLIC can do.

Right now, if a bank is failing or if a savings and loan is failing, we have got to wait until the doors are closed, it is declared insolvent, and then the insurance companies come in and say, "OK, now we will pay off the depositors."

Well, that does not have to happen. A lot of failing thrifts and banks are in the situation because of the eroding of their deposit base. This deposit base erosion comes about because of money market mutual funds. Now, that is not the problem of the management. The management is doing everything it can do. It is restricted by regulation Q as to how much interest it can pay. We see the money running out of the banks because of the fact that we do not have control over the money market and the mutuals, but that is another problem.

Let me say this further. Where there is good management and the FDIC and the FSLIC can infuse it

with a little money, it is better to save an institution than to see if fail. That is all that is in this bill.

Let me tell the Members this about this situation. Have we been watching to see what has been going on in the country? Did we see where National Steel Corp. absorbed three of the biggest savings and loan institutions, one in New York, one in Washington, and one in California?

We have in place today laws or regulations that permit interstate transactions of S. & L.'s. That will not happen in this bill. This bill provides a guideline as to how a bank can enter into interstate acquisitions. We need that. I understand that right now there is bargaining going on to acquire S. & L.'s in Georgia by California S. & L.'s because they are trying to get the best deal. We do not want to see that happen.

This sets up a progam of how interstate acquisitions can proceed, and it is rigid; it is not flexible. Flexibility only applies as to the control of FDIC and FSLIC.

What I am saying is that we are structuring it as to what it is to what it contains. Let me say in closing again that there is an emotionalism about interstate banking, and I agree with it. That is another subject. It is a subject that is going to take a lot more time and a lot more consideration, and we should address it at that time.

Mr. WYLIE. Mr. Chairman, I yield 2 minutes to the gentleman from New York (Mr. WORTLEY).

Mr. WORTLEY. Mr. Chairman, I rise in support of the Deposit Insurance Flexibility Act. My colleagues, have said considerable about what this means to the institutions but if we do not enact this legislation there will be no money for home lending.

Since the Great Depression, the American thrift industry has been the major source of home mortgage money. Mutual savings banks and savings and loan associations are holding low yielding, long-term housing loans. At the same time, they are forced to pay the going market rates on a substantial percentage of their liabilities. Passbook savings accounts, once a mainstay of the thrift institutions liabilities have shrunk to a scant 30 percent. The rest of their liabilities are far more costly to the institutions themselves and ultimately to the financial consumer.

Competition is a laudable goal. But when these savings institutions cannot compete with money market funds, commercial paper, and Government securities, the time has come to help this industry over the most difficult barriers.

The bill we are considering today is not a bailout. It costs the Government no money and in fact, could end up saving the Government-backed insurance funds a significant amount.

It is no secret that the thrift industry is deeply troubled. It is far more sensible in my judgment, to act now and grant the regulators of these financial institutions additional powers to provide the necessary capital infusion and merger authority on a limited, emergency basis.

Some people have criticized this bill because they see it opening the door to a homogenization of our banking system. They contend that if this legislation is enacted, the door will be wide open for large commercial banks to swoop down on savings banks and savings and loans. They see the day when only 10 of the largest banks will control the entire financial industry.

I do not feel that argument holds up under careful scrutiny. If we fail to act now, out of some misguided but lofty principle, we will hasten the demise of the savings industry and bring about even less choice for financial consumers.

This bill is not meant to solve all the problems facing the thrift industry. It is limited in scope and duration and intentionally so.

Once the economy begins to improve and interest rates return to more reasonable levels, the mutual savings banks and savings and loan associations will be in a better financial position.

During the course of hearings on this bill, I asked Chairman Volcker of the Federal Reserve what would happen if Congress did not act and act soon to aid the ailing thrifts. He predicted that the thrift institutions as we know them would ultimately disappear, a situation none of us would like to cause.

If we do not act responsibly now and pass this legislation, it is highly likely that in the next few years, Congress will have to reinvent the thrift industry.

As legislators we have a duty to maintain the safety and soundness of these financial institutions in a timely fashion by giving the regulators the tools they need to infuse capital into the troubled thrifts and bring about the necessary mergers and acquisitions.

I strongly urge my colleagues to vote "yes" on this bill.

Mr. WYLIE. Mr. Chairman, I yield 2 minutes to the gentleman from Florida (Mr. MCCOLLUM).

Mr. MCCOLLUM. Mr. Chairman, I rise in opposition to H.R. 4603.

I do not doubt for a minute that there are problems with the mutual savings banks in the Northeast, and that we need to do something about them. As far as this bill goes in that direction, I support it.

The problem is that the bill goes much further than the mutual savings banks in the Northeast. It opens the potential door, however small the crack may be, to interstate commercial banking. It tears down the fabric potentially of the dual banking system of our States and our Federal Government, and it leads to an inevitable concentration of financial powers in the largest financial institutions of this country. That is why I oppose this particular bill.

The fact of the matter is that this bill favors the highest bidder in most of the major provisions that are in it, the highest bidder being the biggest banks in this country when the opportunity presents itself.

The Chairman of the Federal Home Loan Bank Board has said with respect to the savings and loan provisions in this bill that they are not necessary, he does not need them, but he needs a lot of other things. He already has whatever merger powers are needed in the FDIC and the Federal Home Loan Bank Board area.

So the point is that the legislation with respect to the Federal savings and loan is not what is necessary in this bill.

Furthermore, the bill goes further than simply mutual savings banks, because in section 15 it deals with commercial banks as well, and there is no testimony that any commercial banks are in imminent danger of being closed.

The bill simply has holes in it. It does not need to be written the way it is, it does not need to be as broad as it is, and the fact of the matter is that it is opposed by every major trade association that testified before us, with one exception. The fact is that the Conference of State Bank Supervisors, the National Governors Association, and the National Conference of State Legislators are opposed to this bill.

As has been pointed out earlier, if this bill goes on to the Senate, maybe it will not be Christmas-treed, because the chairman indicated he will work very hard not to allow that to happen. But I suggest that whatever happens with respect to that conference, the chances are that this will be the bill coming before this House in this session of Congress to deal with the problems of the savings and loans. We have to deal with them responsibly by sending this bill back to committee to work on the real problems facing the savings and loans and the mutual savings banks. If we do not bring up a bill that deals with those failures and those problems in the right way, this body will not have that opportunity.

Mr. ST GERMAIN. Mr. Chairman, I yield myself the balance of my time.

Mrs. SCHROEDER. Mr. Chairman, will the gentleman yield?

Mr. ST GERMAIN. I yield to the gentlewoman from Colorado.

Mrs. SCHROEDER. Mr. Chairman, many of my constituents have told me that they fear that this bill may return from the Senate with several

provisions that go far beyond the scope of the legislation we are debating today. I wonder if the gentleman could assure me that he will resist any significant departure from today's bill should the Senate wish to add on extraneous provisions.

□ 1610

Mr. ST GERMAIN. I would like in the few seconds remaining to state that this bill will not bring down interest rates. This bill will not help provide home mortgage money for home purchases and we do not claim that it will.

Perhaps the effects of it in the long run might be salutary in this manner by helping thrift institutions to survive or to merge with other institutions.

However, this bill will insure that we, the Congress, set the terms for merger activities, that we, the Congress, say to the Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation (FSLIC), that are going around the country right now peddling savings and loan associations that they are going to have to go intrastate first and foremost.

The CHAIRMAN. The time of the gentleman has expired. All time has expired.

● Mr. MOFFETT. Mr. Chairman, the savings and loans banks of the Nation have been particularly hard hit by the astronomic interest rates under which our country has suffered. Nearly two-thirds of their holdings—the primary assets of savings and loans—are in long-term mortgages paying under 10 percent. At the same time, interest rates for the past year—which represent the costs of doing business—have averaged 15 percent. H.R. 4603 is a careful bill which provides authority to the FDIC and FSLIC to aid S. & L.'s. It is very short term, lasting only through fiscal year 1982. It does not set up any new bureaucracy, but rather provides increased flexibility in existing rules dealing with S. & L.'s.

Consider the problems of the savings and loans industry:

First, during the first 8 months of 1981, S. & L.'s suffered a net outflow of nearly $20 billion. This compares to a net inflow of nearly $5 billion during the same period in 1980. What this means is a turnaround of $25 billion in barely 1 year.

Second, nearly 80 percent of the Nation's S. & L.'s are currently operating in the red. While many of them have sufficient reserves to remain in business, it is obvious that no business can indefinitely lose money.

Third, the Nation's 463 mutual savings banks have incurred losses in 27 of the past 30 months.

Fourth, at least 300 of the 3,840 S. & L. associations in the country are in serious financial trouble. Their failure would result in approximately $60 billion in losses. Sales of assets and compensation through Federal insurance would offset only $15 billion of this, leaving a net loss of $45 billion.

Relaxation of banking laws over the past several years has permitted other types of financial institutions to offer a much wider range of services than S. & L.'s, further harming the competitive position of S. & L.'s. Most recently, Sears has announced plans to offer a range of financial services in each of its stores which virtually obliterate traditional lines of demarcation among a whole range of financial institutions.

These statistics show that Congress must act to aid S. & L.'s. But it should be clear that the Nation's economy will not be dramatically improved by H.R. 4603 alone.

The financial status of the S. & L.'s will not improve because of the premises and trends of Reaganomics. The massive deficits that the Reagan budget and tax plans are incurring will dwarf all previous records, and drive up interest rates even further. Responsible economists are now predicting a minimum deficit of $80 billion deficit would exceed the previous record by nearly $15 billion. It will add $15 billion in interest cost alone to the national burden. It results directly from the President's excessive tax cuts combined with excessive spending on weapons for the Pentagon.

This past summer, Congress adopted the Reagan tax plan, cutting tax revenues by $750 billion over the next 5 years. It also agreed to spend $1.6 trillion on the Pentagon during that period. It slashed social service programs to the bone, abolishing a number of them. All of this was supposed to lead to "economic recovery." Instead, we have economic disaster in an increasing number of critical sectors. In housing, this will be the worst year since 1946. In automobiles, sales are at a 23-year low. Bankruptcy rates are 42 percent higher this year than last, with an average of 326 firms a week going under. Among housing subcontractors, bankruptcy is up 120 percent over 1980. Much of this is the direct result of high interest rates produced by the Reagan deficits. If the Government did not have to borrow tens of billions of dollars to cover its deficits, it would not be driving up the price of money in the marketplace.

High interest rates have forced S. & L.'s and other industries to compete for scarce capital in the financial markets with giant corporations engaged in a merger mania. The value of business mergers so far in 1981 is up 60 percent over 1980 levels. Mergers drive up interest rates from two sides—the bidders and the objects of bids. For example, major corporations had no trouble in lining up $25 billion in credit in the bidding war for Conoco. On the other side, Pennzoil has borrowed $2.5 billion to stave of a hostile merger bid from Standard Oil of California.

These bidding wars do nothing for economic production or productivity. In 1980, 700 of the largest U.S. companies spent only $28 billion on research and development, while pouring $44 billion into mergers. The final figures for 1981 will undoubtedly show an even more lopsided bias on behalf of nonproductive mergers.

Reaganomics' combination of massive deficits, high interest rates, and double-digit inflation are jeopardizing savings and loans associations, the auto industry, the housing industry, and small businesses, among others. H.R. 4603 is a sensible, short-term attempt to aid S. & L.'s. But we will need a good deal more to rescue the economy from the totality of Reaganomics.●

Mr. CHAIRMAN. Pursuant to the rule, the Clerk will now read the amendment in the nature of a substitute recommended by the Committee on Banking, Finance and Urban Affairs, now printed in the reported bill as an original bill for the purpose of amendment.

The Clerk read as follows:

H.R. 4603

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

ASSISTANCE TO INSURED BANKS

SECTION 1. Section 13(c) of the Federal Deposit Insurance Act (12 U.S.C. 1823(c)) is amended to read as follows:

"(c)(1) The Corporation is authorized, in its sole discretion and upon such terms and conditions as the Board of Directors may prescribe, to make loans to, to make deposits in, to purchase the assets or securities of, to assume the liabilities of, or to make contributions to, any insured bank—

"(A) if such action is taken to prevent the insolvency of such insured bank;

"(B) if, with respect to a closed insured bank, such action is taken to restore such closed insured bank to normal operation; or

"(C) if, when severe financial conditions exist which threaten the stability of a significant number of insured banks or of insured banks possessing significant financial resources, such action is taken in order to lessen the risk to the Corporation posed by such insured bank under such threat of instability.

"(2)(A) In order to facilitate a merger or consolidation of an insured bank described in subparagraph (B) with an insured institution or the sale of assets of such insured bank and the assumption of such insured bank's liabilities by an insured institution, the Corporation is authorized, in its sole discretion and upon such terms and conditions as the Board of Directors may prescribe—

"(i) to purchase any such assets or assume any such liabilities;

"(ii) to make loans or contributions to, or deposits in, or purchase the securities of, such insured institution or the holding company which controls such insured institution; or

"(iii) to guarantee such insured institution or the holding company which controls such insured institution against loss by reason of

such insured institution's merging or consolidating with or assuming the liabilities and purchasing the assets of such insured bank.

"(B) An insured bank described in this subparagraph—

"(i) is an insured bank which is closed;

"(ii) is an insured bank which, in the judgment of the Board of Directors, is in danger of insolvency; or

"(iii) is an insured bank which, when severe financial conditions exist which threaten the stability of a significant number of insured banks or of insured banks possessing significant financial resources, is determined by the Corporation, in its sole discretion, to require assistance under subparagraph (A) in order to lessen the risk to the Corporation posed by such insured bank under such threat of instability.

"(3) The Corporation may provide any person acquiring control of, merging with, consolidating with or acquiring the assets of an insured bank under section 13(f) of this Act with such financial assistance as it could provide an insured institution under this subsection.

"(4) With respect to an insured bank described in paragraph (2)(B), no assistance shall be provided under this subsection to such insured bank in an amount in excess of that amount which the Corporation determines to be reasonably necessary to save the cost of liquidating (including paying the insured accounts of) such insured bank, except that such restriction shall not apply in any case in which the Corporation determines that the continued operation of such insured bank is essential to provide adequate banking services in its community.

"(5) Any assistance provided under this subsection may be in subordination to the rights of depositors and other creditors.

"(6) In its annual report to the Congress, the Corporation shall report the total amount it has saved, or estimates it has saved, by exercising the authority provided in this subsection.

"(7) For purposes of this subsection, the term 'insured institution' means an insured bank as defined in section 3 of this Act or an insured institution as defined in section 401 of the National Housing Act (12 U.S.C. 1724).".

Mr. ST GERMAIN (during the reading). Mr. Speaker, I ask unanimous consent that section 1 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

TECHNICAL AMENDMENTS OFFERED BY MR. ST GERMAIN

Mr. ST GERMAIN. Mr. Chairman, I offer technical amendments and I ask unanimous consent that they be considered en bloc since they relate to two different sections of the legislation.

The CHAIRMAN. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. ST GERMAIN: Page 4, beginning on line 9, strike out "With respect to an insured bank described in paragraph (2)(B), no" and insert in lieu thereof "No".

Page 4, line 11, strike out "to such insured bank".'

Page 11, beginning on line 16, strike out "Board of Directors" and insert in lieu thereof "Corporation".

Page 12, line 14, strike out "Board of Directors" and insert in lieu thereof "Corporation".

Page 13, line 5, strike out "Board of Directors" and insert in lieu thereof "Corporation".

Page 13, beginning on line 21, strike out "With respect to an insured institution described in paragraph (2)(B), no" and insert in lieu thereof "No".

Page 13, line 23, strike out "to such insured bank".

Mr. ST GERMAIN (during the reading). Mr. Chairman, I ask unanimous consent that the amendments be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

Mr. ST GERMAIN. Mr. Chairman, these are technical amendments to H.R. 4603 as the bill was reported from the committee. The amendments clear up two very minor technical and cross-reference problems in the bill.

It is my understanding these amendments are supported by the gentleman from Ohio (Mr. STANTON), the ranking minority member, as well as the gentleman from Ohio (Mr. WYLIE), the ranking minority member on the Subcommittee on Financial Institutions Supervision, Regulation and Insurance.

Mr. WYLIE. Mr. Chairman, will the gentleman yield?

Mr. ST GERMAIN. I yield to the gentleman from Ohio.

Mr. WYLIE. I thank the gentleman for yielding. My colleague from Ohio (Mr. STANTON) and I have had an opportunity to examine the amendments. They are corrective and they are technical amendments and not substantive. We support the amendments.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Rhode Island (Mr. ST GERMAIN).

The amendments were agreed to.

Mr. ST GERMAIN. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. PEYSER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 4603) to provide flexibility to the Federal Deposit Insurance Corporation, the Federal Savings and Loan Insurance Corporation, and the Federal supervisory agencies to deal with financially distressed depository institutions, had come to no resolution thereon.

GENERAL LEAVE

Mr. ST GERMAIN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous material on the bill just considered.

The SPEAKER. Is there objection to the request of the gentleman from Rhode Island.

There was no objection.

□ 1215

CONGRESSMAN ADDABBO COMMENDS SERVICES FOR ANTI-DRUG EFFORTS

(Mr. ADDABBO asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ADDABBO. Mr. Speaker, in recent months we have been following the unfolding story of illicit drug use by members of the military here and overseas. We have all seen the headlines and heard the stories about drug abuse that scare us half to death. There is some reason to question the quality of our military readiness if the figures provided to the Congress by the services themselves are accurate. There is no reason to doubt the validity of the figures that have been provided to us.

It is the intention of the House Subcommittee on Defense Appropriations to conduct hearings into the results of a long investigation into drug abuse within the military. In the meantime, however, let me note that there is beginning to be some solid evidence that the military is finally taking some strong steps to combat those people who seek big profits by preying on their friends who wear the same uniform. Most of our service people are great and dedicated.

Mr. Speaker, I say it is about time that this is happening and I call on all Members of the Congress to applaud these efforts. We have to make it clear to those who would sell drugs within the military that justice is swift and the penalties severe. The recent drug busts on board the U.S.S. *Midway* and at Homestead Air Force Base in Florida are just what we need to get the drug enforcement program off the ground.

For all too long we have had military commanders at every level and in every service hiding their heads in the sand while illegal drug use went on around them. Nobody wanted to dirty up their career on something nobody could stop.

Well, it remains to be seen if this insidious trafficking can be ended but one thing certainly is true: It cannot be stopped until someone takes the first step. I commend the Air Force for

its action in Florida and the Navy for its action on board the *Midway*. I also wise to bring to your attention a new 10-point program started by the Navy which is designed to provide incentives to those in command positions to fight narcotics use.

This program, which ought to be used as a role model by all of the services, provides help for those on drugs who want to get off, and provides assistance for those who command units who want the drug users and drug sellers busted as they ought to be.

I feel so strongly about the positive actions of the Navy and Air Force that I have today put out a press release outlining the 10-point program begun by the Navy. I believe that everyone who is interested in this subject, and that should include every Member of Congress, ought to read about it. Accordingly, Mr. Speaker, I include the press release as part of the RECORD:

ADDABBO COMMENDS SERVICES FOR ANTIDRUG EFFORTS

Congressman Joseph P. Addabbo, Chairman of the House Subcommittee on Defense Appropriations, today commended efforts by the Navy and the Air Force to control drug abuse at military bases.

The New York Congressman who has led an investigation into the growing use of illicit drugs by military personnel both on and off duty, declared that "after much hesitation, top service officials have begun a dedicated crack-down on those who sell or otherwise distribute illicit drugs within the military services".

Chairman Addabbo noted that a recent undercover operation at Homestead Air Force Base in Florida resulted in the arrest of seventy-eight persons. This followed by several weeks a major durg bust on the USS MIDWAY. "While these arrests are beneficial in that we bring those who violate the law to justice, we still require an overall program to fight drug abuse in a number of ways."

In that regard he was especially enthusiastic about a new ten point program devised by the Navy over a five year period, which was designed as the first full scale program against drug abuse.

Among the provisions of the ten point program are the following:

The Navy drug safety action program is a thirty six hour remedial education and motivation counseling program for identified drug abusers.

Twenty portable urinalysis are planned for introduction for fleet use shortly. This, along with 133 kits already in use, provides the capability to conduct 100,000 urinalysis tests each year. Urinalysis is the single best way of determining drug usage.

Creation of a new law enforcement command which will effectively administer legal matters in the anti-drug program.

An additional fifty drug detector dog teams will be added to fifty-three dog teams already operating.

Expanding the size of inspection and assistance teams which will help commands combat drug abuse by improving the local programs.

Creation of a computer system to be used to assess how drug and alcohol programs are working.

Creation of nine new officer billets who will be responsible for a wide variety of assistance to drug control officers.

A new specialty, drug abuse specialists, will be assigned to each command as a means of turning around apparent apathy that exists amongst junior personnel.

Upgraded training program will be established along the east and west coast to provide a better training program for those assigned responsibility for anti-drug efforts.

A new project to be started to develop and implement a motivational drug abuse education program, designed to change behavioral patterns.

"This is a very ambitious program that has been begun by the Navy. It is very important that it succeed for if it does the other services will soon follow suit", Addabbo said. "Conversly, if it fails, the programs to stop drug abuse will be set back for years. That is unacceptable."

The House Defense Appropriations Subcommittee has been conducting a year long investigation into military drug use problems. A final report is in the process of being completed, Congressman Addabbo said, and the results will be made known at a Subcommittee hearing which will be held sometime in the next month. No date has yet been set for that hearing.

THE TREASON OF CONGRESS

(Mr. JOHNSTON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. JOHNSTON. Mr. Speaker, the Wall Street Journal recently published an editorial which accurately describes the situation we face in trying to get the Federal budget under control.

As the editorial points out, the strongest opposition we face in trying to cut the budget comes not from the intended benefit recipients, but, rather, from the special interest organizations who have profited the most from the growing number of Federal programs. This is a fact which has been overlooked for too long. As we hear the cries of opposition to any further budget cuts, too often we fail to discern precisely from whom these cries are emanating.

I commend the following Wall Street Journal editorial to my colleagues, as it accurately focuses on the real victims of Federal budget cuts.

THE TREASON OF CONGRESS

In 1906, the muckraking journalist David Graham Phillips wrote a magazine series on the way leading U.S. Senators served the bidding of corporate interests. He gave his articles the collective title "The Treason of the Senate." Exaggerated as the charge might have been, it is no less appropriate now for a Congress that has let spending run out of hand, relied on unlegislated tax increases and phony bookkeeping for any semblance of budget balance, driven the nation's largest trust fund to the verge of bankruptcy, and, when confronted with a national mandate to change its ways, thrown up its hands at the "political difficulty" of reform.

The "political difficulty" is that Senators and Representatives are just as subservient now as in 1906 to the bidding of special interests. These interests masquerade under humanitarian labels, but they are even more harmful to the public good than the trusts and corporations belabored by the Progressive movement. There is the lobby for job training programs, which is less concerned with turning welfare recipients into productive workers than with protecting federal contracts for the job training industry. There is the housing lobby, which represents builders so addicted to federal rent subsidies that they can't conceive of putting up a moderate-income apartment house without them. There are myriads more. The motives and men may be worthy, but these interests have all come to depend for a living on one or another federal line item in health, welfare or social serivce, and nothing arouses their energies as much as a campaign to keep Congress from cutting their program.

But the problem goes beyond structures. Congress lives in an isolated, self-indulgent universe, oblivious to the way its rhetoric translates into the real world. House Majority Leader Jim Wright presents budget cuts as an assault on women, children and the helpless without pausing to glance at the mound of evidence that federal social programs have bettered mainly their administrators and contractors and have often done harm to the people they were intended to help. Senators of both parties murmur that tax cuts have been overdone, even though the President's program does little more than compensate for the "bracket creep" caused by inflation. For members of Congress, Social Security remains an abstract problem interesting only for its short-term politics, since they pay no Social Security taxes and don't have to worry whether any of this considerable bite on the payroll will be around for their retirement in the next century.

Congress is one of the main victims of the elephantiasis that infects the federal government. As committees and programs have proliferated, staff members have taken over much of the legislative detail. As employes of Congress have multiplied, it has been spreading its increasingly bloated buildings over Capitol Hill, threatening to expropriate space from the Library of Congress and even the Supreme Court. This antheap of legislative aides and committee staff—the legocracy, as some call it—is even more divorced than the members from the real world back home.

Washington is all too receptive to these campaigns. In a group, Congressmen make all the appropriate noises about fiscal responsibility, but each one knows in his heart that his political future is best served by staking a claim to a well-heeled, well-organized "program constituency." The arrangement is all the tighter if the Congressman holds rank on a subcommittee that controls the program's funding. In the Executive Branch, the bureaucrats who work on that program have an obvious interest in seeing it grow. And so, with the private industry that springs up around each program, you have the famous "iron triangles" which, until this year, have been the downfall of every attempt to control the budget. President Reagan's massive budget assault earlier this year threw the interests in momentary disarray; now they have regrouped and one hears on every side how hard it will be to make further cuts.

Pampered, privileged, surrounded by aides who regard him with servile contempt, your Congressman has become adept at confusing the public good with his own interest and interests. Campaign reforms become a

means for protecting incumbents. Budget outlays become a mutual aid arrangement with budget constituencies. The duty to the folks back home becomes a matter of winning them federal goodies, to the point that it is a question whether the Congressman is serving his electors or corrupting them.

The result has been double-digit inflation, suffocating tax increases procured in the dark of the moon, and now, the agonizing corrective of high interest rates. By any view that the public interest lies in balanced budgets, sound currency and a stable tax rate, Congress has sold us out. And now it is about to tell us that because of the "political difficulty" of real budget control, there is "no alternative" but to postpone the scheduled tax rate cuts, allow inflation once again to boost taxes surreptitiously and go back to all of the old ways.

U.S. SKI ASSOCIATION SUPPORTS MULTIUSE CONCEPT OF PUBLIC LANDS

(Mr. CRAIG asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. CRAIG. Mr. Speaker, I take this opportunity to recognize a letter from the U.S. Ski Association, addressed to the President. This letter signifies the commitment of an organization that is dedicated to the multiple-use of our public lands.

I commend the U.S. Ski Association for their efforts to open a line of communication between the Sierra Club and other land user groups. I believe it is a timely and sincere commitment by a large public land user group, to begin a constructive and meaningful dialog between all land user groups which would be beneficial to the Nation, those participating interest groups, and the administration.

I would hope the Sierra Club will accept the U.S. Ski Association invitation and work together to strike a balance between environmental protection and the wise and prudent multiple use of our public lands.

U.S. SKI ASSOCIATION,
Washington, D.C., October 14, 1981.

President RONALD REAGAN,
The White House,
Washington, D.C.

DEAR PRESIDENT REAGAN: The United States Ski Association has a large stake in the allocation of our Nation's public lands. In many instances, and especially in the West, ski terrain, both presently developed and future non-developed potential, is located upon lands under the jurisdiction of the U.S. Forest Service or the National Park System. For this reason we feel compelled to reiterate to you our strong support for the multiple-use concept. We have been very pleased with the importance your Administration has placed upon re-examining our national land use policies, focusing upon multiple-use and equitable access for all segments of our population.

It is our belief that Secretary of the Interior James Watt has been a positive force in this re-examination of our land management policies. Our members, as strong environmentalists with a deep love and appreciation for this Country's natural resources, hope that you will continue on your present path toward broadening the public's opportunity to use and enjoy their public lands. By copy of this letter to the Sierra Club, we invite them to begin a constructive dialogue with ourselves and other public land users, based not upon destructive emotional rhetoric and unfounded accusations, but rather upon reasoned consideration of methods of combining environmental protection with increased use and enjoyment of our public lands.

Very truly yours,

NANCY J. INGALSBEE,
Director of Public Affairs.

THE COAL SEVERANCE TAX LIMITATION ACT OF 1981

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. CORCORAN) is recognized for 10 minutes.

● Mr. CORCORAN. Mr. Speaker, I am today introducing legislation that would amend the Powerplant and Industrial Fuel Use Act of 1978 by placing a ceiling on severance taxes a State can impose on coal produced from Federal and Indian lands. The provisions of the Coal Severance Tax Limitation Act of 1981 are identical to S. 178, introduced by Minnesota Senator DAVE DURENBERGER on January 21.

During the 96th Congress, I cosponsored similar legislation, H.R. 6625, a bill introduced on February 26, 1980, by Congressman PHILIP R. SHARP. That legislation was the subject of hearings by the Interstate and Foreign Commerce Committee's Energy and Power Subcommittee, of which I was a member, on March 21 and June 5, 1980. H.R. 6625 was reported by the full committee on September 16, 1980 (H. Rept. 96-1527, part 1, December 4, 1980).

The legislation I am introducing today differs from H.R. 6625 in that the scope of this bill is limited to coal produced from Federal and Indian lands. While I hesitate to support Federal legislation that seems to infringe on areas normally reserved to the States, it does seem unfair for States that are blessed with extensive Federal resources to excessively tax those resources and pass on those taxes to citizens of other States. My legislation does not prohibit this kind of taxation; rather, it establishes a ceiling of 12½ percent.

I recognize that the approach taken by my legislation could make Illinois coal less competitive inasmuch as my legislation would tend to make western coal, which now has severance taxes in excess of 12½ percent, more attractive to potential users of that coal. Illinois, incidentally, imposes no severance taxes on any of its energy resources. I am also concerned that the establishment of a 12½ percent ceiling could, in effect, become a floor.

On balance, though, I have concluded that it is unfair for Illinois consumers, particularly Commonwealth Edison ratepayers, to pay higher utility bills as a result of high severance taxes on the low sulfur coal ComEd chooses to use. I will continue to work to promote the production and utilization of high sulfur Illinois coal, particularly in connection with congressional consideration of the Clean Air Act.

The conflicting views on coal severance tax limitation legislation are evident in two letters I received earlier this year. First, in a January 12 letter to me from Commonwealth Edison, several reasons for supporting this kind of legislation are discussed. Reasons in opposition to this position are described in a June 29 letter to me from the Illinois Institute of Natural Resources which has since been renamed the Illinois Department of Energy and Natural Resources. The texts of these two letters are included at the end of my statement.

Illinois consumers paid over $20 million in coal severance taxes to other states in 1979. They paid an additional $90 million in severance taxes on other energy resources to other states during the same period. Severance taxes by "have" States at the expense of "have not" States seem to create an inequity that I believe Congress must address. As a result of the July 2, 1981, U.S. Supreme Court decision in the Commonwealth Edison Co. against Montana case, the matter of State severance taxation on energy resources destined for shipment in interstate commerce is clearly an issue for the Congress to address.

As a member of the Energy and Commerce Committee's Subcommittee on Fossil and Synthetic Fuels, I commend subcommittee Chairman Sharp for beginning hearings this week on this subject. Particularly as one who was active during subcommittee and full committee consideration of this issue during the last Congress, I look forward to this issue being addressed during the 97th Congress.

Mr. Speaker, I insert the texts of the two letters mentioned earlier, as well as the text of the Coal Severance Tax Limitation Act of 1981 at this point:

COMMONWEALTH EDISON,
Chicago, Ill., January 12, 1981.

HON. TOM CORCORAN,
Longworth House Office Building, Washington, D.C.

DEAR TOM: Thank you for your letter of December 29 about H.R. 6625. I am glad that you are one of the co-sponsors of that bill because it is a very good piece of legislation for the entire country. As you well know, it would also be particularly helpful to the people we serve and you represent. If H.R. 6625 had been law during 1980, our customers would have saved about $20 million which instead will go to pay severance taxes in Montana and Wyoming.

The majority report on the bill by the Committee on Interstate and Foreign Commerce is excellent. It is factually accurate

and properly explains the importance of enacting the bill. The report explains how a few states, by enacting excessively high severance taxes, can thwart our national energy policy and can unfairly export the burden of taxation to the citizens of other states like Illinois.

I think the majority report is responsive to the concerns expressed by Congressman Wirth in his minority opinion. Congressman Wirth's main argument is that coal production in Montana has not declined since the enactment of that state's 30 percent severance tax. He takes this as an indication that our national energy policy of developing coal resources has not been frustrated. The majority points out that Montana coal is usually bought under long-term production contracts. While pre-existing contracts will sustain the production levels cited by Congressman Wirth, there have been few new contracts signed since the severance tax was passed. The lack of new contracts shows how the Montana tax has frustrated our national effort to reduce oil consumption. The amount which our customers will pay Montana and Wyoming, $48 million last year, and as much as $260 million over the next five years, demonstrates the unfairness of the situation. Congressman Wirth suggests that the Montana taxes paid by our customers represent only a small portion of their electric bills. This is mainly the result of our ability to use nuclear power to supply so much of our customers' needs. It does not reduce the unfairness of the excessive state severance taxes included in the price of every kilowatt hour we generate with Montana coal.

If we are going to develop our national energy resources and free ourselves from reliance on foreign energy producers, it is imperative that we prevent regionalism from interfering with national interests. H.R. 6625 is a necessary step in that direction.

In your letter to me, you also included a copy of your December Congressional Report. I noticed several items in it of direct interest to us. These are the discussion of the urgent need for a rational national policy on nuclear waste disposal (which I discussed briefly in a separate letter to you written earlier today), the discussion of the importance of promoting the use of Illinois coal, and your efforts to speed decisions in FERC wholesale rate cases. These are all subjects which have a direct impact on Commonwealth Edison and on which Congress could usefully act. If you intend to pursue legislative proposals on these issues in the next Congress, we will be happy to offer any assistance we can or any information which our experience has given us.

Sincerely,

JAMES J. O'CONNOR,
Chairman and President.

ILLINOIS INSTITUTE OF NATURAL RESOURCES,
SPRINGFIELD, ILL.,
June 29, 1981.

Hon. TOM CORCORAN,
Longworth House Office Building, Washington, D.C.

DEAR REPRESENTATIVE CORCORAN: In the 97th Congress, the issue of limiting coal severance tax will no doubt be debated again. I would like to offer you an explanation as to why we are opposed to the idea of such a limitation.

To begin with, Illinois coal producers will lose from the limitation, while consumers will gain little. Montana's severance tax only accounts for 5 percent of the delivered cost of coal to Illinois. Furthermore, since Western coal is usually mixed with other coals and since fuel is only one component of cost, the limitation will save Illinois consumers only one-fourth of 1 percent on the average electricity bill, or less than 10 cents per month. On the other hand, the limitation will harm Illinois coal markets by putting Western coal in a better competitive position. According to Data Resources, Inc.'s coal model, Illinois would lose 1 million tons per year of production during the next 5 years to Wyoming and Montana. This translates into 390 miners out of work in Illinois.

Second, limiting severance taxes sets a precedent for limiting all general purpose taxes. Montana and Wyoming are not unique in taxing the commodities they export. Michigan taxes automobiles, North Carolina taxes tobacco and Illinois taxes its corn and soybeans, as well as its manufactured products through sales, property and income taxes.

Third, there is something to the argument that Montana and Wyoming need the revenue they are setting aside in trust funds as insurance for the future when their resources are depleted. It is unfortunte that the Appalachian states, as well as Illinois, did not have the foresight when they began producing large quantities of coal to provide for their futures.

Fourth, a limitation on severance taxes is likely to be ineffective. A 12½ percent limit probably would not apply to Wyoming, since its actual severance tax is 10.5 percent. It is local ad valorem taxes which bring its rate up to 17 percent. Likewise, Montana, or any other state, could easily replace all or part of its severance tax with property or income based taxes.

Finally, efforts to limit Montana's and Wyoming's severance taxes on coal are misdirected. The revenue generated by coal producing states from severance taxes pales in comparison to that collected by oil and gas producing states. This year an estimated $600 million will be collected in coal production taxes, while over $8 billion will be collected in taxes on oil and gas. Illinois will pay $25 million to Montana and Wyoming for their coal severance taxes, but $300 million to support the governments of oil and gas producing states.

It does not make sense, therefore, to limit coal severance taxes without also looking at oil and gas taxes. At a minimum, federal aid formulas should be changed so that energy producing states do not doubly benefit from consuming states by receiving tax money from them and then receiving preference in aid formulas for having a high tax effort. In the long run, what may be necessary is a windfall profits tax on state energy resource taxes to redistribute the excess revenues to the energy poor states. One question, however, is left unanswered in this whole issue: who should benefit from this nation's resources, the individual states or the nation as a whole? I think the answer is both.

I urge that you not support the 12½ percent limitation on coal severance taxes. The issue is much broader than Montana's or Wyoming's tax. A long term solution should be sought which encompasses all energy resources and which enables the individual states to benefit from their resources, but at the same time provides a benefit to the entire nation.

Thank you for allowing the State of Illinois to provide you with our position on this important issue.

Sincerely,

FRANK BEAL,
Director.

H.R. 4841

A bill to amend the Powerplant and Industrial Fuel Use Act of 1978 to further the objectives of national energy policy of conserving oil and natural resources through removing excessive burdens on production of coal

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Coal Severance Tax Limitation Act of 1981".

SEC. 2. The Congress finds that, in order to alleviate the national energy emergency, reduce national dependence on petroleum imports, encourage the highest and best use of domestic petroleum and natural gas, and enhance interstate commerce by promoting increased reliance on our national reserves of coal for the generation of electricity and power, it is necessary to remove excessive burdens on production of coal used in powerplants and major fuel-burning installations.

SEC. 3. (a) The Powerplant and Industrial Fuel Use Act of 1978 (42 U.S.C. 8301 et seq.) us amended by adding immediately following section 807 the following new section:

SEC. 808. COAL FOR POWERPLANT AND INDUSTRIAL CONVERSION

"(a) LIMITATIONS.—Notwithstanding any other provision of State or Federal law, with respect to any coal mined or produced from Indian lands or lands owned by the Federal Government which is destined for shipment in interstate commerce for use in any powerplant or major fuel-burning installation, the sum of all severance taxes, or fees, in respect of any fiscal year, imposed by a State or any political subdivision thereof on such coal or on any improvements or other rights, property, or assets produced, owned, or utilized in connection with the production of such coal shall not exceed a total of 12½ percent of the value of such coal produced during such fiscal year determined at the time it has been extracted and prepared for transportation free on board the production site but exclusive of all State and local taxes and fees.

"(b) SEVERANCE TAXES OR FEES DEFINED.—For purposes of subsection (a), 'severance taxes or fees' include any tax or fee, by whatever name called, imposed upon coal or upon any improvement or other rights, property, or assets produced, owned or utilized in connection with the production of coal except for income, sales, or other similar taxes or fees or general application which are not disproportionately imposed thereon.".

(b) The table of sections for such Act is amended by inserting after the item relating to section 807 the following new item:

"Sec. 808. Coal for powerplant and industrial conversion.".●

A TRIBUTE TO BERNARD J. O'KEEFE, "NEW ENGLANDER OF THE YEAR"

The SPEAKER. Under a previous order of the House, the gentlewoman

from Massachusetts (Mrs. HECKLER) is recognized for 10 minutes.

● Mrs. HECKLER. Mr. Speaker, on November 4 the New England Council will honor a man whose contributions to society, and to all our futures, have been immense: Bernard J. O'Keefe, chairman of the board and chief executive officer of E. G. & G. Synfuels, Inc., will be formally honored as New Englander of the Year for 1981.

Though the accomplishments of a single life are impossible to measure, the recognition of one's peers and associates is surely one means to gage the magnitude of a person's contributions to his fellow men and women.

If it is true, as Emerson wrote, that an institution is but the lengthened shadow of one man, then E. G. & G. is most surely the product of Bernie O'Keefe's special genius. A pioneer in the commercialization of alternative energy sources, Mr. O'Keefe has over the past 34 years turned E. G. & G. into a leading force in the fight to solve our Nation's energy problems.

Working to develop the full range of alternative energy possibilities, E. G. & G. has, under Mr. O'Keefe's leadership, contributed not only to a brighter energy future for America, but created the promise of thousands of new jobs for the people of New England.

But Bernie O'Keefe's contributions have not been limited to forging the link between energy development and economic development. Rather, his life and career have exemplified, in the truest sense, the genius and promise of American democracy.

In so many ways—from his rise from humble beginnings in Providence, R.I., to eminence as a technological innovator, successful businessman and outstanding linguist—to his personal triumphs as a loving husband and father—to his leadership in public affairs—Bernie O'Keefe has demonstrated that intellect, determination, and integrity remain the engines of success in our society.

A concerned member—and leader—of the community, he serves now as chairman of the Massachusetts Governor's Management Task Force—a post he has held under both Governors Michael Dukakis and Edward J. King. He also lends his insight and energy as a director of the Boston Museum of Science, the Woods Hole Oceanographic Institute, the Boston Urban Foundation and the Lahey Clinic Foundation, and has served in the past as chairman of Citizens for Economy in Government.

But perhaps the most prominent of Mr. O'Keefe's concerns is his devotion to quality education. A former vice chairman of the Massachusetts Board of Higher Education, he has long recognized the vital importance of educating today's generation to face the challenges and problems of tomorrow. His concern that students today receive a strong intellectual foundation in mathematics and the sciences reflects his vision of a future in which new technology will reshape our economy, our society, and every aspect of our lives.

This farsightedness is the mark of a true leader—a man who does not simply speculate about the future, but charts a clear path toward achieving it.

The people of New England have been the beneficiaries of his genius, and their gratitude is evident in the honor he will receive.

Bernie O'Keefe's selection as New Englander of the Year by the New England Council is a fitting tribute to a man who has been a pioneer in his field, and a pacesetter for an entire generation of New Englanders.

There is, in fact, no one man or woman who has done more to shape the New England of the future—a future of prosperity and hope, economic security and personal dignity. The recognition that he receives is only an imprecise measure of his vision; it is in the hearts and minds of all who know him that the full range of this man's greatness is most clearly written.

I count it a great honor to be able to call Bernard J. O'Keefe a friend, and I count it a singular privilege to call the attention of all my colleagues to the accomplishments of this most extraordinary American.●

INEQUALITY MAKES FOR WORSE GROWTH, NOT BETTER

The SPEAKER. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 5 minutes.

● Mr. REUSS. Mr. Speaker, in a recent article in Challenge magazine, "Inequality, Here We Come" (CONGRESSIONAL RECORD, October 26, 1981, pages 25282 thru 25284), I pointed out how, contrary to popular opinion, the distribution of income in the United States has steadily become more unequal since the mid-1960's. The income shares for the middle and lower middle classes fell from 28.1 percent in 1967 to 26.1 percent in 1978. Under Reaganomics, with its high interest rates and tax redistribution, income inequality is speedily worsening.

Greater inequality is justified by the administration on the ground that inequality is needed for greater productivity and output. As the administration's economic theoretician, George Gilder, points out, "a successful economy depends on the proliferation of the rich."

Following this precept, the administration has been busy proliferating. The nonaffluent two-thirds of America are being told that though the slices of the bread they receive may be getting thinner, the size of the economic loaf will grow so fast that they will be better off.

But Reaganomics seems to have neglected to put yeast in the dough. And the result is that the loaf, far from growing, has fallen.

Real gross national product has been falling at an annual rate of 2.2 percent ever since last April. Since President Reagan took office, the Nation has lost $16 billion of real output.

The real income of middle and lower income families has been declining. Nonaffluent America has had the worse of both worlds—thinner slices and a smaller loaf.

So far, then, the greater inequality produced by Reaganomics has meant less growth, not more. But perhaps it is unfair to judge the administration on its first 10 months. Let us look at a longer period, the last 20 years, and compare the growth records of countries of the industrialized world according to the degree of their equality of income distribution. Do countries with greater inequality have higher growth rates?

To answer this question, I asked the Joint Economic Committee staff to compare inequality and growth in the seven leading industrial democracies—the United States, Canada, France, West Germany, the United Kingdom, Sweden, and Japan. The results of this comparison should interest the President and the Members of Congress. The JEC staff found an inverse relation between equality and growth—overall, countries with high inequality have had low growth, and countries with low inequality have enjoyed high growth.

The JEC staff table below shows that the more unequal a country's income distribution, the worse is its productivity performance. Taking the United States, Japan, West Germany, and Canada, our three largest trading partners, we find that Japan had the lowest inequality and the highest productivity growth, West Germany had the second lowest inequality and the second highest productivity growth, Canada had the third lowest inequality and the third highest productivity growth, and the United States had the highest inequality and the lowest productivity growth.

INCOME INEQUALITY AND PRODUCTIVITY GROWTH RATES

Country	Relative index of income inequality, 1970–75 (U.S. = 100)	Average labor productivity growth rate, 1960–79 (in percent)
United States	100	2.5
Canada	94	3.2
France	92	5.4
West Germany	68	5.3
United Kingdom	65	3.2
Sweden	63	4.7
Japan	48	7.9

Source: OECD

If Reaganomics were correct, one would expect that the United States with high inequality, would have achieved rapid growth, while Japan, with the least inequality, would have languished. But just the opposite is true.

Not only is there no evidence for the administration's high inequality-high growth thesis, the evidence is just to the contrary.

Why, then, should we believe that worsening inequality will be conducive to growth? Reaganomics should go back to the drawing board.●

HOUSE SHOULD RETAIN CURRENT OUTSIDE EARNED INCOME LIMITATIONS

The SPEAKER. Under a previous order of the House, the gentleman from Indiana (Mr. HAMILTON) is recognized for 15 minutes.

● Mr. HAMILTON. Mr. Speaker, House Rule 47 limits outside earned income for House Members to 15 percent of their congressional salary, and limits the amount from any single honorarium to $1,000 per speech, appearance, or article. The rule was added in 1977, along with several other ethical reforms, when we significantly tightened up the generally ineffective codes of conduct and financial disclosure rules adopted in 1968. The tightening up of congressional ethics followed a storm of public outcry in 1976 over congressional misconduct and scandals, such as the South Korean influence buying and the Wayne Hays affair. The reforms were the product of extensive work by the Obey commission and three House committees, and the outside earned income limitation was accepted by an overwhelming vote of 344 to 79. House Resolution 251 would significantly liberalize House Rule 47 by raising through 1983 the limit on outside earnings from 15 to 40 percent of the congressional salary. I oppose this change.

1. STRICT LIMITATIONS WERE ADOPTED FOR THREE MAIN REASONS

Mr. Speaker, we adopted the outside earned income limitation for three very good reasons:

First, it minimizes the possibilities for conflicts of interest. Certainly the integrity of the legislative process is called into question when, for example, a committee chairman accepts thousands of dollars from groups with special interest in legislation before his committee, or when a Member makes his services available for large legal or professional fees.

Second, it avoids time being taken away from congressional work. Being a Representative should be a full-time job. But that certainly was called into question when Members spent substantial time earning several times their congressional salary in outside work, as happened before House Rule 47 went into effect.

Third, it avoids the appearance of cashing in on the congressional position. Receiving thousands of dollars in overpaid honoraria, in consulting fees for little work done, in salaries for adding one's name to a law firm—all strike the American citizen as someone trying to exploit his current status for financial gain.

On the basis of these arguments, we adopted the outside earned income limitations by a more than 4-to-1 margin. These reasons also, by the way, explain why we did not apply the rule also to unearned income. Two of these problems generally do not arise in typical cases of investment income: When a Member is simply receiving money from previous investments no exploitation of congressional stature is involved, nor is significant time taken away from congressional duties. So we applied the rule only to earned income where there is much more possibility for abuse.

2. PUBLIC DISCLOSURE IS NOT ENOUGH

We passed these rules to specifically limit certain outside earnings because we felt that mere public disclosure of the actions would not suffice. It will not do to tell a voter that if he thinks that a Congressman is engaged in improper outside earning activities, he should vote him out of office. In 434 of 435 possible cases, the voter simply cannot do that. Each American is affected by the actions of all Members of Congress, yet he can vote disapproval of only his own Representative's actions. It is little consolation to him to have only public disclosure that, for example, an influential committee chairman has accepted $25,000 in honoraria from groups with special interest in legislation before his committee. We need to assure each American that there are at least some minimal sorts of safeguards on the books trying to insure that each committee chairman, each influential party leader, each Member of Congress making important decisions that affect him dearly, is not engaged in such abuses.

3. BASIC REASONS FOR LIMITATIONS HAVE NOT CHANGED

Mr. Speaker, no one would maintain that this one rule is the cornerstone of all congressional ethics, the panacea for all congressional misconduct and impropriety. However, it is a significant and meaningful provision. As Speaker O'NEILL said during the 1977 floor debate, this limitation is "the heart and soul of the entire package". Moreover, the outside earnings limitations have been thought important enough to be applied to high-level officials of the executive and judicial branches. House rule 47 is one step toward trying to insure that Members of Congress are in fact here working for the good of the American public, rather than for their own personal gain or for the good of high-paying special interests. I submit that whatever we can do to promote that ideal is worth pursuing.

House Resolution 251 would significantly weaken our ethical reforms of 1977. But as far as I can tell, the original reasons for adopting these limitations are just as valid today as they were 4 years ago:

I do not believe that in the past 4 years there has been any evidence showing a significant lessening of the possibility of abuse from outside earnings in terms of conflicts of interest, taking time away from congressional work, or cashing in on the congressional position.

I do not believe that in the past 4 years this rule has led numerous competent Members to leave Congress, only to have them replaced with less competent individuals. On the contrary, I can detect no recent deterioration in the caliber of Members of Congress.

I do not believe that in the past 4 years there has been a significant change in the number of Members who would be affected by House rule 47. Estimates were that roughly one Member in six exceeded the limits before they went into effect, and a similar proportion of Members is approaching our current 15-percent limit. Then, as now, this rule affects primarily only a handful of Members of Congress.

I do not believe that in the past 4 years the American public has changed its thinking to now believe that House Members have less need of ethical reform than before. If anything, I would imagine that incidents of misconduct, from Abscam to payroll kickbacks, would make the American public think that there should be tougher restrictions on congressional conduct.

4. THE LIMITATIONS ARE AN ETHICAL, NOT A FINANCIAL MATTER

Mr. Speaker, one major change over the past 4 years that proponents of House Resolution 251 point to—which I think is correct—is the change in the buying power of congressional salaries. Salaries of Members have not nearly kept up with inflation. However, that is a totally financial matter that should be addressed by reviewing the process of pay increases for Members. It is not an ethical matter affecting our ethical codes. What House Rule 47 involves is an ethical standard, and the ethical reasons for its adoption are just as valid today as when it was first adopted, if not stronger. Congressional pay problems should be resolved by altering congressional pay practices—as apparently they have by provisions in the recently passed continuing resolution. They should not be resolved by overturning ethical reforms.

5. HOUSE SHOULD NOT BACKTRACK ON ETHICAL REFORM

Despite the mixed record of conduct by individual House Members in recent years, by almost any standard the House as an institution has made significant progress in its handling of congressional ethics. We have enacted tough new codes of conduct, set up a permanent ethics committee, punished far more Members for misconduct than ever before, and have given out tougher and more meaningful sanctions by overwhelming margins. It is not an overstatement to say that the past 10 to 15 years have marked the most significant period of institutional reform in the entire history of House ethics.

Given our impressive record of improvement, I would not like to see us take this first major step backtracking on ethical reform. In the past, the clear overall direction of our revisions in the House standards of official conduct has been one of toughening them up. But House Resolution 251, which almost triples the amount of allowable outside earned income, would represent the largest step backwards that the House has ever taken to overturn one of its previously enacted ethical reforms. All Members voting for it should be aware of the unprecedented nature of their actions.

6. HOUSE SHOULD NOT SHOW EXCESSIVE CONCERN FOR MEMBERS' PERSONAL INCOME

Most of our tough new ethical reforms enacted in recent years have been generally accepted by most Members. But House Rule 47 has cut into Members' personal income the most, and it is the one that has been fought the hardest: Members tried in 1978 to repeal it in the House even before it went into effect; Members have challenged it in the courts; many Members have openly stated that they would try to find various ways to skirt its provisions; on the Senate side, Members first voted to postpone the 15-percent limitation and then recently repealed the only remaining annual earned income limitation; and today House Members are trying to change the rules mid-session, after having been elected to Congress last fall with the clear understanding that there was to be a 15-percent limitation on outside earnings or honoraria. Such actions make many Americans think that the feeling on Capitol Hill is that ethical reform is fine, as long as it does not hurt Members' pocketbooks. Moreover, we have recently cut back various Federal services and benefits for the average citizen to unprecedented degrees. Nonetheless House Resolution 251 represents yet another attempt to provide additional financial benefits for Members. At a time of great sacrifice for the American people, we should not tell them that the only sacrifice Members of Congress are willing to make is one of sacrificing ethical reform for personal gain.

CONCLUSION

To sum up, we should start backtracking from our strong past tradition of institutional ethical reform only for extremely strong and convincing reasons. The desire of a small percentage of Members for more money is not one of them. The basic ethical reasons for the ethical standards embodied in House Rule 47 are as strong as ever. Mr. Speaker, I urge the defeat of House Resolution 251.●

PERSONAL EXPLANATION

The SPEAKER. Under a previous order of the House, the gentlewoman from New York (Ms. FERRARO) is recognized for 15 minutes.

● Ms. FERRARO. Mr. Speaker, due to an unavoidable conflict, I was unable to be present for the vote on final passage of H.R. 3603, the Food and Agriculture Act. Had I been present, I would have voted for passage.●

PERSONAL EXPLANATION

The SPEAKER. Under a previous order of the House, the gentleman from Michigan (Mr. CROCKETT) is recognized for 5 minutes.

● Mr. CROCKETT. Mr. Speaker, earlier this afternoon, I was unavoidably detained in my office during the vote on final passage of H.R. 4503, the Federal Water Pollution Control Act Amendments.

I strongly support passage of this legislation to extend Federal participation in helping communities meet the clean water requirements. Had I been present at this vote, I would have voted "Yea."●

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. THOMAS) to revise and extend their remarks and include extraneous material:)

Mr. BLILEY, for 60 minutes, October 28.

Mr. GILMAN, for 5 minutes, today.

Mr. WEBER of Ohio, for 15 minutes, today.

Mr. CORCORAN, for 10 minutes, today.

Mr. EDWARDS of Oklahoma, for 60 minutes, November 4, 1981.

Mrs. HECKLER, for 10 minutes, today.

(The following Members (at the request of Mr. PATTERSON) to revise and extend their remarks and include extraneous material:)

Mr. REUSS, for 5 minutes, today.

Mr. HAMILTON, for 15 minutes, today.

Mr. GONZALEZ, for 15 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Ms. FERRARO, for 5 minutes, today.

Mr. LAFALCE, for 15 minutes, today.

Mr. MOTTL, for 5 minutes, today.

Mr. CROCKETT, for 5 minutes, today.

Mr. BINGHAM, for 5 minutes, October 28, 1981.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mrs. BOUQUARD, to revise and extend her remarks prior to the vote on H.R. 4503 today.

Mr. WEISS, to revise and extend his remarks prior to the vote on H.R. 4503 today.

(The following Members (at the request of Mr. THOMAS) and to include extraneous matter:)

Mr. ERLENBORN.
Mr. CORCORAN.
Mr. GINGRICH.
Mr. DANNEMEYER.
Mr. GILMAN in two instances.
Mr. NELLIGAN in two instances.
Mr. KEMP in two instances.
Mr. MICHEL in two instances.
Mr. JOHNSTON.
Mr. ASHBROOK in three instances.
Mr. FIELDS in two instances.
Mr. SAWYER.
Mr. WOLF.
Mr. BENEDICT.
Mr. DERWINSKI.
Mr. MORRISON.
Mr. GOODLING.
Mr. JAMES K. COYNE.
Mr. HANSEN of Idaho in two instances.

(The following Members (at the request of Mr. PATTERSON) and to include extraneous matter:)

Mr. ASPIN in two instances.
Mr. PEASE.
Mr. IRELAND.
Mr. MOFFETT.
Mr. BOLLING.
Mr. SOLARZ.
Mr. PICKLE.
Mr. DWYER.
Mr. WON PAT.
Mr. FORD of Michigan.
Mr. LAFALCE.
Mr. BONKER.
Mrs. SCHROEDER.
Ms. FERRARO.
Mr. SHAMANSKY.
Mr. ROE.
Mr. OTTINGER.
Mr. HUBBARD.
Mr. KOGOVSEK.
Mr. MCDONALD in five instances.
Mr. FARY.
Mr. BAILEY of Pennsylvania.
Mr. SCHEUER in two instances.
Mr. MARKEY.
Mr. BEDELL.
Mr. HOWARD.
Mr. REUSS.
Mr. O'NEILL.
Mr. DYSON.

ADJOURNMENT

Mr. PATTERSON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 20 minutes p.m.) the House adjourned until tomorrow, Wednesday, October 28, 1981, at 10 a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2420. A letter from the Governor, Farm Credit Administration, transmitting the final amendments to title 12, chapter VI of the Code of Federal Regulations promulgated by the Farm Credit Administration, pursuant to section 5.18(c)(1) of the Farm Credit Act of 1971, as amended; to the Committee on Agriculture.

2421. A letter from the Acting Vice President for Government Affairs, National Railroad Passenger Corporation, transmitting the financial report of the Corporation for the month of July 1981, pursuant to section 308(a)(1) of the Rail Passenger Service Act of 1970, as amended; to the Committee on Energy and Commerce.

2422. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the Department of the Army's intention to offer to sell certain defense equipment and services to Greece (Transmittal No. 81-109), pursuant to section 36(b) of the Arms Export Control Act, together with certification that the sale is consistent with the principles contained in section 620C(b) of the Foreign Assistance Act, pursuant to section 620C(d) of the act; to the Committee on Foreign Affairs.

2423. A letter from the Assistant Secretary of the Treasury for Legislative Affairs, transmitting various reports prepared by the International Bank for Reconstruction and Development and the Asian Development Bank, pursuant to section 301(e)(3) of the Foreign Assistance Act of 1961, as amended; to the Committee on Foreign Affairs.

2424. A letter from the Deputy Assistant Secretary of Defense, transmitting notice of a proposed new records system, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

2425. A letter from the Associate Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting copies of orders entered in cases in which the authority contained in section 212(d)(3) of the Immigration and Nationality Act was exercised in behalf of certain aliens, pursuant to section 212(d)(6) of the act; to the Committee on the Judiciary.

2426. A letter from the Comptroller General of the United States, transmitting a report on Department of Energy's low-income weatherization program (EMD 82-2, October 26, 1981); jointly, to the Committees on Government Operations and Energy and Commerce.

2427. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of the proposed transfer of certain property to the Republic of Panama, pursuant to section 154(b) of Public Law 96-70; jointly, to the Committees on Merchant Marine and Fisheries and Foreign Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BRINKLEY: Committee on Armed Services. H.R. 3502. A bill to amend title 38, United States Code, to provide for greater coordination and sharing of the medical facilities of the Veterans' Administration and the Department of Defense; with an amendment (Rept. No. 97-72, Pt. II). Referred to the Committee of the Whole House on the State of the Union.

Mr. PRICE: Committee on Armed Services. Report on revised allocation of budget totals to subcommittees under the first concurrent budget resolution for fiscal year 1982. (Rept. No. 97-294). Referred to the Committee of the Whole House on the State of the Union.

Mr. JONES of North Carolina: Committee on Merchant Marine and Fisheries. H.R. 3942. A bill to amend the Commercial Fisheries Research and Development Act of 1964; with amendments (Rept. No. 97-295). Referred to the Committee of the Whole House on the State of the Union.

Mr. BRINKLEY: Committee on Armed Services. H.R. 4591. A bill to amend the mineral leasing laws of the United States to provide for uniform treatment of certain receipts under such laws, and for other purposes (Rept. No. 97-296). Referred to the Committee of the Whole House on the State of the Union.

Mr. WHITE: Committee on Armed Services. H.R. 4624. A bill to amend title 10, United States Code, to provide employment protection for employees of nonappropriated fund instrumentalities of the Department of Defense who report violations of law or mismanagement (Rept. No. 97-297). Referred to the Committee of the Whole House on the State of the Union.

Mr. WHITE: Committee on Armed Services. H.R. 4625. A bill to authorize the Secretary of the Army to return to the Federal Republic of Germany certain works of art seized by the U.S. Army at the end of World War II (Rept. No. 97-298). Referred to the Committee of the Whole House on the State of the Union.

Mr. BRINKLEY: Committee on Armed Services. H.R. 4543. A bill to amend title 10, United States Code, to provide for the sharing with State and local governments of amounts received by the United States from the sale of timber produced on military installations (Rept. No. 97-299). Referred to the Committee of the Whole House on the State of the Union.

Mr. MOAKLEY: Committee on Rules. House Resolution 257. A resolution providing for the consideration of S. 1193. A bill to authorize appropriations for fiscal years 1982 and 1983 for the Department of State, the International Communication Agency, and the Board for International Broadcasting, and for other purposes (Rept. No. 97-301). Referred to the House Calendar.

Mr. BOLLING: Committee on Rules. House Resolution 258. A resolution providing for the consideration of House Resolution 251, a resolution amending the Rules of the House of Representatives to increase the amount of outside earned income which a Member may have in 1981, 1982, and 1983, and to increase the amount of the maximum honorarium which a Member may accept (Rept. No. 97-302). Referred to the House Calendar.

Mr. BOLLING: Committee on Rules. House Resolution 251. A resolution amending the Rules of the House of Representatives to increase the amount of outside earned income which a Member may have in 1981, 1982, and 1983, and to increase the amount of the maximum honorarium which a Member may accept (Rept. No. 97-303). Referred to the House Calendar.

REPORTED BILLS SEQUENTIALLY REFERRED

Under clause 5 of rule X, bills and reports were delivered to the Clerk for printing, and bills referred as follows:

Mr. WHITE: Committee on Armed Services. H.R. 4448. A bill to amend title 10, United States Code, to increase the number of Assistant Secretaries in the Department of Defense, and for other purposes; referred jointly to the Committee on Post Office and Civil Service and to the Permanent Select Committee on Intelligence for a period ending not later than November 30, 1981, for consideration of such portions of the bill as fall within the jurisdiction of those committees under clause 1(o) of rule XI and clause 2 of rule XLVIII, respectively (Rept. No. 97-300, Pt. I). And ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASPIN:

H.R. 4839. A bill to amend title XVI of the Social Security Act to allow the award of attorneys' fees in appeals involving claims for supplementary security income benefits on the same basis as is presently provided under title II of such act in the case of appeals involving claims for old-age, survivors, and disability insurance; to the Committee on Ways and Means.

By Mr. CHAPPIE:

H.R. 4840. A bill to grant to the State of California concurrent jurisdiction over fishing in that part of the Klamath River which is within the "Hoopa extension" of the Hoopa Valley Reservation; to the Committee on Interior and Insular Affairs.

By Mr. CORCORAN:

H.R. 4841. A bill to amend the Powerplant and Industrial Fuel Use Act of 1978 to further the objectives of national energy policy of conserving oil and natural resources through removing excessive burdens on production of coal; to the Committee on Energy and Commerce.

By Mr. JAMES K. COYNE:

H.R. 4842. A bill to authorize the U.S. Government to issue constant dollar debt obligations and to authorize depository institutions to issue constant dollar savings certificates; jointly to the Committees on Banking, Finance and Urban Affairs and Ways and Means.

By Mr. FRENZEL (for himself and Mr. VANDER JAGT):

H.R. 4843. A bill to amend the Internal Revenue Code of 1954 to clarify certain requirements which apply to mortgage subsidy bonds, and for other purposes; to the Committee on Ways and Means.

By Mr. FUQUA (for himself, Mr. WINN, Mr. GIBBONS, Mr. CONABLE, Mr. FLIPPO, Mr. HOLLENBECK, and Mr. VANDER JAGT):

H.R. 4844. A bill to amend the Tariff Schedules of the United States to permit the duty-free entry of materials certified by the National Aeronautics and Space Administration as intended to be launched into space or to be spare parts or necessary and uniquely associated support equipment for use in connection with such launches, and for other purposes; to the Committee on Ways and Means.

By Mr. HOWARD (for himself, Mr. CLAUSEN, Mr. FARY, Mr. STANGELAND, Mr. HAMMERSCHMIDT, Mr. BEVILL, Mr. BRINKLEY, Mr. COLLINS of Texas, Mr. GAYDOS, Mr. MILLER of Ohio, Mr. MONTGOMERY, Mr. MYERS, Mr. NICHOLS, Mr. RAILSBACK, Mr. WINN, and Mr. WYLIE):

H.R. 4845. A bill to designate the building known as the Lincoln Federal Building and Courthouse in Lincoln, Nebr., as the "Robert V. Denney Federal Building and Courthouse"; to the Committee on Public Works and Transportation.

By Mr. HOWARD (for himself, Mr. ROE, Mr. CLAUSEN, and Mr. HAMMERSCHMIDT) (by request):

H.R. 4846. A bill to provide for the recovery of capital and operation and maintenance costs assignable to commercial water transportation for certain U.S. Army Corps of Engineers inland waterway projects, and to authorize construction in specified circumstances; jointly, to the Committees on Public Works and Transportation and Ways and Means.

By Mr. HOWARD (for himself, Mr. MINETA, Mr. CLAUSEN, and Mr. SNYDER) (by request):

H.R. 4847. A bill to amend title 18, title 28, and title 49, United States Code, in order to implement the "Convention for the Suppression of Unlawful Acts Against the Safety of Civil Aviation"; jointly to the Committees on the Judiciary and Public Works and Transportation.

By Mr. HOYER (for himself, Mr. BARNES, Mr. DYSON, Mrs. HOLT, Ms. MIKULSKI, Mr. LONG of Maryland, Mrs. BYRON, Mr. MITCHELL of Maryland, Mr. NATCHER, Mr. REUSS, Mr. BRODHEAD, Mr. ANNUNZIO, Mr. AKAKA, Mr. DOWNEY, Mr. LOWERY of California, Mr. HEFNER, Mr. ADDABBO, Mr. CORRADA, Mr. WEISS, Mr. ROSE, Mr. PORTER, Mr. SUNIA, Mr. BIAGGI, Mr. RATCHFORD, Mr. D'AMOURS, Mr. ROUSSELOT, Mr. DERWINSKI, Mr. ST GERMAIN, Mr. DELLUMS, Mr. WHITEHURST, Mr. BINGHAM, and Mr. RODINO):

H.R. 4848. A bill entitled "The Gladys Noon Spellman Parkway"; to the Committee on Interior and Insular Affairs.

By Mr. LUJAN:

H.R. 4849. A bill to authorize certain additions to the Santa Ana Indian Reservation in new Mexico; to the Committee on Interior and Insular Affairs.

H.R. 4850. A bill to establish a Corporation for Prison Industries; to the Committee on the Judiciary.

By Mr. MOTTL:

H.R. 4851. A bill to amend title 38, United States Code, to exempt the Department of Medicine and Surgery in the Veterans' Administration from any Office of Management and Budget policy or directive prescribing procedures for contracting out commercial or industrial functions; to the Committee on Veterans' Affairs.

By Mr. MURPHY (for himself, Mr. SMITH of Pennsylvania, Mr. HANCE, Mr. ERDAHL, Mr. LOEFFLER, Mr. WON PAT, Mr. ROE, Mr. NEAL, Mr. EDGAR, Mr. WINN, Mr. DYMALLY, Mr. MAZZOLI, Mr. RAHALL, Mr. CONTE, Mr. CORCORAN, Mr. RICHMOND, Mr. LAGOMARSINO, Mr. WHITEHURST, Mr. HARKIN, Mr. FAUNTROY, Ms. MIKULSKI, Mr. GINN, Mr. PICKLE, Mr. OTTINGER, Mr. CORRADA, Mr. FRENZEL, Mr. MOTTL, Mr. SIMON, Mr. WILSON, and Mr. BAFALIS):

H.R. 4852. A bill to authorize the annual presentation of an Anwar El Sadat Peace Medal, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. ROTH:

H.R. 4853. A bill to amend the Second Liberty Bond Act to increase the investment yield on U.S. savings bonds to a level competitive with comparable investments; to the Committee on Ways and Means.

By Mr. ZABLOCKI (for himself, Mr. FASCELL, Mr. ROSENTHAL, Mr. HAMILTON, Mr. BINGHAM, Mr. YATRON, Mr. SOLARZ, Mr. IRELAND, Mr. MICA, Mr. BARNES, Mr. WOLPE, Mr. SHAMANSKY, Mr. GEJDENSON, Mr. DYMALLY, Mr. ECKART, Mr. LANTOS, Mr. BOWEN, Mr. BROOMFIELD, Mr. DERWINSKI, Mr. FINDLEY, Mr. WINN, Mr. GILMAN, Mr. LAGOMARSINO, Mr. PRITCHARD, Mrs. FENWICK, Mr. DORNAN of California, Mr. LEACH of Iowa, Mr. ERDAHL, Mrs. SNOWE, Mr. LEBOUTILLIER, Mr. HYDE, and Mr. GOODLING):

H.J. Res. 349. Joint resolution to authorize the participation of the United States in a multinational force and observers to implement the treaty of peace between Egypt and Israel; to the Committee on Foreign Affairs.

By Mr. HOLLENBECK (for himself, Mr. HORTON, Mr. BROWN of Ohio, Mr. PURSELL, Mr. JEFFORDS, Mrs. SNOWE, and Mrs. SCHNEIDER):

H. Con. Res. 207. Concurrent resolution expressing the sense of the Congress concerning funding for the general revenue sharing program; to the Committee on Government Operations.

By Mr. FRENZEL (for himself, Mr. BADHAM, Mr. THOMAS, and Mr. JAMES K. COYNE):

H. Res. 254. Resolution reducing the clerk hire allowance of certain Members of the House who make associate committee staff appointments; to the Committee on House Administration.

By Mr. FRENZEL (for himself, Mr. BADHAM, Mr. THOMAS, Mr. JAMES K. COYNE, and Mrs. MARTIN of Illinois):

H. Res. 255. Resolution amending rule XI of the Rules of the House of Representatives to reduce the number of subcommittees of standing committees of the House for which certain staff positions are available; to the Committee on Rules.

H. Res. 256. Resolution amending the Rules of the House of Representatives to provide for improved accountability in funding of staff for committees, and for other purposes; jointly to the Committees on Rules and House Administration.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

216. By the SPEAKER: Memorial of the General Assembly of the Commonwealth of Pennsylvania, relative to Poland; to the Committee on Foreign Affairs.

217. Also, memorial of the Senate of the Commonwealth of Massachusetts, relative to delays in social security cost-of-living adjustments; to the Committee on Ways and Means.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 459: Mr. FORSYTHE, Mr. GINGRICH, Mrs. MARTIN of Illinois, Mr. SOLOMON, Mr. PORTER, Mrs. BOUQUARD, and Mr. PATTERSON.

H.R. 845: Mr. HILER.

H.R. 1692: Mr. GEPHARDT.

H.R. 1922: Mr. DORNAN of California.

H.R. 2052: Mr. SHAW.

H.R. 2322: Mr. CONYERS.

H.R. 3540: Mr. DECKARD.

H.R. 3614: Mr. RATCHFORD, Mr. BRINKLEY, Mr. GEJDENSON, Mr. LEVITAS, Mr. WIRTH, Mr. KILDEE, Mr. STATON of West Virginia, Mr. ANDREWS, Mr. CONYERS, Mr. BUTLER, Mr. BROOMFIELD, Mr. SABO, Mr. FORD of Tennessee, Mr. HUGHES, Mr. PURSELL, Mr. SMITH of New Jersey, Mr. SMITH of Oregon, Mr. MATSUI, Mr. DAVIS, Mr. TAYLOR, Mr. FLIPPO, and Mr. BARNES.

H.R. 3940: Mr. SENSENBRENNER, Mr. PEPPER, Mr. NAPIER, Mr. WALKER, Mr. QUILLEN, Mr. SABO, Mr. VENTO, Mr. WORTLEY, Mr. NELLIGAN, Mr. LAFALCE, Mr. MITCHELL of Maryland, Mr. FORSYTHE, Mr. KINDNESS, Mr. COELHO, Mr. MYERS, Mr. EMERSON, Mr. WYDEN, Mr. MCDADE, Mr. RICHMOND, Mr. CONYERS, Mr. ZEFERETTI, Mr. EVANS of Indiana, and Mr. MATTOX.

H.R. 4554: Mr. FORSYTHE.

H.R. 4666: Mr. CORCORAN, Mr. CORRADA, Mr. GINGRICH, Mr. MURPHY, Mr. PORTER, and Mr. SMITH of Pennsylvania.

H.R. 4673: Mr. PASHAYAN, Mr. WATKINS, Mr. STENHOLM, Mrs. BOUQUARD, Mr. CHAPPELL, and Mr. SKELTON.

H.R. 4686: Mrs. CHISHOLM, Mr. EMERY, Mr. FORSYTHE, Mr. KEMP, Mr. LAFALCE, Mr. LAGOMARSINO, Mr. MITCHELL of New York, Mr. MURPHY, Mr. RAILSBACK, Mr. RATCHFORD, Mr. SMITH of Pennsylvania, Mr. STANGELAND, Ms. MIKULSKI, Mr. FISH, and Mr. FAZIO.

H.R. 4797: Mr. MURPHY, Mr. PEPPER, Mr. LEBOUTILLIER, Mr. WEAVER, Mr. SMITH of Pennsylvania, Mr. DUNCAN, and Ms. FIEDLER.

H.J. Res. 231: Mr. BAFALIS, Mrs. BOUQUARD, Mr. BRINKLEY, Mr. COATS, Mr. CORRADA, Mr. CROCKETT, Mr. DE LA GARZA, Mr. DENARDIS, Mr. DERWINSKI, Mr. DICKINSON, Mr. DOUGHERTY, Mr. EMERSON, Mr. ERDAHL, Mr. FAUNTROY, Mr. FAZIO, Mrs. FENWICK, Mr. FOLEY, Mr. FORD of Tennessee, Mr. FORSYTHE, Mr. FRENZEL, Mr. FROST, Mr. FUQUA, Mr. GINGRICH, Mr. GREEN, Mr. HEFNER, Mrs. HOLT, Mr. HUGHES, Mr. LAFALCE, Mr. LEE, Mr. LEHMAN, Mr. MADIGAN, Mr. MAZZOLI, Mr. MCCLORY, Mr. MCEWEN, Ms. MIKULSKI, Mr. MINETA, Mr. NEAL, Mr. OBERSTAR, Mr. PANETTA, Mr. PORTER, Mr. REGULA, Mr. ROE, Mr. SOLARZ, Mr. SUNIA, Mr. WEBER of Ohio, Mr. WHITEHURST, Mr. WINN, Mr. WON PAT, Mr. WORTLEY, Mr. GEJDENSON, and Mr. ROEMER.

H.J. Res. 305: Mr. DONNELLY and Mr. MITCHELL of New York.

H. Con. Res. 139: Ms. FERRARO.

H. Con. Res. 178: Mr. REGULA, Mr. BURGENER, Mr. LIVINGSTON, Mr. HUTTO, Mr. ERLENBORN, Mr. DYMALLY, Mr. GINGRICH, Mr. MARTIN of New York, and Mr. OBERSTAR.

H. Con. Res. 199: Mr. MITCHELL of Maryland.

H. Res. 227: Mr. ECKART, Mr. LUNDINE, Mr. RINALDO, Mr. CONYERS, Mr. FISH, Mr. DYSON, Mr. SAVAGE, Mr. BEILENSON, Mr. MCGRATH, Mr. PEPPER, Mr. AUCOIN, Mr. FRANK, and Mr. BENJAMIN.

H. Res. 228: Mr. WYDEN, Mr. KOGOVSEK, Mr. DWYER, Mr. CHAPPELL, Mr. WILSON, and Mr. MAZZOLI.

SENATE—*Tuesday, October 27, 1981*

(Legislative day of Wednesday, October 14, 1981)

The Senate met at 9 a.m., on the expiration of the recess, and was called to order by the President pro tempore (Mr. THURMOND).

PRAYER

The Chaplain, the Reverend Richard C. Halverson, LL.D., D.D., offered the following prayer:

Let us pray.

Sovereign Lord of history, God of all nations and peoples, as good and faithful men and women search and struggle for the path of righteousness, justice, and peace, grant to Thy servants light for the way and strength for the day. Defend them against any deterrent to responsible statesmanship, any compromise that sacrifices principle or violates conscience, any action that would endanger the Republic.

Grant to each grace and wisdom to measure personal conviction in the light of truth and courage, to act consistent with enlightened conscience, however costly to personal ambition.

In disagreement, grant attention to and respect for opposing views, and willingness to be flexible when the good of the people and the rightness of the issues become clear. In the name of Him who is truth incarnate and the Light of the world. Amen.

RECOGNITION OF THE ACTING MAJORITY LEADER

The PRESIDENT pro tempore. The acting majority leader is recognized.

THE JOURNAL

Mr. McCLURE. Mr. President, I ask unanimous consent that the Journal of the proceedings be approved to date.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF PROCEDURE

Mr. McCLURE. Mr. President, this morning, after the expiration of the time allotted to the two leaders under the standing order, there are special orders for the recognition of the distinguished Senator from Oklahoma (Mr. BOREN), the distinguished Senator from West Virginia (Mr. ROBERT C. BYRD), and the distinguished Senator from Kentucky (Mr. HUDDLESTON), for 15 minutes each, followed by routine morning business, as previously ordered, not to extend beyond 10 a.m., with statements therein limited to 3 minutes each.

As has been previously ordered, at 10 a.m. we will return to the consideration of the Interior appropriations bill, with certain amendments thereto which already have been included in the previous orders entered into, with the vote on passage of the bill to occur not earlier than 2 p.m. today.

RECOGNITION OF THE MINORITY LEADER

The PRESIDENT pro tempore. The minority leader is recognized.

Mr. ROBERT C. BYRD. Mr. President, I do not have any need for time at the moment.

I ask unanimous consent that I may reserve my time for a little while.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF PROCEDURE

Mr. McCLURE. Mr. President, I ask unanimous consent that I may reserve my time at this moment, and I suggest the absence of a quorum.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BOREN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. HEINZ). Without objection, it is so ordered.

RECOGNITION OF SENATOR BOREN

The PRESIDING OFFICER. The Senator from Oklahoma is recognized.

Mr. BOREN. Mr. President, I ask unanimous consent that in addition to the order set forth for me, I be authorized to use as much time of the order of the Senator from West Virginia (Mr. ROBERT C. BYRD) as I might require.

The PRESIDING OFFICER. Without objection, it is so ordered.

AWACS

Mr. BOREN. Mr. President, several years ago I read a biography of John Tyler, a U.S. Senator from the State of Virginia for nearly 10 years, and, of course, later Vice President and President of the United States. The author described a situation in which Senator Tyler was called upon to cast a very difficult vote.

He agonized about his vote. Political opportunity seemed to lead in one direction. His conscience and better judgment, drew him in the other.

Finally when the roll was called, the biographer said that Tyler voted his best judgment. After casting his vote, he slumped into his chair thinking that he had perhaps ended his political career but then slowly, as the writer described the scene:

He drew himself up out of his chair and walked out of the Senate Chamber in the proud company of his own self respect.

None of us is blessed with perfect judgment but each of us has an opportunity to act upon what we believe to be best for our Nation and for our people.

I cannot say, with certainty that I have come to the right conclusion about the proposed sale of AWACS aircraft to Saudi Arabia. I can say with certainty, however, that my decision is based upon my own best judgment of what would promote the national security interests of the United States.

Many of our colleagues, Mr. President, have set forth their reasons for deciding for or against this sale. I have considered their arguments with care. I have received countless briefings from military and intelligence experts, from diplomats and historians.

I visited the region with a Senate delegation for firsthand observation. Our delegation listened carefully to the leaders of Saudi Arabia, Israel, and Egypt about the sale. Two of the giants with whom we spoke, Anwar Sadat and Moshe Dayan, have been tragically removed from the world stage since our visits last spring.

Few decisions which I have faced as a public official have been more difficult. Few calls have been closer. I respect the deliberations of each Member of the Senate. Knowing how difficult this decision has been for me, I could not criticize any Senator for reaching the opposite conclusion from my own.

The major goal in the Middle East for the United States is obviously to achieve peace and stability. Instability threatens a disruption of the flow of petroleum needed by the free world. It is a condition which is ripe for exploitation by the Soviets and others to serve their own purposes. It makes less secure the existence of the democratic State of Israel.

Many of us could argue about the original wisdom of proposing this sale. I, for one, would have preferred a continuation of the present policy of providing AWACS protection to the region, with missions controlled and manned by American crews or at the very least with Americans participating in joint crewing. I would have preferred clearer understandings with the Saudis on issues such as the development of a series of facilities in the Middle East which could be used by the United States in emergencies when a grave threat to the area exists.

Unfortunately, these and other options are not before us. The question is not, would each of us have negotiated different terms? The question is, Shall we accept or reject the proposal before us?

The question I posed to myself was

this: Will a rejection of this sale contribute to the stability of this region and to the security of our friends in the area?

After careful consideration, I must answer that it would not. In my opinion, the adverse consequences for the United States of the rejection of this sale are far too grave for a prudent person to risk them.

To reject the sale will not contribute to the stability of the region or the security of our friends for several reasons.

First, rejection would raise more questions about whether America keeps her word. For a nation to be effective in international relations it must have credibility. It must have the reputation that it means what it says. In the past several years the reputation of the United States as a reliable friend has been eroded. In the Middle East, our off again on again support of the Shah's government in Iran is a prime example.

It is clear that two American administrations, of both political parties, encouraged the Saudis to publicly request the sale of AWACS aircraft to their government. For us to lead another government to public embarrassment by not following through with our offers would be yet another signal to watching nations around the world that we are not reliable. A further reduction in our international credibility is clearly not in our best interests.

Second, a rejection of the sale will make us less able to bring about a satisfactory conclusion of the Camp David peace process. For lasting peace to be achieved in the region, the agreement and support of the moderate Arab States like Egypt, Jordan, Saudi Arabia, the Sudan, Oman, and others must be obtained. The United States must develop a broader range of friendships to achieve this goal. Egypt, acting alone in the Arab world, cannot obtain the broad agreement which is needed. The United States will need the help of moderate states like Saudi Arabia if the Palestinian question is ever to be solved on a basis which recognizes the proper security necessary for the continued existence of the State of Israel.

To those who say that an arms sale to Saudi Arabia is not a substitute for our first goal of finishing the Camp David process, I can only answer that I agree. I would ask them, however, how rejection of this sale and the public embarrassment of the government of Saudi Arabia will aid our task of bringing the moderate Arab States into the peace process?

Third, the rejection of this sale will not slow down the arms race in the Middle East. It will simply give the Soviet bloc more of an edge in that race. Our failure to provide equipment to Saudi Arabia will not cause the Soviets to stop pouring arms into the region any more than unilateral disarmament by the United States would immediately usher in an era of world peace.

Peace and stability in the Middle East are not served by allowing the balance of power to be severely upset. From 1977 to 1980 the Soviet delivery of lethal weapons to the Third World was approximately twice the level of the United States and Western Europe combined in ground forces weapons, approximately one-third greater in air weapons, and greater in most categories of naval weapons.

Fourth, the rejection of the sale would increase the risks to our American servicemen if they ever were called into action in the Persian Gulf area and would make it harder for the United States and Saudi Arabia to coordinate their defense of the vital oilfields.

Senator SAM NUNN ably pointed out in his floor speech on October 17 that we would need the best possible air surveillance to warn our forces in order to have time to act to shoot down aircraft approaching the oilfields.

In addition, we will need a coordinated effort to protect American lives if we ever do have to move into the area. As Senator NUNN pointed out, the AWACS system would make instant communication of American and Saudi forces possible in order to assure total coordination. If the Saudi's were using the British Nimrod, or some other surveillance system, such coordination and communication would not be possible.

Senator NUNN concluded by saying:

Without AWACS on the Arabian peninsula, the Rapid Deployment Force could be deprived of critical warning of an impending hostile military action and could be deprived, once hostilities began, of the capacity to win the air superiority battle essential to the fate of U.S. forces ashore.

He closed by saying:

If this sale is vetoed by the Congress, these questions should and will be asked by the American military personnel who are prepared to risk their lives to protect our vital interests. I leave it to the opponents of the sale to answer them.

Fifth, the rejection of the sale will not contribute to Israel's security. I consider myself to be a strong and sincere supporter of the State of Israel. The Government of Israel is the only complete democracy in that part of the world. Its ties of friendship and kinship with the United States are beyond question. Our commitment to the security of Israel should never be doubted.

It is clear that Israel will be best protected if the Saudis buy AWACS from us rather than the Nimrod or some other system. The Nimrod, for example, has a better ability to track Israeli ground movements. Other systems would come to the Saudis presumably without controls on their use or on the sharing of information gained.

Under the terms of this sale, it is my understanding that the President will make a written commitment not to transfer the equipment until there is an enforceable agreement that: First, offensive coordinating equipment will not be on the plane, second, the equipment will be manned and secured only by nationals of Saudi Arabia or the United States, third, information gained will not be shared with other nations without the consent of the United States, fourth, the United States will have a continuous flow of information from the flights and will therefore know where the flights have taken place, and fifth, the flights will not be outside the borders of Saudi Arabia without American consent. It is also my understanding that it is planned that the flights will stay approximately 150 miles away from the Isreli borders and that training will be conducted following this standard U.S. Air Force doctrine.

The equipment will be maintained by American technicians and as a practical matter the planes could not be fully operational without American technical assistance into the next decade.

If a neighboring nation were going to have air surveillance capability, surely it would be in the best interest of any country to have a significant measure of control over the use of such system in the hands of its closest international friend instead of being completely uncontrolled.

To sum up, for the five major reasons, which I have cited, I must conclude that rejection of the treaty would hurt and not help the United States and our friends in the Middle East.

Two other questions remain to be addressed. The first relates to the security of our technology. I generally subscribe to the theory that technology developed by American skill and American funds should remain in American hands. One of the primary reasons for my own delay in expressing support for this sale, was my concern about the security of our technology.

After briefings and physical observation of the equipment at Tinker Air Force Base, I have been assured that those elements which would be most damaging if they fell into enemy hands including the joint tactical information distribution system, the secure voice system, and the friend-or-foe identification system will be removed from those planes which are sold, or will be available only in a modified or commercially obtainable form.

In addition, the software would remain American property and the methodology for linking together information and communications systems would remain in American hands alone. All of the technology will also be 4 years older when the actual sale takes place.

Even so, there are still elements of the radar technology, even though developed in the late 1960's, which certainly should be protected to the maximum possible degree. Security clearance procedures and security plans have been carefully developed.

In addition, I was reassured by the President's agreement to include in his letter of certification to the Congress that before the transfer actually takes place, he will secure an agreement that "The United States has the right of continual on-site inspection and surveillance by U.S. personnel of security arrangements for all operations during the useful life of the AWACS. It is further pro-

vided that security arrangements will be supplemented by additional U.S. personnel if it is deemed necessary by the two parties."

This language, which I suggested to the President, would in my opinion give the United States the right to make periodic inspections by Americans of security arrangements onboard the aircraft in flight or of the perimeter of the installations on the ground.

It would also make it possible to increase the frequency of placing Americans with the equipment to monitor security at times when a particular threat to security is perceived. While it does not constitute joint crewing or joint command and is not continuous, it is a step in the right direction.

No system is perfect but these additional steps should greatly decrease the chances of our equipment falling into the wrong hands. The question of the security of the F–15 enhancement package and particularly that of the AIM 9–L air-to-air missile has also been raised. Opponents of the sale speak as if the sale of this equipment to Saudi Arabia is to be the first sale to any foreign government.

In fact, we must remember transfers have already been made or are in process with eight other nations and discussions are in progress with others.

Finally, even if all of the arguments which I have cited above in opposition to rejecting the sale were cast into the doubtful column, there is one important fact which would still lead me to oppose rejection.

We must not forget as we debate the issue that the actual transfer of most of the technology is not to take place for 4 years. We are not being asked to place our immediate trust in the intentions of Saudi Arabia to help in bringing a peaceful resolution to the Palestinian question.

We will have 4 years in which to observe Saudi actions in regard to the peace process, in regard to the right of Israel to exist, in regard to closer friendships with Egypt and other states friendly to the United States. We will know much more in 4 years than we now know. If we find 4 years from now that this transfer would not contribute to peaceful resolutions of the disputes in the region, the President has assured us that the transfer will not take place.

If we find that Saudi Arabia does not turn out to be the friend we believe her to be we will have adequate time to reverse our decision. Why decide now to not give that friendship a chance for fuller development? Why not at least try to build bridges to other Arab States in the hope of forwarding the peace process and reducing pressures on our friends in Egypt?

Perhaps our experiment with Saudi Arabia for mutual defense and concerted action in seeking peace in the Middle East will fail. One thing is certain, it will fail if we never try. There is much to be gained if we succeed, including an immeasurable contribution to the cause of world peace. The risks are small when compared with the potential gain and have been minimized by not making the actual transfer of the AWACS aircraft for 4 years.

Mr. President, I cannot in conscience accept even a part of the responsibility for the consequences of a rejection of this sale. The potential damage to our country is too grave. The risk is too great. I will vote against the resolution of disapproval.

I yield the floor.

Mr. BAKER. Mr. President, will the Senator yield to me?

Mr. BOREN. I would be happy to yield.

Mr. BAKER. Mr. President, in my time in the Senate I have heard many speeches. I have heard some of great import and some of extraordinary persuasion, some that were dramatic in their presentation. But I have never heard a speech more carefully reasoned or prudently prepared or more conscientious in its dedication to the Senate and to the country than that just presented by the distinguished Senator from Oklahoma.

It is a hallmark of this body that sometimes it takes good men and converts them into great men. I have seen that process work. I believe it works most often in times of great stress and controversy.

The Senator from Oklahoma is in that tradition, Mr. President. I commend him for his courage, for his careful, methodical approach to the analysis of the problem, and I need not say I am pleased beyond description with his final judgment. I thank him.

Mr. THURMOND. Mr. President, will the Senator yield?

The PRESIDING OFFICER. The Senator from South Carolina.

Mr. THURMOND. Mr. President, I just want to take this opportunity to commend the able Senator from Oklahoma for the position he has taken on the sale of the AWACS to Saudi Arabia. I have had the pleasure of traveling with the Senator from Oklahoma on some trips, and I have made the statement several times to friends that he is one of the ablest and finest men who has come to the Senate during my 27 years as a Member of this body.

He has developed a reputation not only for character and integrity but also for wisdom and vision. The stand he has taken here today has substantiated my high opinion of him, and I just want him to know that we in this body have the greatest respect for him and we wish him well in all of his undertakings because we are proud of him as a Senator from Oklahoma and as a Member of this body.

Mr. BOREN. Mr. President, I want to thank both of my colleagues, the distinguished majority leader and the Senator from South Carolina, for their remarks. I certainly am humbled by them.

I can only say that, as they know, this has been a very very difficult decision for me. I have given it a great deal of thought. Having come to this conclusion, it is my hope that each and every Member of the Senate up until the time of the rollcall will reexamine his position on this issue, as I have been carefully reminded in the last few days.

I am convinced if we reject this sale we will turn our backs on one of the great opportunities—perhaps one of the few opportunities, if not the only opportunity to begin the series of right steps in the Middle East to forward the peace process.

As I have said, we have 4 years in which to observe the actions and intentions of the Government of Saudi Arabia. This is an opportunity for developing a friendship, an opportunity which I hope will be seized.

If during those 4 years our efforts to work together have failed, there is still time for the United States to reverse its position. So I can only say I urge my colleagues to give us a chance to work toward the resolution of the very difficult questions in the Middle East, a chance to develop bridges of friendship and understanding with the moderate countries of the Arab world.

It is certainly in the best interests of both Egypt and Israel for us to do so, and I am convinced it is in the best interests of the United States.

There has been a lot of talk about immense pressures. I have been asked by members of the press if immense pressures were exerted on me during the course of taking this position. I will say in all candor that I have received a great deal of information. No one on either side of the issue has tried to pressure me in any improper manner, including the President of the United States, who made it very clear to me during our visits that this was a national security issue, an issue that should be considered solely on its own merits, without regard to other political questions.

I certainly agree with that assessment.

I have made this decision based on one and only one thing—what I perceived was the best national security interests of the United States. There was no other basis for the decision.

The greatest pressure and struggle was with my own judgment and with my own conscience. But, having made that struggle, I am absolutely sure in my own mind that I will be voting in accord with my own best judgment about what is right for the United States and about what is the right decision for the Senate of the United States.

I yield the floor.

Mr. BAKER. Mr. President, what is the business before the Senate?

The PRESIDING OFFICER. The next order is for the Senator from Kentucky (Mr. HUDDLESTON) to be recognized.

ROUTINE MORNING BUSINESS

ORDER OF PROCEDURE

Mr. BAKER. Mr. President, due to personal circumstances of which I have been made aware, I am going to ask the Senate to change the order for this morning.

I ask unanimous consent that the remaining time allocated to the distinguished Senator from West Virginia (Mr. ROBERT C. BYRD) on special order be vitiated. I ask, as well, that the time allocated to the distinguished Senator

from Kentucky (Mr. HUDDLESTON) on special order be deferred until 10 o'clock.

I ask unanimous consent that the time between now and 10 o'clock be dedicated to the transaction of routine morning business under the terms and conditions heretofore prescribed for today, and that the Senate resume consideration of H.R. 4035, the Interior appropriations bill, at the conclusion of the Huddleston presentation.

The PRESIDING OFFICER. Is there objection? The Chair hears none. It is so ordered.

Mr. BAKER. I thank the Chair.

THE GENOCIDE CONVENTION AND THE TREATYMAKING POWER

Mr. PROXMIRE. Mr. President, yesterday I discussed the allegation of the Liberty Lobby's "White Paper on the Genocide Convention" that this treaty could supersede the Constitution. As I demonstrated, the historical record is conclusive that such allegations are nonsense: First, treaties can only be valid when consistent with the Constitution; second, treaties can never supersede the Constitution; and, third, in cases where there is an inconsistency or contradiction between a treaty and a law adopted by Congress at a later time, the act of Congress prevails and the treaty which it contradicts is null and void.

Today, I would like to turn to another, perhaps more theoretical, aspect of treatymaking: That is, the contention that treaties are limited to matters which cannot be dealt with by the States. The argument has been cast many ways but it often runs like this: Genocide, in its most basic and brutal form, in murder on a large scale and the States are competent to adopt laws dealing with murder; therefore, crimes such as genocide go beyond the treaty power under the Constitution. Proponents of this view are fond of citing Thomas Jefferson's famous four conditions for treatymaking from his "Manual of Parliamentary Procedure" as authority for this interpretation.

Mr. President, far from being accepted constitutional practice, a limited interpretation of treaty powers is clearly opposite to the historical record. I intend to show that: First, this limited view of treaty powers was never fully accepted by our Founding Fathers and Jefferson recognized that; second, the Supreme Court has decisively rejected a limited interpretation of proper subjects for treaties; and, third, contemporary practice has supported the Court's interpretation.

THE MISSING WORDS OF JEFFERSON

Mr. President, it is quite clear that Thomas Jefferson favored a very limited interpretation of treaty powers but in citing selectively from his "Manual of Parliamentary Procedure," proponents of his view overlook two key points: Jefferson recognized that his interpretation was not in a clear majority among the Founding Fathers and, second, that a comparison between the Articles of Confederation and the Constitution make it clear that the omission of specific restrictions in the Constitution on treaty powers is of particular significance.

The initial lines of Jefferson's listing of conditions for treaty-making are important:

> By the Constitution of the United States, this department of legislation is confined to two branches only of the ordinary legislature—the President originating and the Senate having a negative. To what subjects this power extends has not been defined in detail by the Constitution nor are we entirely agreed among ourselves. . . .

That final line, seldom quoted, is important on two counts.

First, Jefferson explicitly recognized that his view was not universally held by the other Founding Fathers.

Second, the fact that the Constitution did not spell out in detail any limitations on treaty power is important when contrasted with the restraints imposed upon treatymaking powers by the Articles of Confederation, the predecessor to our Constitution. That document prohibited treaties which would restrain State legislatures from:

> Imposing such posts and duties on foreignors as their own people are subject to, or from prohibiting the exportation or importation of any species or commodities whatsoever.

In this light, the omission of specific prohibitions on subjects for treatymaking takes on additional significance.

THE SUPREME COURT'S INTERPRETATION

The Supreme Court's record also clearly reinforces this broad interpretation of the proper subjects for treaties.

From the beginning of the Republic, the Court had tended to uphold treaty makers in any challenge regarding the propriety of subject matter. While most of these decisions did not specifically address the question of subject matter, Justices often outlined their views in dicta. One of the cases to which I referred yesterday, contained just that type of pronouncement. Mr. Justice Field in Geofrey against Riggs (1890) noted regarding treaty powers that:

> It would not be contended that it extends so far as to authorize what the Constitution forbids, or a change in the character of the government, or in that of one of the States, or a cession of the portion of the latter, without its consent . . .
>
> But with these exceptions, it is not perceived that there is any limit to the questions which can be adjusted.

The second case that I want to cite is perhaps the most celebrated and analyzed constitutional law case, Missouri against Holland.

In this case, decided in 1920, the Court was reviewing a challange to the validity of a congressional statute implementing a Migratory Bird Treaty between the United States and Canada. It was the contention of the State of Missouri that this statute went beyond the authority of the Federal Government and that it could not have been adopted except pursuant to a treaty.

The decision, rendered by Mr. Justice Holmes, had an enormous impact. It conclusively dismissed the claim of Missouri—and, by extension, the Jeffersonian view—that the treaty power was limited by any form of unstated extension (or as Holmes phrased it "invisible radiation") from the 10th amendment.

Oliver Wendell Holmes' opinion has remained the controlling interpretation of treaty power since that time.

THE CONTEMPORARY PERIOD

Interestingly, one who did question this decision, Senator Bricker, provided backhanded support for Holmes' view. In an unsuccessful effort between 1952 and 1957 to "overrule" the Missouri case, Senator Bricker led a fight for a constitutional amendment. The very fact that Bricker pursued a constitutional amendment strategy suggests an awareness of the lack of constitutional restraints upon treaty powers. The Missouri case, then, was not a case of misinterpretation by the Court to be reversed at a later date but rather a correct interpretation, with which he disagreed, and sought to remedy constitutionally. Otherwise, as Prof. Louis Henkin notes, his struggle would have been "largely unnecessary, legally as well as politically."

The contemporary record provides more straightforward endorsement of this view. The Senate has given its advice and consent to a series of treaties, running the gamut from political rights of women to protection of whales, safeguards against hijacking and political terrorism to protection of the seas against oil spills.

While some of these treaties have been challenged on political grounds, the authority of the United States to enter into these agreements has been virtually unquestioned—further proof that the broad scope of treaty powers is unquestioned today.

IN CONCLUSION

Mr. President, it is clear that the treaty powers of the Constitution have been fully recognized, and exercised, as unfettered since the definitive Missouri case.

The only overarching limitations, and I discussed them yesterday, are the requirements that treaties be consistent with the Constitution and that they may never supersede the Constitution or impinge upon constitutional freedoms.

Yet, in our exercise of that unfettered power, Mr. President, we have failed to give our advice and consent to the one treaty which embodies the highest of American ideals, the right to live.

Mr. President, there is no constitutional impediment to ratification of this treaty. It is perfectly consistent with our Constitution and deserves our fullest support. I urge my colleagues to join me in seeking prompt ratification.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SIMPSON). Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Morning business is concluded.

RECOGNITION OF SENATOR HUDDLESTON

The PRESIDING OFFICER. The Chair recognizes the Senator from Kentucky (Mr. HUDDLESTON).

AWACS

Mr. HUDDLESTON. Mr. President, tomorrow the Senate will vote on one of the most difficult foreign policy issues to confront us in many years. The ramifications of our decision could have far-reaching effects on the peace and stability of the Middle East and therefore on the security of the United States, of Israel, and of the free world.

The question is whether to approve the President's proposal to sell a package of air defense enhancement weapons and equipment to Saudi Arabia.

For the past several weeks, I have devoted many hours to the study and consideration of all aspects of the proposed sale. I have talked to many on both sides. I have talked with the President, military officials, State Department personnel and representatives of our intelligence agencies. I have consulted with many of my colleagues in the Senate and with groups and organizations dedicated to the security of Israel and to peace in the Middle East.

I have read everything I could find relating to the proposition and to its potential effects. I have considered the points of view of all who wrote to me or contacted me in any way.

I have sought answers to every question raised and fully explored every argument, for or against presented from any quarter.

I purposely and consciously avoided making a decision until I had completed this exhaustive process.

Two considerations I steadfastly refused to allow to enter my deliberations: The possible political repercussions to me personally and whether I would be on the prevailing side when the vote was taken.

I have decided to vote in favor of the sale.

I am convinced that the proposal is in the best interest of the United States. To meet that test, it was necessary for me to determine on the basis of all factors involved:

That Saudi Arabia had a legitimate need for increased defensive capability and the sale would contribute to meeting that need;

That the introduction of the airplanes, equipment and weapons would not constitute an increased threat to the security of Israel but had the real potential of enhancing that security;

That the sale would be consistent with and supportive of U.S. efforts to provide a creditable defense force in the area to protect the legitimate interests of our country, of our friends in the area, and of our Western allies;

That the risk of compromising valuable advanced technology was minimal;

That the United States would maintain sufficient continuing involvement to prevent a breach of the agreement or improper use of the systems to the detriment of our friends in the area; and

That the transaction would improve the chances for peace and stability in the Persian Gulf area.

Taking these requirements separately, here are some of the points that persuaded me.

Saudi Arabia's defense needs are real and have been greatly increased by such recent events as the fall of the Shah of Iran, the Soviet invasion of Afghanistan, the Iran-Iraq war and the increased Soviet and Cuban involvement in Lybia, Ethiopia, Syria, and South Yemen.

With a large area and small population and armed forces, Saudi Arabia is ill-prepared to defend its widely dispersed oil-related targets.

Early warning and the ability to react to an impending strike are the essence of protective forces. AWACS and the additional ground radar will provide that early warning and direct the defensive attack.

The Sidewinder missile will enable the defenders to attack head on to stop the intruders before they reach the target area.

The conformal fuel tanks and aerial refueling tankers will enable the Saudi Royal Air Force to remain over the target longer and will permit the basing of planes at fields farther away from the targets for additional security.

The Iran-Iraq war and the recent strike against Kuwait have demonstrated that oil producing, refining, and transporting facilities are likely targets .

Clearly a threat to Saudi Arabia exists, and clearly the sales package would help the Saudis meet that threat.

Still, if the proposed sale presented a threat to Israel or required extensive countermeasures on the part of Israel it would be counterproductive to the interest of the United States and violate our commitment to the security of our strongest ally in the region.

AWACS were designed for defensive purposes and have only limited offensive utility. To use it in concert with forces of other countries requires extensive joint training and compatible equipment in the participating countries—both prohibited by the agreement and with the United States continuing involvement in maintenance and monitoring, highly unlikely.

If the sale is approved it would not materially affect the balance of power between Israel and its potential enemies in the area. Military experts believe Israel would still prevail over any other country or combination of countries which pose a threat. Israel's margin of superiority over its Arab neighbors has increased since the war of 1973.

If the sale is rejected, it is possible—even likely—that Saudi Arabia will turn elsewhere to obtain similar equipment without the restrictions we would impose. It is probable, too, that the United States would lose what leverage it has to advance the cause of peace between Israel and Saudi Arabia.

It should be remembered that in the last Israeli-Arab war Egypt and Saudi Arabia were among Israel's enemies. Now Egypt has signed a peace treaty. Improved relations between the United States and Saudi Arabia will certainly increase the likelihood that they, too, will take a more conciliatory and peaceful attitude.

That they have not fully supported the peace project to date is a matter of legitimate concern. On the other hand, they have not precipitated a confrontation and they have been cooperative and helpful in a number of ways.

A wise man said once:

If one makes a friend of an adversary, has he not conquered an enemy?

It cannot be questioned that the United States has a direct security interest in the continued flow of oil from Saudi Arabia. It has been said that Saudi oil is not an economic luxury, it is a strategic necessity.

This was acknowledged by President Carter before a joint session of Congress in January of 1980 when he said that any attack on the oil production of the Persian Gulf would be considered an attack on the security of the United States and would be resisted by any means possible.

At the time, we had no means to project an effective force in the area. We are only marginally better prepared today. We have increased our naval presence in the area, we have begun extensive expansion of our facilities at Diego Garcia—still a long way from the Persian Gulf. We have secured access rights to certain bases in the general area and we have begun the development of a rapid deployment force.

Having a compatible warning and communications system provided by the AWACS in Saudi Arabia would be consistent with and supportive of those efforts. The continuous information we would receive from the Saudi AWACS under the sales agreement could be crucial to our ability to properly respond to a hostile challenge.

Of course, the development of the Saudi capability to defend its own oil fields is a major contribution to our strategic goals in the region.

The deployment of advanced technology weapons always raised the concern that the technology will fall into hostile hands and be compromised. But no persuasive evidence has been presented that that danger would be more than minimally increased by the proposed sale.

Five critical elements of the AWACS will not be included. The technology is already several years old and will undoubtedly be advanced considerably by the time of delivery in 1985.

Software and programing techniques will not be on the planes. Operation restrictions in the agreement further minimize the likelihood of compromise.

In the case of the AIM–9L missiles, they are already deployed in eight other countries including Israel. All of those countries except Israel have diplomatic

relations with the Soviet Union which means a sizable contingent of Soviet agents operate within their borders. Saudi Arabia has no diplomatic relations with the Soviets.

Furthermore, the missile is produced in West Germany. Opportunities for Soviet discovery abound with or without the sale to Saudi Arabia. Also, our intelligence officials tell me that the Saudis have been exceptionally effective in protecting important information.

Of course, our highest technology has been compromised most often right here at home as recent espionage cases attest.

There can never be a guarantee, but after all, why do we develop sophisticated defense systems, if not to promote peace and security?

In my judgment, what little additional risk of compromise may be occasioned by the sale would be worth it.

Without joint operation in the air, is there enough U.S. involvement with Saudis to assure enforcement of the agreement? Ground maintenance will continue for the life of the AWACS. We supply the spare parts. We conduct the training of crews in the air and on the ground until at least 1990. We receive the information picked up by the AWACS continuously. We monitor the operation. It does not take much imagination to see that we would have the ability to halt their operations in a short period of time.

The President has indicated that if actions during the 4-year period between approval and delivery warrant, the sale could be canceled.

Mr. President, my final point is that the prospects for peace and stability in the Mideast will be enhanced by the sale.

With the difficulties in Iran and the uncertain conditions in Egypt, Saudi Arabia is the key to stability and peace in the region as fragile as it may be.

While concern is expressed about the durability of the present regime the fact is that it has ruled for 50 years. It has been sensitive to the needs and desires of its people. That is not to say that there may not be internal difficulties, but they will be better to cope with those problems if they have confidence that they can deal with external threats to their security. The proposed sale will help give them that confidence and it will assure them that the United States is serious about being a dependable and helpful ally.

Mr. President, I believe the proposed sale serves our interest, the interest of our friends, the Israelis, and the free world.

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. HUDDLESTON. The Senator from Kentucky will yield.

The PRESIDING OFFICER. The Senator from California.

Mr. CRANSTON. I regret the decision of the Senator from Kentucky but I respect it as I respect the Senator from Kentucky. I know the deep thought he has put into this matter, the many conversations he has had with many people whom he has sought out or who have sought him out to weigh the pros and the cons, and I think the Senator from Kentucky has stated the argument in favor of the sale to Saudi Arabia as well as anyone could state it.

I happen to think that the arguments on the other side are more compelling, but I think the Senator has made a good contribution to this debate.

The fact that the Senator from Kentucky, along with the Senator from Oklahoma (Mr. BOREN) have today taken the positions in support of the sale they have taken underscores the fact that this is not a partisan issue, despite the efforts of some to turn it into one. There are Senators on both sides of the aisle, on both sides of the question.

Someone asked me just before I came on the Senate floor what I thought about the defections of the Senator from Kentucky and the Senator from Oklahoma and, of course, they are not defections.

The fact that they are Democrats coming out on the same side on which they have come out is not a defection because there was not a party position, and the positions taken by both Senators are no surprise to anyone who has been trying to analyze who will come down where on this issue. The position taken by the Senator from Kentucky and the position taken by the Senator from Oklahoma were anticipated by leaders of the effort on both sides, and do not change the relative balance of the strength on each side as of this moment.

Again I want to express my respect and friendship for the Senator from Kentucky. I know on the next issue or almost the next one we will be together and working on the same side and for the same purposes. Our purpose is actually the same in this matter, the national interest of the United States and stability and peace in the Middle East.

Mr. HUDDLESTON. I thank the distinguished Senator from California.

Mr. BAKER. Mr. President, will the Senator yield to me for a moment?

Mr. HUDDLESTON. I yield.

Mr. BAKER. Mr. President, I thank the Senator from Kentucky.

The Senator from Kentucky and I have been not only colleagues but friends now for many years, and I have watched him over those years as he has approached many difficult issues and reasoned his way through with the skill that has become characteristic of DEE HUDDLESTON.

I cannot recall, however, Mr. President, when I have seen an issue that has required so many Senators to spend so much effort in trying to weigh and balance the equities and reach a final judgment. It has been one of those kinds of issues.

The Senator from Kentucky, it seems to me, once again never panicked, he never was excited, he approached the matter methodically and carefully and he rationalized the issues presented. He postponed his judgment until he himself was content with the result, and I believe in doing so he has exhibited the best qualities of Senate deliberation on important issues.

It is my purpose to say to him that I am pleased with the decision of the Senator from Kentucky. I believe he is absolutely correct, and I believe his view will prevail, and I thank him for his support.

Mr. HUDDLESTON. I thank the Senator from Tennessee as well as the Senator from California.

Let me reaffirm what they both indicated, that there has been no political consideration in making this decision. There has been no pressure. I have not felt I was under pressure, although many people on both sides did seek an audience with me, and most of them were granted.

I certainly was not offered anything nor did I ask anything of anybody that might influence this particular decision.

It is difficult because as I look around at those who are either for or against and who have declared such, both those individuals in this body and others, I find people for whom I have great admiration and respect, people whose opinion I value very much, on both sides. I am convinced from the beginning, of course, like most other issues that all the wisdom, all the dedication, all the patriotism are certainly not on one side of this particular issue.

So it all boils down to a very lonely decision that each of us in the Senate has to arrive at, and that is there is nobody to make it for us. We make the decision ourselves, and we make it on the basis of what we believe to be in the best interests of our country and in the discharge of our responsibility in that manner.

I have many friends who will be sorely disappointed in this particular decision, many who will appreciate the problem. But that is not a consideration.

While we take into account the points made by our friends on both sides, consider very carefully their arguments, in the final analysis it is our responsibility to act in accordance with our belief in what is in the best interests of the country.

I yield the floor.

The PRESIDING OFFICER. The time of the Senator from Kentucky has expired.

Mr. JOHNSTON. Mr. President, I ask unanimous consent that I be allowed to proceed for 2 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. JOHNSTON. I simply want to add my congratulations to that of the others in congratulating the Senator from Kentucky and the Senator from Oklahoma for making what is a very tough decision.

The Senator from Kentucky has said that he did not allow political considerations to enter into his judgment. I know that is true, because had he allowed those judgments to enter, I am sure he would have voted against the sale, because there are very few Saudi Arabians in Kentucky—or indeed Arabs at all. But in the final analysis, Mr. President, the Senator from Kentucky and the Senator from Oklahoma have announced for this sale because it is decidedly, and in my view clearly, in the national interest.

If we could turn back that clock to the time when we were originally considering whether or not we should offer the AWACS or the enhancement pack-

age on the F–15's to the Saudis, then, indeed, it would have been a very close decision and I may have counseled the President not to do it.

But, having gone this far, having the prestige not of Ronald Reagan, President, but the prestige of the President of the United States on the line and of the United States as a reliable ally in the world on the line, I believe the decision is clear.

I congratulate my colleagues.

Mr. McCLURE. Will the Senator yield?

Mr. JOHNSTON. Yes.

Mr. McCLURE. Mr. President, I wish to second the comments just made by the distinguished Senator from Louisiana. It is an extraordinarily difficult decision for a great many people, not the least of whom is the Senator from Idaho. Although I analyzed the issues and made up my mind very early, it does not mean it was necessarily an easier decision.

I congratulate those who have made the decision, I think, on the right side of that difficult issue. I thank the Senator from Louisiana.

ORDER OF BUSINESS

Mr. PRESSLER. Mr. President, I ask unanimous consent to proceed for 3 minutes on the matter of the AWACS sale.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD, Mr. President, I yield 3 minutes to the distinguished Senator from the time under my control.

The PRESIDING OFFICER. Without objection, it is so ordered.

AWACS

Mr. PRESSLER. Mr. President, I had a wonderful experience as the speaker at the annual meeting of the Anti-Defamation League in San Francisco last week.

Given the current AWACS debate, I considered the atmosphere at that meeting to be very positive. It made me feel very good about America to participate in such a rational discussion with an audience of 500 to 600.

I wish to commend them for their thoughtfulness and the polite way in which I was received. I think that this experience illustrates how great our country is. It also reemphasized for me the importance of the basic right of all Americans to express their views on domestic and foreign policy issues without injecting irrelevant considerations of ethnic or religious backgrounds. We must remember that people of all religious faiths and political persuasions have a right to lobby and to express their opinions. That is the American way.

Mr. Maxwell Greenberg, the national chairman of the Anti-Defamation League, emphasized that one could be for the AWACS sale and not be against Israel. My own remarks addressed the importance of active political expression for all Americans while avoiding ethnic and religious prejudice in politics. I am indebted to Prof. H. A. Overstreet, whose article, "The Gentle People of Prejudice"—the Saturday Review of Literature, January 21, 1950—provided me with some useful insight into the problems of prejudice. I recommend his article to all concerned with the problem.

Many American Jewish groups deserve to be praised for their effective and careful participation in the AWACS debate. Although their numbers are relatively few, they have provided a valuable public service by sharpening and focusing the debate on all possible ramifications of the proposed sale. They have amply demonstrated their deep concern for U.S. strategic interests and a furtherance of Middle East peace prospects with an outpouring of basic facts and complex useful analyses of the Middle East situation. Few other groups have given so much time, energy, and other resources to the important task of informing the public and elected officials. This is democracy and representative government in action, and I congratulate these groups for contributing so tirelessly to the democratic process. They have helped to make our system work better.

But I was really assured in my faith in America during my visit to the Anti-Defamation League meeting, and I wish to commend them again for the fine and polite fashion in which I was received.

After the meeting, I had a long session with their national leadership, which was equally informative and worthwhile. It was one of the greatest experiences I have had during my time in the U.S. Senate.

Mr. President, I yield back the remainder of my time.

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS—1982

The PRESIDING OFFICER. The clerk will state the pending business.

The bill clerk read as follows:

A bill (H.R. 4035) making appropriations for the Department of the Interior and related agencies for the fiscal year ending September 30, 1982, and for other purposes.

The Senate resumed consideration of the bill.

Mr. McCLURE. Mr. President, under the unanimous-consent agreement, would I be correct in saying that the amendment first in order is that to be offered by the distinguished Senator from West Virginia (Mr. ROBERT C. BYRD)?

The PRESIDING OFFICER. The Senator is correct.

The Senator from West Virginia is recognized.

UP AMENDMENT NO. 533

Mr. ROBERT C. BYRD. Mr. President, I send an amendment to the desk and ask that it be stated by the clerk.

The PRESIDING OFFICER. The clerk will state the amendment.

The bill clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) proposes an unprinted amendment numbered 533:

Insert on page 14, line 2, after "1983" ": *Provided*, That of the amount included in this head, not to exceed $1,500,000 shall be used to reimburse fiscal year 1981 costs of those nine states which did not receive their full survey and planning grants in that year".

Mr. ROBERT C. BYRD. Mr. President, the amendment that I am offering would correct an error that occurred during the passage of the supplemental appropriations, rescissions, and deferral bill, Public Law 97–12, this summer.

During consideration of that bill, an amount of $2.4 million was set aside for seven States—Alaska, Hawaii, Oregon, Tennessee, Virginia, Washington, West Virginia, and, in addition, Puerto Rico and the District of Columbia. So it would be nine political jurisdictions which had not yet received their fiscal year 1981 survey and planning grants from the historic preservation fund. The remaining funds in that account, other than this $2.4 million, were rescinded.

So it is now apparent that the information provided by the Department of the Interior was in error. This rescission actually took more funds than were unexpended. So this creates a situation of importance to the nine political entities which have already incurred certain costs during fiscal year 1981 with the assurance that these costs would be reimbursed by the Federal Government.

Let me add that, in incurring these costs, the States were acting on behalf of the Federal Government.

My amendment is designed to correct this deficiency and to permit the Secretary of the Interior to reimburse a portion of the expenses incurred by these States. It is my intent that the Secretary provide $1.5 million of this 1982 appropriation to the nine jurisdictions in the same ratio as the planning and survey grants were originally earmarked, and that these States and territories may apply 1981 costs to match these grants. I am informed that the State historic preservation officers unanimously endorsed this position at the September 12, 1981, board meeting.

This amendment will still leave $25 million to cover 1982 costs of all States and other entities including the national trust; so, I urge the adoption of this amendment in the interest of fairness.

Mr. McCLURE. Mr. President, I think the Senator from West Virginia has pointed to a problem that did arise and has occurred, and which does need to be rectified.

One of the dilemmas that we always face is: How did you build accountability into a system into which errors inevitably creep? There was an error made in this case. The error, however, was not that of the States. The States ought not to be the ones who suffer from the fact that an error was made. It was bad administration. There was inadequate monitoring of the progress of these grants. That responsibility lies with the Federal agency and should not be transferred as a burden to the affected States.

I think the Senator is correct in offering this amendment. I support the amendment. I take this time only to indicate that there is some unhappiness, at least on the part of the Senator from Idaho, with respect to the administration of the program which permitted this error to be made in the first place. But having been made, we ought to rectify it.

I have no objection to the amendment. I commend the Senator for having offered it.

Mr. JOHNSTON. Mr. President, we also support the amendment. The Senator from Idaho has correctly stated the basis of it. We enthusiastically support it.

Mr. ROBERT C. BYRD. Mr. President, I thank both of the distinguished managers for their support, and I yield back the remainder of my time.

Mr. McCLURE. Mr. President, I ask unanimous consent that the time consumed in the quorum call immediately preceding the discussion of this amendment be charged to the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. I yield back the remainder of my time.

Mr. JOHNSTON. Mr. President, I ask unanimous consent that Senators SASSER and RANDOLPH be added as cosponsors to the Byrd amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment.

Without objection, the amendment is agreed to.

The amendment (UP No. 533) was agreed to.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. JOHNSTON. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. McCLURE. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. McCLURE. Under the previous order, what is the pending business?

The PRESIDING OFFICER. The next amendment is to be offered by the Senator from Vermont (Mr. LEAHY).

The Senator from Vermont is recognized.

Mr. LEAHY. Mr. President, what is the parliamentary situation?

The PRESIDING OFFICER. Under the previous order, the Senator is recognized for the purpose of presenting his amendment. Time for the quorum has been counted equally against each side.

Mr. LEAHY. How much time is remaining per side?

The PRESIDING OFFICER. The time remaining is 30 minutes. There are 15 minutes now remaining on each side on the amendment.

Mr. LEAHY. I thank the Chair.

UP AMENDMENT NO. 534

(Purpose: To increase funding of the Office of Special Counsel of the Economic Regulatory Administration)

Mr. LEAHY. Mr. President, I send to the desk an amendment on behalf of myself, Mr. METZENBAUM, Mr. BUMPERS, Mr. HART, Mr. KENNEDY, Mr. LEVIN, Mr. WILLIAMS, and Mr. PELL and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The bill clerk read as follows:

The Senator from Vermont (Mr. LEAHY) for himself, Mr. METZENBAUM, Mr. BUMPERS, Mr. HART, Mr. KENNEDY, Mr. LEVIN, Mr. WILLIAMS, and Mr. PELL proposes an unprinted amendment numbered 534:

On page 42, line 16, before the period add the following ": and, *provided further*, That of the funds deferred under this head in the Supplemental Appropriations and Rescission Act, 1981 (Public Law 97-12), $24,000,000 shall be available only for use by the Office of Special Counsel and the Office of Special Counsel shall use such funds to pursue alleged violations by major refiners of Department of Energy regulations pursuant to the Emergency Petroleum Allocation Act of 1973 (Public Law 93-159) and not more than $3,400,000 deferred under the Supplemental Appropriations and Rescission Act, 1981 shall be available for program administration".

Mr. LEAHY. Mr. President, this is an amendment to the Department of the Interior and related agencies appropriations bill which will raise the level of funding for the Department of Energy, Office of Special Counsel, to $24 million.

This amendment does not increase either budget authority or budget outlays for fiscal year 1982. It transfers $12.9 million from an account that had been set up to cover costs associated with a reduction in force for OSC operations. This transfer will still leave $3.3 million in the RIF account. More importantly, it will raise funding for OSC to $24 million, a level which insures that more than $8.6 billion in oil company pricing violations can be pursued.

Mr. President, the OSC audits, investigates, and prosecutes the 35 largest domestic oil refiners in this country for alleged petroleum product pricing violations that occurred during the period that the Emergency Petroleum Allocation Act was in effect. OSC is one of two offices in the DOE compliance program. The other, the Office of Enforcement, which deals with smaller, independent refiners, is not affected by my amendment.

OSC was established in 1977 after a report authored by Stanley Sporkin and others showed that the major oil refiners were not being adequately investigated for possible pricing violations.

Since that time, OSC has identified more than $12.8 billion in alleged pricing violations. Last year alone, OSC was able to settle more than $2 billion of these cases. Of this amount, more than $153 million was rebated directly to consumers overcharged. $47 million was returned to the U.S. Treasury, and some $14.5 million in price rollbacks were obtained.

Thus, with a budget of $37 million, OSC operations returned more than $210 million to taxpayers—and they are just getting into the major cases. This represents a return of $5.70 for every Federal dollar spent.

Mr. President, this administration had originally proposed an 84-percent cut in OSC funding for fiscal year 1982. OSC operations would have obviously been seriously impaired. They would have been unable to pursue most of the $8.6 billion in alleged pricing violations.

It would have made a genuflection—a tiny genuflection—toward a balanced budget by making a tiny, tiny cut. But we not only would have been unable to pursue $8.6 billion in claimed pricing violations. I think we would have granted de facto amnesty to the 35 largest oil refiners under the guise of budgetary restraint.

In fact, in a February 6 memorandum, then Acting Economic Regulatory Administration Head, Barton House, wrote that this cutback would, "* * * cause so much confusion and chaos that a substantial portion * * *" of the remaining cases would not be resolved.

Mr. President, it is somewhat encouraging to note that the administration has changed their position on OSC. The President, in his September budget revision, requested $11.5 million for OSC in fiscal year 1982, up from $6.5 million he had originally proposed. However, OSC funding would still be cut some 70 percent.

As Senators may remember, I found the funding levels in the continuing resolution prejudged my amendment. At that time, I was shown a letter by Senator McCLURE written by Energy Secretary Edwards to the distinguished chairman of the Appropriations Subcommittee on the Department of the Interior and Related Agencies. In that letter, Secretary Edwards states that the administration is committed to—aggressively pursuing this program to an orderly completion in a manner which will insure that no general amnesty for violators of regulations under the Emergency Petroleum Allocation Act.

Mr. President, I ask unanimous consent that this letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF ENERGY,
Washington, D.C., September 24, 1981.

Hon. JAMES A. McCLURE,
Chairman, Subcommittee on Interior and Related Agencies, U.S. Senate, Washington, D.C.

DEAR SENATOR McCLURE: I understand concerns have been expressed concerning the Administration's policies regarding execution of the Department of Energy's Compliance Program.

Let me assure you of my strong commitment to aggressively pursuing this program to an orderly completion in a manner which will assure no general amnesty for violators of regulations under the Emergency Petroleum Allocation Act. To this end the Director of the Office of Management and Budget recently provided 250 additional positions to the Department, and we have determined to allocate these positions to enhance the Compliance Program. This addition would bring the budgeted manpower level for the compliance activity to a total of 479 for FY 1982. In addition, I am committed to allocate additional resources as may be necessary from within the Department to meet our program objectives.

As a result of the actions described above, I do not anticipate the need for a general reduction in force in the Compliance Program within the next six months and possibly at any time during FY 1982 due to resource constraints. Of course, some localized reductions could be necessitated by organizational or workload adjustments.

I intend to closely monitor developments in this program during the coming months to assure that it is adequately staffed to meet these commitments.

Sincerely,

JAMES B. EDWARDS.

Mr. LEAHY. Mr. President, in a September 22 letter from Office of Man-

agement and Budget Director David Stockman to Energy Secretary Edwards, Mr. Stockman states that he, "* * * is persuaded that it is not possible to phase out the program as rapidly as was assumed when the President's budget was developed last March." Mr. Stockman goes on to approve additional positions for the program and recommends that any additional resources necessary may be found within the Department.

I ask unanimous consent that this letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF MANAGEMENT AND BUDGET,
Washington, D.C., September 22, 1981.

Hon. JAMES B. EDWARDS,
Secretary of Energy,
Washington, D.C.

DEAR JIM: Thanks for discussing with us your special concerns about sufficient resources for the petroleum compliance program.

I am pursuaded that it is not possible to phase out the program as rapidly as was assumed when the President's budget was developed last March. Therefore, staffing and commensurate funding relief is provided as specified below.

An additional 200 staff-years for compliance in 1982, a total of 429 instead of the 229 previously allowed, is hereby approved. This represents an 87 percent increase, which may be augmented even further by reallocating positions within the Department. The necessary employment ceiling adjustment is shown in the enclosure.

Budget resources will also be provided to pay for the additional personnel. The compliance budget of less than $12 million will be increased to over $20 million in 1982. The total amount is available from funds already deferred from 1981 to 1982.

Please appreciate the exceptional nature of this action to increase resources for the compliance program in the face of the dramatic and stringent reductions which must be made elsewhere in the Department and throughout the entire Government. In view of this overall relief in the Department's employment ceiling and management latitude to transfer positions within the ceiling, the compliance program should experience no further difficulties in responsibly phasing out the petroleum regulatory program.

Sincerely,

DAVID A. STOCKMAN,
Director.

Employment ceiling adjustments—1982

	Full-time equivalent staff years
From:	
DOE total employment	18,675
DOE full-time permanent	17,633
To:	
DOE total employment	18,875
DOE full-time permanent	17,833

Mr. LEAHY. Mr. President, as I have said previously, I am somewhat encouraged by these developments. However, I have learned that none of the additional positions that both Mr. Edwards and Mr. Stockman spoke of has been filled. Further, a reorganization of the program is underway that will compromise the resolution of these cases in the best interest of the consumer.

The largest oil refineries in the country, and billions of dollars in pricing violations are involved. We have given the oil industry a $12 billion windfall exemption in the just-passed tax bill. Having given away that $12 billion, I do not think we should add another $8.6 billion.

I have listened very carefully to the administration speak about the fact that they are strongly in favor of strict enforcement of the law, that they are against any type of criminal conduct, and I applaud them for that. I have not found many administrations in favor of crime, but I am glad to hear them on record against it. I just want to give them the tools to carry forward, whether it involves major oil companies or muggers on the street.

I believe we want to make sure that nobody is exempted from the law and nobody stands above the law.

Mr. President, it should be noted that this program was established with the assumption that it would begin phasing down in fiscal year 1984 and close out completely in fiscal year 1985. The Gramm-Latta II budget resolution originally included $1.5 billion in revenue expected from this program's operations for fiscal year 1982 at the same time the program was targeted for extinction. This must not be allowed to happen.

Mr. President, the letter which we received during debate on the continuing resolution shows that the Secretary of Energy is on record as committed to an aggressive enforcement effort. My amendment, which does not add to budget authority or budget outlays for fiscal year 1982, will enable the Secretary to meet that commitment. It will raise the level of funding for OSC to the level approved by the conferees on the Omnibus Reconciliation Act of 1981 and signed into law by the President August 13.

Adoption of my amendment will insure that justice is done, that the law is pursued. Otherwise, we will be achieving false economy at the expense of the American small businessman and consumer, and to the advantage of the 35 largest oil refiners in this country. I urge my colleagues to join in support of my amendment.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER (Mr. SPECTER). The Senator from Idaho.

Mr. MCCLURE. Mr. President, I oppose the amendment, and I want to indicate very briefly the reasons for my opposition.

There is no question at all, at least of which I am aware, of the determination of the administration to make decisions concerning the allegations of overcharges or misapplication of regulation with respect to the accounts in question.

As the Senator has pointed out, a considerable sum of money is available under the appropriation bill before us, primarily from funds that were deferred from the last fiscal year. The Administrator of the Economic Regulatory Administration, in his confirmation hearings and again in his testimony before the Committee on Energy and Natural Resources, as well as before the Appropriations subcommittee, indicated that he believes that the level of activity that can be financed by the funds available to them will be adequate to make the necessary decisions. He stressed this repeatedly in every forum in which he testified—that they intend to make decisions; that the only reason they would need more money would be in the event of procrastination or delay.

He was questioned very closely by people on both sides of the issue, from both sides of the aisle, as to whether the available funding would permit them to make the determinations that are necessary in advance of making the decisions that are necessary. He assured us in every instance, as did Secretary Edwards in his testimony, that, yes, indeed, it is their judgment that if these matters are pursued vigorously and pursued to conclusion, there will be enough money available.

I suggest to the Senator that if, as a matter of fact, that does not prove to be the case, we will then be in a position to reopen the issue later, with respect to additional funding; but I believe it is premature for us to judge now that, as a matter of fact, the money appropriated will not be sufficient to do the investigations and pursue them to conclusion.

I believe that the Senator from Vermont would share the enthusiasm that others have suggested that one of the major problems is that decisions have not been forthcoming. Everybody needs the decision and that there is no advantage to the Federal Government in delaying the decision, nor is there an advantage to the parties involved in delaying the decision. There should be injected into this process the idea that we have to come to a conclusion with respect to the allegations that have been made.

It is on the basis of those assurances, both before the authorizing committee and the Appropriations subcommittee, by Secretary Edwards and by Administrator Hansley, that we set this level of funding.

I assure the Senator from Vermont and others who might be concerned that if at any time the evidence comes in indicating that the funding is not adequate, that they are not going to be able to do the job, then we will have to entertain a supplemental request, because there is no one who does not want this matter pursued through to conclusion.

Mr. President, I am happy to yield to the Senator from Louisiana such time as he may consume.

The PRESIDING OFFICER (Mr. SPECTER). The Senator from Louisiana is recognized.

Mr. JOHNSTON. Mr. President, I feel somewhat ambivalent about this matter. On the one hand, I believe we clearly need the funds necessary to enforce the EPAA and to collect that which is owed to the Government.

I am concerned, however, about some of the actions of the Department of Energy in this area in the past. Of course, one of their famous actions, in my judgment, was the turning over of what I thought was public money to a number of private philanthropic organizations.

However, I also am concerned that the Department of Energy has come in and made enormous claims with the press as to how much is owed the Government; and then, when all the smoke

is settled, they end up collecting very little.

I am wondering if the Senator from Vermont can tell me about what the track record is recently. My concern is that that the Department of Energy Enforcement Division is engaging in some self-preservation funding, going back and reopening cases more than 5, 6, and 7 years old—not reopening, but beginning audits that are 5, 6, and 7 years old—resulting in some harassment. Can the Senator tell me what the track record recently has been of the Department of Energy, whether we really can expect to collect money, or whether we simply will be putting good money after bad, opening up some cases that are at least a decade old?

Mr. LEAHY. Last year, as I understand it, they settled more than $2 billion of these cases. I believe they had something like $12 billion outstanding. As a result of last year's settlements, $153 million was rebated to consumers who were overcharged, just under $50 million was returned to the Treasury, and around $14.5 million in price rollbacks were obtained.

Mr. JOHNSTON. Last year they got $50 million for the Treasury?

Mr. LEAHY. No, it was something under $50 million. It was $47 million. They rebated $153 million to consumers and settled cases worth a couple of billion dollars.

What I am concerned about is that the older these cases become, the harder it is for everybody to settle them—the Government or the oil companies. I think there is a certain feeling of fairness in settling these matters on both sides. Whether somebody is representing the Government or representing the oil companies, they want to get these cases settled and off the books.

Mr. JOHNSTON. We all do.

I believe it was 3 or 4 years ago, in the Energy Committee, that I proposed a statute of limitations. I recall that it was a 3-year statute to be put in. The Department of Energy said, "Oh, no, we don't need that. We're going to bring all these cases to fruition. We're going to commence all the audits within the next"—I forget the period of time, but it was something like 12 months.

That was 3 or 4 years ago, and here we are asking for more money to open up new audits that go back to 1974. I am wondering whether that is proper.

Mr. LEAHY. I understand that the Office of Special Counsel has already identified more than $12 billion in what they consider pricing violations.

I would hate to think that we first authorized positions within the budget but then suddenly cut back and did not allow the Office of Special Counsel to go after those $12 billion worth of cases.

I see it almost as a kind of amnesty. What I am trying to do here is support the administration's "get tough" attitude.

Mr. JOHNSTON. Mr. President, I had been given time by the Senator from Idaho. So, if I may, I wish to yield back that time because I am using up all this time.

Mr. LEAHY. Mr. President, I ask unanimous consent that Mr. TSONGAS be added as a cosponsor of this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LEAHY. I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. LEAHY. I yield to the Senator from Ohio.

Mr. METZENBAUM. Mr. President, I ask that the Senator from Vermont yield 7 minutes to me.

Mr. LEAHY. I yield 7 minutes to the distinguished Senator from Ohio.

Mr. METZENBAUM. Mr. President, I think this amendment might very properly be called the commonsense and fairplay amendment or the law and order amendment.

Our amendment would transfer approximately $13 million presently scheduled for severence pay for DOE employees and administrative shutdown costs and transfer this money to the Office of Special Counsel, which audits and prosecutes overcharge pricing violations by the 15 largest oil companies.

I understand the comments that have been made by the distinguished Senator from Idaho, as well as my good friend from Louisiana.

Frankly speaking, what this amendment does is provide Department of Energy with the money to do its job. We are talking about massive amounts of overcharges, approximately $11 billion, that is sitting out there. The Department of Energy keeps saying, "Yes, we are not going to grant amnesty, we are going to get in there and we are going to do our job." But they cannot do their job without proper resources and the fact is that these overcharged price violations by the 15 largest oil companies require work. They require effort. They require time.

This is a commonsense amendment, Mr. President, because it involves no additional budgetary outlays. In fact, this amendment is guaranteed to return to the Treasury hundreds of millions of dollars. Last year, for example, the Office of Special Counsel handed over more than $47 million to the Treasury from overcharge settlements, while operating on a budget of $37 million. And the return on the Federal dollar would go up sharply this year, Mr. President, because the oil companies can no longer offer to reduce banked costs as part of any settlement agreement. In an era of decontrol, there are no banked costs, and the oil companies will be forced to offer additional hard, cold cash.

Last year, for example, the Office of Special Counsel, as has already been pointed out, returned $47 million to the Treasury and saved another $153 million for the consumers of this country, all on a budget of $37 million. The return on the Federal dollar would go up sharply this year because the oil companies can no longer offer to reduce bank costs as part of any settlement agreement. Since decontrol they no longer have any bank costs, and they will be forced to come up with hard, cold cash.

The President says that he is willing to consider new forms of Federal revenue to hold down the ever-increasing budget deficit. On Sunday the majority leader stated on television that he was not averse to new revenue enhancement proposals.

Mr. President, I want to point out that with this amendment, when it is passed and enacted giving the Department of Energy the personnel and the dollars with which to do its job, we will need that much less of the revenue enhancement proposals that are presently talked about because it will increase Federal revenues substantially.

This amendment is also based on notions of fair play, Mr. President. The Office of Special Counsel has more than $8.6 billion in alleged pricing violations still pending in the courts and at the Office of Hearings and Appeals. An additional $3 billion in potential overcharges have been identified by the Office of Special Counsel's auditors, but have yet to be pursued. That brings the total to more than $11 billion.

Eleven billion dollars in pricing overcharges. Billions and billions of dollars that are owed to oil jobbers, terminal operators, independent marketers, service station dealers, and consumers by the major oil companies.

This administration claims it supports law and order. This administration claims it is committed to a strong enforcement program at DOE. Secretary Edwards has told the Congress no less than five times that there will be "no amnesty for the oil companies from any pricing violations." But promises sometimes ring hollow in the face of decisive actions. And every action this administration has taken regarding the Office of Special Counsel suggests that it is working to grant amnesty for the oil companies—blanket amnesty for $11 billion in pricing violations.

Just look at this administration's record: On February 2, 2 weeks after President Reagan took office, Barton R. House, the Acting Administrator of the Economic Regulatory Adminstration, sent a memo to the DOE Under Secretary recommending $44 million for DOE compliance programs, including the Office of Special Counsel. The memo went on to state: "Any lesser resource level will signal DOE's reluctance to follow-through on existing identified violations and will seriously weaken DOE's position in negotiating settlements * * * and over $13 billion in identified violations would not be pursued."

What did the OMB then recommend in response to DOE's million minimum figure? They recommended less than $6 million, an 80-percent cut from the fiscal year 1981 level of $37 million.

But as Secretary Edwards says, "We do not intend to give any amnesty to the major oil companies."

If you can do through the back door that which you are not doing through the front door, it amounts to the same thing either way, the American people again get the short end of the stick.

The administration, however, did not stop with this massive budget cut. OMB also directed ERA to reduce the staff of the Office of Special Counsel from a level of 583 to 125 by the end of the fiscal year. This order came even after ERA officials pointed out that at a level of $5.95 million, the Office of Special Counsel could support a staff of more than 150. But that did not keep them from recommending 125.

And, of course, the administration assured us that this massive staff reduction would not grant amnesty to the major oil companies.

At this point, my colleagues might assume that the Office of Special Counsel would have been sufficiently disarmed and the major oil companies would have been satisfied. But the administration was still not finished.

We also should take a look and see whether or not the oil companies would have been satisfied with this backing down, with this letting up, with this lack of enforcement. But, no, they were not, because on February 27 the Department of Energy announced in the Federal Register its intention to review a complex pricing regulation known as the V factor.

The V factor is pretty simple. It is a regulation issued in 1974, amended in 1976 and 1980, and it is essential for any overcharge actions to succeed in court.

In essence, the regulation requires a refiner to allocate its refinery costs in direct proportion to its refined product mix. Otherwise, a refiner would be able to raise the price of its price-controlled products by transferring the refining costs associated with a decontrolled product such as home heating oil to a then-controlled product, such as gasoline.

Since DOE issued its notice to review the V factor, the major oil companies have begun refiling their costs for refined products from 1974 through January 1981. According to the Office of Special Counsel, those refilings now total more than $27 billion in claimed increased costs for price-controlled products. It is clear that if DOE changes the V factor, all $11 billion in pricing overcharges will be eliminated by a slick accounting game.

Eight months after issuing the notice to reconsider the V factor, DOE says it has not reached any decision about this critical pricing regulation. However, an article on Mr. Johnson appearing in the September issue of the District Lawyer states:

> Very soon, the department also will amend the controversial Carter administration "V factor" rule on the pricing of petroleum coke, a by-product of crude oil.

If this article is correct, Mr. President, then the accounting game to free the major oil companies from the $11 billion is going to begin any day. But I can assure you that it will not happen without a fight in both Houses of the Congress.

After watching the administration slash the Office of Special Counsel's budget, riff its staff and tamper with its most potent auditing weapon, some of us in Congress decided to put an end to this amnesty program. When the fiscal year 1982 Department of Energy authorization bill was before the Energy Committee, the distinguished chairman of the Appropriations Committee, Senator HATFIELD, and I succeeded in adding $26 million in budget authority for the Office of Special Counsel. That increase was passed by both Houses.

When the Interior appropriations bill began in the House Appropriations Subcommittee, on Interior and related agencies, the chairman, Representative SIDNEY YATES of Illinois, attacked the administration's plan to destroy the Office of Special Counsel. The Interior Subcommittee, the Appropriations Committee and the House all voted to fund DOE's compliance activities, including the Office of Special Counsel, at the $44 million level that ERA officials originally stated that they needed to carry out an effective enforcement program.

But the major oil companies never say die. They have been back at work in the Senate trying to reverse the tide by pushing for a low funding level. The $11.9 million proposed in this bill is another attempt to gut the Office of Special Counsel.

It will not give them enough money to aggressively pursue the overcharges. It will only give them enough money to riff their employees, make severence payments, settle a few cases and close up shop.

There have also been some disturbing events within the Department of Energy during the past month. The new ERA Administrator announced that he has ordered the Office of Special Counsel staff to fill out a new balance sheet to come up with "hard, cold bottom line numbers" for each of the Government's cases.

Mr. Hanzlik thinks the Government's numbers are "too high." Mr. Hanzlik has also asked the attorneys to rate their cases in order of strength.

These new changes were announced at an October 5 meeting at ERA. At that time, Mr. Hanzlik acknowledged that if this information fell in the hands of the major oil companies, it could weaken the Government's cases significantly. Mr. Hanzlik said this review would be undertaken quietly, without publicity.

But 3 days later, Mr. Hanzlik laid out the entire plan in an interview in the Oil Daily, which is read by every oil executive in the country. And as soon as the new computations are complete, every oil lawyer in town will be getting them through discovery. At that point, what used to be the Government's bottom figure will become the oil company's top figure in any future settlements.

Mr. President, the Office of Special Counsel remains under siege by the administration and by the major oil companies. There is big money at stake here—$11 billion in overcharges. This amendment, which involves no additional budgetary outlays and is guaranteed to bring in millions in needed Federal revenues, is a test of whether the Senate wants to grant amnesty for the oil companies. It is a test of whether the Senate wants to see oil jobbers, and independent marketers and service station dealers and consumers recover the billions they are owed. It is a test of whether we believe in playing by the rules.

Mr. President, what we are really talking about here is whether this Government of ours has any credibility, whether this Government has any responsibility, whether this Government's commitments to the people of this country mean anything.

And every single time we come to the Chamber and the oil companies are on the other side, they win.

I say, Mr. President, that maybe in this one instance, maybe we should win. I say to my good friend from Louisiana who says he has mixed feelings on this subject, that I hope that his mixed feelings would come down on the side of supporting the amendment. We need his assistance. We need his concern, and we need his approbation, as well as his helpfulness in seeing to it that we get enough votes to adopt the amendment.

I urge my colleagues to vote in favor of this important amendment.

Mr. KENNEDY. Mr. President, I rise in support of the amendment by the Senator from Vermont. I am proud to cosponsor an amendment that will permit the Office of the Special Counsel to continue the valuable work it has done since its inception in 1977. The Special Counsel's Office has the tremendous burden of policing the pricing activities of the 35 largest domestic oil refiners and then prosecuting any pricing violations discovered.

Yet the committee's proposed appropriation would cut the Office's budget by an incredible 78 percent. The Leahy amendment recognizes the need for funding reductions in our budget, but it does not accomplish the reductions by destroying the Office of the Special Counsel. It would provide for a more reasonable cut of 35 percent. Moreover, this would not require an increase in the budget authority of the bill. It would merely require a transfer of funds from the RIF account to the Special Counsel's Office and a sufficient amount would remain in the account to serve its purpose.

The Special Counsel's Office has been enormously successful. Last year, direct benefits to the consumer totaled more than $153 million. Another $47 million was returned to the Federal Treasury. All told, the Office reached settlement on more than $2 billion in pricing violations.

The Office's job is far from complete. More than $8 billion in overcharges remain outstanding. Another $3 billion in potential violations have been identified but not investigated. To hamstring the Office by rejecting this amendment would send a signal to oil refiners that their pricing violations will be ignored and forgotten. And it will tell the American consumer that he or she will also be ignored and forgotten.

In the report on the Omnibus Reconciliation Act of 1981, the conferees said they were committed "to an aggressive, fully staffed compliance program." The Leahy amendment will permit such enforcement, the committee recommendation will not.

The American public has made noble sacrifices in the past few years to reduce energy consumption. They have suffered skyrocketing energy price increases. We can, at least, prevent them from being gouged by insensitive oil companies at

the same time. To repay the efforts of the American consumer by ignoring pricing violations of major oil refineries would be cruel and callous.

Mr. President, I have supported a number of budget cuts because they were prudent and intelligent. This cut is neither. Fortunately we can still remedy this unwise proposal. We can still reverse this injustice to the American taxpayer. I urge my colleagues to support this amendment.

● Mr. LEVIN. Mr. President, I want to join with my colleagues from Vermont and Ohio in reinstating an adequate budget for the operation of the Office of the Special Counsel in the Department of Energy.

The pending proposal of $11 million for the Office of Special Counsel is a reduction of four-fifths of the budget request of the past administration. What other program was cut this much? I asked the Secretary of Energy, when he testified before the Government Affairs Committee, what he expected to do with the remaining overcharge cases and he tried to assure me that there would be no amnesty for oil companies. Yet how can we possibly expect the Office of Special Counsel to function with a cut of fourth-fifths of its budget? Are we to believe that the employees were working only 1 day a week and now will work five times harder? I have never received a satisfactory answer from the Department of how they expect one-fifth the money to do the same job.

There should be strong bipartisan support for this amendment because it does not cost any money. Rather, it is a money producer. Those employees whose jobs we would restore with this amendment will collect huge amounts due us from oil company overcharges. Oil companies have received substantial benefits in the last few years; lets not abandon the debts they owe the Government and the American people by dismissing the debt collectors in the Office of the Special Counsel.●

The PRESIDING OFFICER (Mr. QUAYLE). The time of the Senator has expired.

Who yields time?

Mr. LEAHY. Mr. President, I think that we could go on all day on this and be saying the same thing back and forth.

I am willing to yield back my time if the opponents of the amendments are willing to yield back their time and go to a vote.

Mr. McCLURE. Mr. President, I have just a couple of remarks, and then I shall see if the Senator from Louisiana has any further remarks he wishes to make.

I do underscore the fact that we do not know whether the representations that are made are correct. All we can do is exercise our best judgment that indeed the amount of money we have recommended in this appropriation bill will be sufficient to do the job.

We did increase the amount over the administration's request. We have provided $11.1 million for the Office of Special Counsel. We also provided for the Office of Enforcement $5.9 million, for a total of $17 million in the so-called Office of Compliance.

There are also $16.2 million that could be made available under the appropriations bill that we have recommended. If all were made available, it would total slightly more than $33 million.

The House of Representatives has suggested the sum of $28 million, instead of the $17 million that we recommended.

So the figures that we are talking about are somewhere in the general area of what is necessary with respect to this enforcement activity.

As we get to the end of the process, we shift from audit activities to enforcement activities to collection activities.

Auditing is a high manpower requirement as compared to the enforcement activity or the collection activity. I think we are about at that point where the field audits have been completed, and we are now at the point of using those audits to enforce collection, I sincerely believe this amount of money will be sufficient.

If it appears over the period of the next few months that it is not enough funding, we will be back, and I am sure the administration will be back, seeking enough money to make certain that the enforcement activities are completed.

Mr. President, I am prepared to yield back the remainder of my time.

Mr. LEAHY. I would just note that this is one of the reasons we tried to stay within approved budget authority and budget outlay figures. I do want to thank the distinguished floor managers of this bill for their cooperation in making this vote available today, and also the distinguished minority leader, Senator ROBERT C. BYRD, for that. It made life a lot easier for a number of others.

I am going to suggest the absence of a quorum in just a moment. I understand there are a couple of people who want to vote on this who are having a tete-a-tete with the President on a matter which I do not think is related to this bill and, perhaps, to my sensitive radar in these things, it may be related to something else.

So I ask the Chair how much time is remaining for the Senator from Vermont?

The PRESIDING OFFICER. Thirty-five seconds.

Mr. LEAHY. I think I can yield back my 35 seconds, Mr. President.

The PRESIDING OFFICER. The Senator can yield back his 29 seconds.

Mr. McCLURE. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Vermont. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. BAKER. I announce that the Senator from New York (Mr. D'AMATO), the Senator from Florida (Mrs. HAWKINS) and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

I further announce that, if present and voting, the Senator from New York (Mr. D'AMATO) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Connecticut (Mr. DODD), the Senator from Missouri (Mr. EAGLETON), the Senator from Kentucky (Mr. FORD), the Senator from Hawaii (Mr. INOUYE), the Senator from Michigan (Mr. RIEGLE), and the Senator from Nebraska (Mr. ZORINSKY) are necessarily absent.

I further announce that, if present and voting, the Senator from Connecticut Mr. DODD), the Senator from Hawaii (Mr. INOUYE), and the Senator from Michigan (Mr. RIEGLE) would each vote "yea."

The PRESIDING OFFICER. Are there other Senators in the Chamber who desire to vote?

The result was announced—yeas 43, nays 48, as follows:

[Rollcall Vote No. 333 Leg.]

YEAS—43

Baucus	Gorton	Moynihan
Biden	Hart	Nunn
Bradley	Hatfield	Pell
Bumpers	Heflin	Proxmire
Byrd, Robert C.	Heinz	Pryor
Cannon	Hollings	Randolph
Chafee	Huddleston	Roth
Chiles	Jackson	Sarbanes
Cohen	Kennedy	Specter
Cranston	Leahy	Stafford
DeConcini	Levin	Tsongas
Dixon	Mathias	Weicker
Durenberger	Matsunaga	Williams
Exon	Metzenbaum	
Glenn	Mitchell	

NAYS—48

Abdnor	Goldwater	Nickles
Andrews	Grassley	Packwood
Armstrong	Hatch	Percy
Baker	Hayakawa	Pressler
Bentsen	Helms	Quayle
Boren	Humphrey	Rudman
Boschwitz	Jepsen	Sasser
Burdick	Johnston	Schmitt
Byrd, Harry F., Jr.	Kassebaum	Simpson
	Kasten	Stennis
Cochran	Laxalt	Symms
Danforth	Long	Thurmond
Denton	Lugar	Tower
Dole	Mattingly	Wallop
Domenici	McClure	Warner
East	Meicher	
Garn	Murkowski	

NOT VOTING—9

D'Amato	Ford	Riegle
Dodd	Hawkins	Stevens
Eagleton	Inouye	Zorinsky

So Mr. LEAHY's amendment (UP No. 534) was rejected.

Mr. McCLURE. Mr. President, under the previous order, what is the pending business?

The PRESIDING OFFICER. The Senate will be in order.

Senators desiring to converse, please retire from the Chamber.

The amendment by the Senator from Maine (Mr. MITCHELL) is the next pending amendment.

The PRESIDING OFFICER. The Senator from Maine.

UP AMENDMENT NO. 535

(Purpose: To increase the appropriation for State and local weatherization programs)

Mr. MITCHELL. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Maine (Mr. MITCHELL) proposes an unprinted amendment numbered 535.

Mr. MITCHELL. I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 41, line 17, strike out "$138,340,000" and insert in lieu thereof "$167,840,000 of which $56,000,000 shall be available for State and local weatherization programs".

Mr. MITCHELL. Mr. President, I ask unanimous consent that my senior colleague (Mr. COHEN) be added as a cosponsor to this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COHEN. Mr. President, I take this opportunity to express my strong support for the amendment offered by my colleague from Maine (Mr. MITCHELL). It seems to me that in our effort to achieve a measure of energy independence, we have placed the emphasis upon production and we have, in fact, reduced the emphasis on conservation. I think the record is demonstrably clear that the cheapest barrel of oil that we can produce is the one we save. It seems to me this is the essence of what the Senator from Maine (Mr. MITCHELL) is trying to achieve; that is, to put the right balance back into our formula for achieving a balanced energy program; that is, to encourage people to conserve energy as well as produce it and consume it.

As I understand the Senator's amendment, what he seeks to do is put the level of funding back to that of the reconciliation level, accept a 12-percent reduction rather than a 40-percent reduction, and thereby, try to accommodate the President's goal of cutting back in certain areas. Even though I feel this is one area we should not cut back in, but should go further in emphasizing conservation, I think his amendment is eminently fair and reasonable and is designed to produce a much more balanced energy program. Therefore, I support his amendment.

Mr. MITCHELL. I thank the Senator. Mr. President, my amendment would restore funds to the State and local weatherization program. According to the Appropriations Committee report, $112.5 million is intended to be spent in fiscal year 1982 on this program. Under my amendment, the spending level would be increased by $37.5 to $150 million.

I emphasize that even if my amendment is agreed to, weatherization would still receive 22 percent less in funds in fiscal year 1982 than it received in fiscal year 1981. Once CBO's inflation forecast is factored in, the weatherization program would face a real spending cut of 27 percent. I believe that a cut of this magnitude is as far as we should go in cutting such a valuable program.

Unfortunately, the committee bill would go much further. The recommended funding level, $112.5 million, represents a 42-percent cut from last year's funding level, or 46 percent when inflation is considered.

I believe that such a drastic cut in weatherization is counterproductive. It represents a major setback in our efforts to reduce our dependence on foreign oil and to serve the energy needs of low-income households.

I believe that the $150 million funding level is a most reasonable one. It shows fiscal restraint, as my amendment represents a substantial reduction in spending on weatherization, both in real terms and compared to 1981 funding levels.

Furthermore, in the reconciliation conference report, the budget conferees called for as much as $175 million. My amendment reduces this level by 14 percent, slightly greater than the across-the-board reduction of 12 percent requested by the President.

Finally, my amendment would still leave this bill under its budget crosswalk. Budget authority in the bill is currently $240 million under its allocation based on the first budget resolution. Only $32.5 million in budget authority would be added by my proposal, leaving the bill substantially under its crosswalk allocation. Also, because spending under the weatherization program occurs slowly, my amendment adds less than $5 million in outlays in fiscal year 1982. In other words, this amendment has only a modest impact on the fiscal year 1982 deficit.

Thus, I believe that a vote for my amendment is entirely consistent with the degree of fiscal discipline that we are all pursuing. The question is whether that discipline is to be pursued equitably or whether it is to be pursued in some areas much greater than others.

Mr. President, the low-income weatherization program serves two essential purposes, each of which is as important as ever. The first objective of the program is a reduction in foreign oil imports. During the first half of 1981, we depended on foreign oil for 36 percent of our total oil consumption.

Continued dependence at this level threatens our economic and national security, as supply disruptions and OPEC-induced price increases play havoc on our economy.

The experience in the first half of 1981 underscores the importance of conservation as a means of lowering our reliance on foreign oil. We were importing 20 percent less oil in the first half of this year compared to the same period in 1980. This drop was entirely due to less consumption of oil, as domestic oil production actually declined by 1 percent.

Although the decline in consumption was partly due to a sluggish economy, greater efficiency in energy use was an important contributor.

Low-income weatherization can play an important role in our overall conservation efforts. One study of DOE's program found that a $1,000 investment produced, on average, a 25-percent reduction in energy consumption.

If all homes in need of weatherization were served by the program, we could eventually reduce our current level by 16 percent.

A second important objective served by DOE's weatherization program is that it serves the energy needs of low-income households. This fills an important gap in Federal conservation efforts. The residential energy conservation tax credit reaches a broad segment of American households, but most low-income families cannot qualify, because they tend not to have tax liabilities to offset with the tax credit. The DOE program is an essential complement to the conservation tax credits by extending conservation assistance to a sector of society that cannot take advantage of the tax credits.

Perhaps the most glaring flaw in the administration's free market energy policy is its ignorance of the problems of low-income Americans. The administration prefers to leave to the market decisions on energy conservation and production. Although it appears to have more faith in consumers' ability to operate in a free market than it has in the ability of energy producers, as witnessed by its support for subsidies to oil and nuclear power producers, this policy does not recognize the unique problems of low-income Americans.

Clearly, low-income households have at least as much incentive to conserve on energy consumption as other groups of consumers. It is a well-established fact that energy expenses comprise a larger share of the budgets of low-income families than of the budgets of all other households.

Thus, one would expect low-income households to be particularly responsive to high and rising energy prices.

Yet, lacking adequate resources to make the necessary conservation investments, low-income individuals continue to live in energy-inefficient households and to have their family budgets strained by high fuel bills.

Mr. President, on this point, I note that we have a large low-income energy assistance program. Much of that public money—and it is much larger than this weatherization program—is going up the chimneys, under the doors, and out the windows of low-income households who cannot afford to weatherize and insulate. If we are to devote public resources to this problem, it ought to be devoted in a much larger portion to weatherization. That is what the purpose of this amendment is.

The DOE weatherization program is an effective means to provide low-income households with the resources necessary to make these investments. Since 1975, nearly 900,000 homes have received some assistance from the Federal Government.

Unfortunately, this figure is only 6 percent of the total number of households eligible for weatherization assistance. Clearly, now is not the time to pull back on low-income weatherization, particularly since the DOE program has only recently been operating at levels sufficient to make noticeable progress toward serving the eligible population.

The weatherization program, far from being a welfare program, is the most effective means of addressing the vulnerability of low-income households to rising energy costs.

Although programs such as low income energy assistance are necessary to aid the poor in dealing with the financial burden of heating expenses, conservation assistance is better suited to meet the long-term energy needs of the poor.

In the region of the country that I represent, an average weatherization investment can save a family heating with oil as much as $380 a year in fuel bills. Thus, a greater investment in weather-

ization can yield savings in the low-income energy assistance program.

We should not delude ourselves into thinking that the current glut in world oil markets is reducing the need for energy assistance to the poor. Most of the savings that have been achieved thus far in the price of oil have not been passed on to consumers.

Furthermore, there are many indications that the current world oil surplus is evaporating. Oil companies, partly because of the high carrying costs of their inventory, have been drawing down their stocks of oil.

This has kept them out of the world oil markets and has contributed to the softness in oil prices.

But the oil companies are nearing their limit on drawing down their stocks, and they will soon have to make substantial purchases in world oil markets.

Also, OPEC is making further efforts to regain control over the price of oil. Once economic recovery begins in the United States or abroad, we can be assured that the current glut will be replaced by tight oil markets.

The current administration has not recognized the value of low-income weatherization. In its budget proposals earlier this year, it sought to eliminate the program. Congress wisely rejected this proposal and set aside funds for the program in fiscal year 1982. As further evidence of the administration's insensitivity to the energy needs of the poor, DOE is now refusing to provide the states with any funds to run their weatherization programs.

My own state of Maine is a good example of an effective program. To date, the program has weatherized 20.000 dwellings, which is almost 30 percent of the total eligible dwellings. This compares to only 6 percent nationwide. In fiscal year 1981, over 3,700 units were weatherized, although the program could handle 10,000 units with sufficient funding. Without my amendment, the service that Maine's program provides for its low-income population would have to be scaled back significantly.

The funding level recommended by the committee would be a major blow to an effective and successful conservation program. My amendment, which still leaves the program with less money in 1982 than it had in 1981, would continue the balanced energy policy that Congress has so often endorsed.

I emphasize, finally, that my amendment will result in a 22-percent reduction in the level of funding that was expended for this program last year. In other words, it takes the reconciliation level and cuts it 14 percent—2 percent more than even the President asked in his request for a further 12-percent across-the-board reduction.

What the committee has done has been to cut the program 42 percent, a reduction that really is not justified, especially when one considers that we are spending vastly larger sums in low-income energy assistance.

Before I entered the Senate, I had the privilege of serving as a Federal judge. One of the cases I heard was a case involving the low-income energy assistance and weatherization programs in Maine. I heard witness after witness testify about their low-income energy problems, about people faced with the horrible choice of feeding their children or heating their homes at night.

In case after case, it became clear that those persons most in need of low-income energy assistance were living in the least efficient homes; they had the least effective and oldest furnaces; they had no insulation; they had no storm windows.

This program makes sense. It puts public assistance, public dollars, where they do the most good. In the long run, it will save the Federal Government far more than this modest amount by reducing the fuel bills of that segment of our population that is dependent on the low-income energy assistance program. This truly is a program that is an investment which ultimately will save the Government much more money than is being proposed here.

Mr. President, I urge the adoption of my amendment.

The PRESIDING OFFICER. The Senator from Idaho.

Mr. McCLURE. Mr. President, I oppose the amendment. The opposition is partially based upon the merits of the program, and largely based upon the budgetary constraints that we are facing.

Let me make some general remarks with respect to the level of funding that has been suggested.

We started out in the subcommittee with a suggestion of $75 million for this program. The administration requested that be increased to $100 million. In the subcommittee deliberations, an amendment was offered, as I recall, by the Senator from Vermont (Mr. LEAHY).

The administration had asked that all this money be centered in the schools and hospitals section and suggested that weatherization be zeroed out completely.

We suggested that we maintain it at $75 million. Then, in the subcommittee, as I indicated, an amendment was offered to raise that figure; and it was raised, by action of the subcommittee, to $112.5 million.

The other body has already adopted a figure of $150 million. There is no doubt that in the process of the conference, as is usually the case, we probably will compromise between the Senate figure and the House figure.

I remind my colleagues where we stand with respect to this bill. I do not want to raise any specters that are unreal; but I think it is not unknown that there is great determination, both on the Hill and downtown, to restrain the size of the Federal budget. The fact is that, based upon the actions we have taken to date, we are $1 billion higher than the administration's modified request for this bill in budget authority and $600 million higher than the administration's September figure with respect to budget outlays.

I suggest to everyone who looks at this bill that every dollar we add adds to the weight of consideration as to whether the bill, as finally compromised in the conference, will be accepted by the administration. We have fought mightily to keep the expenditure levels down, and I have done the best I know to balance those requirements, as has every other member of the subcommittee.

This amendment comes in not to take money from one place, to substitute one priority for another. It is simply an add-on to the budget of some $37 million. I question how much we can do before we finally sink the ship.

With respect to the comments made earlier by one of our colleagues, that a barrel of oil saved is the cheapest barrel we can buy, that is sometimes true. It sometimes also is very false. If you spend $150 a barrel to save a barrel of oil, it is very expensive.

As a matter of fact, we can in conservation, and should in conservation, make some very hard, discrete decisions as to whether or not certain measures are efficient in an economic sense as well as efficient in an energy sense. We do need to reduce consumption of oil. There is a reason, perhaps, to pay more for conservation than we would for buying an equivalent barrel of imported oil, for consideration other than just the trade-off between consumption or nonconsumption of oil.

I am not sure we should look at it and say, if we can save a barrel of oil at a cost of $32, the current price being sought by at least by Saudi Arabia below the current world price, that would be a good investment. We might decide that for other reasons its worth it to us to pay $40 to save a $32 barrel of oil. But we should not say that any conservation is worth any price. The cheapest thing we can do is simply to yield to slogans rather than reason. There is some evidence that this program has not always been administered in such a way to yield economic results.

There are other programs as well that deal in the same area. The distinguished Senator from Maine in our discussions a moment ago off the floor indicated that he prefers this over some others, and I responded by indicating that may well be, but those others are not before us in this appropriations bill. Those others, of course, are in the low-income weatherization program, under the HUD block grant program, and low-income energy assistance available through the Department of Health and Human Services.

But we might look at the fact that that HUD block grant program, as contrasted to the argument we are having here about $75, $112, $150, $175 million, whatever the figures may be, is $4.168 billion.

So I am not suggesting that this program is unimportant, but in terms of the total effort that is being devoted to conservation throughout the total budget this is a small part of the total. We are doing a great deal in other budgets to deal with this question.

There is another program under HUD dealing in modernization of existing housing for which $1.8 billion is available.

I do not think it would be fair to say that if we do not add $37 million here we have starved the efforts for conservation of energy consumption in our housing, federally assisted and otherwise, because a great deal is being done.

I yield to the Senator from Louisiana.

Mr. JOHNSTON. Mr. President, this is one of those amendments that tests the resolve of us budget cutters. It tests our resolve because it is an excellent amendment. The weatherization program is an excellent program. It is cost effective in my judgment, although there are differences of opinion of people of goodwill and of good intelligence. But I believe it is a very cost-effective program because there are so many low-income homes that are so poorly insulated that a weatherization quick-fix program can have high payoffs. In my part of the country we have some low-income homes where the breezes hardly are slowed down as they come out of the north and blow through the homes, and a weatherization program with those kind of homes can be very effective and a high payoff.

However, Mr. President, I will very, very reluctantly vote against the amendment because of one reason and one reason alone, and that is because of my commitment to do my part to pare down spending. The distinguished chairman of this subcommittee, the Interior Appropriations Subcommittee, has offered up what what I think is a tough but fair set of cuts, which we have gone along with in a bipartisan manner on this committee. It cannot be said insofar as the Interior appropriations bill that the Democrats have not done their share, have not given their blood, have not cooperated with the program of budget cutting, because we have. By the same token the distinguished chairman, I think, has been very fair and reasonable in what he has proposed.

But there are a few amendments, amendments where, as someone said, the rubber meets the road, where our resolve is tested, where the question is close, where the amendment is good, where the program is productive, and this is one of those. And it is a very close and tough question.

I cannot say anything bad about the amendment except that it adds $37.5 million to this bill and that just happens to be $37.5 million that we do not have, and I wish we did.

Mr. MITCHELL. Mr. President, I shall put this in its proper perspective by citing the levels of funding for this program. In fiscal year 1981 it was funded at $193 million. In the reconciliation bill it was funded at $175 million. In the House of Representatives it was funded for the coming year at $150 million.

And my amendment would simply put the Senate on record as providing for the same level of funding as the House, $150 million. That is nearly a 25-percent reduction over the level of funding last year.

So, just as the distinguished Senator from Louisiana says it cannot be said of some members of the committee that they have not made a contribution to reduction of the budget, so also it cannot be said of the weatherization program because the level of funding which I propose is a 25-percent reduction over the program last year. What I am objecting to is the committee's proposed reduction which is in excess of 40 percent as to an admittedly good program.

As to the distinguished chairman's statement reminding the Senate that the committee came out $1 billion over the President's request, that is precisely the point. The committee did not restrain itself to the level of the President's request and it comes out now with a unanimous committee asking for funding $1 billion in excess of the President's request but says we should use that as restraint for this particular program.

Mr. McCLURE. Mr. President, will the Senator yield for just one point?

Mr. MITCHELL. I yield.

Mr. McCLURE. I thank the Senator for yielding. Had we constrained ourselves to the level of the President's request, this program would have been zero, not at the $112½ million which the subcommittee voted to put in. That is one of the reasons why we are above the President's request.

Mr. MITCHELL. Right, I understand, and I thank the Senator.

To keep this program in another perspective, as I said in my remarks, we provide energy assistance in the form of funds with which low-income Americans can buy fuel or direct deliveries of fuel.

Without any question, as stated by the distinguished Senator from Louisiana and as every study has shown, the homes of low-income Americans are generally the least well insulated, they have the least efficient heating systems, and so those funds are to some significant degree achieving less than the full potential and we provide for that program in the reconciliation bill $1.875 billion.

I ask what sense does it make for this country to provide nearly $2 billion in energy assistance and much of that money is going up the chimney, under the door, out the window, and refuse to provide $150 million which is but a fraction of the energy assistance program for weatherization which everyone agrees makes sense.

Everybody agrees, including the opponents of the program, that an investment of $200, $300, or $400 now would return a savings far in excess of that over the next few winters.

If one wanted to waste public funds, one could not think of a more effective way to do it than by this type of approach. The billions of dollars for energy assistance, ineffective to a large degree in meeting the problem; and nothing for weatherization which everybody agrees is a long-term investment. It is small wonder that the people of this country look at Congress and say, "What are you doing?"

This is a good program. This is a program that will return an investment to this Nation many times over. This is a program that is being cut 25 percent below the level of last year. It is being cut 14 percent below the reconciliation level, which is greater than what the President asked for all domestic programs, and if the committee bill is $1 billion over the President's request it is obvious that in other areas funds have been added to the President's request, because here it is being reduced below the President's request.

It simply does not make any sense from the standpoint of the country, from the standpoint of our budget, to say this $37.5 million should not be added to bring this program up to a very modest level. I cannot imagine a national policy being pursued as we are pursuing a national policy with respect to all forms of energy assistance, wasting money, on the one hand, and not using it effectively, on the other hand.

Mr. President, I suggest the absence of a quorum.

Mr. McCLURE. Mr. President, will the Senator withhold?

Mr. MITCHELL. Yes.

Mr. McCLURE. Mr. President, I appreciate the statement that has been made by the distinguished Senator from Maine. I think the same argument could be made regardless of the funding level. You can justify $150 million, $300 million, $600 million, $900 million, you can justify $2 billion by the same argument. But there are budgetary constraints and there is simply no way in which we can satisfy every demand, even for the meritorious programs. I do not think we should too casually accept the idea that since everybody says this is a good program that we can, therefore, afford unlimited funding for it.

Obviously, we cannot, and that is the exact problem with the budgetary restraints we are under, and I think that is a fact of life we can confront.

Mr. MITCHELL. Mr. President, will the Senator yield? I am not suggesting unlimited funding, that is precisely the point. I am suggesting the limit of funding that is 25 percent below the level of funding last year, 14 percent below the reconciliation bill.

Mr. McCLURE. I understand that those figures have been explored. The administration's request was zero, and we have come with $112 million compared to the $175 million that was spent last year, so we have gone far more than halfway already in meeting the requests of this program, justified as they are.

But there are limits on what we can do without overloading the ship. What have we really done, as a matter of fact, throughout the entire budget? We say this is a good program, and we do not care about the impact on the budget. Soon we have a massive budget deficit that continues the terrible spiral of inflation which now wracks our country.

What happens to precisely the same people who would be benefited or assisted by this program? You find out that you hurt people by the very action taken in trying to help them, if we do not restrain the total budgetary appetite for expenditure on justified projects all. Each one of us may have some portion of this budget we like more or less than budget we like more or less than others, but there is no expenditure in the budget that has not been found worthy by a majority of both Houses of Congress. It is that balancing which we are undertaking today, and while I regret it, I must indicate that I think we have gone as

far as we can go. We must resist any further addition with respect to this program or any of the others that are involved under this bill.

If people want to add to the bill then they should find somewhere else in the budget, and particularly within this bill, where a corresponding reduction could be made.

I thank the Senator for yielding, and I reserve the remainder of my time.

Mr. MITCHELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. DURENBERGER). Who yields time?

Mr. MITCHELL. I suggest the absence of a quorum.

Mr. McCLURE. With the time on the quorum to be charged equally to both sides on the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that I may proceed for 10 minutes without charging it against the time allocated for the consideration of this bill and amendments thereto.

Mr. TSONGAS. Mr. President, reserving the right to object, can we have some indication as to when this vote will occur on this amendment? Some of us have other obligations. Can we agree to have it beyond a specific time, say, subsequent to 1:50 or 2 o'clock?

Mr. BAKER. Mr. President, I certainly have no desire to interrupt the proceedings of the Senate and certainly a vote on this amendment. If it could facilitate the matter, might I suggest that we set a time certain for a vote on this amendment at 2 o'clock.

Mr. TSONGAS. That would be fine with me.

The PRESIDING OFFICER. Is there objection to the request of the majority leader?

Mr. BAKER. Mr. President, I withhold the request for the moment.

Mr. President, I understand that the minority is going through its necessary clearance procedure on that request.

I wonder if I might proceed now for a moment, without charging the time against the time allocated on the bill or amendments thereto while we await final clearance on the request to set a time certain for a vote on this amendment.

The PRESIDING OFFICER. Is there objection?

Mr. LEVIN. Mr. President, would the majority leader yield for a question? Does that request assume that there would be no votes on any amendment before 2 o'clock?

Mr. BAKER. No, that was not what I put in the request. I would be glad to do that if the Senator wishes.

Mr. LEVIN. I merely make the inquiry of whether that was the intent.

Mr. BAKER. I think that, as a practical matter, there are not likely to be amendments voted on before 2 o'clock.

Mr. McCLURE. Will the Senator yield?

Mr. BAKER. Yes.

Mr. McCLURE. Mr. President, as I recall, under the controlled time on this amendment, we have something on the order of 20 or 25 minutes remaining on both sides for this amendment. It is my understanding that it is likely that not all of that time would be consumed on this amendment.

We would, therefore, even with the 10 minutes on another matter, have completed debate on the amendment and be prepared for a vote prior to the hour of 1 o'clock.

It would be my hope that we could then move to the consideration of another amendment, even though we might not be able to vote on the pending amendment prior to 2 o'clock. The next amendment in the agreed order is one to be offered by the Senator from Arkansas (Mr. BUMPERS), on which there is an agreed time limit. I would not want to fix a time on the Bumpers amendment that would interfere with the current deliberations here. We also wish to protect the right of Members with respect to amendments in the second degree with respect to either the initial amendment or the Bumpers amendment should any Member desire to offer such an amendment in the second degree.

Mr. MITCHELL. Mr. President, I have no objection to a vote at any time that is convenient.

Mr. President, I ask for the yeas and nays on my amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. Is there further objection to the request of the majority leader?

Mr. BAKER. Mr. President, let me restate the matter. I am asking now that I may proceed for not more than 10 minutes without it charging against the time allocated to this bill or amendments thereto. There is outstanding a request I will later make that the time for the vote on the Mitchell amendment occur at 2 o'clock. I will also include in that request any other rollcall votes ordered between now and 2 o'clock be stacked until after 2 o'clock, but I will not now make that request, Mr. President.

The only request I am putting at this point is that I may proceed for 10 minutes without it charging against the time for the amendment.

The PRESIDING OFFICER. Is there objection to the majority leader's request? Without objection, it is so ordered.

Mr. BAKER. Mr. President, I thank the Chair and I thank the Senate.

AMBASSADOR MIKE MANSFIELD FAVORS AWACS SALE

Mr. BAKER. Mr. President, the man for whom we all have great respect and hold in high regard and esteem is our former majority leader, Mike Mansfield. Senator Mansfield is now our Ambassador to Japan, where he serves with great distinction. It is always a matter of great pleasure when Mike Mansfield returns to this Chamber to give us a chance to renew old friendships and to enjoy once again the camaraderie that he so inspires.

A few days ago, Mr. President, I inquired of Ambassador Mansfield of his position on the President's proposal for the sale of AWACS aircraft to Saudi Arabia. He was kind enough to favor us with a reply in the form of a message which he directed to the President of the United States.

I have been given a copy of that message now, as has the distinguished Senator from Georgia (Mr. NUNN). I would like to yield to him so that we may share that message with our colleagues.

Mr. NUNN. Mr. President, with the vote coming on the AWACS sale tomorrow afternoon, I think that most of my colleagues would be interested in reading a copy of the message that Ambassador Mansfield sent to the President. Therefore, I am going to read it into the RECORD and also, for the benefit of our colleagues who are not here, will be joining with the majority leader to send it around and circulate it, because I do believe that it is an interesting perspective from our former majority leader, who is now Ambassador to Japan.

So I will now quote from this message from the Ambassador to the President.

DEAR MR. PRESIDENT: Over the past several weeks I have been asked by many people in and out of government about my position on the President's proposal to sell AWACS to Saudi Arabia. I have stated publicly and without equivocation that I favored the sale because it was necessary to maintain a balance in the Middle East and to shore up the positions not only of Saudi Arabia but also Egypt, Jordan, Sudan and Somalia.

I have felt that the assassination of the late President Sadat made the sale more imperative than ever. I have also felt that we had to establish a middle course as the President is endeavoring to do to try and find a way to establish a settlement of the difficulties which have confronted this area for so many years.

It would also, in my opinion, reinforce our our own position militarily and politically in that area because it would help to maintain a shaky peace in that most important part of the world.

We have four AWACS in Saudi Arabia now and they are there not for combat but for detection of trouble; we have sizable Naval and air elements in the western Indian Ocean and failure to approve the AWACS sale would mean we would have to increase our own Naval and air strength in the region which would be an extremely difficult task as the Seventh Fleet is already over-extended to a greater degree than many at home realize. Our friends, allies, and partners in this part of the world are keenly aware of the tremendous importance of this issue which in effect goes far beyond the Middle East and therefore could have a very damaging result worldwide.

Disapproval of the White House Proposal would not only reduce our standing in the Middle East but what we would fail to do would be compensated for by the sale of Nimrod Command and Control planes by the UK. The sale of the AWACS would in my opinion increase the stability of the region; and it would give our country time, flexibilty and room for maneuver toward a possible peaceful settlement in a region which has known

only instability, confusion, danger and terror over too many decades. The failure of the proposal would deal a blow to the prestige of Office of the Presidency in the conduct of our nation's foreign policy and do so at a time when we should be providing all our help and understanding in dealings with a part of the world in which we have a vital stake and where our national interest is involved.

The stands taken by both sides on this issue are honest and understandable. The question is how we resolve our doubts and the answer to those doubts is, in my opinion, to give the President of our country the benefit and the responsibility which he has requested.

The pre-eminent issue is peace and peace will take time, patience and understanding. Will we look to the future and measure the possible costs of failure or face up to the present and do what we can to prevent a possible holocaust in the most volatile region on earth? How much is a possible peace worth? What will be the price of a possible failure?

As the President's personal representative in this country, I am outside politics but as a human being, I long for peace. As a citizen, my country, its President, and its future are in my daily prayers. This is my position which you may use as you see fit.

Respectfully,

MIKE MANSFIELD.

Mr. President, as I mentioned, I will, together with the majority leader, send this letter to all Senators, but I felt that it was timely and appropriate and I felt it was a matter that should be brought to the attention of the Senate as we begin the debate on a very important foreign policy matter.

Mr. BAKER addressed the Chair.

The PRESIDING OFFICER. The majority leader.

Mr. BAKER. Mr. President, I thank the Senator from Georgia. I especially appreciate his reading the full text of the Mansfield letter into the RECORD. I think it is important in the context of the deliberations of the Senate and I think it is important as a statement of concern of an individual and public servant.

I hope, Mr. President, that the Mansfield view of this situation will prevail at 5 o'clock on Wednesday next.

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS—1982

The Senate continued with the consideration of H.R. 4035.

Mr. BAKER. Mr. President, I am advised now that it is not possible to proceed to the consideration of another amendment after the Mitchell amendment, until after the Mitchell amendment is disposed of.

I ask unanimous consent then—and I may say parenthetically this has been cleared on both sides of the aisle—that after the debate on the Mitchell amendment is concluded, the Senate recess without further action or motion until the hour of 2 p.m.; that a vote on the Mitchell amendment occur at 2 p.m.. and that after the disposition of the Mitchell amendment, the Senate resume consideration of other amendments as previously ordered, in which case, as I understand, the Bumpers amendment will be the next amendment.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The Senator from Maine.

Mr. MITCHELL. Mr. President, I yield to the Senator from Minnesota.

Mr. DURENBERGER. Mr. President, I rise to support the amendment offered by Senator MITCHELL to restore funding for the weatherization program to the Interior appropriations bill. Senator COHEN and Senator MITCHELL have spoken eloquently and ably on the strength of this program and the contribution that it has made to the national interest by reducing our reliance on imported oil. There are few programs included in the Interior appropriation that have a more important claim to be funded by the Federal Government.

I would remind my colleagues of the source of the funds that will be used to pay for the weatherization program. In 1979 we made the decision to decontrol the price of oil—to let it rise to the level set by the OPEC cartel. This decision has caused a spiral of energy inflation that many in our Nation cannot handle. To offset the impact of that decontrol decision, we imposed a windfall profit tax on the oil industry and announced our intention to use the revenues from the WPT to assist those who could not afford decontrol and to encourage others to conserve and to convert to renewable resources through tax credits.

Decontrol has now been accomplished. The oil producers are receiving the world price. And the Federal Government is taking billions of dollars of that price increase through the windfall profits tax. Is there no room in those billions for us to live up to our promise to assist those who cannot afford decontrol?

Mr. President, weatherization should be the first priority for spending from the revenues of the windfall profit tax. Sometimes I think we made a mistake in our design of that legislation. As some will remember, President Carter proposed that the revenues from the WPT be set aside in a trust fund to be used solely to further our independence from the OPEC cartel. The Finance Committee chose not to take the course. But maybe we should have. Because now we find that the commitment to energy independence which fostered the decontrol decision has evaporated. And few in this body seem to recall their commitment to the elderly and the economically disadvantaged to offset the impact of decontrol through programs like the weatherization program, low income energy assistance, and the tax credits to encourage conservation and conversion to renewable resources.

Mr. President, I made a commitment to these programs when I voted for the windfall profit tax and supported the decisions of two President to decontrol the price of oil. I intend to fulfill that commitment by voting for the amendment offered by the Senator from Maine and I ask the support of my colleagues who were here when we passed the windfall profit tax and when we made the commitment to this program and other efforts to secure the energy independence of our Nation.

Thank you, Mr. President.

The PRESIDING OFFICER. Who yields time?

Mr. MITCHELL addressed the Chair.

The PRESIDING OFFICER. The Senator from Maine.

Mr. MITCHELL. Mr. President, it is only a coincidence, but I think it is ironic, that the distinguished Senator from Georgia read into the RECORD a letter from Ambassador Mansfield regarding the AWACS sale at this point in the deliberation of this amendment. It brings into focus the fact that a major reason for our concern in the Middle East, a major reason for the turbulence in that region, a major reason why the United States is expending billions of dollars and a great deal of national energy, a great deal of the President's time, a great deal of the time of the Congress, is the fact that we are dependent on that part of the world for oil. That ought not to be exaggerated, but it is, nonetheless, to a significant degree.

Here we are now with a very modest amendment that has, as its principal objective, reducing that dependence on foreign oil, reducing our reliance on the supply of an absolutely essential item from the most unstable part of the world, and we are being told that we cannot afford it; we cannot afford to spend $150 million to weatherize homes in this country, but we can afford to spend billions and billions of dollars to try to assure our supply of oil from the Middle East.

Does that make sense? Is that in our national interest? Are we not far better off to take steps within this country to reduce that dependence?

There has been very little disagreement here today about the effectiveness of the weatherization program, and for good reason. That reason is that it is an effective program. It makes sense.

I say that, in addition to the reasons I stated earlier. The coincidence of the distinguished Senator from Georgia raising that point here in the middle of this debate reinforces the argument for this amendment and makes clear that the program is an effective one and, I emphasize in closing, has already been cut 25 percent.

So this program has taken its share of the cuts, has made its contribution to the national need for restraint in spending, and it ought not to be cut 42 percent as the committee proposes.

This is a small, sensible, logical step that is consistent with the national interest and ought to be approved by this body.

Mr. CHAFEE. Mr. President, will the Senator yield?

Mr. MITCHELL. I yield to the Senator from Rhode Island.

Mr. CHAFEE. Mr. President, I thank the distinguished Senator from Maine for yielding this time to me. I rise in support of his amendment. With his permission, I would like to be added as a cosponsor.

Mr. MITCHELL. Very gladly.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAFEE. Mr. President, I think this amendment makes good sense. It seems to me that the weatherization of

the homes of the low-income people should continue to be one of our major priorities in the energy conservation area.

As you know, Mr. President, we have a low-income fuel assistance program which exists, which I have supported through the Chafee amendment and other efforts. However in many ways the fuel assistance program does not get to the heart of the energy conservation problem. The problem is that if a home is not properly weatherized a great deal of energy is lost through improperly insulated roofs, windows, and doors. This is a particularly serious situation for low-income individuals whose homes are often very poorly maintained. The amendment of the distinguished Senator from Maine recognizes the importance of continuing the effort to provide insulation for the homes of low-income families by providing an increase in the weatherization program.

Since the weatherization program started in 1977, 4 years ago, in my own State of Rhode Island, we have received nearly $6 million. With that money we have weatherized over 7,000 low-income homes. Approximately 23,000 eligible low-income households remain. In other words, we have done one-third of the job in 4 years.

The results of the weatherization program in my home State have been extraordinary. We estimate that weatherization results in an average annual fuel savings of 18.5 percent per household. This means a savings of 18 cents of every dollar of low-income fuel assistance that goes to a weatherized home. Thus, weatherization makes low-income fuel assistance money go much further.

So, Mr. President, I urge my colleagues to support Senator MITCHELL's amendment. It is my understanding that it comes below weatherization allocation in the budget reconciliation bill, which is $175 million. This amendment, as I understand it, would bring the Senate recommendation to the House level, which is $150 million, an increase from the $112 million which is the level we are currently considering.

Mr. President, I commend the Senator from Maine for offering this amendment, and I give him my support.

I thank the Senator for yielding.

Mr. LEAHY. Mr. President, a problem is funding for the weatherization program during the continuing resolution. I wanted to make sure other Senators were aware of this situation, and I would also like to explore with the distinguished chairman of the committee (Mr. MCCLURE), what possibilities we have to correct this situation.

Mr. President, the Office of Management and Budget has told the Department of Energy, which administers the weatherization program, that it does not have the authority under the continuing resolution to make grants to States. We now have a situation where the doors may still be technically open in the Washington offices, but all weatherization activities have been sharply curtailed at the State and local levels. Two States, South Carolina and Indiana, have already closed their programs and many others, including my own, are open only because of a small, last minute windfall from 1980 funds. These bonus funds are almost expended already.

Mr. President, I understand that the continuing resolution sets a ceiling on the level of spending, and not a floor. However, the resolution does not allow OMB to terminate programs, which is the real effect of OMS's interpretation. It has also been reported to me that DOE is terminating personnel in the weatherization program. This action would clearly be in contradiction to the terms of the continuing resolution. Such actions should be stopped immediately, both in the Washington and regional offices, for it is a devious way to subterfuge a program which Congress clearly supports.

The report accompanying the resolution states that we were concerned about "preserving to the maximum extent possible the flexibility of Congress in making final funding decisions." The actions of OMB and DOE, if allowed to continue, will deny us this flexibility, and will shut down the program for us.

We are all aware of the strong support Congress has shown for weatherization. Although President Reagan had not requested any funds for fiscal year 1982, Congress has voted on several occasions to continue the program.

In the omnibus reconciliation bill, the Energy and Natural Resources Committee instructed that up to $336 million could be used for energy conservation programs. The committee specifically mentioned the weatherization program as one of the priority programs to be continued.

When the Subcommittee on Interior met back in July, I offered an amendment to fund weatherization at $150 million. We finally agreed on a level of $112.5 million, and the House has agreed to the $150 million level. There is no doubt of the strong support in both the House and Senate for a separate, continued weatherization program.

Given this impressive legislative history, I do not think I was alone in assuming that the terms of the continuing resolution allowed States to continue their weatherization programs. I need not remind my colleagues that these funds are urgently needed by the States before winter sets in. Many of you know that last summer the program was insulating homes at the highest rate in the program's history, which figured out to an annualized rate of $400 million. OMB's action cuts the States down to $0.

The weatherization program is one of the most commonsense, economical programs we have going. Each insulated home will reduce its energy use by an average of 25 percent. This will mean more energy for us all, and less strain on limited fuel assistance funds. Yet OMB is holding back on weatherization moneys at a time when they are most urgently needed.

I turn to my colleague, Senator MCCLURE, for his thoughts and any clarification he may offer on this matter. I would hope that we could urge OMB to reevaluate its interpretation. I simply do not believe that its current actions are consistent with the intentions of our subcommittee, and of Congress as a whole.

The continuing resolution provides that the weatherization program should be funded at a level not to exceed the current rate of $182 million or the fiscal 1982 level as passed by the House of $150 million, whichever is lower. Is this a correct assessment?

Mr. McCLURE. Yes, it is correct.

Mr. LEAHY. Do you agree that it was the intent of the Senate that this program should be continued at a level of at least $112.5 million?

Mr. McCLURE. The committee has adopted that appropriation figure.

Mr. LEAHY. Do you agree that OMB does not have authority to terminate programs under the continuing resolution? Yet has not OMB, in effect, terminated the program for the States by refusing to award their grants?

Mr. McCLURE. To the first question, let me answer that that is my understanding. With respect to the second question, I understand that any agency may request relief from the spending limitation suggested by OMB where it would contravene the minimum level.

Mr. LEAHY. Has the committee received a formal request from OMB to defer funds for the weatherization program?

Mr. McCLURE. No, it has not.

Mr. LEAHY. Does the committee expect such notice to be sent?

Mr. McCLURE. I do not know of any such action.

Mr. LEAHY. Until we receive a formal request, what authority does OMB have to freeze these funds?

Mr. McCLURE. OMB has broad authority in the administration of all Federal programs and expenditures. Their authority is, of course, limited by the provisions of the continuing resolution as well as other statutes.

Mr. LEAHY. If and when we receive a deferral request, what steps will you then take as chairman of the Interior Subcommittee to act on the deferral?

Mr. McCLURE. I can assure the Senator that each deferral will be reviewed very closely and, working with the members of the Interior Appropriations Subcommittee, action will be taken as the subcommittee deems proper.

Mr. LEAHY. If the distinguished chairman does not plan to act on this deferral, I would like to inform him of my intention to immediately introduce a resolution to disapprove the deferral for the weatherization program.

Mr. McCLURE. I thank the Senator for that information.

Mr. LEAHY. Mr. President, I support this amendment today to increase funding for the low-income weatherization program. Even with this increase, the weatherization program will receive significantly less funding than in previous years. The administration has proposed eliminating this program at a time when it is operating at its peak of efficiency—weatherizing some 30,000 to 35,000 homes per month. It was estimated this summer that the States were obligating their funds at an annualized rate of $400 million.

Mr. President, the low-income weath-

erization program provides badly needed aid to those least able to afford rising energy costs and a policy of conservation by price. The administration has twice testified to the Appropriations Committee that the Federal Government should fund those programs that benefit those who cannot take advantage of energy tax credits. The low-income weatherization program is precisely that.

Each household weatherized reduces its energy consumption by an average of 25 percent. In Vermont, these households save an average of $340 over the course of the winter. At the same time, this program has saved 2.5 million barrels of oil a year and promises to conserve much more, helping to reduce our dangerous overdependence on foreign sources of oil.

Two-thirds of all low-income homes remain severely underweatherized. These people are now paying 35 percent of their income for energy. The low-income weatherization program can provide them with cost-effective aid, reducing the burden of rising energy prices for them, and saving energy for all of us.

I sponsored an amendment to fund this program at $150 million when it was considered by the Interior Appropriations Subcommittee. The subcommittee agreed to provide $112 million, which was less than what I believed necessary, but was still far above the President's request of $0. I fully support today's attempt to provide $150 million.

I urge my colleagues to support this amendment.

Mr. KENNEDY. Mr. President, I rise in support of the amendment of my colleague from Maine (Mr. MITCHELL).

This amendment—by providing $62.5 milion to the Department of Energy's weatherization program—may seem excessive to some. It may appear to be too costly. I cannot agree with that characterization.

So long as elderly citizens are forced to choose between heating their homes or buying their food, so long as low-income families shiver through cold winters, so long as middle-income Americans see more and more of their paychecks go to pay their fuel bills, I cannot agree that investment in home weatherization is unnecessary.

The program is too vital to be cut by 42 percent as the committee has proposed. Even with this amendment, funding for the program will still be cut by $18 million—from $193 million last year to $175 million this year. This amendment recognizes the need for savings in the Federal budget without putting an excessive burden for that savings on the low-income and elderly citizens of our Nation.

The success of this program in my home State of Massachusetts has been impressive. Since its inception in 1977, this program, first under the administration of the Community Services Administration and now under the Department of Energy, has weatherized 16,000 households. These households have reduced their energy use by 40 to 60 percent.

The average household in Massachusetts paid $1,274 to heat their homes last year. Saving 40 to 60 percent of this cost is obviously very beneficial to families with little income to spare.

The efficiency of this program has been on the rise. By the time that money ran out in June of this year, Massachusetts was weatherizing 1,000 households per month. As one official said, the program has now gotten off the ground. It is now an efficient and effective program. The drastic cut proposed by the committee in this bill is bound to undermine this efficiency and effectiveness.

Despite the impressive accomplishments of this program, the work that remains is tremendous. The Department of Energy estimates that over 230,000 households are still eligible and their homes need insulation and weatherproofing.

Every year that these homes are not weatherized is another year when our economy is drained by energy costs that need not be spent. It is another year when more foreign oil is used than need be. It is one more year when more low-income families and more elderly will suffer through another cold winter. This proposal can help relieve that suffering. I urge my colleagues to support this amendment.

Mr. MITCHELL. Mr. President, if the distinguished manager of the bill is prepared to yield back the remainder of his time, I am prepared to yield back the remainder of my time.

Mr. McCLURE. Mr. President, I am prepared to yield back the remainder of my time. My understanding is that we have no request for further time from either side.

Let me respond only to the Senator who has just spoken, Senator CHAFEE.

With respect to the issue of weatherization on rental properties, our experience, unfortunately, has been in too many instances that as the home is improved the advantage does not accrue to the renter; the advantage accrues to the landlord who simply then raises the rent. We have not helped the low-income recipient. We have only assisted the property owner. While we might argue that the expenditure of the money thus is a good expenditure from the energy standpoint, it is not necessarily a good expenditure of the taxpayers' money when it goes to enrich the property owner and does not enhance the ability of the low-income renter to pay his rent.

If there be no further requests for time, Mr. President, I am prepared to yield back the remainder of my time on this amendment, and I do so.

Mr. MITCHELL. I yield back the remainder of my time, Mr. President.

RECESS UNTIL 2 P.M.

The PRESIDING OFFICER. Under the previous order, debate having concluded on this amendment, the Senate stands in recess until 2 p.m.

Thereupon, the Senate, at 12:50 p.m., recessed until 2 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mrs. KASSEBAUM).

The PRESIDING OFFICER. The question is on agreeing to UP amendment No. 535, offered by the Senator from Maine (Mr. MITCHELL). On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. BAKER. I announce that the Senator from New Mexico (Mr. SCHMITT) and the Senator from Alaska (Mr. STEVENS) are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Missouri (Mr. EAGLETON), the Senator from Hawaii (Mr. INOUYE), and the Senator from Nebraska (Mr. ZORINSKY) are necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber who desire to vote?

The result was announced—yeas 46, nays 49, as follows:

[Rollcall Vote No. 334 Leg.]

YEAS—46

Baucus	Hart	Mitchell
Biden	Hatch	Moynihan
Boschwitz	Hatfield	Pell
Bradley	Hawkins	Pryor
Bumpers	Heinz	Randolph
Burdick	Hollings	Riegle
Byrd, Robert C.	Huddleston	Rudman
Cannon	Humphrey	Sarbanes
Chafee	Jackson	Sasser
Cohen	Kennedy	Specter
Cranston	Leahy	Stafford

Dixon	Long	Tower
Dole	Lugar	Wallop
Domenici	Mattingly	Warner
East	McClure	

NOT VOTING—5

Eagleton	Schmitt	Zorinsky
Inouye	Stevens	

So Mr. MITCHELL's amendment (UP No. 535) was rejected.

Mr. JOHNSTON. Madam President, I ask unanimous consent that it may be in order to present two uncontested amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 536

(Purpose: To permit the Flathead Irrigation District, Montana, to use net power revenues for maintenance and operation)

Mr. JOHNSTON. I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Louisiana (Mr. JOHNSTON) for Mr. MELCHER proposes an unprinted amendment numbered 536.

Mr. JOHNSTON. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

Insert at the appropriate place the following:

Notwithstanding the provisions of Section 6 of the Act of May 25, 1948, (62 Stat. 269, 273), appropriations of power revenues of the Flathead Irrigation Project on the Flathead Reservation, Montana, made pursuant to Section 3 of the Act of August 7, 1946, (60 Stat. 895) shall hereafter be available in amount not exceeding 20 percent of the gross power revenues of said project for the preceding fiscal year, or $750,000, whichever is greater, for maintenance and operation of the dam: *Provided*, That no appropriations shall be made in excess of the Flathead Irrigation power revenues on deposit with the Federal government.

Mr. MELCHER. Madam President, this amendment would permit the Flathead Irrigation District in Montana to use a portion of net power revenues for maintenance and operation of the project's dam.

At the present time, the district is limited by law to using only up to $75,000 for this purpose. The dam is getting old and it needs repair. Clearly, $75,000 is not sufficient for this purpose.

The Department of the Interior favors this amendment, and has made this known to the distinguished chairman of the subcommittee.

Though the $75,000 limitation was realistic when it was enacted in 1948, it is now totally inadequate to fund improvements and extensions necessary to keep up with increased demand.

The accumulated power revenues are not budget items, and they are funds credited to the project. Therefore, this amendment has no budget implications.

The amendment is germane to this bill because it deals only with the amount of funds that are available to the project. The language closely parallels instructions already in the bill for expenditure of funds such as those in the administrative provisions relating to the Bureau of Indian Affairs.

The limitation on the use of these funds has been a growing problem for a number of years, and it is essential that repairs and modifications be made to the dam before there is a tragedy of major proportions.

I urge the adoption of the amendment.

Mr. JOHNSTON. This is an amendment providing $75,000 for maintenance of the Flathead Dam. It has been approved on both sides.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Louisiana.

The amendment (UP No. 536) was agreed to.

UP AMENDMENT NO. 537

(Purpose: To provide assistance in preventing the destruction of an area of historical significance)

Mr. JOHNSTON. I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The bill clerk read as follows:

The Senator from Louisiana (Mr. JOHNSTON) proposes an unprinted amendment numbered 537.

Mr. JOHNSTON. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 57, after line 21, add the following:

PRESERVATION OF AREA OF HISTORICAL SIGNIFICANCE

For necessary expenses to enable the Architect of the Capitol to carry out the purposes of the first section of the Act of October 14, 1976 (Public Law 94–495), $250,000.

Mr. JOHNSTON. Madam President, this $250,000 is for the maintenance of the Congressional Cemetery. It has been approved by everyone, and it is understood that this will not be a recurring thing.

The reason why this is not on the legislative appropriation bill is because that train has already left the station, and we understand it will not be asked for again this next year. The $250,000 is badly needed for that Congressional Cemetery.

Mr. McCLURE. Madam President, this has not been covered by specific legislative authorization. Under normal circumstances we would request that, and it may well be that this particular item will not make it through the conference. We may have to defer to the legislative process. But with that understanding I have no objection to the amendment at this time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Louisiana.

The amendment (UP No. 537) was agreed to.

FOUR TRIBALLY CONTROLLED COMMUNITY COLLEGES

Mr. MELCHER. Madam President, I am greatly concerned that the committee eliminated funding in H.R. 4035 for four tribally controlled community colleges which have been determined to be feasible during fiscal year 1981. These schools, Fort Peck Community College, Cheyenne River Community College, Lummi School of Aquaculture and Fisheries, and Little Big Horn Community College have all been determined to be feasible and two of the schools actually received grant funds under title I of the Tribally Controlled Community College Assistance Act during fiscal year 1981.

The authorizing statute, Public Law 95–471, provides that the Secretary shall not consider any grant application unless the school has been found to be feasible and will service a reasonable student population. However, once the Secretary has approved an application for a tribally controlled community college, the statute provides that he shall provide a grant to such college. This is an entitlement program and any selection of a subset of the eligibles for funding to the exclusion of other eligibles appears to be discriminatory and an unequal application of the law.

Since this is an entitlement program, I believe the Bureau of Indian Affairs could be mandated by the courts to provide funds to these four schools with whatever funds are appropriated. The statute provides that each grant shall provide $4,000 per fulltime equivalent student but further provides that if the sums appropriated are not sufficient to pay in full the total amounts then such amounts shall be ratably reduced. If the Senate reduction of $998,619 is adopted and the Bureau is required to provide grants to the four schools, with the increased enrollment due to the rise in unemployment on Indian reservations, the reduction of each of the 17 title I eligible schools would have to absorb would greatly hinder their ability to provide the educational opportunities for Indian students contemplated by title I of the act.

Given the budget cuts which have been recommended for Indian programs both within the Bureau of Indian Affairs' budget and generally throughout the Federal budget, I believe that additional reductions to the tribally controlled community colleges would be unfortunate. We must realize that on most reservations there is no private sector funding available for these colleges to access for assistance. In addition, unemployment is increasing on reservations with reductions in or elimination of federally funded programs and many of the unemployed are enrolling in tribally controlled community colleges to increase their skills in order to find gainful employment.

Madam President, although enrollments at a number of colleges exceed the estimate in the Bureau of Indian Affairs' budget justification, if we assume that these estimates are accurate for the purpose of calculations, the original budget request of $6,157,000 in the March budget would provide $3,443.50 per full-time equivalent student if all eligible schools are funded. If the Appropriations Committee reduction of $998,619 stands and the Bureau is required to fund all eligible colleges, the per student amount will be reduced to $2,885.

I might point out that, according to the subcommittee, under the committee bill the Bureau-operated postsecondary schools will receive $5,400 per student, including residential costs, and the Bureau schools have access to other Bureau services not included in their budgets, which would further increase the amount per student. I believe it is unfair to expect the tribes to perform services at such a reduced rate below what we provide for the Bureau of Indian Affairs to perform similar services.

Madam President, I believe we should fund these colleges to succeed, not to fail. I am not going to offer an amendment to restore the funding in an effort to assist the managers of the bill in limiting the number of floor amendments. However, I urge my colleagues to agree with the House in conference to provide the additional $998,619 for operating funds for the above-mentioned four tribally controlled community colleges.

Mr. BAKER. Madam President, I am advised the distinguished Senator from Nebraska wishes to make a statement at this time not related to the pending bill or amendments thereto, and I ask unanimous consent that he may now be recognized for not to exceed 15 minutes without the time being charged against the bill or amendments at this time.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE SALE OF AIR DEFENSE ENHANCEMENTS TO SAUDI ARABIA

Mr. EXON. I thank the Chair and I thank my friend, the majority leader.

Madam President, the administration's sale of our sophisticated and highly advanced technology known as AWACS to Saudi Arabia or any other country poses serious questions from a security standpoint by almost every measurement which I have judged it against during my time-consuming pursuit of reaching a decision on this national security issue.

(Mr. ANDREWS assumed the chair.)

Mr. EXON. It is my unequivocal conviction that the United States of America has worked its way into a serious and potential no-win situation. Our goal must be to minimize the damage.

I, frankly, have been appalled by some of the simplistic arguments advanced regarding these very complicated and far-reaching proposals which have been advanced by some people.

Among them was the misguided and non-statesman-like approach by former President Nixon that the proposal was a choice between Reagan and Begin. Indeed, one of my constituents indicated that if I dared consider voting against the sale of the AWACS that they had gotten to me and I had sold out.

There is another theory that a President, any President, should always be supported in foreign policy decisions. Otherwise, we could not have a true bipartisan foreign policy. That attitude Mr. President, ignores completely the responsibility of the Senate and flies directly against the actions of many of the current proponents who were vocal in their calls for the Senate to reject the President's initiatives on the Panama Canal controversy and the proposed SALT II treaty. The Senate abdicates its constitutional, legal, and sworn obligations if it follows such a course, as may have been done unwittingly with the near unanimous endorsement of the Tonkin Gulf resolution.

Still another line of reasoning, or lack thereof, was touted by some here that it was good for business and employment for use to approve the sale. This, Mr. President, is an extension of what evidently and unfortunately has become the centerpiece of our foreign policy, whatever it is—allowing the great United States of America to allow its true resolve to be measured by potential friend and foe alike as to how successful a gunrunner we are to our hopeful friends. While this is not the time to debate overall foreign policy, Mr. President, our obvious preoccupation with military sales again raises the question which I have posed frequently before on this floor and elsewhere which still begs for an answer, Why can we not recognize and exploit peace initiatives based on America's prime resource of food production and why are we not more aggressively pursuing arms control negotiations while we continue to build our military capability?

Mr. President, I have listened to and studied the recommendations of many of my colleagues on this important subject and have been involved in countless discussions. Those whom I consider most knowledgeable on military and foreign affairs have frankly made my decision more difficult since they are almost evenly split on their bottom line conclusions. The issue here is: first, what is in the best security interests of the United States; and second, how best do we promote the chances of peace in the troubled Middle East?

An interesting and perceptive argument against approval was that advanced by the minority leader. It addressed the political difficulties which might confront, and possibly imperil, Prime Minister Begin—the only remaining key figure in the important breakthrough embodied within the Camp David peace accords, thereby limiting the flexibility that leader needs in advancing the chances for a comprehensive and workable peace.

It is my view that the AWACS portion of the sale presents no serious or direct military threat to Israel, our primary ally and friend in the Middle East. However, loss of the AWACS, if its security is compromised by any subsequent developments, would be a serious blow to both the United States and all of our allies. Deeply troubling to me has been what I perceive to be an administration-backed effort to downplay the AWACS technology. It should be remembered that the Soviets have no such surveillance system and are just now beginning efforts to deploy something of its kind. We claim to be superior to the Soviets in overall technology, and I believe we are. To downplay the seriousness of the security implications of the AWACS sale is irresponsible. We are not proposing here to sell a video computer game.

The companion F–15 enhancements in the sale package include the highly advanced Sidewinder missile. This will make the F–15, as equipped, a potential offensive force against Israel. However, anytime we sell any military equipment, we run the potential risk of its subsequent use against us and our allies. Indeed, when we launched our rescue attempt in Iran, it was American planes and American-trained Iranian pilots which were a primary concern for the chances of success during the mission's latter stages. Since the mission failed early, we were spared the opportunity to see if fleeing Americans would be hoisted on the Petard of our American arms for everyone syndrome.

While this problem exists, the F–15 enhancements will not, in my opinion, seriously threaten Israeli overall clear air superiority in the region. It is clear to me that Saudi Arabia does indeed need the F–15's and the enhancements to defend themselves from possible threats on their southern and eastern borders, the areas which include the oilfields. It would have been far, far better had we agreed to only the F–15 enhancement sale and contracted to continue indefinitely the present arrangement with U.S. AWACS with our crews and joint sharing of information. It still is not clear why this could not have been the arrangement. It seems the sale is another unwelcomed litmus test of friendship.

It is clear that the Saudis have been friends of the United States, but let us remember that we and our allies are also their best customers for the material God—oil. They have been helpful to our interests in bringing about the recent truce in Lebanon. They are frequently a voice of moderation in essentially a volatile Arab world.

But degrees of friendship can also be measured by the long-term actions of one's friends and the company they keep.

While we are led to believe that the Saudis are a real and trusted friend, we should realize that our last large sale of military equipment—the F–15's—to them back in 1978 was to moderate price increases in oil. It has nearly tripled in price since then.

Many Americans believe that the Saudis are the moderating influence in OPEC. In truth, they are OPEC, and because of their dominant position in oil production they set high world oil prices which are the single most important factor in the current economic problems of the Western industrial nations.

As Dr. J. B. Kelly details so well in his excellent book, "Arabia, the Gulf and the West":

> All indications are that the Saudi government intends to continue to impose restraints upon oil production so as to prolong the technical life of the fields—which in turn implies that it will seek to raise prices at intervals in order to maintain revenues at a desired level. The only way to achieve this aim is through the survival of the OPEC cartel, which is why Saudi Arabia, one of the principal founders of the organization, will strive to ensure its survival. How much, if at all, her "special relationship" with the United States may hamper her pursuit of these aims has yet to be seen.

And so, Mr. President, I say to all that the Saudi-American relationship to date has been something less than expected from one friend to another. It appears clear that the royal family views its relationship with the United States as in its and the Saudi people's best long-range interests.

Yet they have some proving to do in the future. How many of the American people know that Saudi Arabia:

First. Is the prime financial benefactor of the PLO;

Second. Has crippled the Sadat peace initiatives in the Middle East, including rejection of the Camp David accords;

Third. Has counseled other sovereign states in the area against granting American bases and port facilities;

Fourth. Has welcomed the presence of African terrorist Idi Amin within its borders; and

Fifth. Has censured the United States for shooting down the two Libyan fighters which attacked our fleet in international waters.

Mr. President, it is clear to this Senator that this proposed sale is a high-risk venture, and along with it goes the open guarantee of the Reagan administration that we will become directly and militarily involved in Saudi Arabia to protect our interests there. The Secretary of Defense was quoted as saying on October 5, 1981, that President Reagan would intervene "if there should be anything that resembled an internal revolu-

tion in Saudi Arabia, and we think that's very remote." The President has confirmed essentially the same thing with me in White House conversations. Right or wrong then, this country has promised to duplicate in Saudi Arabia what we criticized the Soviets for doing in Afghanistan. I wonder how that grabs the American people? Moreover, I wonder what we are going to do it with.

It is ironic that, simultaneous with all of this tough macho talk, and while the President proclaims that those Senators who do not agree with him on the AWACS sale are not doing their country a service, the same President is ordering a reduction of at least 25 percent in our naval carrier task forces in the Indian Ocean and Persian Gulf areas.

So, Mr. President, these are the problems I see with the decision by the President to enter into the sales agreement. But I am faced with the fact that that Presidential decision has been made.

It seems to me that the President's commitment, and the world discussion surrounding it, has advanced to the point that rejection of the sale by the Senate would generate extreme ill will for the United States—not only in Saudi Arabia but throughout the Middle East and the world. Our ability to follow through on a promise would be called into question.

While we can argue that this concern is not valid, the perception would be there. And when it comes to world opinion of our trustworthiness, perception may, in fact, be reality.

Former Secretary of State Henry Kissinger put it well in summing up this controversy some time ago. He said it was a mistake for us to have ever agreed to sell the AWACS to Saudi Arabia in the first place, but it would even be a worse mistake now to decline to approve the sale.

Our leadership position in the world is one which requires resoluteness and the support of others in our common goals. The common goals must include the deterrence of war and the active pursuit of peace. This latter consideration is the one which must have a new life breathed into it immediately. We simply must move the Camp David accords—a true beginning—forward and we must have help from our Arab friends. Egypt cannot be allowed to go it alone much longer. And neither can Israel survive indefinitely in isolation. Our attention and very best efforts must now be turned to the achievement of a peace in the region which can endure and withstand changes of government or other transitory considerations.

Mr. President, in closing, one redeeming feature of this arms sale package which must be kept in mind is that it is conditional, as verified by the President's letter to me of October 26, 1981. The first AWACS aircraft is not scheduled for delivery until late 1985, while the F–15 enhancement package will go forward sooner. We do have the option of canceling the sale during the interim period if conditions change before delivery.

Mr. President, I ask that my letters of inquiry in this matter to the President and his answers thereto be printed in the RECORD following my remarks, along with a draft copy of a letter hand delivered to me by the White House on this subject.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. EXON. This time period will give the Saudi Government a chance to prove their true friendship for us and put to rest forever the charge that U.S. policy in the Middle East is geared to one country only—our proven friends in Israel.

Because of these perspectives and my conclusion that, at this juncture, no other course would be wise, I will reluctantly support the sale. At the same time, I will defend to the end my colleagues who will cast contrary votes. It is my view that they have as good a chance to be correct as this Senator, as we face this essentially no-win situation.

I thank the Chair.

EXHIBIT 1

U.S. SENATE,
Washington, D.C., October 19, 1981.

President RONALD REAGAN,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Following our two conversations regarding the proposed sale of air defense enhancements to Saudi Arabia, I assured you that I would continue to evaluate your position and that of your representatives on this matter. Although I hold reservations on the "packaging" of many items in the proposed sale and had requested previously that the issues be separated, I have not co-sponsored the Senate Resolution of Disapproval. As part of my continuing evaluation of this proposal, I will appreciate very much if you would provide me with responses to several related questions.

Under the terms of the sale, if approved, I understand that the first AWACS aircraft will not be delivered until late 1985. One important factor which needs amplification is the ability to reconsider delivery of these aircraft in the event of changed circumstances in the Middle East between now and that time. Is there currently embodied in the sales agreement a provision outlining the authority of the President to cancel the sale in the event that, during the pre-delivery timeframe, a determination is made that the sale would no longer be in the best interest of the United States? If not, was there an attempt on the part of our government to negotiate such a safeguard? What was the Saudi reaction to such a proposal if made?

Are there any written or other understandings with the Saudi government which guarantee the continued deployment of U.S. AWACS aircraft based in that country between now and the proposed delivery of the first Saudi AWACS aircraft in late 1985? If Saudi Arabia decided, between the time this sale might be approved and the delivery of their own AWACS aircraft, that the U.S. AWACS aircraft were no longer welcome in their country, would the sale be subject to cancellation according to the agreement?

As part of the original negotiations or subsequent discussions with the Saudi government, was a proposal ever made by U.S. representatives for joint control or crewing of the Saudi AWACS, similar to the arrangement we currently have with our NATO allies? Part of my concern stems from the conduct of "secret diplomacy" and its outgrowth. While I recognize the need for negotiations on sensitive matters to be conducted in a non-public forum, by the same token once negotiations have been completed and the Congress asked to acquiesce or approve, all of the available information should be provided to those who must make these decisions. It is and always has been bothersome to me to be asked to make such important decisions without having all of the facts at hand.

It has been widely rumored and you have been quoted in the media as indicating that you may have the authority to proceed with this proposed sale even if it is rejected by the House and Senate. Since I find this possible course troubling, I would appreciate your assurance at this time that you will not proceed unilaterally if the sale is blocked by both Houses of Congress.

Thank you for your attention to this request for information and I look forward to your response.

With best wishes.

Sincerely yours,

J. JAMES EXON,
U.S. Senator.

THE WHITE HOUSE,
Washington, October 26, 1981.

Hon. J. JAMES EXON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR EXON: Thank you for your thoughtful letter of October 19, 1981, on the subject of air defense enhancements for Saudi Arabia. I appreciate sincerely the attention you are giving to this important issue, and I am pleased to answer the questions raised in your letter.

First, although we do not anticipate such a development, I want to assure you that we have reserved the right to reconsider delivery of the AWACS aircraft in the event of changed circumstances in the Middle East. This right will be embodied in the Letters of Offer and Acceptance (LOAs) that will be signed by the USG and Saudi Arabia after Congressional review of the sale. A specific condition of these LOAs will be the provision that under unusual and compelling circumstances when the national interest of the U.S. so requires, the USG reserves the right to cancel the sale at any time prior to delivery.

Second, continued deployment of our AWACS is not a precondition to delivery of the Saudi AWACS, since our current AWACS deployment in Saudi Arabia is at their request and based on an understanding that arises from our mutual perception of the increased threat to the Saudi oil fields. This understanding will be formalized in a written foreign military sales agreement providing Saudi funding for the continuing deployment. Assuming that our proposal to sell AWACS to Saudi Arabia proceeds successfully, we fully anticipate that our AWACS will remain in Saudi Arabia, until or after the Saudi AWACS are delivered and we and the Saudis agree that the U.S. AWACS deployment is no longer required.

Third, during our meetings with the Saudis, U.S. representatives did discuss, in considerable detail, the issues of aircraft crewing and manning, specifically including joint crewing and control. As a result of these discussions, the Government of Saudi Arabia has agreed that the U.S. will have an important, long-term role and will maintain direct involvement in the development of the Saudi air defense system, including AWACS, well into the 1990s. The resulting structure is not based on the NATO arrangement, for we do not have a formal alliance with the Saudis. Rather, it is tailored to meet the security needs of both the U.S. and Saudi Arabia in the crucial Persian Gulf area.

The agreements we have reached with Saudi Arabia on security of technology,

access to information, control over third-country participation, and AWACS flight operations will be incorporated into the U.S./Saudi General Security of Military Information Agreement, the LOAs, and related documents, all of which will be available to the Congress. In accordance with the AWACS Export Control Act, however, final negotiation and signature of the LOAs cannot take place until after Congressional review is completed.

I am not considering employing any statutory waiver provisions regarding these sales.

Thank you again for your continued interest on this matter of mutual concern.

Sincerely,

RONALD REAGAN.

Dear ———: On October 1, 1981, I formally notified the Congress of our intention to sell AWACS aircraft and F–15 enhancement items to Saudi Arabia. This sale will enhance our vital national security interests by contributing directly to the stability and security of the critical area from the Persian Gulf through the Middle East to North Africa. It will improve significantly the capability of Saudi Arabia and the United States to defend the oilfields and facilities on which the security of the Free World depends, and it will pose no realistic threat to Israel.

When this proposed sale was first announced last spring, the Congress expressed concerns about certain aspects of the sale. After analyzing these concerns in detail, we entered into a series of discussions with the Government of Saudi Arabia over the summer.

The Government of Saudi Arabia has agreed, and I am convinced welcomes the fact, that the United States will have an important, long-term role and will maintain direct involvement in the development of the Saudi air defense system, including the AWACS. We also have reached agreement with the Saudi Government on a number of specific arrangements that go well beyond their firm agreement to abide fully by all the standard terms of the normal Letter of Offer and Acceptance as required by the Arms Export Control Act.

Transfer of the AWACS will take place only on terms and conditions consistent with the Act and only after I have certified to the Congress in writing that the following conditions have been met:

1. SECURITY OF TECHNOLOGY

A. That a detailed plan for the security of equipment, technology, information, and supporting documentation has been agreed to by the United States and Saudi Arabia and is in place; and

B. The security provisions are no less stringent than measures employed by the U.S. for protection and control of its equipment of like kind outside the continental U.S.; and

C. The U.S. has the right of continual on-site inspection and surveillance by U.S. personnel of security arrangements for all operations during the useful life of the AWACS. It is further provided that security arrangements will be supplemented by additional U.S. personnel if it is deemed necessary by the two parties; and

D. Saudi Arabia will not permit citizens of third nations either to perform maintenance on the AWACS or to modify any such equipment without prior, explicit mutual consent of the two governments; and

E. Computer software, as designated by the USG, will remain the property of the USG.

2. ACCESS TO INFORMATION

That Saudi Arabia has agreed to share with the U.S. continuously, and completely, the information that it acquires from use of the AWACS.

3. CONTROL OVER THIRD-COUNTRY PARTICIPATION

A. That Saudi Arabia has agreed not to share access to AWACS equipment, technology, documentation, or any information developed from such equipment or technology with any nation other than the U.S. without the prior, explicit mutual consent of both governments; and

B. There are in place adequate and effective procedures requiring the screening and security clearance of citizens of Saudi Arabia and that only cleared Saudi citizens and cleared U.S. nationals will have access to AWACS equipment, technology, or documentation, or information derived therefrom, without the prior, explicit mutual consent of the two governments.

4. AWACS FLIGHT OPERATIONS

That the Saudi AWACS will be operated solely within the boundaries of Saudi Arabia, except with the prior, explicit mutual consent of the two governments, and solely for defensive purposes as defined by the U.S., in order to maintain security and regional stability.

5. COMMAND STRUCTURE

That agreements which concern organizational command and control structure for the operation of AWACS are of such a nature to guarantee that the commitments above will be honored.

6. REGIONAL PEACE AND SECURITY

That the sale contributes directly to the stability and security of the area, enhances the atmosphere and prospects for progress toward peace, and that initiatives toward the peaceful resolution of disputes in the region have either been successfully completed or that significant progress toward that goal has been accomplished with the substantial assistance of Saudi Arabia.

The agreements we have reached with Saudia Arabia on security of technology, access to information, control over third country participation, and AWACS flight operations will be incorporated into the U.S./Saudi General Security of Military Information Agreement, the Letters of Offer and Acceptance (the government-to-government sales contracts), and related documents. These documents will stipulate that the sale will be cancelled and that no equipment or services will be delivered in the event any of the agreements are breached. I will not authorize U.S. approval of any of these contracts and agreements until I am satisfied that they incorporate fully the provisions that satisfy the concerns that you and I share. I do not foresee any need for changes in these arrangements, but should circumstances arise that might require such changes, I would consult fully with the Congress before deciding on any modifications.

I believe it is important to look beyond these agreements to their practical consequences, and to the implications of U.S. security assistance and training requested by Saudi Arabia. For example, the agreement we have reached with the Saudi Government to protect the security of equipment also affects the nature, extent, and duration of the U.S. role in the AWACS program. Since skilled Saudi personnel available for this program will remain in short supply, the U.S./Saudi understanding that third country nationals will not be permitted to operate or maintain the Saudi AWACS, will, in practice, extend U.S. involvement in Saudi AWACS operations and activities well into the 1990s. U.S. military and contractor personnel will be required to provide extensive operational training for Saudi AWACS aircrews; it will be 1990 at the earliest before the eight Saudi crews needed to operate all five AWACS aircraft will be trained, and replacement and refresher training of individual Saudi crew members will require USAF Technical Assistance Field Teams during the 1990s. Critical AWACS maintenance, logistics, and support functions, particularly radar and computer software support, will, of necessity, be performed by U.S. personnel in Saudi Arabia and in the United States, for the life of the AWACS.

The Saudi agreement not to share AWACS-gathered information with third countries also has significant practical consequences. This agreement, combined with the standard requirement that US-supplied equipment be used solely for defensive purposes, as well as the agree-to Saudi AWACS configuration, precludes any possibility that Saudi AWACS could contribute to coordinated operations against any nation in the region.

Concerning the agreement to operate AWACS only inside the Kingdom, it should also be noted that the Saudi Air Force will be trained to operate the AWACS in accordance with standard USAF AWACS doctrine and procedures, which call for AWACS to remain at all times a "safe distance" behind sensitive political borders—normally 100 to 150 nautical miles—to ensure AWACS security and survivability. Given the physical location of the oilfields AWACS is to defend, the vulnerability of AWACS should it operate near sensitive borders, and the history of Saudi observance of U.S. Air Force tactical doctrine, we are confident that the Saudis will adopt these practices.

In a broader sense, by enhancing the perception of the United States as a reliable security partner, we improve the prospects for closer cooperation between ourselves and the Saudi government in working toward point 5 above: our common goal of a just and lasting peace in the region. Since assuming the responsibilities of the Presidency, I have been impressed by the increasingly constructive policy of Saudi Arabia in advancing the prospects for peace and stability in the Middle East. The Saudi Government's critical contribution to securing a ceasefire in Lebanon is a striking example. I am persuaded that this growing Saudi influence is vital to the eventual settlement of the differences that continue to divide Israel and most of the Arab world.

I am confident that the Saudi AWACS will pose no realistic threat to Israel. I remain fully committed to protecting Israel's security and to preserving Israel's ability to defend against any combination of potentially hostile forces in the region. We will continue to make available to Israel the military equipment it requires to defend its land and people, with due consideration to the presence of AWACS in Saudi Arabia. We have also embarked on a program of closed security cooperation with Israel. This proposed sale to Saudi Arabia neither casts doubt on our commitment, nor compromises Israeli security.

It is my view that the agreements we have reached with the Government of Saudi Arabia take account of the concerns raised by the Congress. I am persuaded, as I believe the Congress will be, that the proposed Saudi air defense enhancement package makes an invaluable contribution to the national security interests of the United States, by improving both our strategic posture and the prospects for peace in that vital region while maintaining the security of Israel. In addition to my review of the formal documents prior to signature to ensure they fully reflect our mutual concerns, we will continuously evaluate the regional security situation between now and actual delivery, and consult fully with you should any modifications be required prior to my certification.

Mr. BAKER. Mr. President, will the Senator yield to me briefly?

Mr. EXON. I am happy to yield.

Mr. BAKER. Mr. President, I will take but a moment. I wish to express my ad-

miration for the distinguished Senator from Nebraska and my appreciation for not only the statement of his position on this issue, but his example, which he has shown us so eloquently and spoken of so clearly, of the difficult and sometimes painful anguish that Members of this body must endure in order to reach decisions in respect to the formulation of the most essential parts of public policy of this Republic.

I believe that the method of analysis, the technique by which this Senator approached this subject, leading him to his conclusion, is typical of the very best efforts and finest traditions of the Senate. I wish to express my appreciation to him.

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1982

The Senate continued with the consideration of the bill (H.R. 4035).

Mr. FORD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. FORD. Mr. President, what is the pending business before the Senate?

The PRESIDING OFFICER. The next order of business is the amendment of the Senator from Arkansas.

Mr. FORD. Mr. President, would it be in order for me to ask unanimous consent to make a statement as relates to the AWACS sale?

The PRESIDING OFFICER. It would be in order.

Mr. FORD. Mr. President. I ask unanimous consent that I might have 10 minutes to make a statement on the AWACS sale.

The PRESIDING OFFICER. Without objection. it is so ordered.

Mr. FORD. I thank the Chair. I thank the distinguished majority leader.

PROPOSED SALE OF SOPHISTICATED WEAPONRY TO SAUDI ARABIA

Mr. FORD. Mr. President, in the past months, the Congress and the Nation have engaged in extensive debate of the proposed sale of sophisticated weaponry to Saudi Arabia.

From the beginning, my two foremost concerns have been the risk to our national security posed by the possible compromise of our advanced technology and the destabilizing effect the sales would have on the Middle East and the Persian Gulf region.

Thus far, public attention has focused almost exclusively on the sale of the five airborne warning and control system (AWACS) aircraft. Yet, many people are unaware that there are several other little-known implications of the total package which have not only been relatively overlooked, but substantially underestimated.

In addition to the much-publicized AWACS, the package includes 1,177 AIM–9L Sidewinder missiles, 101 conformal fuel tank packs, and six KC–707 aerial refueling aircraft. with an option for the purchase of two more.

Clearly, the stakes involved are much more complex than the simple sale of five aircraft. Thus, a decision on whether or not to support the sale must be based on consideration of the entire package—not just the AWACS.

Consider the Sidewinder missile, for instance. This missile incorporates advanced seeker and fuse technology which allows it to be fired at an enemy aircraft from any angle—specifically head-on, rather than from the side or rear. This is a revolutionary capability that fundamentally changes aerial combat tactics.

Unlike the AWACS, the Sidewinder is a classified technology. Normally, its sale would be approved through procedures established to safeguard its security and protect it from compromise. The National Disclosure Policy Committee, made up of representatives of the Secretary of Defense and the armed services, is charged with evaluating the eligibility of nations to receive such classified technology and to weigh the risks associated with the transfer of a particular weapons system.

Apparently in the case of the proposed sale of the Sidewinder to Saudi Arabia, the national disclosure policy procedure was waived and the committee was bypassed. In other words, Saudi Arabia has not been given security clearance to receive the missile.

Presently, the Soviet Union does not have the manufacturing capability to produce a comparable missile. If the Soviets were to get their hands on a single one of the Sidewinders proposed to be sold to Saudi Arabia, they could erase the technological edge we now hold. Our own pilots have urged rejection of the Saudi sale because compromise of this technology would give up the advantage they feel this country now has over Soviet aircraft.

Meanwhile, the conformal fuel tanks increase the combat radius of the F–15 warplane from 40 percent to 70 percent, while the KC–707 aerial tankers enable the plane to stay in the air for extended periods of time—capabilities that change the Saudi force from a defensive to an offensive one.

It must also be noted that the proposed sale goes against the grain of the terms of the 1978 sale of F–15 aircraft to Saudi Arabia. At that time, prior to agreeing to go along with the sale, Congress sought and received assurances that offensive weapons systems would not subsequently be sold to Saudi Arabia. The original intent of the F–15 sale was to help the Saudi Government improve its defensive weapons system, not enhance its offensive capability as the current proposal would do.

Sometimes, our foreign policy tends to set up countries and their leaders and make targets out of them, rather than protect them. I firmly believe that we have done so in this instance with Saudi Arabia and the Royal House of Saud as we did in Iran.

Perhaps by itself, without the antijamming device, the AWACS is a purely defensive system. But in conjunction with the F–15's, it can be clearly misused and become a threat to other states in the Middle East-Persian Gulf region. In this regard, I support Senator GLENN and other of my colleagues who have called for joint United States-Saudi command and control of the aircraft to provide insurance against such a possibility.

After all, even in the case of our NATO allies, who are our longstanding treaty partners and participants in a regional collective security arrangement, AWACS aircraft in Europe are under U.S. top command and U.S. personnel will be represented throughout the chain of command—something which is not required of Saudi Arabia.

All considered, there are too few safeguards, too many nagging doubts, and too many national security risks for this sale to be in our country's best interest.

Mr. President, there is an article by George F. Will in the October 26 Newsweek entitled "Who Is Our Mideast 'Pillar?' " It says:

> The Administration downgraded Sadat by elevating the Saudis to a "pillar" of U.S. policy. The Shah was a pillar. So was Sadat. Now Saudi Arabia is called a pillar. That reminds me of Lincoln's lesson: if you call a tail a leg, how many legs has a dog got? Five?

What we are doing here is setting up another nation to be knocked off.

Mr. President, I found a very disturbing article in the Houston Chronicle. It is an article that quotes the London Daily Telegraph. That paper reports that Saudi Arabia—

> has agreed to give Syria nearly $500 million to help finance a massive new arms deal with the Soviet Union, which will include two Soviet radar warning system planes

similar to the AWACS. Saudi Arabia is giving to Syria almost $500 million to buy an arms package from the Soviet Union—Syria, with a treaty with Russia; Syria, a supporter of Qadhafi; Syria, an anti-U.S. country. Saudi Arabia wants Syria, which would take the brunt of an Israeli attack, to have all of the funds, all of the equipment available.

One other item, in closing, Mr. President. The nonalined countries made a harsh statement recently against the United States. U.S. Ambassador Kirkpatrick has written to about 40 of those countries, asking them to confirm or refute this statement. Saudi Arabia was one of those countries and, to date, to my knowledge, they have not answered in the negative or refuted that statement.

Mr. President, I ask unanimous consent that the statement by Mr. Will be printed in the RECORD at this point and that the report from the Houston Chronicle, dated October 26, 1981, be printed in the RECORD, also.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WHO IS OUR MIDEAST "PILLAR"?

(By George F. Will)

As a bass fisherman casting with light line and a high wind, I have produced some dreadful snarls. But I have rarely seen anything as snarled as the AWACS argument. The argument is less about hardware than about the suspicion that there is afoot a radical reorientation of U.S. policy. It is about how much weight the Saudi regime can bear. And it is about adopting the Saudi approach to peace, which means accommodating the group the Saudis sponsor, the PLO.

Regarding AWACS, the Administration has entangled a sensible question (how can we protect Saudi Arabia?) with a nutty question (how can we make Saudi Arabia the center of American policy in the Middle East?). The Administration downgraded Sadat by elevating the Saudis to a "pillar" of U.S. policy. The Shah was a pillar. So was Sadat. Now Saudi Arabia is called a pillar. That reminds me of Lincoln's lesson: if you call a tail a leg, how many legs has a dog got? Five? No, four, because calling a tail a leg does not make it a leg. In any debate about which nation can be counted as a pillar, it cannot hurt to notice the obvious: Israel is the only nation in the region where we know we can land a plane tomorrow.

A PARTNER?

Grasping for ground for praising the Saudis, the Administration cites the Saudi role in the most recent "settlement" in southern Lebanon. But that was a defeat for Israel. The Syrian missiles which precipitated the crisis remain.

The Administration says Saudi Arabia's moderation makes it a plausible partner in a "strategic consensus." But the Administration says Saudi friendship is so tenuous it must be bought with AWACS. Perhaps Saudi Arabia's policy is ambiguous, and it is so because Saudi Arabia's position is ambiguous: for cultural reasons it cannot be pro-Soviet, but for political reasons it dare not be pro-American. However, the premise of the AWACS sale is that the Saudis want to be helpful. The sale needs a new premise unless the Saudis endorse the Camp David process and especially the multinational force for the Sinai.

As Carter did with SALT II, Reagan chose to get into a game of "chicken" with Congress, thereby risking paralysis in government, discord in the country and disrespect in the world. He assumed that Congress, afraid of being blamed for that would flinch. Reagan's men must not have noted that, regarding SALT II, Congress did not flinch and was not blamed for the damage Carter caused.

The Administration has chosen to poison our politics by impugning the motives of opponents, implying that they are craven about "the Israeli lobby." This libel comes from people inexhaustibly obsequious toward a Saudi regime that molests U.S. interests while refusing even slight compromise to help the President out of the AWACS crisis his men have caused.

At first, a reason for gritting one's teeth and supporting the sale was to prevent the President's Middle East policy from becoming a shambles. But a policy of treating Saudi Arabia as a pillar is inherently a shambles. A remaining reason for approving the sale is that if it is disapproved the Administration may spend three years offering abject apologies to the Saudis.

Speaking of abjection, consider the musings of ex-presidents Ford and Carter in favor of accommodating a terrorist organization, the PLO. The musings are a reminder of why Ford's Presidency made Carter's Presidency possible, and why the country refused to renew either. In their airborne press conference, Carter was in character, laying down the law about abstract "rights" and sermonizing about how Israel is violating "the heritage of the Jews." But Carter is consistent. The logic of his Administration's initial policy of pushing for a "comprehensive" settlement, which would have maximized the leverage of the most extreme party at the table, pointed to an embrace of the PLO. Indeed, Sadat went to Jerusalem to derail Carter's policy. But now Carter and Ford have retreated from solemn commitments. As presidents, Ford and Carter pledged that the United States would not deal with the PLO until the PLO acknowledges Israel's right to exist. But now they have prepared the ground for the burial of those pledges. They have done so while they and the Reagan Administration (which should ponder the fates of Ford and Carter) urge Israel to trust U.S. reliability while the United States arms Israel's enemy.

KEYSTONE

Sadat's death suggested that being America's friend can be fatal. The Administration's solicitousness toward Saudi Arabia suggests that a nation need not be friendly to garner the benefits of U.S. friendship. But if the Administration is determined to treat Saudi Arabia as the keystone of U.S. policy, it must try to sanitize the PLO, which Saudi Arabia finances. Candidate Reagan said: "Unlike President Carter, I have no hesitation branding the PLO as a terrorist organization." President-elect Reagan said: "I think the PLO has proven that it is a terrorist organization." Yet President Reagan allows the PLO to maintain an office in Washington.

Regarding the PLO, Ford and Carter spoke the language of inevitability. An approach to the PLO "has to happen," it "has to take place" (Ford), the dealings "have to be done" (Carter). But if accommodation of the PLO is, as Ford and Carter say, inevitable, the PLO has no need to abandon the terrorism and intransigence that have won it the status of an inevitability. Heaven preserve us from small minds bandying large notions of what history says "has to take place" and playing fast and loose with the nation's honor. Leaving honor aside, where it frequently has been left, let this be said: our ex-presidents are pushing Egypt toward radicalism and Israel toward South Vietnam's fate.

Bruno Kreisky, Austria's Chancellor, holds the Olympic record for fawning over the PLO, but even he was momentarily sobered by the PLO statement about shaking the hand that pulled the trigger to kill Sadat. When Ford and Carter urged appeasing the PLO, they were flying home from the funeral of a man who opposed the PLO and paid with his life. They could have found a more tasteful time to advocate rewarding those who execrated Sadat while he lived and rejoiced at his death.

SAUDIS REPORTEDLY TO HELP SYRIA PURCHASE RUSSIAN RADAR PLANES

The London Daily Telegraph reported that Saudi Arabia has agreed to give Syria nearly $500 million to help finance a massive new arms deal with the Soviet Union, which will include two Soviet radar warning system planes.

These are similar to the American AWACS which Saudi Arabia has so far failed to buy from the Reagan administration. The Syrian arms order with the Soviets reportedly is worth almost $2 billion.

The Telegraph reported that Moscow is expected to deliver by the end of this year three squadrons of MIG-25 and two of MIG-23 fighters and ground attack aircraft and four squadrons of Sukhoi Su-22 fighters, the same aircraft as sold to Libya, two of which were shot down by Americans in the Mediterranean earlier this year.

In addition, there will be four missile-carrying corvettes of the Nanuehka type, 800 armored personnel carriers, 500 122mm field artillery guns and 200 152mm guns.

The newspaper said Saudi Arabia has a growing feeling that a political solution, despite whatever the Camp David agreements may yet produce, may not be found to the Middle East problems.

In the event of another Middle East war, Saudi Arabia wants Syria, which would take the brunt of an Israeli attack, to be well armed. Saudi Arabia is already financing the Syrian peace-keeping force stationed in Lebanon, and is trying to keep an even-handed control of volatile Arab states such as Iraq, which it is backing in the Iran-Iraq war.

On the proposed U.S. sale of surveillance planes to the Saudis, the U.S. Foreign Relations Committee, in a report made public Saturday, criticized the proposed sale as having "security implications" for Israel and warned that it could escalate the Midwest arms race and draw the Saudis into a future Arab war against Israel.

The report added that some committee members "were deeply perturbed by the repeated assertion that the United States was committed to go ahead with the sale based on U.S.-Saudi discussions which had not been shared with Congress." It also rejected the administration's contention that the sale is a "litmus test" of U.S.-Saudi relations, saying: "It would appear that the relationship of the two nations should not require such tests."

President Reagan Saturday said senators who refuse to see the value of the sale to both U.S. and Israel security "are not doing their country a service."

Reagan said he had no intention of withdrawing the proposal for the sale of the Airborne Warning and Control System planes, and repeated that he was "cautious but optimistic" that the sale would go through.

The president plans to mount a final lobbying effort Monday that White House officials said would continue up to 5 p.m. Wednesday, when the Senate is scheduled to vote on the controversial deal.

The senate staff report questions how the U.S. can monitor the Saudi use of the planes. In an effort to win votes for the proposed sale, the administration has said it has obtained agreement from Saudi Arabia to "complete sharing" of all information gathered by the planes on a "continuous" basis.

The Senate staff report discussed three methods by which U.S. personnel on the ground could gather information from Saudi-flown AWACS planes, none of which seemed entirely foolproof, the New York Times reported.

The report, quoting unnamed military officers, said "electronic filtering" could prevent American personnel from monitoring the information the Saudis were gathering.

Mr. FORD. Mr. President, for the above reasons, I shall have to oppose the sale of the so-called AWACS package to the country of Saudi Arabia. I thank the Chair for allowing me this time.

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1982

The Senate continued with consideration of the bill.

Mr. McCLURE. Mr. President, what is the pending business?

The PRESIDING OFFICER. Under the previous order, the Senator from Arkansas is recognized for his amendment.

UP AMENDMENT NO. 538

(Purpose: To prohibit the Department of the Interior's Office of Surface Mining from withdrawing the final cutoff date for exemptions from the prime farmlands requirements of the 1977 Surface Mining Control and Reclamation Act)

Mr. BUMPERS. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The bill clerk read as follows:

The Senator from Arkansas (Mr. BUMPERS) proposes an unprinted amendment numbered 538.

Mr. BUMPERS. I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 19, line 19, before the period insert the following: ": *Provided*, That no funds appropriated under this Act may be used to approve exemptions from the requirements of section 510(d)(1) of the Surface Mining Control and Reclamation Act of 1977 for surface mining permits, permit revision, or permit renewals for operations on prime farmlands, after August 3, 1982, unless such permit, permit revision, or permit renewal is issued by the permitting authority for the purpose of allowing permittee to complete mining operations within the original permit boundary".

Mr. BUMPERS. Mr. President, the only game in town right now seems to be how to save Saudi Arabia. My amendment deals with saving the United States.

This amendment deals with a bill we passed in 1977. The Senate voted then and has voted on at least two occasions since then to provide that, under the Surface Mining and Reclamation Act of 1977, coal companies that strip coal out from under what is defined as prime agricultural land must, within a reasonable length of time, restore those lands to the productivity of other prime farmlands in the area.

There is no time constraint on the period in which they must do this. The law says productivity must be restored within "a reasonable length of time."

The reason I am offering this amendment, Mr. President, is that an action has recently been taken by Secretary of the Interior Watt and the Director of the Office of Surface Mining which effectively guts—and there is no other good term to use for it—the prime farmland provision of the Surface Mining Control and Reclamation Act of 1977. Mr. President, we did not put the prime farmland provision in the strip mining bill just to rankle people's nerves and feelings. We put it in there because 1 million acres of prime farmland is being taken out of cultivation in the United States every year for surface mining and other uses, including highways, airports, shopping centers, and urban sprawl. There is not a person in the U.S. Senate, Mr. President, who believes for a minute that we can continue to increase our population as we have in the past, take a million acres of our best farmland out of cultivation every year, and still feed not only the world but the people of the United States.

I have heard it said that, at the rate at which citrus groves in Florida are being taken out of cultivation and converted to condominiums and other uses, by the year 2000, Florida, which produces 50 percent of all the grapefruit produced in the world, will not produce one grapefruit; Florida, which produces 25 percent of all the oranges produced in the world, will not produce one orange by the year 2000.

So, when we started talking about strip mining of prime farmlands and restoring these lands to their original productivity, we were doing it because we felt that our children and our grandchildren ought to have a little say-so over their future, that we ought not just to pillage everything while we are on Earth and deprive future generations of our most productive agricultural lands.

This year, 1981, 226,000 acres of agricultural land may be lost to surface mining. I am talking about the richest land in America. And though we passed that bill in 1977 saying prime farmlands must be restored, as of this moment, not one single coal operator has had to come into compliance with the bill.

Mr. President, when we passed that bill, we also said, "All you coal operators who already have a permit to mine coal can continue to mine that coal under that permit or any revisions or renewals of that permit." These operators would be exempted from the prime farmlands reclamation provisions for the duration of their pre-1977 permits. But we did not mean that operators could just renew and renew and renew their permits so that the prime farmland provisions would have no effect. What we meant was that within 5 years from the passage of the act, all operators were to come into compliance.

Not one State—I want every Senator who is listening to this, in his office or otherwise, to understand this—not one State in the Union gives a permit to mine coal for longer than 5 years. Furthermore, the Federal Government does not issue permits for terms longer than 5 years.

So, early this year the Interior Department issued a regulation that by August 3, 1982, all operators must start coming into compliance with the prime farmlands provision of this bill.

But on September 29, this Interior Department, under the direction of Secretary Watt, said, "We are going to lift that date." In a regulation published on September 29, the August 3, 1982, cutoff date was withdrawn.

What is the effect of that? The other day, in a hearing conducted by Senator PERCY, Secretary Watt said, "We are going to hold some hearings, and we are going to consider what would be a good date for a cut-off. At some point, operators will have to come in compliance, and we are going to think about it some more and talk about it some more"—even though 5 years have gone by since we passed the bill.

The Interior Department not only lifted the date of August 3, 1982, and essentially said, "You can keep on mining without complying with the prime farmlands provisions for restoring the land."

They also said in the regulation:

Lands included in an existing surface coal mining operation for which a permit was issued for all or any part thereof prior to August 3, 1977, must come into compliance—

And let me emphasize the next part of the regulation—

unless the lands contain part of a continuous recoverable coal seam that was being mined in a single continuous mining pit begun under a permit issued prior to August 3, 1977.

Mr. JOHNSTON. Mr. President, will the Senator yield for a question?

Mr. BUMPERS. I yield.

Mr. JOHNSTON. Does that regulation exceed the bounds of the law, particularly section 510(d)(2)? That section reads:

Nothing in this subsection shall apply to any permit issued prior to the date of enactment of this Act or to any revisions or renewals thereof, or to any existing surface mining operation for which a permit was issued prior to the date of enactment of this Act.

In other words, does the regulation exceed the statute?

Mr. BUMPERS. Let me answer that with a question.

We put the grandfather clause in there. The Senator from Louisiana and I sat in the committee during all the markups on the bill. He and I sat in the conference committee when we debated the bill, including the prime farmlands grandfather clause as did the distinguished Senator on the majority side, and we included that grandfather clause because we knew that 5 years was the longest period for which anybody had a permit. We said, "We don't want to create economic losses for anybody who has a permit at the time this legislation is passed." We said that even though an operator could get a revision or a renewal of that permit to continue mining coal within the boundary of that permit, even if the permit extended beyond the original period of time, that permit would be acceptable under the grandfather clause.

However, what Secretary Watt has done, to answer the question of the Senator from Louisiana, is to go far beyond the bounds of the statute. He effectively destroys that provision which protects prime farmlands, by saying: "You don't have to come into compliance if the lands you are mining were a part of a continuous recoverable coal seam, any part of which you were mining previously under a permit issued before August 3, 1977."

The map at the rear of the Chamber is a map of the State of Illinois, and it is there for one purpose only: To show that everything you see there in green is virtually a continuous seam of coal.

If you had a permit issued before August 3, 1977, to mine 3 acres of ground in Illinois, under the regulation which Secretary Watt and Director Harris promulgated as of September 29 of this year, you would be permitted, so long as you could get additional lands around it, to mine the whole State of Illinois, because the whole State of Illinois covers one virtually continuous seam.

Our amendment is very generous, and it does exactly what we intended to do at the time we passed the statute in 1977. It says that if you had a permit issued before August 3, 1977, you could mine that area. If you cannot finish mining the coal you anticipated mining within that permitted period which is less than 5 years, you can get an extension, a revision, or a renewal. My amendment does not change this.

However, what I object to is the new regulation issued on September 29, 1981.

Mr. JOHNSTON. Mr. President, will the Senator yield for a question?

Mr. BUMPERS. Yes. I will ask the Senator to yield some of his time to me.

Mr. JOHNSTON. I will do that.

Is it the intent of the Senator from Arkansas to restrict it any more than we did back when we passed it? In other words, is the Senator intending to breathe life into it as it reads, not further to restrict it? In the Senator's opinion, the Watt language goes beyond the statute?

Mr. BUMPERS. There is no question. We said in section 510(d)(2), which was the grandfather clause:

> This subsection will not apply to any permit issued prior to the date of enactment of this act or to any revisions or renewals thereof, or to any existing surface mining operation for which a permit was issued prior to the date of this enactment.

If you interpret this clause as Secretary Watt has done, then you have a gross contradiction with the statute. The statute contains a provision that goes into lengthy detail about how you must restore prime farmlands back to their original productivity. The Secretary's interpretation is that if you had an existing permit and a mining operation for which a permit was issued, you could continue to be exempt from the prime farmlands restoration requirements, forever, since, in most cases, strip mining seams in prime farmland areas are continuous.

Mr. JOHNSTON. I thank the Senator.

Mr. BUMPERS. Mr. President, I cannot add much to what I have said, except that I should like to make a philosophical argument.

The State of Illinois, which is a part of the breadbasket of America, has 9,400,000 acres of prime farmland; according to one conservative estimate, 2,417,800 acres of that has strippable coal under it. That means that, at some point, about 25 percent to 30 percent of the prime farmland of Illinois could be destroyed and may never be restored as was intended by the 1977 Surface Mining Act.

Obviously, at some point, America would wake up and say, "We can't go on this way." But how long is that going to be?

We thought we were taking care of this when we passed this bill in 1977. The Senator from Louisiana will recall that Senator PERCY and Senator CULVER introduced the grandfather clause. It was not my proposal, but I was a champion of it, a strong supporter of it, and I took on the unpleasant chore of opposing the majority leader last year on this very question.

And the Senate voted again to uphold the provisions of the prime farmland bill.

My State is the biggest rice-producing State in the country. It is fourth in the production of soybeans and fifth in cotton. But we only have 8 million acres of land under cultivation in my State.

Ten million acres of prime farmland with coal under it may be taken out of production just for coal strip mining alone—an area greater than the entire area under cultivation in my State.

I do not know what it is going to cost. But I will say this: We are losing in agricultural production $17 million a year now on lands that are being uncovered or stripped for coal. We get coal out of that land one time and we lose that $17 million in production every year from now until the second coming.

Everyone knows we have to face up to this problem. It is a question of when we are going to do it. I thought we had already done it. We had done it until Secretary Watt decided otherwise.

Mr. President, Secretary Watt has also changed the definition of cropland. Originally the Carter administration determined that cropland, if it had produced crops for 5 out of the last 20 years, was considered prime farmland. This administration has changed that requirement to 5 out of 10 years. That reduces the definition of prime farmland, and so reduces the total acreage that will be subject to prime farmlands requirements.

Mr. President, in this amendment, I am not saying every coal company in the country must come in compliance immediately. That is not what my amendment does. What it does is exactly what we intended to accomplish in the 1977 legislation. It says if you had a permit and you are mining coal within the original boundaries of the permit, you can be exempted under the grandfather clause. But once you mine that area out, then you have to start coming into compliance with the prime farmland requirements. You have to prove that you have the ability to comply before getting a permit, and once you get the permit you must comply. The time is now.

So, Mr. President, I hope my colleagues will understand we are not trying to deprive anyone of an economic value. No one is deprived of any economic value that he had at the time we passed the bill. So I sincerely hope my colleagues will support the amendment.

Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 4 minutes.

Mr. BUMPERS. Thank you. I reserve the remainder of my time.

Mr. McCLURE. Mr. President, I am having some difficulty trying to determine just what it is that the Senator from Arkansas is trying to achieve, because there is not any question that the legislation on the books provides for the restoration of prime farmland for operations that begin after the date of that act.

The exemption that was written into the law, which has been read into the record here today, already provided that those operations which were then in existence as defined in the statute and the regulations that were issued subsequent to that would be exempted from that prime farmland restoration requirement.

I am not here to debate the degree of restoration that might be required under the prime farmland requirement as contrasted to the protection of watersheds, soils, revegetation and restoration under the regulations independent of the prime farmland provision. That is in effect and that is not at issue here, as I understand it. But there is some distinction between the two.

I do not believe that there was any question at the time we adopted it. It was intended to have a grandfather clause, and that grandfather clause should apply to those operations as thus defined. There was no time limit expressed in the statute.

The last administration sought to attach a time limit. It said irrespective of the provisions of the law we find that to be a reasonable application of the grandfather clause, there has to be a cutoff date. They established a cutoff date, which I do not believe was called for or required or even permitted under the statute.

If I understand the Senator from Arkansas he is saying he does not disagree. Within that boundary, they may continue mining no matter how long it takes them to complete that mining operation within that boundary.

As I understand what Secretary Watt and the Office of Surface Mining have suggested is that we remove the cutoff date, and apparently we all approve of that. Apparently we all agree that that is proper, that the arbitrary date was not provided for and not required by the existing statute.

The second issue, as I see it, lies in the question of whether or not the States are to be permitted under their reclamation enforcement to adopt primacy. There is some discussion in the Federal Register in the rulemaking that is underway at the present time whether the State conservation plan that would be adopted under the primacy provision of the act which we adopted would give them some flexibility to deal with the question of restoration of prime farmland as well as the other provisions under the statute.

I do not understand that to be a proposal on the part of anyone that we simply wipe out the grandfather clause by saying any mining operation that was started out may continue forever if it is on a continuous seam of coal. As I understand, that is what concerns the Senator from Arkansas.

I have searched the Federal Register. I cannot find it. It may be that is someone's interpretation of what may come from this. But I do not see that. I might also add that at the present time the previous rulemaking that established the cutoff date as well as other provisions——

Mr. BUMPERS. Mr. President, will the Senator yield?

Mr. McCLURE. I yield.

Mr. BUMPERS. May I insert this in the RECORD?

Mr. McCLURE. Of course.

Mr. BUMPERS. What I was reading with regard to the continuous seam provision was from Monday, September 28, 1981, Federal Register. It is the provision on pages 47721 and 47722.

Mr. McCLURE. That is actually on Tuesday, September 29. I have it in my hand.

Mr. BUMPERS. What did I say?

Mr. McCLURE. The Senator said Monday, September 28. I think the correct date is Tuesday, September 29.

Mr. BUMPERS. The regulation is indeeded dated September 29. I am sorry.

Mr. McCLURE. It appears on page 47721.

Mr. BUMPERS. 47721.

Mr. McCLURE. It starts on page 47720 and goes through 47722.

Mr. BUMPERS. Right. Special performance standards 716.7, prime farmland, and thereafter.

Actually the relevant part is on the succeeding page if the Senator wishes to go through it.

Mr. McCLURE. I am happy to because I have read all of that.

Mr. BUMPERS. He has not read all of that?

Mr. McCLURE. I have read all of that.

Mr. BUMPERS. Under subparagraph (iii). Does he see (iii)?

Mr. McCLURE. Yes.

Mr. BUMPERS. "Lands included in any existing surface coal mining operations for which a permit was issued for all or any part"—"or any part" is the key here—"thereof prior to August 3, 1977, provided that:"—and then if we look at subsection (c), it says: Provided that: "the lands contain part of a continuous recoverable coal seam that was being mined in a single continuous mining pit—or multiple pits in the lands are proved to be part of a single continuous surface coal mining operation—begun under a permit issued prior to August 3, 1977."

Mr. McCLURE. May I say to the Senator that I think that language is ambiguous in terms of the application here. I understand his concern now that he has identified how he thinks it might be interpreted. I do not think there is any doubt in the mind of the Senator from Idaho, who sat through all those debates and all those markups as did the Senator from Arkansas with respect to this issue, and also on the floor of the Senate as we debated the amendments of that act. I think there is no doubt that the intention of the law was to grandfather those operations for which a mining plan had been issued. The concern I have with the Senator's amendment as offered is the last line of the addendum which says "to complete mining operations within the original permit boundary." The Senator knows there may be sequential permits under a mining plan.

Mr. BUMPERS. The Senator is absolutely right. One can call that taking liberty with the statute but the statute makes absolutely no sense under any other interpretation.

Mr. McCLURE. I think it may indeed because the Senator would know that we debated at great length the question of what was a mined plan as distinguished from the operation that might extend over a whole series of years going down a coal seam or through the countryside on a bed of deposit of coal.

Mr. BUMPERS. Mr. President, will the Senator yield at that point.

Mr. McCLURE. I yield.

Mr. BUMPERS. Let me point out that no mining plan is ever required nor indeed is one submitted for longer than the permit period.

No permit period is longer than 5 years.

Mr. McCLURE. That is not always the case, I would say to the Senator.

Mr. BUMPERS. That may not be true on Federal land. We are not so concerned here with Federal lands at this point because there are no prime farmlands on Federal lands.

Mr. McCLURE. Well, there can be.

Mr. BUMPERS. There may be, but I venture to guess there are less than 10,000 acres in the whole United States.

Mr. McCLURE. I do not have the figures, but I think you might find there are in excess of that particularly where there are federally reserved mineral rights as distinguished from fee ownership in the land.

I do not have a quarrel with the attempt of the Senator to avoid the——

Mr. BUMPERS. Circumvention of the law.

Mr. McCLURE. Circumvention if, as a matter of fact, that is what it is, to get around the limitations of the grandfather clause.

On the other side of that I do not believe we want to go in the other direction and say any less than was said in the original enactment.

Mr. BUMPERS. I appreciate the Senator saying that because when we were debating it I was not very supportive of the grandfather clause. I voted for it because regardless of whether it is a severe economic impact or a very small economic impact, I thought there was an element of unfairness to people who were at the present either mining or who already had a permit in hand to mine coal, to suddenly change the rules on them in the middle of the game.

When the administration last year set a 5-year time period that was not an arbitrary date. As I have pointed out, they checked very carefully to find that no State issues a permit for longer than 5 years. My amendment is even more generous than that because it effectively says to these people, "You can continue mining prime farmlands under a revision or even a renewal of your permit as long as it is within the original permit boundaries without having to comply with the prime farmlands requirements." But at some point those requirements must become operative, and I think I have been extremely generous in my interpretation of the law.

The Secretary's interpretation of it is that we may never require the implementation of the prime farmland provision of the bill, and I think that is a direct and flagrant and blatant attempt to thwart what was the obvious intent of Congress when we passed that bill in 1977.

Mr. McCLURE. I know opinions can differ as to what the intention was and, indeed, our recollections or memories may differ.

Let me read again what the statute says, the existing statute, under which permits are issued:

> Nothing in this subsection shall apply to any permit issued prior to the date of enactment of this act—

and we have no quarrel with that issue—

> or to any revisions or renewals thereof or to any existing surface mining operations for which a permit was issued prior to the date of enactment of this act.

We have some problem with respect to whether or not there is an existing surface mining operation. What is the extent of that, what are boundaries, what are the limits of that? But it is obvious that the grandfather clause did apply to any existing surface mining operation. It also does apply to any revisions or renewals of a permit which had been issued prior to the date of the enactment of the act.

Mr. BUMPERS. At that point, as does the Senator, I wish there were a little more specificity. But let me read through that and sort of paraphrase as I go through it to point this out: No. 1, when it says "nothing in this subsection shall apply to any permit issued prior to the date of enactment of this act," then it says "or to any revisions or renewals thereof," referring back to the original permit.

The original permit had a specific boundary in it, so obviously any revision or renewal of that permit, which refers back to a revision or renewal of the original permit, would still refer to the lands that were covered in the original permit. That is the reason why I came down on the side of saying operators could continue to mine within the original permit boundary because I do not believe the law is subject to much of any other interpretation.

Mr. McCLURE. I understand what the Senator is saying. My only difference with him would be whether there is a mining operation which is larger than the single permit which is granted. The Senator would know in many instances there is a mining plan which is offered and in which sequential permits for individual actions or for statements of time under that mining plan are offered.

If that is the case—and I cannot say it is the case here—then the Senator's amendment would have the effect of limiting the grandfather clause much more strictly than was originally contemplated in the statute. If it is not the case then, of course, the Senator's amendment would not.

I have no objection to restating the law, even though we are dealing here in an appropriation rather than in a legislative matter. But I am hesitant to see us attempt to revise the statute, if that is what is intended, to remove an ambiguity which may be or may not be apparent in the eyes of whoever may be beholding that particular regulation or that particular section of the statute.

Mr. BUMPERS. We are making a pretty good record of what my amendment is intended to do. As I have pointed out, and will say again, my amendment goes as far as one can go in interpreting the grandfather clause without effectively repealing the prime farmland provision which the Congress has not chosen to do.

Mr. McCLURE. I understand the Senator's position.

Might I inquire of the Chair how much time remains on both sides?

The PRESIDING OFFICER. The Senator from Idaho has 6 minutes remaining, and the Senator from Arkansas has 4 minutes remaining.

Mr. McCLURE. I yield 3 minutes to the Senator from Louisiana.

Mr. JOHNSTON. Mr. President, I must say when I first saw this amendment, I thought that this amendment was in-

tended to undo a very carefully crafted compromise of the committee and of the Senate put together when this substantive bill was put before us.

But as I read this language from the Federal Register it is somewhat ambiguous, but it does seem to suggest, as the Senator from Arkansas says, that it is the intent of these regulations to go beyond what I read as the authorizations and Public Law 95–87.

At this point, and very tentatively, I would say that his amendment is intended to breathe life into what we considered to be the limits of Public Law 95–87.

So when I came on this floor intending to oppose this amendment I now cannot find justification to say that his amendment goes beyond what we intended by that compromise. To the contrary, as I read it—and I will wait to be convinced to the contrary, and perhaps I ought to at this point let my colleague from Kentucky convince me to the contrary—but as of this point it seems to be consistent with that compromise.

Mr. McCLURE. I yield 2 minutes to the Senator from Kentucky.

Mr. FORD. Mr. President, let me discuss the exactness of the April 3, 1982 cutoff date. We all know that this is the cutoff date now in the Federal regulation, and the act itself has no specific cutoff date.

I realize that this cutoff date was approved by the Senate on August 22, 1980, and we must recognize that it was not adopted standing by itself. We did not adopt this date when it stood out there alone. It was part of a major compromise attempt to rewrite and recodify the regulations relating to prime farmlands in general. The Senator from Arkansas and I were, I guess, as interested in that compromise that morning as any other Senator attempting to rewrite or to arrive at that compromise.

On August 22 I did indicate during the course of the debate that at that time August 3, 1982 appeared to be reasonable. This was done with certain understandings that I believe we all shared. The principal understanding was that most, if not all, of the States seeking primacy would achieve it during calendar 1980 or early 1981. This unfortunately has not been the case.

Most States do not have primacy. If we set the August 3, 1982 date in concrete, I say to my colleagues, we will be forcing States that only recently to that date had been granted primacy to act with undue haste on prime farmland mining permits.

I have a suggestion for the distinguished Senator from Arkansas, that instead of pursuing this amendment, which, after all, affects only 2 months, we attempt to seek legislation with regard to section 510(d)(2) itself. We have seen the folly in all the surface mining turmoil in setting a calendar date certain for all to meet in what is essentially a fluid State-by-State development. I, for one, feel it would be much sounder to relate the cutoff of exemption to the date when a particular State actually achieves primacy.

Could the Senator help in that respect? Does he not believe that this would be about as good as we can do than really only have 2 months and it is about gone?

Mr. BUMPERS. Mr. President, I just want to say to the distinguished Senator from Kentucky and also to both of the distinguished floor leaders of this bill that under your interpretation of this there will never be any compliance with the prime farmlands requirements.

Mr. FORD. I say to my colleague that he is coming at this piece of legislation indirectly and then he makes it open season and the only thing I can say is S. 1403 is alive again.

The PRESIDING OFFICER (Mrs. HAWKINS). The time of the Senator from Kentucky has expired.

Mr. McCLURE. Madam President, how much time remains?

The PRESIDING OFFICER. One minute and 26 seconds remain for the Senator from Idaho.

Mr. BUMPERS. Madam President, I believe I have 4 minutes and something remaining. I yield the remainder of my time to the Senator from Illinois (Mr. PERCY).

Mr. PERCY. I thank my distinguished colleague very much, indeed.

Madam President, I support strongly the Bumpers amendment to the Interior appropriations bill as part of a general concern I share with my colleague from Arkansas about the preservation of prime agricultural lands. In particular, the reclamation of prime farmland after it has been surface mined is an important part of our efforts to protect and preserve the Nation's agricultural resources. Congress has addressed this issue specifically in the past; as part of the 1977 Surface Mining Control and Reclamation Act my colleagues overwhelmingly supported an amendment I proposed requiring 100 percent reclamation of surface mined prime farmland.

Madam President, we have 18 million acres of prime farmland in the United States that has coal under it. Nine million of those acres—half of that amount in the country—is in the State of Illinois. So we have a very deep interest in the Bumpers amendment and in this issue.

Last year, the Senate was nearly unanimous in its support for a measure similar to this one of Senator BUMPERS, which would have set an August 3, 1982, cutoff date for grandfather exemptions to the prime farmland reclamation rules.

Now, however, the Department of the Interior seems to be somewhat hesitant to implement this part of the act. The previous administration ruled that the August 1982 date be the end of grandfather exemptions to the prime farmland reclamation provisions. Earlier this year, Interior recalled these regulations, then reissued them in almost identical form, only without a specific cutoff date. Instead, they proposed to decide the cutoff date through a separate rulemaking.

Last week, at a hearing which I chaired and Senator BUMPERS attended and participated in actively, we each pressed DOI on this point. In the abstract, I am supportive of DOI, and would like to allow them to complete their rulemaking on the issue. I also hesitate to use the appropriations process to decide particular points of policy. However, on balance, I feel that it is wise for the entire Senate to indicate once again its concern for this issue by voting for Senator BUMPERS' amendment.

It should be pointed out that the States may nonetheless use their own funds in their reclamation programs to continue the approval of grandfather exemptions. Any true cutoff date will only come through the Department's promulgation of a rule. That is why the DOI rulemaking is so important, and why I pressed so hard for it at our hearing last week.

I must also add that I was quite encouraged by what I heard at the hearing about the improvements in reclamation technology over the last few years. Quality reclamation is no longer a question, it is a fact. Admittedly, further advances must be made for us to be assured that all prime farmlands can be fully reclaimed. Nonetheless, the amount and kind of reclamation work now going on is in harmony with what the Congress intended by passage of the 1977 act.

I am confident that the various interests will continue to work together on this issue to come to a sensible solution. In Illinois, the Governor has done a great job in setting up the State reclamation program. The coal companies have made tremendous gains in reclamation technologies. Farm and citizen groups have provided invaluable assistance in educating the public about the utmost importance of protecting our agricultural lands.

At the same time, the Office of Surface Mining should continue its vigilance of and encouragement to the States, helping them develop and implement fair and effective reclamation programs. The rulemaking on the cutoff date is part of this effort. Otherwise a State which supports a cutoff date earlier than its neighbors would be putting its own coal industry at a competitive disadvantage. Support of this amendment will show the Interior Department that the entire Senate shares the concerns that Senator BUMPERS and I stressed to them at last week's hearing.

Madam President, may I ask my distinguished colleague from Arkansas (Mr. BUMPERS) if I may be added as a cosponsor of h's amendment.

Mr. BUMPERS. Madam President, I ask unanimous consent that the Senator from Illinois be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

All time of the Senator from Arkansas has expired.

Mr. McCLURE. Madam President, I must strenuously oppose this amendment, not because I do not think there is ambiguity, because there apparently is. But the way to revise the ambiguity and remove it is in the legislative forum before the legislative committee.

I am sure that the Energy and Natural Resources Committee can hold hearings to determine the nature of the problem, the extent of the question, revise the ambiguity and remove the ambiguity and resolve it in a way which is satisfactory to the entire Senate.

But I submit it is not right to attempt to legislate in this fashion on the floor of the Senate on an appropriation bill without the benefit of hearings before the authorizing committee.

I have great respect for the Governmental Affairs Committee that held the hearings. But the Governmental Affairs Committee is not the authorizing committee. It is not simply a matter of jurisdiction, but the authorizing committee, the Energy and Natural Resources Committee, is the one that held past hearings, the one that develops the legislation in the forum which the Senator from Arkansas has suggested, previously had an understanding of what those terms meant.

It seems to me that that legislative committee ought to have the opportunity to look at the question and determine whether or not the ambiguity does need to be resolved so that we do not end up in court, as we are now on this precise regulation and as we certainly will be again on any subsequent regulation derived under this particular procedure.

So I would hope that the Senate will reject the amendment and give the authorizing committee, the legislative committee, the opportunity to legislate rather than do it in this manner on an appropriations bill.

The PRESIDING OFFICER. The time on the amendment has expired.

Mr. BUMPERS. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. McCLURE. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. Madam President, I ask unanimous consent that we may proceed for an additional 10 minutes on the Bumpers amendment and that that time be equally divided.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BUMPERS. Madam President, I wanted to ask the distinguished floor manager a couple of questions about the regulation of September 29, 1981. Is it the distinguished floor manager's understanding that, in order to be exempt from the prime farmland provision No. 1, the permittee must have had a permit in existence prior to August 3, 1977?

Mr. McCLURE. Either he must have had a permit in existence or mining operations must have begun under the definitions that were written into the statute in the legislative history of the rules and regulations, yes.

Mr. BUMPERS. Is it the distinguished manager's interpretation that the reference in the new regulation to lands being mined or owned by a permittee for purposes of mining—the part that deals with a continuous recoverable coal seam—only refers to such lands as were included in the original permit? It says here the permittee had legal right to mine the land prior to August 3, 1977, through ownership, contract, or lease, but not including an option to buy, lease or contract.

Is it the distinguished floor manager's interpretation that that refers to lands the permittee owned at that time?

Mr. McCLURE. That could be in the mining operation, not necessarily within the boundaries of the permit. I think that the definition that is contained in the proposed regulation would conform to the intention of the law.

Mr. BUMPERS. Let me say this, Madam President, to the distinguished floor manager: In private discussions with him, he has agreed to hold hearings in an effort to resolve any ambiguity which exists either in the grandfather clause of the original bill or in these regulations, with a view toward offering the Senate an opportunity to determine a specific date so that there will be some finality to the time in which permitted lands or subsequent permitted lands must come into compliance with the prime farmland provision.

Mr. McCLURE. Let me assure the Senator that this colloquy very eloquently reveals the existence of an ambiguity in the underlying statute and the possibility of different interpretations that might be expressed in regulations under that statute. It certainly would be my expectation that, indeed, by regulation or by statute, we need to define the grandfather clause in some kind of limited term, not an unlimited term, whether it be in the extent of boundary or by time limit.

That is one of the things that I think would have to be determined by the hearings, to determine exactly what the situation might be in various areas of the country and how we can best deal with the question of how to limit the extension of the grandfather clause. I think there is a recognition that it needs to be limited in some manner.

I suppose it might be possible that the evidence adduced at such a hearing would indicate that there is not as large a problem as now looms in some minds. We might, in that event, decide we do not have to make that limitation. My expectation would be, however, that we would desire to impose a limit, either by area or by date.

Mr. BUMPERS. Or both?

Mr. McCLURE. Or both, Madam President.

I say further to the Senator that having this issue raised in this manner, let me give him the assurance that the legislative committee will hold hearings to try to develop the evidence and then move from that to a positive solution of the ambiguity that is before us.

Mr. BUMPERS. I thank the Senator very much.

With that, Madam President, I withdraw the amendment.

The amendment (UP No. 538) was withdrawn.

AMENDMENT NO. 618

On page 40, line 21, strike the number "$408,490,000" and insert in lieu thereof the following:

"$273,490,000 and $135,000,000 to be derived from 'Fossil Energy Construction', Department of Energy,"

The PRESIDING OFFICER. Under the previous order, there will now be a vote on the amendment of the Senator from Wisconsin (Mr. PROXMIRE) No. 618. The yeas and nays have been ordered. The clerk will call the roll.

The bill clerk called the roll.

Mr. STEVENS. I announce that the Senator from New Mexico (Mr. SCHMITT) is necessarily absent.

Mr. CRANSTON. I announce that the Senator from Missouri (Mr. EAGLETON) and the Senator from HAWAII (Mr. INOUYE) are necessarily absent.

I further announce that, if present and voting, the Senator from Hawaii (Mr. INOUYE) would vote "nay."

The PRESIDING OFFICER (Mr. ABDNOR). Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 40, nays 57, as follows:

[Rollcall Vote No. 335 Leg.]

YEAS—40

Abdnor	Garn	Levin
Armstrong	Gorton	Lugar
Baucus	Grassley	Mattingly
Biden	Hatch	Nickles
Boren	Hawkins	Packwood
Boschwitz	Hayakawa	Proxmire
Byrd, Harry F., Jr.	Helms	Quayle
Chafee	Humphrey	Riegle
Cohen	Jepsen	Roth
Danforth	Kassebaum	Simpson
Dodd	Kasten	Symms
Durenberger	Kennedy	Wallop
East	Laxalt	Zorinsky
	Leahy	

NAYS—57

Andrews	Glenn	Nunn
Baker	Goldwater	Pell
Bentsen	Hart	Percy
Bradley	Hatfield	Pressler
Bumpers	Heflin	Pryor
Burdick	Heinz	Randolph
Byrd, Robert C.	Hollings	Rudman
Cannon	Huddleston	Sarbanes
Chiles	Jackson	Sasser
Cochran	Johnston	Specter
Cranston	Long	Stafford
D'Amato	Mathias	Stennis
DeConcini	Matsunaga	Stevens
Denton	McClure	Thurmond
Dixon	Melcher	Tower
Dole	Metzenbaum	Tsongas
Domenici	Mitchell	Warner
Exon	Moynihan	Weicker
Ford	Murkowski	Williams

NOT VOTING—3

Eagleton	Inouye	Schmitt

So Mr. PROXMIRE's amendment (No. 618) was rejected.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 539

Mr. McCLURE. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Idaho (Mr. McCLURE) proposes an unprinted amendment numbered 539.

Mr. McCLURE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 41, line 9, strike the period and insert the following:

": *Provided*, That the funds deferred under this head in the Supplemental Appropriations and Rescission Act, 1981 (Public Law 97-12) $135,000,000 shall be available for continuing design of the Solvent Refined Coal-I (SRC-I) demonstration facility (Project No. 78-2-D)."

The PRESIDING OFFICER. Just one moment. Members will take their seats, please. The Senate will be in order.

Mr. McCLURE. Mr. President, this amendment simply does in an affirmative way and by affirmative language what the Senate just decided to do in turning down the Proxmire-Nickles amendment. It says in the face of the statute that this amount of money is appropriated for SRC–I. The committee had put that in report language and in view of the amendment just rejected, I thought it would be appropriate that we put it in unambiguous terms into the appropriations statute. That is the purpose.

Mr. JOHNSTON. The Senator is correct, and we support the amendment.

The PRESIDING OFFICER. Is all time yielded back?

Mr. McCLURE. I yield back my time.

Mr. JOHNSTON. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Idaho.

The amendment (UP No. 539) was agreed to.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, I ask unanimous consent that the distinguished Senator from New Mexico (Mr. DOMENICI) may proceed for 5 minutes without time being charged against the time allocated to the bill or any amendment thereto.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE SALE OF AWACS TO SAUDI ARABIA

Mr. DOMENICI. Mr. President, I first want to thank the distinguished majority leader for his request.

I rise to state my position on the AWACS sale. I am convinced that the proposed sale does no harm to the future of Israel, and that it offers us an opportunity to bring the Saudi Arabians into the peace process in the Middle East.

I would not be making this commitment if I was not firmly convinced that our President, indeed, is firmly committed to Israel, to its protection and to our longstanding commitment to that country, and to our partnership in their great experiment in freedom and democracy in the Middle East.

I am convinced that his actions to this point support that position. I am convinced that over the last decade his actions have clearly indicated that he is so committed.

I am further convinced that it is a fact that Israel cannot stand alone in the Middle East. There must be other countries there, moderate Arab countries, that are willing to join in the peace efforts to make a real effort to bring peace to the Middle East.

I believe the Saudis are the most likely country to do that, but I do think that possibility is lost if we turn this sale down. If we do not give them the sense of mutual trust and regard their concern as to the symbol that comes with this proposed sale, I think we will have lost any opportunity for that kind of arrangement.

I am absolutely convinced that we must broaden our sphere of friends, and that this sale will provide a real test of the Saudis' willingness to become a constructive force in the Middle East.

I am certain that many still do not understand that we will not deliver these AWACS for 4 years. That is a long time. That will give us and the Saudis and other friends we have in the area ample opportunity to see whether or not what I have just stated can indeed reach some profitable point of fruition, whether their commitment to become a constructive force in the Middle East is so or not.

I am also convinced without a doubt, too, that the Saudis are going to purchase equipment of this type. There is no doubt in my mind that they will either buy from England or France or the Soviet Union. I am convinced they are going to do what they think is in their best interests to protect the oil fields from what they see as a position now where they cannot adequately defend, predict, or foretell what might be happening.

Obviously, there are risks in any transaction of this type. Knowing what I know about the President and his commitment, I am convinced as a Senator that I should resolve the doubts in his favor.

There has been much talk about the nature of the technology. I am certain we are going to receive certain certifications regarding the safekeeping of AWACS. I am convinced that that, plus the need to train, the need to work together, to put that equipment for the foreseeable future in a position of being safe, and I am also convinced that much of the technology, along with the limited software, is not as serious a problem to the free world as some would indicate.

In summary, I believe that if we reject this sale we reject an opportunity to bring a new potential player into the arena that will seek peace in the Middle East. I am convinced that we have adequate time to find out whether the initial—although they have not been major episodes, but some initial—indications that the Saudis are willing to try to play that role, we will have plenty of time to see whether it is doable or not.

I intend to support the President because I believe his reasoning is sound.

I close by saying that it seems to me when you have President Reagan, and former Presidents Ford, Carter, and Nixon, all indicating that this sale is in our interests, that while we have prerogatives, that those four individuals, knowing the problems with respect to foreign affairs and the perception of a President in the world, should carry some weight.

Mr. President, I do hope that the President will prevail tomorrow. I do not think that his leadership in that part of the world will be truly what it must be if we deny him this opportunity to work with the Saudis while continuing our commitment to protect and to remain a staunch ally to Israel.

I yield the floor.

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS—1982

The Senate resumed consideration of the bill.

The PRESIDING OFFICER. Under the previous order, the Senator from Nevada is to be recognized.

Mr. DOMENICI addressed the Chair.

The PRESIDING OFFICER. The Senator has 27 seconds remaining.

Mr. DOMENICI. Mr. President, I wanted to ask the distinguished Senator from Idaho a question then I would yield.

Before final passage of the bill, I wanted to engage in about a 3- or 4-minute discussion about the bill with the Senator from Idaho and perhaps ask him for some comments as to whether my analysis of it versus the first resolution and its complying with crosswalk targets were correct, because I think that his amendment that has already been adopted is precisely within the first resolution and within the targets.

The PRESIDING OFFICER. I would advise the Senator that it would take unanimous consent.

Mr. McCLURE. Mr. President, in response to the Senator from New Mexico, it would be my intention to ask unanimous consent to conduct that colloquy. We can do it at any time. I would suggest that immediately upon the disposition of the Cannon amendment would be a good opportunity to do it.

Mr. DOMENICI. I thank the Senator.

Mr. JOHNSTON. Mr. President, I ask unanimous consent that the permission to submit the Cannon amendment and the time therefor, that that order be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. Mr. President, I ask unanimous consent that the Senator from New Mexico may have 5 minutes to proceed in general discussion on the current legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from New Mexico.

Mr. DOMENICI. Mr. President, I would ask the distinguished managers of the bill, in particular, the distinguished senior Senator from Idaho, the manager for the majority, if he could give me just a few moments to see if he and I could agree on what the bill does and what it does not do.

First, the Senate bill, H.R. 4035, as reported by the Appropriations Committee, provides new budget authority of $7.7 billion in 1982. It is my understanding that the distinguished Senator from Idaho, the chairman of the subcommittee and the manager of the bill, has already offered, and the Senate adopted, an amendment to reduce the bill as reported by $165 million in budget authority, bringing the bill down to $7.6 billion in budget authority.

Mr. McCLURE. The Senator is correct. It is actually $7.582 billion, but rounded to $7.6 billion.

Mr. DOMENICI. I wish to commend the Senator for that. It is absolutely essential, in my way of thinking, that we do everything we can to stay within some

sort of budget allocation. I commend him for that.

With the McClure amendment, and taking into account the possible later funding requirements of forest firefighting and the October 1981 pay raise, if my figures are correct, the bill will be exactly at the Interior Subcommittee's first budget resolution budget authority crosswalk, and $600 million below its allocation in outlays.

Mr. McCLURE. The Senator is correct.

Mr. DOMENICI. As the Senate is aware the two items which I have just described are inevitable. They will occur. You have not put them in this bill because they belong elsewhere. However, the committee has left room for them so that the bill will still be within its budget allocation. Is that correct?

Mr. McCLURE. The pay supplemental and the firefighting costs will come in a supplemental bill, as they always do. We anticipated they will be there and we have made allowance for them. The Senator is correct.

Mr. DOMENICI. The bill, as amended, is $1 billion in budget authority and $600 million in outlays above the President's September request. I want the Senator to know that my purpose in stating that is not to here and now argue the point as to whether the bill should have been brought down to that level, but to point out the effect of the President's proposal on this committee's bill. The President's 12 percent proposal would have reduced programs in the bill by another billion dollars in budget authority and $600 million in outlays. Is that not correct?

Mr. McCLURE. The Senator is again correct.

Mr. DOMENICI. In general, then, would you agree that the Interior bill is not consistent with the President's September 23 request. Under the committee's bill, most programs are funded at or slightly below the March request of the President. I think that is correct, also, is it not?

Mr. McCLURE. As a general statement, that is correct.

I would like to also point out there are some substantial differences between the House bill and the Senate bill. Although the dollar totals are similar, the components are somewhat different. We cannot really indicate exactly what the shape of the legislation will be until we get back from the conference and see how those differences are resolved.

Mr. DOMENICI. I was just going to make that point, I say to my good friend from Idaho.

The major exception to the President's September request in this bill is for the Land and Water Conservation Fund.

Mr. McCLURE. There are two areas in which the bill exceeds the September target as suggested by the administration. One is the Land and Water Conservation Fund and the other is a rather large aggregate of moneys in the energy conservation and renewable energy accounts, upon which there has been a substantial disagreement between the Senate's position and that of the administration over the months ever since the March submission.

Mr. DOMENICI. Mr. President, I would indicate, in looking at the bill, that it provides $100 million for State recreation grants under the Land and Water Conservation Fund, proposed for elimination by the President and $50 million more than was proposed for the Federal land acquisition.

Mr. McCLURE. The Senator is correct.

Mr. DOMENICI. The President has proposed an immediate moratorium on Federal parkland acquisition and has requested $40 million, the amount estimated to be necessary to close it out. This same general policy was proposed by the President in March.

Mr. McCLURE. The Senator is right.

Mr. DOMENICI. This bill, as reported originally, was generally at the President's March request, with the exception of the Land and Water Conservation Fund. The net effect of the McClure amendment is to offset the increase for the LWCF, bringing the bill, in total, essentially to the President's March proposed level.

Mr. McCLURE. Essentially so.

Mr. JOHNSTON. Will the Senator yield?

Mr. DOMENICI. I am pleased to yield.

Mr. JOHNSTON. It was over the March budget request in at least one other area, and that is the payment in lieu of taxes by some $60 million. But I think the McClure amendment offset that, as well.

Mr. DOMENICI. I think that is correct. The Senate bill is $400 million in budget authority and $300 million in outlays below the House level. The House bill provided no funding for payments in lieu of taxes, while the Senate bill provided $100 million.

The Senate provides no funding for either the youth conservation corps or urban parks, while the House bill provided $30 million for those programs. The Reconciliation Act authorized no funds for the youth conservation corps and that is what the Senate bill does.

Mr. McCLURE. And we made an adjustment in an amendment which was offered on the floor by the Senator from Mississippi (Mr. COCHRAN) to add $7 million to payment in lieu of taxes for the Fish and Wildlife Refuge System. So that that figure is now about $112 million.

Mr. DOMENICI. The Senator is correct. I did not take the Cochran amendment into consideration, but I do recall it.

The Forest Service appropriation in the bill exceeds the total level authorized in the Reconciliation Act for the Forest Service by $200 million. It also exceeds the President's September request by this amount.

Mr. McCLURE. I think that figure is nearly correct. We are about $116 million or $117 million over the reconciliation level. This item will be in conference and will be discussed with the other body.

Mr. DOMENICI. With regard to the Forest Service, the House is $100 million above the Senate's level, which will be another item in conference.

Mr. McCLURE. Yes.

Mr. DOMENICI. Mr. President, I thank the distinguished manager of the bill for this dialog.

I ask unanimous consent that a table showing the relationship of the reported bill, together with possible later requirements, the two that I have spoken of, be printed in the RECORD. The table basically places in a chart form, the numbers we have discussed here today.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

INTERIOR SUBCOMMITTEE

[In billions of dollars]

	Fiscal year 1982	
	BA	O
Outlays from prior-year budget authority and other actions completed		4.3
H.R. 4035, as reported in Senate	7.7	4.9
Effects of McClure reduction amendment	−.2	−.1
Possible later requirements:		
Forest firefighting	.2	.1
October 1981, pay raise	.1	.1

Mr. DOMENICI. I want to commend the distinguished Senator for the work that he and others have put into this bill. Some might wonder why I am not here supporting an across-the-board 12-percent cut on this. My position is very clear: I think we have to reduce the 1982 expenditures, but I do not believe that we can reasonably be expected to save $8 billion, 12 percent, on domestic accounts through the appropriations process.

I do hope that before we are finished some target number will be reached for all the bills so that we will not have one veto after another, but we will reach agreement to let this process work.

Committees have an important role to play. Given that we are still working on the March number resulting from reconciliation, I do not believe that anyone can say that the appropriations process to this point has been irresponsible. Quite to the contrary, the sum total would probably have come within the reconciliation and the first budget resolution rather handily. Some could be over, but I do not think there are cases which would break this budget, nor do I think there would have been significant effect on the cumulative deficits even if we had been slightly over. With respect to the overall totals appropriated in this bill, however, we are not even over budget allocations.

I will support the position of the Senator from Idaho, until we find some other solutions to assign to some general role of the appropriations process.

Mr. McCLURE. I thank the Senator very much. I appreciate particularly the fact that he has underscored the fact

that the appropriations process is doing what it is supposed to do. The Appropriations Committee has attempted to live up to the reconciliation targets adopted by this body earlier. I think if anybody will look at the total shape of the Federal budget, it is not the appropriated funds which are driving the increases in the budget nor being a matter of concern in the 1983 or the 1984 expenditure levels. If the rest of the budgets are in as good a shape as the appropriated fund levels are, we would not be facing the kinds of trouble we are at the present time.

Certainly, we do need to establish the means by which we do achieve the other macroeconomic game plan upon which the Congress and the administration can agree. I thank the Senator for his comments.

The PRESIDING OFFICER. The Senator from Georgia is recognized.

UP AMENDMENT NO. 540

(Purpose: To reduce by 5 per centum the funds appropriated in the bill for payments not required by law)

Mr. MATTINGLY. Mr. President, I have an amendment at the desk. I ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The bill clerk read as follows:

The Senator from Georgia (Mr. MATTINGLY) proposes an unprinted amendment numbered 540.

Mr. MATTINGLY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

Mr. JOHNSTON. I object, Mr. President.

The PRESIDING OFFICER. Objection is heard.

The bill clerk read as follows:

At the appropriate place in the bill insert a new section as follows:

SEC. . The total funds appropriated or otherwise made available by this Act for payments not required by law shall be reduced by five (5) per centum: *Provided*, That the amount appropriated or otherwise made available in this Act for each appropriation account, activity and project under which payments not required by law are made not be reduced by more than nine (9) per centum.

Mr. MATTINGLY. Mr. President, throughout this entire session of Congress, virtually all of my colleagues have acknowledged the absolute necessity of revitalizing the American economy and restoring the faith of the American people in the future of this great land. We have repeatedly assured the average citizen that we, as U.S. Senators, would lower interest rates and reduce the ravages of inflation by eliminating Federal deficit spending.

We have raised the expectations of all Americans through our actions in this session. We have indicated our intent to respond to the voters mandate of November 1980, to reduce the level of Federal spending, lower Federal taxes, and place the control of an individual's economic destiny back in his or her own hands.

I want to commend the Senator from Idaho, who, as subcommittee chairman, has labored valiantly through many long weeks and days to guide the formulation of the proposal which is now before us. As a member of the Appropriations Committee, I can appreciate his leadership in arriving at many difficult decisions involving competing interests.

However, even at this advanced stage of our consideration of this bill, close scrutiny reveals that we still have not reduced the level of Federal spending in this area to a figure which will meet our earlier promises of economic revitalization. Some of my colleagues seem to cling to the notion that we can continue to spend Federal dollars at these levels which, in turn, will tend to delay—or destroy—reductions in interest rates and inflation.

My amendment is very simple. Even after the amendments submitted by Senator MCCLURE and others, the bill is still approximately $1 billion above the figure needed to effectively fight deficit spending.

My proposal would mandate a further average reduction of 5 percent to correct that problem, but it also provides that no one account, activity, or project shall be forced to bear more than a 9-percent reduction. Further, mandated or entitlement funds are exempted from any further cuts.

As I pointed out earlier, we have made significant progress with our efforts and we have raised the hopes and expectations of our people. Now it is time to prove that we have not merely been paying lipservice to the principle of fiscal responsibility and budget reform. It is time to prove whether we only intend to be "shadow-boxers" in the war on inflation, or whether we stand ready to deliver a knock-out blow. It is time to stand up and be counted as to our real commitment to economic revitalization of America, and the people deserve to know their Senator's position on the issue.

My brief tenure in the U.S. Senate has taught me rather rapidly that very few really uncomplicated issues are brought before this Chamber.

However, I would submit to my colleagues that this is one of those rare instances. Either we are for fiscal responsibility, or we are against it. We will either fight inflation with every tool at our disposal, or we will allow it to continue to rob the American public. If we really believe what we have been saying, we can vote now to prove it. If not, we should at least be honest enough to tell the folks back home that we were just fooling them with our rhetoric.

I want to call to the attention of my colleagues that this reduction does not bring the spending level down to the budget target which has been requested. To do so would require a reduction of approximately 14.8 percent. This reduction does, however, establish a point of principle that we in the U.S. Senate can and will act in a responsible manner to make some significant reductions toward that goal.

I urge the adoption of this amendment and call for the yeas and nays on the question.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. MCCLURE. Mr. President, while I commend the Senator from Georgia on his desire to reduce Federal expenditures, I must rise in opposition to an across-the-board-reduction of the appropriations contained in this bill.

There are 19 different departments and agencies which receive all or a portion of their appropriations through this bill. The only way this amendment could be applied is to invest in the Office of Management and Budget the discretion to reduce appropriations enacted by the Congress. That is an authority and a responsibility which should never be abdicated by the legislative branch.

Mr. President, while the Senator is correct that the bill now under consideration is substantially over the September budget estimates, I feel it would be helpful to view this measure from a different angle. Let us look at where we are compared to the appropriations for fiscal year 1981.

The administration and the Congress have agreed that we cannot continue "business as usual." In my opinion, this bill meets that commitment. In the Department of the Interior, for example, only three accounts show an increase over the fiscal 1981 level: The National Park Service, the Bureau of Mines and the Office of the Solicitor. These increases over last year total less than $25 million. At the same time, compared to the fiscal 1981 level, we have reduced funding for the Bureau of Land Management by $39 million; for the Fish and Wildlife Service by $36 million; for the Geological Survey by $111 million; and for the Bureau of Indian Affairs by $155 million. The total decreases for the Department of the Interior are $401 million compared to increases of $25 million.

Mr. President, it is also worthwhile to note that the Department of the Interior, the Forest Service, and the naval petroleum and oil shale reserves represent a significant portion of the revenue generating activities of the Federal Government. It is estimated that in fiscal 1982, the Federal Government will realize revenues from these sources in excess of $17 billion. This bill will, therefore, result in a net profit to the Government of more than $10 billion.

It has been said that "you have to spend money to make money." Our subcommittee has spent 9 months in hearings and markups in an effort to determine which areas have the greatest need of our scarce resources and which areas will yield the greatest return on an investment of Federal dollars. An across-the-board reduction would not just cut the fat from these departments and agencies, but, in a very real sense, could result in decreased revenues to the treasury if applied in an indiscriminate manner.

Mr. President, it is not the intention of the Senator from Idaho to take this bill to conference with the House and "split the difference," which would result in a conference bill higher than either the House or Senate bills. I, for one, intend to bring back a conference

bill which is below that amount now contained in the Senate version of the Interior Appropriations bill. Those reductions must, however, be the result of the collective judgment of the conferees on each of the hundreds of conference items in this bill, rather than across-the-board reductions which would remove from Congress the ability to make any significant imprint on Federal spending priorities.

Mr. President, I must reluctantly recommend that this amendment be defeated.

Mr. President, I kept listening to the Senator from Georgia and I kept hearing words that I have uttered before. I share much of the concern and the dedication which is evident in the remarks just given by the distinguished Senator. I appreciate very much the kind remarks he made about the efforts which were exerted in the subcommittee and in the full Appropriations Committee to limit the size of this bill. We were not totally successful in every instance, but it did represent the composite judgment of a majority of the members of that subcommittee. Whether or not that composite judgment is too high, the Senate will now judge.

Mr. President, we are concerned in two respects with the amendment. First is the 5-percent reduction across the board, which, in every appropriated account, simply squeezes a little on each of those accounts. Many of these, in my judgment, have been squeezed too far; and many of these, in my judgment, have not been squeezed far enough and can easily tolerate it.

I think the Members should be aware, however, that the limitation of 9 percent gives the administration then an opportunity to pick and choose among items. I suggest anyone looking at the amendment wondering where the ax should fall should look at the President's latest request and assume that, in any area where the latest requests are below the amount we have suggested here, the full 9 percent will fall on that account first and, in that manner, achieve the 5-percent reduction. It will only be after those have been exhausted that it will be likely there will be a 5-percent reduction in any account.

Finally, Mr. President, I am concerned that as we look at what it is that we are trying to do, the appropriated accounts that are now about 16 percent of the budget are already declining at 7.7 percent a year. The military budget, the defense preparedness budget, is increasing at about 21 percent a year over the next 3 years and now comprises about 30 percent of the budget. That other 54 percent of the budget, which is the entitlements, the income maintenance, the welfare, the income transfer programs of all kind and character, has only borne $15 billion of the $35 billion that has been cut so far and continues to grow at 16 percent a year. It is the growth in that area that is causing us the greatest economic distress.

Mr. President, I could accept further restraint in these appropriated accounts much more easily if I were convinced that this Congress, the Senate and our companion body across the Capitol, as well as the administration were ready to confront this matter which is really destroying the economic health of this country.

We look at interest rates that are 10 and 12 percentage points above the rate of inflation. That is an anomaly that defies description or analysis until we recognize that those who are lending money are obviously making the bet now that, instead of interest rates dropping, the rate of inflation will rise and extinguish that difference. We need very clearly to state that we intend to control the budgetary deficit in this country in years to come—not just in 1982 but in 1983 and 1984—so that the gap between interest rates and inflation will close, not by a rise in the rate of inflation but by a drop in the rate of interest. If we will do that, if we will control the growth of that 54 percent of the budget we have scarcely touched, then I believe interest rates will drop. If indeed we do that, we shall satisfy the promise that has already been so eloquently begun in the statements of the President and in actions of the Congress in restraining budget growth so far.

Mr. President, we are only dealing with a very, very small part of the total budget here. This effort of the Senator from Georgia is worthy of our commendation. But I want to see it in the context of the larger effort that must yet be done to accomplish any good. This by itself, even if adopted by the Senate, would have almost no effect on the deficit, almost no effect with respect to future budget deficits, and therefore, have almost no effect upon the interest rates and the economic health of this country.

Mr. MATTINGLY. Will the Senator yield?

Mr. McCLURE. Yes; I yield.

Mr. MATTINGLY. We have cut back $500 million.

Mr. McCLURE. Out of over $800 million.

Mr. MATTINGLY. I would like to commend the Senator from Idaho and also his colleague, with whom I have cosponsored legislation to attack entitlement programs which I hope will arise before the Senate eventually.

Mr. McCLURE. Mr. President, I know the Senator shares that goal. I did not take this time to indicate that he does not. I am reluctant to say I am not able to support this amendment as wholeheartedly as I would like under other circumstances and in a different context.

I yield to the Senator from Louisiana.

Mr. JOHNSTON. I thank my distinguished colleague.

Mr. President, this sounds awfully good, but either it is specific or it is general; in either event, it is bad. Either it is ambiguous or it is clear and in either event, it is bad. When I explain, I think even my distinguished colleague from Georgia will agree and I hope he will withdraw the amendment once he sees the light on this matter.

There happens to be a little project in the State of Georgia called the Chattahoochee River. There has been a $14.3 million option negotiated for the purchase of a piece of property down on the Chattahoochee River, $14.2 million will not do the job; only $14.3 million will do the job on that project if that is defined as a project—and I do not know whether it is because it is listed only in the report which, by custom, has listed projects and has always been respected by the Department. So in that sense, I guess it is a project, although the definition of project in this context is totally ambiguous. But if we assume it is a project and we have to cut all these projects, then you have lost your deal on the Chattahoochee. It is not just Chattahoochee.

You say, well, Chattahoochee is different. That is ours and it is specific. How about Cumberland Island? They have an option on Cumberland Island for the acquisition of further seashore for $10 million—not $9.5 million but $10 million. I could go down this list on land and water conservation fund acquisitions.

Castle Island, for example, in the Virgin Islands, is $3.55 million—not $3.54 million, but $3.55 million. If you do not make the deal and do not come up with 100 percent of that which is negotiated, you lose the deal.

You can say, well, we did not mean those are the projects, we mean to give the President the authority to wipe out Cumberland or Chattahoochee or Castle Island and let him pick and choose as to which of those projects he shall fund. If that is what it means, it is even worse, because to give to the President of the United States a line item veto—not only a line item veto, but a line item deferral or a line item rescission—over any and all projects in these accounts, I think, would be totally inconsistent with what every Member of this body wants to do. That is to fulfill his duty under the Constitution.

It is not only those things. If you go through the items, every activity here, there are among those activities certain things that cannot be reduced. How about international obligations, where we have an international treaty or another obligation that obligates us to fund something at 100 percent? Are you going to tell the President, "It is up to you, if you want to fund them fully or not, or pick and choose and eliminate"?

I do not think this is the way to do business. I believe this is the reason why my distinguished chairman, when he had to get out the scalpel and cut, looked at the different accounts, the ones that could be cut, and we swallowed hard and went along with him. We cannibalized this bill in a very cruel and difficult way, but at least we did it in a workable way. We did not say, "Mr. President, you cannot have enough money to fund Chattahoochee and Cumberland Island," which this amendment, I fear, would do.

So I hope the Senator will understand that we cannot do business this way. We cannot give the President complete, carte blanche authority to cut anywhere he wants to, and we have to go along with fully funding those obligations which require full funding in order to be efficacious.

I hope the Senator will withdraw his amendment.

Mr. MATTINGLY. Mr. President, I respect the remarks of the Senator from

Louisiana, and I will not withdraw the amendment; because I think I have an obligation to the taxpayers not only of my State but of the United States as well.

I appreciate the Senator pointing out to me that there are two projects in the bill that impact Georgia. But I do not think the people of Georgia consider the economy of our country to be now construed to be in operation in a business as usual fashion, as we have in the past.

Mr. JOHNSTON. Mr. President, will the Senator yield for a question?

Mr. MATTINGLY. I yield.

Mr. JOHNSTON. What is the Senator going to do on Chattahoochee?

Mr. MATTINGLY. Let me finish.

We talk about losing the deal, to which the Senator referred, and it reminds me of when I was in the private sector. That is what I interpreted the Federal Government to be—a deal.

I feel that the people of my State would be willing to come up with money from the private sector to pay the difference on the 5-percent cut, and I believe the people across this country would be willing to try to find 5 percent of the money from the private sector to help do it.

In fact, we have already been at work in my office trying to do that, trying to find money from the private sector, in case it was not funded or in case it was partially funded. I think that is part of the responsibility of being in the United States Senate.

I feel that I do have an obligation, and that all of us have an obligation, to look to the private sector and restore the private sector. There is no way you can make a healthy private sector by continuing to have outrageous Federal spending, as we have had. In order to get control of it, if it takes an across-the-board 5-percent cut by line item, then so be it.

I do not believe that any project will sink or that any endeavor of the Federal Government will sink as a result of a 5-percent cutback.

Mr. JOHNSTON. Mr. President, I should like to think that we can come up with 5 percent in all these activities—Indian affairs and the rest of them—and get the 5 percent out of the private sector and do it within the time constraints.

For example, the Hassel Island option expires on March 1. You have to go down there and immediately acquire big money. You have no fundraising, ongoing projects in place. and you immediately have to acquire this money, or you lose your option.

I say this in all agreement with my dear friend from Georgia, with whom I should like to join to cut the budget; but you just cannot go in and cut in the dark and cut blindly, because you will lose many of these projects. Many of them are very tenuous right now and close to the deadline right now.

Mr. MATTINGLY. A point of verification: The project in Georgia to which the Senator referred expires November 30. We are working at an accelerated pace, as other people are down there, trying to search out some money. So it is not as if we did not know it was going to happen. We do try to use other methods, and I think that is also part of our job, to try to find different sources.

It is not going to be a real crisis. In fact, if we all stand up and try to cut 5 percent, especially when it is 14.8 over, I believe it would be well underway to help us to economic recovery.

I rest my case.

Mr. McCLURE. Mr. President, I understand the concerns of the Senator from Louisiana.

I can only repeat what I said earlier. We are at the tail end of this process. If we were applying a 5-percent cut to the entire budget, so that every sector of the budget were treated the same, I could feel more enthusiastic for the approach.

This being the third appropriation bill coming to the floor, and bearing the brunt of the new budget, with no assurance with respect to what preceded—whether in HUD or all which follow in the other appropriations but, more important, in the 30 percent that is military and the 54 percent that is neither—we have no assurance that those areas will be cut at all.

If we are going to get into an across-the-board cutting mode, I hope it will apply fairly and equally to everyone. I know that the Senator has made that approach.

A number of people have suggested that if you end up here and are still too high, let us take a 2-percent cut out of everything. I could support that as an alternative, and I may yet, before we finish this year in the budgetary process.

Mr. MATTINGLY. I do not want to keep the Senator in the dark. I intend to do this when it comes down. So I will try to be equitable with everyone.

SEVERAL SENATORS. Vote! Vote!

Mr. McCLURE. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. LUGAR). The question is on agreeing to the amendment. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from New Mexico (Mr. SCHMITT), and the Senator from Virginia (Mr. WARNER), are necessarily absent.

Mr. CRANSTON. I announce that the Senator from Missouri (Mr. EAGLETON) and the Senator from Hawaii (Mr. INOUYE), are necessarily absent.

The PRESIDING OFFICER. Is there any Senator in the Chamber desiring to vote?

The result was announced—yeas 35, nays 61, as follows:

[Rollcall Vote No. 336 Leg.]

YEAS—35

Armstrong	Grassley	Proxmire
Baker	Heflin	Quayle
Bentsen	Helms	Riegle
Boren	Humphrey	Roth
Boschwitz	Jepsen	Sasser
Byrd, Harry F., Jr.	Kassebaum	Simpson
Danforth	Kasten	Specter
Denton	Laxalt	Symms
Dole	Lugar	Thurmond
East	Mattingly	Wallop
Exon	Nickles	Weicker
	Percy	Zorinsky

NAYS—61

Abdnor	Burdick	Cohen
Andrews	Byrd, Robert C.	Cranston
Baucus	Cannon	D'Amato
Biden	Chafee	DeConcini
Bradley	Chiles	Dixon
Bumpers	Cochran	Dodd
Domenici	Jackson	Packwood
Durenberger	Johnston	Pell
Ford	Kennedy	Pressler
Garn	Leahy	Pryor
Glenn	Levin	Randolph
Goldwater	Long	Rudman
Gorton	Mathias	Sarbanes
Hart	Matsunaga	Stafford
Hatch	McClure	Stennis
Hatfield	Melcher	Stevens
Hawkins	Metzenbaum	Tower
Hayakawa	Mitchell	Tsongas
Heinz	Moynihan	Williams
Hollings	Murkowski	
Huddleston	Nunn	

NOT VOTING—4

Eagleton	Schmitt	Warner
Inouye		

So, Mr. MATTINGLY's amendment (UP No. 540) was rejected.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. JOHNSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, I ask unanimous consent that the distinguished Senator from Montana be recognized for 10 minutes without it being charged against the bill or any amendments thereto.

Mr. CHILES. Mr. President, I object. I think that we ought to finish this bill, then most of us who want to go home and have dinner with their families can do so and anybody who wants to speak after that can speak and the Chamber will be here for them.

We should have finished this bill an hour ago. We have been 5-minuting and 10-minuting it to death. Mr. Pastore is not here anymore but his ghost is here and his ghost speaks for the wives and the children and the chicken in the pot.

Mr. BAKER. Mr. President, I have tried very hard to honor the ghost of John Pastore and we have gotten out at 6 o'clock more often than I would have expected otherwise.

But all day long now we have been making these statements and they have been very brief. It would seem to me that we ought to go ahead and acknowledge this request and agree to it. I hope the Senator would not object to that.

Would the Senator consider permitting the Senator proceeding for 7 minutes instead of 10 minutes?

Mr. MELCHER. Six minutes.

Mr. BAKER. Six minutes.

Mr. CHILES. Three minutes? Five minutes?

Mr. MELCHER. Five minutes.

Mr. BAKER. Mr. President, I ask unanimous consent that the Senator from Montana may proceed for 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Montana.

THE SALE OF AWACS PLANES TO SAUDI ARABIA

Mr. MELCHER. Mr. President, the quest for peace in the Middle East and the grappling for stable governments there is the interwoven theme—the dominant factor in our countries' quandary to sell or not to sell the AWACS and Sidewinders to Saudi Arabia.

It is no easy task for the United States to maintain its world prominence as

peacemakers in the Middle East. We have sought that goal for two decades past, and we dramatically provided that role in the attainment of the Camp David accords.

That may possibly be recorded as the start of lasting stability and the precursor of peaceful solutions to end the centuries of festering Middle East religiously fostered distrust, antagonism, and barbarity.

Whether that end to the undying war between the followers identified as Moslem and Israel may be enhanced or aggravated by the Senate's decision to sell or not to sell aerial arms to Saudi Arabia is the issue the Senate judges. The procedure of the President proposing arms sales, providing both the House and Senate do not disagree, leaves part of the decision process closer to the people.

It is apparent that many Americans would be disposed not to consider this quandry. "Is it our business?" many ask or a parallel query, "Why is it our business?"

These are pertinent questions relevant to fear of warfare that may entangle us—at best in financial outlays that we can ill afford and at worst in direct involvement with Americans again fighting, sacrificing, dying in a foreign war.

Our judgment in the likelihood of future events even with thoughtful prayer does not provide—at least in my case and I suspect in the cases of my 99 Senate colleagues—with access to the coming design of divine providence for the world's future of war or peace.

Perhaps Salomon had same divine inspiration for his notable wise decisions. But more important the divine descendant of that House of David, Jesus Christ, in his Sermon on the Mount listed in the beatitudes:

> Blessed are the Peacemakers for they shall be called the Children of God.

At this point in time for us and the world the decision on this arms sale should be based on our best judgment as to how the United States continues in the role of peacemaker. That judgment, of course, considers the views of those directly involved.

Israel strongly opposes. Egypt, their partner in the Camp David accords, strongly supports. That is not to say that either wants war. The Moslem support for the Palestinians, the often repeated threats against Israel by Moslem entities and their mutual distrust makes peace tenuous.

Selling arms is generally construed as warmongering. That is counterbalanced by the historic knowledge that lack of defense can invite hostile acts and at times aggression. The NATO alliance is based on the latter.

In the Middle East our strong support and strength has been channeled to Israel and to a limited degree of late to Egypt. We have sold armaments to Iran and to Saudi Arabia. The results in Iran were counterproductive.

NATO allies, Japan, ourselves and others by varying degrees use Middle East oil. Concern that oil production there might be threatened by hostile acts inspired or overtly supported by Russia leads Moslem countries to want the sale to protect against that possibility. Israel believes that the defensive AWACS planes in Saudi Arabia's hands as well as the Sidewinder rockets mounted on F–15's might be used aggressively against them.

In that atmosphere where Egypt and Saudi Arabia violently differ from Israel what should be our judgment? Is it possible to start a coalition of mutual defense involving part of the Moslem world without antagonizing Israel?

Building a coalition of mutual defense in the Middle East can be done if there is thawing out of distrust and hate. The military capability and the use of modern war technology has been mastered by the Israelis. They are excellent fighters.

It is not easy to envision with certainty a stable coalition of Middle East Moslem countries. Egypt and Saudi Arabia believe it is possible. We should support that goal.

The questions of our people who ask "Is it our business?" and "Why?" can and should be answered "Yes" if there is a chance to enhance the stability of the Middle East which means a continuation of no warfare, firm efforts to resolve conflicts, a seeking of peaceful solutions to antagonisms—in short keeping the peace.

The American people expect us to prevent circumstances where we are dragged into a war, a war directly drawing our youth into foreign conflicts.

It should be noted by Americans that the delivery of the AWACS planes starts in 1985, and the delivery of Sidewinders about January of 1984. If there are reasons to block the sale before those dates, action to stop the delivery of the arms can be done then.

There are no guarantees. I quote from Montana's Mike Mansfield's cable:

> The pre-eminent issue is peace and peace will take time, patience and understanding. Will we look to the future and measure the possible costs of failure or face up to the present and do what we can to prevent a possible holocaust in the most volatile region on earth?

The Camp David accords can be enlarged, can be resolved, conflicts can be avoided. While we continue to support Israel's survival there can and must be a broadening of responsibility shared by Moslem neighbors to understand and accept as Egypt has Israel's permanence as a nation. A coalition of understanding is necessary. Saudi Arabia has stepped forward to some degree—I would hope more—to work with Egypt a beginning toward that goal.

The sale may enhance that beginning. As Mike Mansfield determined, I too am ready to "face up to the present and do what we can to prevent a possible holocaust in the most volatile region on Earth."

I side with Mike.

I shall vote for the AWACS sale.

Mr. BAKER. Mr. President, I wish to commend the Senator from Montana. I know this has been a difficult decision for him as it has been a difficult decision for virtually every Member of the Senate. I think he has shown courage, and, by example, he has shown how the Senate will work its will to assist in the peace and maintain the security of the United States.

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS, 1982

The Senate continued with the consideration of the bill (H.R. 4035).

Mr. McCLURE. Mr. President, I ask unanimous consent that the Senator from Florida be recognized for not to exceed 5 minutes for a colloquy with respect to another matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mrs. HAWKINS. Mr. President, instead of requesting the yeas and nays on an amendment today, I believe this matter can be disposed of through a colloquy with the Interior Appropriations Subcommittee chairman and our Energy Committee Chairman, Senator McCLURE.

As the Senator from Idaho knows, an environmental dispute of great concern to the State of Florida is raging over whether the Interior Department should issue leases to mine phosphate in the Osceola National Forest.

Since my colleagues may not be as aware of the issues involved that have implications for all States, I would like to begin this colloquy by first giving the background behind this dispute.

During the period 1965 to 1968, 92 prospecting permits were issued in the Osceola National Forest by the Department of the Interior's Bureau of Land Management. And between 1969 and 1972 four companies subsequently filed applications for preference right leases on 41 of these permit areas, covering 34 percent of the forest.

In 1972, the State of Florida filed suit to enjoin the Interior Secretary from issuing the leases and has expressed its continuing opposition by intervening in two lawsuits which attempted to force issuance of the permits. Nevertheless, the Department of the Interior has suddenly decided to press ahead. Unless Congress acts, mining in the forest could begin soon after the leases are granted sometime early next year.

In my view, issuing these leases would violate States rights in a major way. In my hand today, is a copy of a letter to Secretary Watt signed by 16 of 17 Members of the Florida delegation in opposition to mining in the forest.

I ask unanimous consent, Mr. President, to have it printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., October 27, 1981.

Hon. JAMES G. WATT,
Secretary of Interior,
Washington, D.C.

DEAR MR. SECRETARY: It is our understanding that the Department of the Interior is presently reviewing forty-one preference right lease applications for phosphate mining in the Osceola National Forest in Florida. The Congressional delegation of the State of Florida would like to express its concern over continuing reports that the Administration supports phosphate mining in this forest and is taking steps to attain that end.

The phosphate deposits in the Osceola National Forest are small in comparison to those beyond the forest's bounds. In fact, two-thirds of the phosphate body which contains the Osceola deposits lie on private lands adjoining the Osceola National Forest. Countless studies confirm that there is more

than enough phosphate available in the United States to satisfy our domestic demand and allow us to maintain a healthy export trade in this commodity.

The Osceola is a multi-purpose forest. Therefore, a variety of recreational activities will be disrupted during 30 years of phosphate mining as proposed. Many of us also doubt whether the affected wetlands can be reclaimed without damage after that 30-year period.

Several proposals are currently before the Congress to prohibit phosphate mining in the Osceola National Forest and compensate those who have made applications to mine there. While these proposals suggest different methods of compensation, all have one overriding goal: prohibit phosphate mining in this valuable and unique national forest.

The Congressional delegation of the State of Florida and the citizens we represent are united in our opposition to the issuance of phosphate leases in the Osceola National Forest. One of the basic tenets of this Administration has been to return decision-making authority to the states and localities, who are best able to determine the needs of their citizens. It is our firm hope that the Administration will adhere to the doctrine it espouses, acknowledge the wishes of the citizens of Florida, and discontinue its efforts to institute phosphate mining in the Osceola National Forest.

Sincerely,

Paula Hawkins, Lawton Chiles, U.S. Senate; L. A. "Skip" Bafalis, Don Fuqua, Bill McCullum, Clay Shaw, Claude Pepper, Bill Lehman, Bill Nelson, Earl Hutto, Bill Young.

Mrs. HAWKINS. Mr. President, should the department proceed in the face of such strong opposition from our State's elected representatives, it will make a mockery of the view that development issues are for local people to decide, not people in Washington.

Now, sometimes it is argued that development is in the national interest and the views of local citizens must be overridden. However, that case cannot be made with regard to mining this forest for phosphate.

There are enough known domestic phosphate deposits to satisfy U.S. demand and to continue exporting phosphate at the current level for about 100 years.

In view of these concerns, I wonder if the Senator from Idaho will comment on this States rights dispute and whether he can advise the Senator from Florida whether he feels new powers should be given to State or local officials so that they can decide how best to use their own resources?

Mr. McCLURE. Mr. President, if the Senator will yield, I think certainly the question of leasing of Federal resources within a State is a matter of continuing concern. I think we should be very sensitive to the opportunity for the State and local governments to go through the permit process to apply whatever conservation or environmental constraints the local governments desire to attach.

There is, of course, always the concern with respect to the wise utilization of the natural resources that belong to all the taxpayers of this country. I would hope that we are always able to give to State and local governments the full range of opportunity to exercise their own judgments with respect to those resources which more particularly affect them.

Mrs. HAWKINS. Is the Senator aware that the companies were going to settle until someone in the Interior Department flashed the high sign to pursue their efforts?

Mr. McCLURE. I am aware that this is a continuing struggle that has been going on for at least 10 years. I have been up and down this hill.

I should not say that. I am not sure that in Florida they have what is known as a hill. But if there is one, certainly this is it, and we have been up and down it several times.

Mrs. HAWKINS. In view of all of this, I wonder if the Senator from Idaho, wearing his other hat as chairman of the Energy Committee, would agree to hearings by February on my bill, S. 1633, and on a bill by Senator CHILES also on this subject.

Mr. McCLURE. Without fixing a specific date, I can assure the Senator we will have hearings on it early in the next session. I say that because I am not certain when the Senate will convene or when it will be possible for us to schedule such hearings. But it will be very early in the next year.

Mrs. HAWKINS. With those assurances, Mr. President, I will not offer my amendment. I thank the Senator from Idaho for his cooperation and yield what time remains to my colleague, Senator CHILES.

Mr. CHILES. Mr. President, I wish to associate myself with the comments of my colleague from Florida.

I am pleased to speak to the issue of phosphate mining in the Osceola National Forest in Florida. This small, 157,000-acre forest in my State has been, and hopefully will continue to be, a valuable source of timber, fish and wildlife species, wetlands, and recreational opportunities including hunting, fishing, and camping.

Today, however, the Osceola National Forest is in danger. It is in danger of undergoing drastic change by being strip mined for phosphate. Unless Congress acts, there is a chance the Department of Interior could issue mining leases that would cover approximately one-third of this forest. And, unfortunately, the chances appear to be getting greater that the Department of Interior will, in fact, issue leases. One thing is clear. If we extract the phosphate deposits underlying the forest we will do so at the expense of timber harvesting, wetland preservation, wildlife protection, and recreation opportunities now offered by the forest.

Mr. President, for many years now the people of Florida have lived with the threat hanging over us that the Osceola will be strip-mined for phosphate. The 41 pending applications have been under review since 1974. Time and again public testimony has been delivered in opposition to this activity and, as you know, legislation is now pending in the Senate which seeks to resolve this situation.

While different approaches have been suggested. Members of the Florida congressional delegation agree that phosphate mining should not take place in this forest. It is obvious time is needed for Congress to look into this matter carefully and hopefully reach a consensus on how best to protect the forest and deal fairly with those who may establish rights to leases in the Osceola.

I am growing increasingly concerned, however, about the mood of the present administration in terms of mineral exploration in general and, more specifically, about the administration's attitude toward leasing in the Osceola National Forest. What has been an involved and lengthy process has suddenly steamrolled and, before you know it, if no action is taken, these leases will have been issued without Congress having an opportunity to exercise its judgment. Let me give you some examples of how this leasing procedure is moving along.

Soon after the Reagan administration entered office, I contacted the Secretary of Agriculture, Mr. Block, concerning the Department's position on the Osceola phosphate mining leasing question. In an April 1981 response to me Secretary Block indicated that the Department position remain unchanged from the previous administration. I was encouraged by this response in that the former administration's position had been that no technology was available or proven to assure that mining could be carried out under conditions that would insure the adequate utilization of the lands. Now, however, only 6 months later, the Department of Agriculture announces that the administration now believes the forest will not be threatened by intensive phosphate mining. I ask you, what has changed?

Another incident involved the Environmental Protection Agency. In the past the Agency has opposed leasing, stating that the issuance of the leases would lead to irreparable destruction of some 28,000 acres of wetlands in the Osceola. A January 1980 report to the Bureau of Land Management from the Agency recommended that no leases for phosphate mining be issued for the forest and that alternative approaches be explored to resolve the matter of the pending lease applications. Now, however, as indicated in EPA's testimony before a House of Representatives subcommittee, the Environmental Protection Agency appears to be moving in the same direction as the Department of Agriculture. I ask you, what has changed?

Mr. President, the charges made by the administration that the forest can, in fact, be restored if strip-mined, need to be examined. The Osceola National Forest deserves protecting and Congress needs to have a chance to fully explore the issues surrounding the pending lease applications. I feel confident that the scientific evidence coupled with public support in favor of preserving the present uses of the Osceola will convince Senators to take the necessary action to prohibit phosphate mining in the forest. We need to make sure we do, in fact, have time to study this matter. Hopefully, this will lead the way to active consideration of legislation to resolve the longstanding controversy surrounding phosphate mining in the Osceola Na-

tional Forest. I know I will continue to press for action in this regard.

I thank the distinguished chairman for his commitment that we will have hearings on this subject. It is a matter that we need to try to resolve. Certainly, in Florida, the local government units, the recreation people, all people—all people, except the people holding permits—are universally against the mining industry going into these forests.

Mr. McCLURE. Mr. President, I ask unanimous consent that the junior Senator from Idaho be permitted to proceed for 2 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 541

Mr. SYMMS. Mr. President, I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Idaho (Mr. SYMMS) proposes an unprinted amendment numbered 541.

Mr. SYMMS. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On Page 35, line 10, after the date "1983" insert the following: ": *Provided*, That funds made available for expenditure under this Act for contracts entered into pursuant to 16 U.S.C. 579a to provide fixed-wing air tanker services shall be transferred into the category of 'Fighting Forest Fires' and that, with respect to subsequent fiscal years, the Forest Service budget shall include such amounts within such budget category or such equivalent category as may subsequently be adopted".

Mr. SYMMS. Mr. President, I offer a technical amendment whose only purpose is to secure increased accountability for a vital Forest Service firefighting program. This amendment does not call for the appropriation of any additional funds. But it will provide a considerable public benefit by enabling Congress and the Forest Service to make better use of available resources in protecting our national forests.

The initial attack capability of fixed-wing firefighting aircraft commonly referred to as airtankers provides an indispensable firstline of defense in protecting the national forest system. The Forest Service contracts annually with about 15 small, private companies, through competitive bidding, for these services. Under existing statutory authority these contracts are renewable twice without readvertising. The companies provide airtankers and highly trained crews to drop fire retardant chemicals on forest fires. They are paid a daily readiness rate, called the availability payment, and they are paid an additional hourly amount for actual flying time related to firefighting.

Under current procedures, the airtanker availability funds are included without identification under a general "fire protection" line item in the Forest Service budget. Because these funds are not separately identified, effective congressional oversight is impossible. Furthermore, airtanker operators can only guess at the Forest Service's tanker usage intentions. I should point out that these airtankers were originally converted for the benefit of the Government firefighting system and they have no other purpose. As things now stand, these contractors cannot effectively conduct the long-range planning that is vital to their survival in such a complex and capital-intensive business.

The 1981 airtanker year program illustrates the problem dramatically. Last fall the Forest Service advertised contracts for 45 airtankers. In January it announced it would award only 37 contracts because bids had exceeded the Forest Service expectations. Of course, neither Congress nor apparently anyone else knew what these expectations were. The Forest Service then announced that, without a $1 million programing, funds would not be available to contract for what they had earlier advertised as the Government's minimum needs. Suddenly in March, however, without any new funds, the Forest Service awarded all but one of the contracts. Where did the funds come from? Why was this critical program apparently so vulnerable to factors we know nothing about?

The 1981 program involved approximately $3½ million in availability funds for a fleet of 44 airtankers. To award the same contracts for 1982 would require the same amount plus an additional amount to cover inflation. Supposedly these funds exist in this budget. Assuming they do, they are buried in a $178 million line item. My amendment would consolidate airtanker program costs into the forest firefighting line item, where they belong. I seek to avoid a repeat of the same problem again next year.

This amendment would cost no money. It would place availability funds and actual flying time funds into the same line item. It is designed to provide some Forest Service accountability to Congress for this important program. In addition, Government lands will benefit from the increased protection assured by the airtanker industry's ability to plan ahead with some awareness of Forest Service intentions.

Of course, this amendment will not alter the existing system whereby actual fire protection costs, as determined by burning conditions during a particular fiscal year, are funded through the same line item, but in a supplemental appropriation. Sufficient authority would exist with respect to these firefighting funds to allow the Forest Service to contract for additional airtankers during any fiscal year if fire conditions warrant such action. The transfer is not in any way intended to limit the ability of the Government to contract for the availability of additional planes if necessary. On the contrary, it is intended to facilitate contracting for the availability of additional airtankers under serious fire conditions.

Wildfires are a devastating threat to Idaho and the mountainous West. This summer forest fires ravaged thousands of acres of Idaho mountainsides, destroying millions of dollars of Government and private property. At the same time, apparently for want of either Forest Service money or authority, more than a dozen airtankers sat uncontracted for on runways through the West. I understand some otherwise unused American tankers went to Canada in the meantime.

Protection from these fires should never be compromised by the vagaries of a Government budgeting system hidden from sight. I urge the Senate to bring the dollars assigned to this program out in the open. At the same time, we would clarify whatever question may exist with respect to the authority to hire additional airtankers if conditions warrant. The purpose of my amendment is to provide additional protection for our forests without any additional appropriation

I would say to my colleagues that I have discussed this matter with both the distinguished chairman, the Senator from Idaho, and the distinguished ranking minority, the Senator from Louisiana. I would be happy to yield to them at this point.

Mr. McCLURE. Mr. President, this matter has been discussed extensively. I am not certain what the ultimate result will be, whether or not the other body will find an acceptance of this amendment. However, I am willing to accept the amendment, take it to the conference, and determine at that point where we might go after further consultation with the administration and Members of the other body.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment (UP No. 541) was agreed to.

Mr. McCLURE. Mr. President, I ask unanimous consent that the junior Senator from Indiana be permitted to proceed for 2 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. QUAYLE. I thank the Senator for engaging in a colloquy on behalf of myself and the distinguished senior Senator from Indiana, now the Presiding Officer (Mr. LUGAR).

On behalf of myself and my distinguished colleague from Indiana, I would first like to thank the Senator from Idaho for consenting to engage in this colloquy to address an issue that is of vital concern to the State of Indiana.

The legislative history of the Indiana Dunes National Lakeshore indicates consistent congressional support throughout the last 15 years. The Dunes were authorized by Congress on November 4, 1966, and established on September 8, 1972. The authorization was amended on October 18, 1976, to set the lakeshore boundaries and to begin acquisition. The authorization act, as amended, established an acquisition ceiling of $60,812,100, and to date, $60,800,000 have been appropriated. Of the 12,535 acres that were authorized for acquisition between 1966 and 1976, only 170 acres remain to be acquired.

Public Law 96–612, which passed Congress in December of 1980, authorized an additional 488 acres for acquisition.

Thus, the Dunes' acquisition plans will be complete with the addition of only 658 acres. In light of the fact that 100 percent of the currently appropriated funds have been expended, it is essential that additional moneys be made available for completion of a process that began almost 15 years ago.

Senator LUGAR and I have consistently supported the Indiana Dunes National Lakeshore, which is the only designated national park area in the State of Indiana. The location of the park in the northwest corner of the State provides scenic beauty and recreational facilities to an area which is, in all other respects, heavily industrialized, urbanized, and congested. Over a million people visit and use the Dunes' facilities each year and expansion is essential to accommodate the ever-increasing number of visitors. To illustrate, 264,000 people visited the Dunes in 1978, while 1,223,000 people visited in 1980. These figures represent a 78-percent increase in park visitations.

Another example is the fact that the level of participation in the wide range of environmental education programs and other public activities offered by the Park Service has almost doubled in the mental phenomenon which is both spectacularly beautiful and a source of great pride to Indiana residents. It should also be noted that 35 percent of the visitors to the park each year are from outside Indiana.

I want to make you aware of our letter of July 13, 1981, in which we requested an appropriation of $3.5 million in fiscal year 1982 for land acquisition and completion of several projects related to the continued improvement of the Indiana Dunes National Lakeshore. The House has included this and then some in its bill.

We want, at this time, to reaffirm our support of the Indiana Dunes National Lakeshore and to express our hope that you will give careful consideration to this request when H.R. 4035 goes to conference. We also want to support the House position. Since there is no money in this bill, essential operations of the Dunes cannot continue. This is tantamount to deauthorization, which the administration opposes and I strongly oppose.

I am confident there will be compromise with the House, that the operations of the Dunes will continue, and that there will be reasonable amounts of moneys for future acquisition.

I urge committee cooperation and indulgence in this matter.

I want to remind the chairman of our letter of October 13 reiterating our concerns over the Indiana Dunes. The letter of July 13 requested appropriations of $3.5 million in fiscal year 1982 for land acquisition and other expenses for the Indiana Dunes National Lakeshore.

Mr. President, I ask unanimous consent that a copy of our letter dated July 13, 1981, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD as follows:

U.S. SENATE,
Washington, D.C., July 13, 1981.

Hon. JAMES A. MCCLURE,
Chairman, Senate Appropriations Subcommittee on Interior and Related Agencies, Washington, D.C.

DEAR JIM: When the Senate Subcommittee on nterior and Related Agencies marks up H.R. 4035 this week, we hope that it will give favorable consideration to an appropriation of $3.5 million in fiscal year 1982 for land acquisition and other expenses for the improvement of the Indiana Dunes National Lakeshore.

In December 1980, following four years of legislative effort, the Congress enacted S. 2261, a bill introduced by Senators Lugar and Bayh, S. 2261 authorized $3.1 million for land acquisition at the Indiana Dunes. In addition, $1.7 million of acquisition authority remains to be funded under the 1966 and 1976 legislation.

The Indiana Dunes National Lakeshore is the only national park in the State of Indiana. Over one million U.S. citizens visit the park each year. An appropriation of $3.5 million would permit completion of several important projects and funding of half of the land acquisitions previously authorized.

Specifically, we would propose that $2.4 million be appropriated for land acquisition in fiscal year 1982. This would allow for acquisition of land for the east transit terminal and information center and possible acquisition of a golf course to provide a camping ground for park visitors, as authorized by S. 2261. Some of these funds might also be used for acquisition of homes for those owners who might want to sell their homes during fiscal year 1982.

The House re ort recommends $200,000 in funding for the west unit access road and $200,000 for the east unit transit terminal and information center. But the House bill does not specifically set aside these funds. These are high priority items which we believe should be specifically earmarked in the bill. We would also strongly recommend an appropriation of $500,000 to complete work already underway for road restoration. Finally, we would recommend $200,000 for a comprehensive transportation evaluation study.

Our recommendation of $3.5 million is the same as recommended by the House Appropriations Committee. But it excludes $300,000 for yet another geological study of the Bailly nuclear facility and two small appropriations totalling $100,000, while assuring funding for the west unit access road and the east unit terminal and information center.

If you have any questions, or need additional information, please contact us directly or Jeff Burnam (ext. 47443) or Mary Moses (ext. 48736) of our staffs.

Sincerely,

RICHARD G. LUGAR,
DAN QUAYLE.

Mr. QUAYLE. As the Senator knows, there is no money in this bill.

I urge the cooperation of the chairman in working with the Senators from Indiana to come to a reasonable compromise in the conference committee to continue the money for the continuation of the Indiana Dunes National Lakeshore.

Mr. MCCLURE. I thank the junior Senator and the senior Senator from Indiana for their continued interest in this subject. I am sure they recognize that all of the items included in the request dated July 13 will be dealt with in conference. The Senate conferees will give these items very careful consideration, recognizing the fiscal restraints within which we have to work.

Mr. BURDICK. Mr. President, I am deeply concerned about the additional reductions in this bill for the Bureau of Indian Affairs and Indian Health Service budgets.

Of particular concern to me is the future of the Community Health Representative program which the administration wants to completely eliminate. The proposal before the Senate would reduce the program to $24.5 million, which is a 32½-percent cut from last year's budget. Obviously, this valuable program is being asked to absorb more than its fair share of budget cuts.

The CHR program provides a broad range of health care assistance to tribal members; it is managed and administered solely by the tribes which allows each program to be tailored to the individual and unique needs of each reservation.

The program has succeeded in not only bringing crucially needed health care services to reservation Indians, but it has also had the effect of reducing costs associated with health care.

In North Dakota, where the reservations are located many miles from population centers where there is hospital care, the CHR's provide in-home services.

The patient does not have to experience the trauma of traveling long distances for routine tests and examinations, and hospital admissions and associated costs have been reduced significantly. Indian Health Service statistics shows that the CHR's have led to a 25.2-percent decline in hospital admissions at a time when the daily hospital room charge is about $175.

In cases where it is necessary to admit a patient, the CHR's provide the only available ambulance service other than that which is privately owned and which costs an average of $135. In addition, the IHS has indicated that the CHR program has resulted in a 17.5-percent reduction in the number of days a patient is hospitalized.

The CHR's handle an average of 20 patients each day, are on call 24 hours a day, and work about 6 days a week. They are also an essential element in relieving the workload of the reservation physicians whose patients number about 20 percent higher than physicians servicing non-Indian populations. The CHR program has proved it is cost efficient and of great benefit to the tribes and should not be cut to the extent now being recommended.

I also have reservations about the reductions targeted to the Indian education programs, specifically the school equalization formula, Johnson-O'Malley educational assistance, and postsecondary schools. These programs are vitally important components of our national Indian education efforts and I believe it is a mistake to make further reductions.

Significant reductions are also being requested for program management and general management and facilities administration. While this reduction may well be justified, I am concerned that the Senate has not been provided with specific information about how these reductions will be absorbed by the BIA and

IHS. At the time this bill is considered by the conference committee, it would be helpful to have a more precise listing of how these reductions will be dealt with by the agencies.

Mr. President, I have stated my intention to comply with the President's plan to reduce Federal spending. But I also intend to support these reductions in an equitable fashion. It would appear that many of the programs serving the Indian population of our country are receiving an inequitable share of the cuts, and as a conferee on this bill, I intend to support adequate levels of funding for these programs.

Mr. BRADLEY. Mr. President, as a member of the Committee on Energy and Natural Resources, I am pleased to see us take a step toward solution of part of our national energy problem by addressing H.R. 4035.

One industry with major oil dependence is that of electric power generation. Because of the historical economics of oil products and refining, many utilities are directly dependent on imports as their primary fuel. While all users of electric power have been affected, those businesses and individuals who draw their power from one of these utilities have not only paid the price, they are also exposed to a very fragile and vulnerable supply line.

One of the major Department of Energy programs for electric utility coal utilization is the pressurized fluidized bed combined cycle pilot plant being constructed at the Wood-Ridge, N.J., facilities of Curtiss-Wright Corp. DOE gave the go-ahead for this plant's construction after Curtiss-Wright capped 2½ years of basic component effort by an extended period of operation of a small gas turbine driven electric generator with direct combustion of coal as the power source.

Excellent efficiency and environmental control was maintained during this test. This level of accomplishment has yet to be reached elsewhere. The pilot plant, now far along in construction, will serve as an actual integrated combined cycle system and, though smaller than what will be necessary in commercial use, it is intended to show that remaining technical issues can be satisfactorily resolved and, in that way, provide the confidence which the industry needs to proceed to full scale commercial equipment.

In March of this year the President's request for revision of the fiscal year 1982 authorization reduced the total Department of Energy fossil energy effort from $2.551 billion to $435 million; however, support of the Wood-Ridge pilot plant was unchanged.

Both House and Senate authorization committees concurred. So does H.R. 4035 and so did the responsible subcommittee under the distinguished Senator from Idaho.[1] I am pleased to speak for this important program whose success will be an important contribution to economical, clean and secure electric power.

[1] Senate Report No. 97-166 (Appropriation fiscal year 1982, Interior and Related Agencies).

● Mr. NICKLES. Mr. President, today I feel compelled to cast my vote against H.R. 4035.

This bill is approximately $1 billion over in B.A. from the President's September 24 appropriation request for the Department of the Interior appropriations bill. This will establish a very poor precedent for the appropriation bills that have yet to reach the Senate floor.

I believe that this Senate must demonstrate its true commitment to returning fiscal responsibility in the spending habits of the Federal Government. Now is the time to live out this commitment. Now is when the rubber meets the road. Are we really serious about turning this country's economic problems around, or are we just paying lipservice to the current political rhetoric of the day, only to change when pressure of private interest groups begins to mount?

Do we really have $135 million in our budget for SRC-1? Are we not courting disaster by refusing to accept even a 5-percent reduction in the bottom line of this bill?

I know that there are other areas where this bill would appropriate money for projects which, in this time of economic austerity, should not be funded.

I would like to state my intent to place into the RECORD, either later this evening or tomorrow, a breakdown of H.R. 4035, highlighting those areas where this bill excedes the recommended target needed to balance the budget by 1984.

I am not without understanding of the difficulty that the distinguished chairman, Senator MCCLURE, has had in completing this appropriation bill, the President's additional budget requests came after the mark-up in subcommittee had occurred, making it very difficult for the members to examine and make the appropriate changes.

However, I feel that to vote for this bill would set a serious precedent for future appropriation bills by indicating that we are willing to accept funding levels which exceed those which would balance the budget by 1984. I am not willing to throw in the towel.

Therefore, I respectfully state my opposition to this bill and encourage my colleagues to join me. Should the President decide to exercise his veto power, he will have my firm support.●

FUNDING FOR TRIBALLY CONTROLLED COMMUNITY COLLEGES

● Mr. BAUCUS. Mr. President, I express my concern for the funding for tribally controlled community colleges in the Senate version of the Interior appropriations bill for fiscal year 1982. As presently constructed, the Senate version does not provide funding for four tribally controlled community colleges which have been determined to be feasible during fiscal year 1981.

These schools—Fort Peck Community College, Cheyenne River Community College, Lummi School of Aquaculture and Fisheries, and Little Big Horn Community College—have been determined to be feasible. Moreover, two of the schools received grant funds under title I of the Tribally Controlled Community College Assistance Act during fiscal year 1981.

I understand, however, that the House version does provide funds required to provide grants to these four schools. I would strongly urge, therefore, that my colleagues on the conference committee on the Interior appropriations bill adopt the House version. Given the severity the budget cuts that have already been recommended for Indian programs throughout the Federal Government, I believe that additional reductions to tribally controlled community colleges would be most unfortunate.

Mr. President, I believe the wisdom of my request will become most apparent during deliberations on the conference report. The Senate committee did not provide the $998,619 budgeted for these tribally controlled community colleges because it believed they had not been declared eligible for assistance during fiscal year 1982.

However, these tribally controlled community colleges have, in fact, been declared eligible for Federal grants. Adopting the House committee's version would simply restore funding levels to that requested by President Reagan in March, and would meet the obligation of the Federal Government under Public Law 95-471 to provide these grants.

Again, Mr. President, I urge my colleagues to adopt the House version for tribally controlled community college funding.●

THE LAND AND WATER CONSERVATION FUND: CONTINUING OUR COMMITMENT TO RESOURCE CONSERVATION

● Mr. BIDEN. Mr. President, it has been said, and I believe appropriately, that one measure of a society's greatness is how it treats its young, its sick, and its aged. I believe yet another criterion should be added which reflects the complexity of life in the 1980's—how a society conserves its scarce natural resources, specifically its air, its water, and its lands.

The election of Ronald Reagan, his appointment of James Watt as Secretary of the Interior and Anne Gorsuch as Administrator of the Environmental Protection Agency, and their subsequent policy recommendations has focused public and congressional attention on this administration's commitment to natural resource conservation.

The Congress will soon be debating the future of our Nation's air and water pollution laws. The outcome of these upcoming deliberations will have a major effect upon the health and welfare of all our citizens for generations to come.

Today, the Senate is about to take another step in preserving the Land and Water Conservation Fund (LWCF). President Reagan's March budget revisions proposed slashing the Land and Water Conservation Fund's fiscal year 1982 appropriation 91 percent from then President Carter's January budget request by terminating the State assistance grant program and by imposing a moratorium of Federal acquisitions. At that time, President Reagan sought only $45 million for the fund. Last month, the President reduced his original request even further to $39.6 million. Fortunately, a bipartisan coalition on both sides of the Congress have rejected the President's proposals.

In the bill we are about to pass, the Senate Appropriations Committee has allocated $201.5 million for the Land and Water Conservation Fund. Of this total, $99 million is to be allocated to the various Federal land management agencies, $100 million is to be allocated to the States, and $2 million is to be used to administer the State assistance grants program. I ask that a table showing the State-by-State allocations be printed in the CONGRESSIONAL RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

LWCF State apportionment at $100 million—Senate version of H.R. 4035

State:	*Allocation*
Alabama	$1,676,388.07
Alaska	868,348.08
American Samoa	9,955.38
Arizona	1,392,592.23
Arkansas	1,222,727.45
California	7,173,567.06
Colorado	1,502,405.70
Connecticut	1,685,427.89
Delaware	930,328.37
District of Columbia	337,705.27
Florida	3,169,127.48
Georgia	1,955,135.82
Guam	32,192.56
Hawaii	1,019,493.38
Idaho	931,298.64
Illinois	3,842,198.07
Indiana	2,151,870.35
Iowa	1,367,575.07
Kansas	1,284,440.76
Kentucky	1,524,905.36
Louisiana	1,742,748.13
Maine	989,878.76
Maryland	1,931,093.88
Massachusetts	2,497,076.05
Michigan	3,281,252.97
Minnesota	1,765,238.41
Mississippi	1,223,670.98
Missouri	1,960,466.37
Montana	923,790.25
Nebraska	1,115,763.33
Nevada	960,942.40
New Hampshire	975,639.72
New Jersey	2,905,691.61
New Mexico	1,018,275.51
New York	5,850,422.84
North Carolina	1,959,215.43
North Dakota	910,673.29
Ohio	3,677,615.82
Oklahoma	1,434,855.86
Oregon	1,359,945.65
Pennsylvania	3,977,763.68
Puerto Rico	1,306,761.77
Rhode Island	1,053,564.40
South Carolina	1,409,160.20
South Dakota	911,815.85
Tennessee	1,828,326.10
Texas	4,250,405.19
Utah	1,131,267.25
Vermont	852,987.86
Virgin Islands	29,763.58
Virginia	2,033,787.07
Washington	1,735,790.69
West Virginia	1,155,183.82
Wisconsin	1,917,798.11
Wyoming	843,680.89
Total	96,999,997.71

Mr. BIDEN. Since its inception in 1965, the Land and Water Conservation Fund has been the principle mechanism for financing the protection of our Nation's natural resources and for the provision of adequate outdoor recreational opportunities throughout all regions and States of the country.

In this year of budget austerity, $201.5 million might seem a very large funding level. It is, in fact, the minimal funding which is fiscally prudent for four reasons.

First, it represents a 61-percent reduction from the budget request submitted to Congress in January by then President Jimmy Carter.

Second, the Omnibus Reconciliation Act recently signed into law by President Reagan, Public Law 97–35, recommended annual spending from the Land and Water Conservation Fund of not less than $275 million. The $201.5 million contained in the Interior appropriations bill which we are about to pass is 27 percent lower.

Third, the $201.5 million is 47 percent less than the amount Congress originally appropriated for fiscal year 1981 and 30 percent less than the final fiscal year 1981 appropriation after subtracting the $90 million rescission enacted in June.

Fourth, and most importantly, one must understand how this program is funded. The revenues for the Land and Water Conservation Fund are not raised through income tax collections. Rather, these funds come from the Federal Government's receipts from the Outer Continental Shelf oil and gas leasing program.

According to the Congressional Budget Office, these receipts are expected to exceed $11.4 billion in fiscal year 1982. In this year of fiscal austerity, the Senate Appropriations Committee arrived at a reasonable compromise with bipartisan support by allocating $201.5 million, or 1.8 percent of the anticipated OCS revenues for the Land and Water Conservation Fund. In this way, the Nation reinvests a modest portion of the revenues realized by the depletion of oil and gas resources to save for public use natural resources which cannot be replaced—land and water resources.

This is the concept behind the Land and Water Conservation Fund's creation back in 1965. It is still very much valid today—perhaps even more so.

Unfortunately, President Reagan earlier this year sought to eliminate the State assistance grants program and to drastically curtail funding for the Federal share. Fortunately, both the House and Senate recognized this program's accomplishments and rejected the President's request during consideration of the Budget Reconciliation Act. In fact, the Reconciliation Act recommends that "not less than $275 million" should be appropriated annually from the Land and Water Conservation Fund, section 1401(b) of Public Law 97–35.

It is important to note that the decision to continue the LWCF during reconciliation was a strongly bipartisan one. In mid-July, a bipartisan group of 21 Senators joined with me in a letter to the Interior Appropriations Subcommittee urging continued funding for both the Federal and State shares of the fund. Finally, in late July, the Senate Appropriations Committee voted to appropriate the $201.5 million which is included in the bill we are about to pass. Importantly, that decision was also bipartisanly arrived at.

Last month, when it appeared likely that the Senate would begin debate on the Interior appropriations bill, a letter in support of the Land and Water Conservation Fund was distributed to all Senators. This letter urged the retention of the funding level established by the Senate Appropriations Committee and was signed by the following 11 national environmental organizations:

The American Rivers Conservation Council;

The Appalachian Trail Conference;

The Friends of the Earth;

The Izaak Walton League;

The National Audubon Society;

The National Parks and Conservation Association;

The National Recreation and Park Association;

The Nature Conservancy;

The Sierra Club;

The Trust for Public Land; and

The Wilderness Society.

Mr. President, since this is such a short letter, I would like to read it to the Members of the Senate at this point in my remarks:

SEPTEMBER 10, 1981.

DEAR SENATOR: The Land and Water Conservation Fund (LWCF) has proven to be one of the nation's most effective and popular conservation programs. It is funded primarily by Outer Continental Shelf (OCS) leasing revenues. Congress established the Fund so that some of these OCS revenues would be reinvested in the protection of national parks, forests, wildlife refuges, other critical federal areas, and in the protection and development of state and local parks. As evidenced by its widespread support, the LWCF has been very successful in achieving what Congress intended it to do.

The Senate Appropriations Committee has included $201.6 million for the LWCF in the Fiscal Year 1982 Interior Appropriations bill, H.R. 4035. The Budget Reconciliation legislation, P.L. 97–35, recommended that the LWCF be funded annually at a level of at least $275 million. Based on our own analysis, we have estimated that actual needs for FY 1982 exceed $100 million. We believe, however, that the $201.6 million level as reported out by the Appropriations Committee will provide the funding necessary to continue this important program at a minimum level.

We urge you to support the Senate Appropriations Committee level for the Land and Water Conservation Fund and to oppose any attempt to reduce the funding for this program when the Senate considers the Interior Appropriations bill.

Sincerely,

Howard Brown, American Rivers Conservation Council; Laurence Van Meter, Appalachian Trail Conference; Elizabeth Kaplan, Friends of the Earth; Maitland Sharpe, Izaak Walton League; Alison Horton, National Audubon Society; Barry Tindall, National Recreation and Park Association; William Lienesch, National Parks & Conservation Association; William Chandler, Nature Conservancy; Larry Williams, Sierra Club; Harriet Hunt-Burgess, Trust for Public Land; and Ronald Tipton, Wilderness Society.

The Reagan administration's effort to eliminate or drastically curtail the Land and Water Conservation Fund just does not make much sense to me given all its talk about the need to return program decisions and funds back to the States—the so-called "new federalism." The Land and Water Conservation Fund has been a perfect example of creative federalism since 1965.

It is through the fund that park and outdoor recreation land is protected by the National Park Service, the Fish and Wildlife Service, and the Forest Service. In addition, the State assistance grants provided by the fund are used by the States and their localities for

land acquisition, planning, and construction of outdoor recreation facilities.

Each Federal dollar received, however, must be matched by an equal value contribution by the recipient State or local government. More importantly, States and local governments then operate and maintain these facilities. This year local governments will spend more than $4 billion to operate park systems.

The fall edition of the Wilderness Society magazine, the Living Wilderness, contains an excellent historical review of the Land and Water Conservation Fund. This article, entitled, "The Land and Water Fund: A Good Program Under Siege," was written by Meg Maguire. Ms. Maguire served as Deputy Director of the recently abolished Heritage Conservation and Recreation Service during the Carter administration. Her article reviews the reasons behind the creation of the Land and Water Conservation Fund, points out many of its notable achievements, and makes an excellent case for its continuation. Ms. Maguire explains that:

Since 1965, 2.6 million acres have been acquired for $2.1 billion by the four participating federal agencies—the National Park Service, the Forest Service, the Fish and Wildlife Service, and the Bureau of Land Management.

The places where the fund has been used to acquire key parcels reads like a guide to the nation's outstanding treasures: the Appalachian Trail, Blue Ridge Parkway, Cape Cod, Crater Lake, Death Valley, the Everglades, Gettysburg, the Grand Tetons, the Boundary Waters Canoe Area, key lands on national wild and scenic rivers, including the Rio Grande, Rogue, Upper Missouri, American, Arapaho, Cascade, Skagit, Sawtooth and Chattooga, and dozens more.

The Land and Water Conservation Fund's accomplishments on the State and local level are equally impressive. Since 1965, the fund has provided $2.46 billion to the States and their localities through the State assistance grant program. These funds, which had to be matched dollar-for-dollar, were then used to finance 27,000 approved projects involving the acquisition of open space for outdoor recreation or the development of outdoor recreation facilities. Of the total number of projects, 7,160 have been for the acquisition of over 2.02 million acres of land. The degree of local government benefit from this program is apparent from the statistic that 59 percent of the total funds obligated through fiscal year 1980 were channeled through the States to locally-sponsored projects.

In Delaware, the Land and Water Conservation Fund has made important contributions through the years. Since 1965, Delaware has received a total of $23.5 million for 110 projects. Over 15,000 acres of parkland and seashore have been acquired using these funds, including all or major portions of the following State parks: Bellevue, Brandywine, Carpenter, Lums Pond, Killens Pond, and the Delaware State Seashore.

Mr. President, a recent edition of the Delaware Conservationist magazine, published by the Delaware Department of Natural Resources and Environmental control, contained an informative article on the Land and Water Conservation Fund's accomplishments in Delaware. I shall ask that this article as well as the previously mentioned article which appears in the fall edition of the Wilderness Society's magazine be printed in the CONGRESSIONAL RECORD at the conclusion of my remarks.

(See exhibit 1.)

As these magazine articles describe, the Land and Water Conservation Fund is simply too important a program to have its funding reduced any more than it has already been. Such additional cuts are especially inappropriate at a time when public visitations at our national and State parks are straining the systems' abilities to handle them. Last year, 200 million visits to national parks were recorded as well as 700 million at State parks.

A June 19, 1981, a Washington Post editorial explained it this way:

The solution to the overuse problem is the acquisition of more park land. That is what the Land and Water Conservation Fund was created to provide . . . By providing a steady flow of money for that and similar projects, state as well as federal, the Land and Water Conservation Fund has made it possible . . . to protect key areas from development. If Congress disrupts that process without any fixed guarantee of when, if ever, it will be resumed—as Secretary Watt has requested—that protection is going to slip away, and the land future generations will need for recreation will sprout houses and roads and the other attributes of development.

I ask that the editorial be printed in the RECORD at this point in its entirety.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUYING LAND FOR PARKS

The Land and Water Conservation Fund was established by Congress in 1965 to provide an orderly flow of money for the purchase of park land by the federal and state governments. The money comes from the sale of surplus property, taxes on motorboat fuel and off-shore oil leases. About $5 billion of it has been spent in the last 15 years to buy almost 3 million acres of land for federal projects and more than 2 million acres for state projects.

Secretary of the Interior James Watt has proposed putting a moratorium on these purchases and diverting some of the fund's money for "restoration and improvement" of property the federal government already owns. His rationale is that the national parks, and other federal properties, are in a sad and perhaps dangerous state of disrepair, and the government should not buy any more land until it takes better care of what it already has.

Mr. Watt's argument has a superficial logic to it if you accept his premise. But it seems to us that the national parks are not in particularly worse shape now than they were 10 or 20 years ago. Here and there parks do have serious problems—bad water and sewer systems, decaying buildings and roads. That's nothing new: remember Mission '66, the project of the 1950s and 1960s to get the parks back in first-class condition?

Most of the problems of the parks (and for this purpose we include in that term all federal recreational property) come from overuse. For instance, Rocky Mountain National Park, once one of the gems of the Park Service, is being loved to death, as the Denver Post put it last summer.

The solution to the overuse problem is the acquisition of more park land. That is what the Land and Water Conservation Fund was created to provide. It may be appropriate to take some of the money to bolster the maintenance and repair program. But totally cutting off the land-buying program would be a serious mistake. More than $30 million has been spent in the last three years, for example, buying land for the Appalachian Trail; another $50 million would complete this project, which has been under way for decades. If it is not completed soon, the land will be used for other purposes.

By providing a steady flow of money for that and similar projects, state as well as federal, the Land and Water Conservation Fund has made it possible for property owners and local governments to protect key areas from development until their acquisition came to the top of the list. If Congress disrupts that process without any fixed guarantee of when, if ever, it will be resumed—as Secretary Watt has requested—that protection is going to slip away, and the land future generations will need for recreation will sprout houses and roads and the other attributes of development.

Mr. BIDEN. Now there have been some who have suggested deferring the Land and Water Conservation Fund's State assistance grants for a year or 2, as well as reducing the Federal share to the administration's requested funding level of $39.6 million. I must reject such a notion.

First, such action would delay acquisitions already on line. At the rate which land values appreciate, the eventual cost to the Government could be an additional 20 percent or more for each year beyond the current year. Since outstanding land areas which have been authorized for purchase are yet to have funds appropriated total more than $3.1 billion, the eventual cost to the Government of such a funding delay is substantial.

Second, such a disruption in the State grants program would mean the loss of many of the skilled program managers who have so effectively administered this program through the years.

Finally, and most importantly, a disruption would mean the loss of some natural areas which need to be acquired within the year or be lost to encroaching development. Areas like the Middle Run and White Clay valleys in Delaware have tracts which most certainly would be lost. Similarly, Valley Forge, in nearby Pennsylvania, has tracts which might not survive intact after a funding moratorium of a few years.

The administration's efforts to eliminate the State share and drastically curtail the Federal share just does not make much sense to me. It is bad environmental policy, shortsighted budget policy and poor Government management.

In conclusion, I support the Land and Water Conservation Fund. While I would have preferred a higher funding level, I believe the $201.5 million included in the fiscal year 1982 Senate Interior appropriations bill is reasonable, given this year's budget cuts. Mr. President, let us make no mistake about it. The money appropriated for the Land and Water Conservation Fund represents a substantial budget cut. It is 61 percent less than the January budget request, 30 percent less than the final fiscal year 1981 appropriation, 47 percent less than the originally enacted fiscal year 1981 appropriation, and 27 percent less than the minimum funding level recommended by the Reconciliation Act which the President signed into law just 2 short months ago.

Mr. President, I congratulate the Senate Appropriations Committee for their action on this question. I especially thank Senators JOHNSTON, PROXMIRE, SPECTER, and BUMPERS for their leadership on the Land and Water Conservation Fund debate in committee. I hope the Members of the Senate who will participate in the joint House-Senate conference on this bill will resist any effort to reduce the Land and Water Conservation Fund's appropriation beyond the level it has already been reduced to this year.

EXHIBIT 1

THE LAND AND WATER FUND: A GOOD PROGRAM UNDER SIEGE

(By Meg Maguire)

It is classic theater.

The setting is America. The tale revolves around an institution that has inherited "oil money" and use it to finance a vast and beautiful domain that brings pleasure to many.

The characters are a diverse lot: members of Congress who try to match the institution's funds with the people's needs, community leaders who work to save special places in their environments and create new ones, and the people of the land who enjoy the resulting benefits. The play has had a long and productive run.

Then, enter from the right a new president and an old Washington hand brought into rewrite the scene.

That is exactly what is happening now. The "institution"—the blend of money and need—is the Land and Water Conservation Fund. It is a sixteen-year-old program that was born in bipartisanship and has acquired millions of acres of land for public use in thousands of projects across the nation. It is under attack. The Reagan administration proposes to alter its purposes, eliminate its functions, and cut its funds to zero.

It is an odd target for budget-cutters.

The fund has accomplished what few government programs can claim: a vast, permanent legacy for the American people. To list the accomplishments requires a computer printout three inches thick with over 28,000 federal, state, and local project entries involving 14,000 communities. Altogether, 4.5 million acres of land has been acquired.

The fund was established in 1965 to assure that "present and future generations" would have a full range of outdoor recreational opportunities "to strengthen the health and vitality of the citizens of the United States."

Ninety percent of the revenue for the fund comes from off-shore oil leases. The theory is that the nation should reinvest a portion of the revenues from a natural resources that is being depleted—oil—to save for public use that which cannot be replaced—land and water resources. The law requires that every year the fully authorized amount for the fund—now $900 million a year—be held in a special account, even if Congress fails to appropriate it from that account. Today, over $1 billion remains in unappropriated resources.

The fund has served as the principal planner, architect, and financier of many of the country's finest environmental blueprints. Since its inception there has been a steady infusion of money for national parks, forest preserves, and wildlife refuges; state parks and community recreation areas; access ways to wild and scenic rivers; and historic trails. Benefits of the fund investment are not confined to recreation. Local officials, planners, and developers have come to understand that open space and recreation projects often are the best ways to achieve other goals—reclamation of mined lands, revitalization of neighborhoods, development of waterfronts and downtown areas, opportunities for health and physical fitness, cooperation between public and private sectors.

The fund has always been blessed with completely bipartisan political support. In fact, it has been so noncontroversial, so free from scandal, so steady in performance, that it attracted little public attention or awareness until recently.

Now, suddenly, it is being treated by many as a burden rather than a blessing. Some of its friends have scattered, others have risen angrily to its defense. Suddenly there is also public interest. Now, more than ever, the fund needs to be understood.

The fund is an outgrowth of the Outdoor Recreation Resources Review Commission (ORRRC), established by Congress in 1958 during the Eisenhower administration as an early and formal recognition that growth has an environmental price and that resources for public enjoyment are finite. The commission's purpose was to recommend ways to preserve and develop outdoor recreation opportunities for Americans.

In 1962 its report, Outdoor Recreation for America, was issued with the most comprehensive assessment ever undertaken of the country's potential land and water-based recreation resources.

The report concluded—not surprisingly—that outdoor recreation was most needed near metropolitan areas, but that "most of the land is where the people are not."

Economic benefits of outdoor recreation, its growing importance as a major leisure time activity, and its compatibility with other resource uses were underscored. One conclusion stood out above the rest: "Money is needed," especially by the states.

According to the commission: "The key elements in the total effort to make outdoor recreation opportunities available are private enterprise, the states, and local governments." The role of the federal government should be one of cooperation and assistance, not domination, the report said.

The ORRRC report, still relevant and frequently cited almost twenty years later, had a profound influence on conservation legislation. In 1963, the Outdoor Recreation Act authorized the Secretary of the Interior to assess needs and demand, classify resources, develop a nationwide plan, provide technical assistance, stimulate regional cooperation, and conduct research and education. To carry out this mandate, the Secretary established the Bureau of Outdoor Recreation (BOR). Congress intended it to be a small service bureau, not a land-managing agency. BOR and its successor agency, the Heritage Conservation and Recreation Service (HCRS), were to administer much of the legislation emanating from ORRRC, including the fund.

As passed by Congress, the fund had two "sides." The state side matched state or local money on a fifty-fifty basis to finance acquisition and development of outdoor recreation areas and facilities in accordance with individual state plans and a nationwide plan. The federal side provided only for land acquisition for the National Park Service, Fish and Wildlife Service, Bureau of Land Management, and U.S. Forest Service.

In 1976 amendments to the fund legislation, Congress recognized urban needs by greatly increasing the level of authorization and slightly altering the distribution formula on the state side. Congress also called for "a comprehensive review and report on the needs, problems, and opportunities associated with urban recreation in highly populated regions." The National Urban Recreation Study, published in late 1977, concluded that current national recreation programs did not pay enough attention to rehabilitation needs of deteriorating local and regional parks in urban areas. Buying land was still a priority in growing communities in the Sun Belt, the report said, but almost all jurisdictions in all parts of the country listed their top priority as rehabilitating and maintaining what they already had in a time of shrinking financial resources and increased public use. It was a task the fund was never meant to perform.

The findings of the urban study also upheld the fund's critics, who complained that it was heavily oriented toward suburban areas. On the state side of the fund, almost twice as much money per capita had gone to suburban areas as to central cities. A full range of options to meet urban recreation needs was presented, including one to amend the fund to remove various constraints on it.

Altering the basic purposes of the fund was rejected on the basis that it was still badly needed to support numerous legislative mandates and national conservation objectives quite apart from the need to rebuild cities. Instead, as part of the National Urban Policy, President Carter proposed a companion to the fund, tht Urban Park and Recreation Recovery Program (UPRRP), which Congress enacted in 1978. For the first time, targeted cities were required to develop comprehensive plans and innovative approaches, bringing back to health their total park and recreation systems. The fund was to continue to be used by cities to buy land and for other new development needs.

Thus, by the end of 1978, the federal government had a comprehensive recreation policy that included a variety of legislation, interagency agreements, executive orders, and two complementary funds aimed at stimulating state and local action to address a broad range of recreation needs.

All of this required more money. The original fund authorization was for $100 million a year, but by 1968, with land values escalating dramatically, there was widespread support in Congress for tripling the original amount. Senator Thomas Kuchel (R-California) worked for that measure, citing the extensive needs of California, and supported by then-Governor Ronald Reagan. In 1976, the $300 million level was tripled again for similar reasons, and today the authorized level is $900 million.

It was never intended that the fund receive its appropriations from general tax revenues. From the beginning, special recreation-related sources of revenue were used: recreation fees from federal lands, receipts from the motorboat fuel tax, and proceeds from sale of surplus federal real property. Still, it was not enough to cover the $300 million level, much less the expanded authorization.

To answer this need, the 1968 fund amendments established a new conservation principle by tapping receipts from leasing of oil exploration areas along the Outer Continental Shelf (OCS). The money was to be placed in the fund up to the authorized amount and held in reserve, even if not appropriated by the Congress.

In spite of an adequate and guaranteed funding source and the increased authorization level to $900 million, only once has Congress appropriated all it had available.

Since 1965, 2.6 million acres have been acquired for $2.1 billion by the four participating federal agencies—the National Park Service, the Forest Service, the Fish and Wildlife Service, and the Bureau of Land Management.

The places where the fund has been used to acquire key parcels reads like a guide to the nation's outstanding treasures: the Appalachian Trail, Blue Ridge Parkway, Cape Cod, Crater Lake, Death Valley, the Everglades, Gettysburg, the Grand Tetons, the Boundary Waters Canoe Area, key lands on national wild and scenic rivers, including the Rio Grande, Rogue, Upper Missouri, Amer-

ican, Arapaho, Cascade, Skagit, Sawtooth and Chattooga, and dozens more.

Not only have monetary needs of state and local governments been met, but planning for recreation also has improved dramatically. Every state and territory now has a state comprehensive outdoor recreation plan. The federal government has a nationwide outdoor recreation plan that is sent to Congress every five years. Better data and information have led to more rational decisions about what lands to buy and facilities to build.

Fund-financed projects have contributed heavily to improving outdoor recreation for America, in some areas on a grand scale. The East Bay Regional Park District in Oakland, California, serves two million park visitors annually at ten new regional park sites made possible by twenty-one fund grants totaling $5.8 million. Boston's Urban Wilds Program has relied heavily on fund and state urban self-help money to acquire a network of unique and diverse underdeveloped lands.

If the fund had simply done what it was intended to do—provide incentive to create much-needed outdoor recreation—it would be judged a success. But it has done much more. Communities have used the fund in concert with private volunteer help and donations to accomplish a wide variety of purposes, including:

Land reclamation: A grant of $5,000 to Polk County, Tennessee created a recreation area from land that had been ruined by copper smelting from local mines. The copper company donated the land and assisted in reclaiming the site. The county, state, and federal agencies provided funding for grading, soil reconditioning, reforestation, and recreation facilities.

Non-structural flood control: In 1978 Rapid City, South Dakota, was declared a flood disaster area. Rather than construct dams, channels, or levees to control the problem in the future, the city developed a floodway that will be almost seven miles in length when completed and include an eighteen-acre lake, a trail system, and other recreation areas.

Community renewal: The city of New York was awarded a grant of over $1 million to develop fourteen sites on rubble-strewn land in the most deteriorated community in urban America, the South Bronx. With technical assistance from a variety of groups in New York and involvement of the Trust for Public Land, community residents assumed ownership of some of the sites, developed highly productive community gardens, and donated many hours of labor to building play and sitting areas.

Urban economic development: Dozens of cities are using fund grants as the first step in revitalizing waterfronts that may have declined in economic importance or have been sealed off from public access by rail lines or highways. Englewood, Colorado, is developing a park at an old gravel operation and landfill site adjacent to the South Platte River. The 227-acre site will serve as a focal point in attracting business and upgrading the surrounding area.

Historic preservation: Many areas suitable for recreation or trails are found near historic resources. An old grist mill in Jefferson City, Missouri, on more than 130 acres of land, was acquired through a twenty-five-year donated lease, and recreation facilities were developed in keeping with the historical integrity of the area.

The fund never works alone. Often it serves as a catalyst in securing substantial private donations that may function as part of the required fifty percent match, and the fund later provides money to develop facilities. HCRS encouraged over $100 million in land donations or bargain sales by private corporations.

Projects like those listed here are fairly common now. Twenty years ago, with no Land and Water Conservation Fund, they were not. But what is their future? Does the country still need them? Want them?

The 1979 Nationwide Outdoor Recreation Plan—which involved private citizens, elected officials, and expert witnesses—confirmed what common sense and observation had been telling us:

Recreation demand is burgeoning and the need for land and facilities far outstrips availability.

Recreation is one of the fastest-growing and most important sectors of the American economy, employment, and generation of foreign dollars.

Recreation has become an important public health strategy.

Visitation to the national parks has increased almost tenfold since 1950.

People of all ages are changing their habits and acquiring new recreation skills that require many more facilities.

The 1979 plan also warned that America continues to confront a crisis of land use. Development is eating up vacant land—on river fronts, barrier islands, mountains, and farms. Urban America confronts particularly serious recreation problems as costs soar and revenues decline. While the public is willing to pay more for recreation services, many will not be served at all if these services are provided only by the private sector.

The plan did not say that the challenge outlined in the ORRRC report had been met or that the end was in sight, or that we should stop acquiring park lands, or that the states and private sector could accomplish the remaining agenda without federal interest or support. The plan did say that the policy of the country as it had evolved during six administrations was heading in the right direction, that for the most part the basic federal and state legislation and funding tools were in place. But, it said, we need to move faster and creatively. No one questioned its findings or conclusions. The only dissenters were those who felt the plan did not go far enough.

In January 1981, Ronald Reagan took office and nominated James Watt, former director of the Bureau of Outdoor Recreation from 1972 to 1975, as Secretary of the Interior. During his confirmation hearings, Watt cited his record at BOR and support of the fund as his primary pro-environmental accomplishments:

"In preparation for this appearance I have reviewed in detail my 1973 work product, 'Outdoor Recreation—A Legacy for America' (1973 Nationwide Outdoor Recreation Plan). It continues to represent my philosophy and my commitment to recreation, to preservation and to multiple use of the resources of America. The plan outlined what needed to be done to save, protect, and utilize our shorelines, beaches and estuaries, flood plains, recreation trails, wild and scenic rivers, wilderness areas, islands, reservoirs, natural lakes, rivers and streams.

"It is a record that I am proud of, and it is a record that has been before America since 1973.

"In addition to this important part of my record, stands my frequent testimony before both the Senate and House committees in support of additions to our wild and scenic rivers program, our national trails program and park and recreation areas.

"I call the committee's attention also to testimony I presented before the House Interior Committee with regard to the need for increasing the size of the Land and Water Conservation Fund. In that regard, I successfully laid the groundwork for legislation which enlarged the fund from $300 million to its present level of $900 million.

"I take great pride in the role that I played for three and a half years building a record in public service with regard to preservation and to the maximization of benefits from recreation lands, as Director of the Bureau of Outdoor Recreation."

One month after he was confirmed by the Senate, Secretary Watt abolished the Heritage Conservation and Recreation Service, BOR's successor, which administered the LWCF, the UPRRP, and the Historic Preservation Fund. He recommended that the fund be cut to zero, that none of the outstanding $2 billion federal backlog be acquired, that the fund be modified radically to allow for operation and maintenance of the national parks, and that the UPRRP—the fund companion—be terminated. These actions were proposed in the absence of any study or analysis of their consequences. Funds were frozen and projects abruptly halted.

Nathaniel Reed, the assistant secretary under whom Watt had served as BOR director in the Nixon and Ford administrations, said in a May 2, 1981 speech to the Sierra Club:

"I am a lifelong Republican . . . I supported Ronald Reagan's election by word and deed. . . . It causes me a great deal of pain to criticize the Administration as I am about to do. . . . But two of Watt's actions have convinced me that he is already a disaster as Secretary. One of these is his butchery of the Land and Water Conservation Fund. . . . In one rash step, the Secretary of the Interior has proposed wiping out the most popular and effective federal revenue-sharing program in the country."

What will be the consequences? No one can say exactly. But we do know that opportunities to acquire choice pieces of land will be lost to private, and often inappropriate, development. Since land prices are escalating, we will eventually pay more for the $3.1 billion worth of land that has been authorized but not acquired by the federal agencies. Communities with an expanding need for public recreation will experience over-crowding and accelerated deterioration of existing limited facilities. Many potential private donations to the public sector will not be made because the government will be in a poorer position to be a contributing partner. And the federal government will fail to honor its massive authorized acquisition responsibilities in national recreation areas.

At the time that revenues from depletable off-shore oil are growing geometrically—to $4.1 billion in 1980 and projected much higher than this by 1990—America will be reinvesting none of these in on-shore conservation.

Congress appears to be rejecting that radical redefinition of the fund—and Secretary Watt's sudden change of heart—and may well approve a very modest appropriation for 1982. That would keep the fund alive, but would not address the central issue: Will the nation continue its long-standing policy of conserving and building on its resources? If so, will it be a token effort, or a serious, well-planned and adequately funded effort?

That the American people love their heritage is not questioned. For years they have shown that their concern is for both old and new, conserving and building. They have enthusiastically approved plans for acquiring new sites, redeveloping river fronts, building new parks for a growing population, while at the same time saving barrier beaches and mountain wilderness areas.

A Land and Water Conservation Fund that is strong and fully supported can do its part in protecting America's heritage. But first Congress and the President must understand anew how strong is the people's love for doing just that.

And understand the depth of the loss if support does not come.

LAND AND WATER CONSERVATION FUND

(By Judith Ventura)

The gleeful cries of frolicking children fill the air as they slide, swing, and twirl on the brightly colored playground. The happy noise echoes in the nearby game field where an impromptu softball game races to an end.

People stroll along the sidewalks spread throughout the park. Some settle on benches to watch the children play. Welcome to Blades Town Park.

Blades is a small town, population 654, located just south of Seaford. A year ago the park was just a plan taking shape in the town fathers' minds. They bought a piece of land and applied for a grant from the federal Land and Water Conservation Fund (LWCF). The grant was approved in February, 1980 and by October the town had a new park complete with playground, picnic area, sidewalks, comfort stations and a multipurpose game field. Total cost of the entire project was $140,000 and the grant paid half of that tab.

The Land and Water Conservation Fund has been helping state and local governments to plan, acquire, and develop outdoor recreation areas and facilities since its establishment in 1965. So far, over $2.5 billion has been issued to acquire more than 2 million acres of land and develop facilities at 26,000 park and recreation projects across the nation.

The program is primarily funded by revenues from federal leasing of the Outer Continental Shelf for oil and gas exploration and drilling. The rest comes from the sale of surplus government property and the motorboat fuel federal tax.

Traditionally, 60 percent of the fund is distributed each year among the states, the District of Columbia, Puerto, Rico, the Virgin Islands, Guam and American Samoa. The other 40 percent is divided between four principal federal land managing agencies for land acquisitions. On the average, Delaware receives between 2 to 3 million dollars annually, depending on the amount in the fund. Last year $2.1 million was apportioned to Delaware.

To qualify for LWCF grants program, Delaware must have a Statewide Comprehensive Outdoor Recreation Plan (SCORP). SCORP provides information and guidelines for the management of recreation, conservation, and preservation actions for the public benefit. Through SCORP, grants were opened up to county and local governments, including school districts, in 1977.

The program is managed in Delaware by the Technical and Community Recreation Services Section (Tech Services) of the Division of Parks and Recreation. They regulate the grant application procedure and advise during the planning and construction periods. Applicants receive, if their plan is approved, up to 50 percent of the project's cost.

The completed project is now the responsibility of Tech Services. They must inspect the area at least once every five years, making sure the land is continually used for recreational purposes and that all handicapped facilities are up-to-date. The area must be in accordance with the civil rights act, meaning all persons, regardless of race, color, or national origin, will be allowed to utilize the facility.

Since the creation of LWCF in 1965, over $23.5 million has been obligated to Delaware. Those funds, combined with local and state matches, have provided over $40 million for 110 outdoor recreation projects.

Delaware took immediate advantage of the fund by purchasing Brandywine Creek State Park in 1965. That was only the beginning. Over the years, more than 15,000 acres in 80 separate tracts have been acquired.

The Division of Parks and Recreation has purchased all or major portions of Bellevue, Walter S. Carpenter, Jr., Lums Pond, Killens Pond, and Delaware Seashore State Parks. The Division of Fish and Wildlife has acquired over 12,000 acres at a cost of nearly $6 million, including Nanticoke and Little Creek Wildlife Areas.

Aside from land acquisitions, about 90 percent of the fund monies apportioned to Delaware go to recreational development. A large amount has been spent on State Parks' improvement. For example, Lums Pond boasts a new boathouse thanks to the fund. A 60-site family campground with water and electricity hookup, a showerhouse and pavilion, is a new feature at Killens Pond. Cape Henlopen has all new facilities, including a bathhouse. At Towers Road, part of Delaware Seashore State Park, a new bathhouse and campground are currently under construction.

Counties, school districts and local communities like Blades, realizing that money is available, are applying for and receiving the matching grants for projects. New Castle County received $200,000 to develop an old state prison farm into Delcastle Recreation Area. They built a golf course and a baseball complex. In 1978 they applied for another grant to fund the ballfield lighting, for landscaping, and for improvements on the golf course. This time they received $137,000. Delcastle is one of the most widely used and attractive areas upstate.

The southern campus of Delaware Technical and Community College in Georgetown is a showcase example of what can be done with fund monies. Through a continuing project that began in September of 1977, the campus has gained a 50-site picnic area, picnic shelter, volleyball court, basketball court, two acre pond, landscaping, fencing, roads, and this past summer a four court tennis area. So far the project's cost is $412,000. The project has been amended twice to meet the current needs of the campus.

In New Castle County, Wilmington has used money to improve the recreation situation in the city. They have acquired land on East Seventh Street and plan to develop a waterfront park there. A parking lot surrounding the Soldier and Sailor Monument was bought and converted into a minipark complete with benches, playground, and landscaping. The Eastside Pool on Seventh and Poplar Streets was completed this past summer for the inner city residents. Tatnall Park's existing facilities were expanded to include a basketball court and new playground equipment.

Two of the cities in Sussex County that have successfully used the fund to better their communities are Milford and Seaford. In Milford a new athletic complex stretches across the seven acres behind the Sussex Company on southeast Fourth Street. Complete with two softball fields, bleachers, fencing, and various site improvements, a grant for $16,954 paid half the costs. The project, approved in January, 1979, was finished by June of that year.

Soroptimist Park, located south of William Pond in Seaford, received a new underground water system with the help of grant money. $15,675 from the federal fund paid 50 percent of the costs for the system, which upgraded the drinking water and irrigation in Seaford, and provided for public restrooms to be installed in the park. The plan was approved in October, 1979 and was completed this past June.

Another LWCF project is currently underway in Seaford. 3.8 acres on Virginia Avenue within the city will be the site for a new L-shaped Olympic-size pool with swimming lanes, diving area, wading pool, showerhouse, restroom facilities, and a 60 car parking lot complete wtih bicycle racks. The proposed total cost of the project is $400,000.

The communities in Kent County have not used the available funds as much as the rest of the state. To date, Dover has applied for only one project grant. They received funding to light the city's baseball park. A new "tot lot", a playground especially for younger children, was built in Leipsic. The Lake Forest School District received a $60,000 grant for an eight court tennis complex at the high school. The project began in October of 1979 and was completed in August.

The next time you visit a Delaware recreational area, be it a town park like Blades or a bathhouse at a state park, look for the Land and Water Conservation Fund insignia: a green mountain, blue lake, and brown land enclosed in green circle. That is a reminder of a "cooperative project for outdoor recreation." Thanks to LWCF, outdoor recreation has been developed throughout the state for individuals of all walks of life to enjoy.●

FUNDING FOR THE LAND AND WATER CONSERVATION FUND

● Mr. BAUCUS. Mr. President, the land and water conservation fund (LWCF) was established by Congress in 1965 to provide funds for the purchase of parkland by Federal and State governments. The money comes from the sale of surplus property, taxes on motorboat fuel, and offshore oil leases. About $5 billion has been spent in the last 15 years under the LWCF program to purchase nearly 3 million acres of land for Federal projects and more than 2 million acres for State projects. The LWCF has contributed immensely to the expansion of Federal, State, and local parks and recreational facilities. Just as important, the LWCF serves as an incentive for even greater non-Federal park and recreation investment because States and localities must match the Federal grants they receive on a dollar-for-dollar basis.

Recently, the LWCF's future has been most uncertain. For fiscal year 1982, the administration requested only $45 million for Federal land acquisition. More strikingly, the administration proposed no funds for State assistance grants under the LWCF. The Reagan administration's budget request for LWCF reflects a 91-percent cut from the budget submitted by former President Carter last January.

I fully understand that budgetary restraint requires us to significantly reduce spending for a wide variety of programs. However, a 91-percent cut is simply asking too much. It would be a serious and tragic mistake. It would cripple State and Federal efforts to protect threatened land resources and meet pressing recreational needs.

I was pleased, therefore, to see the full Senate Appropriations Committee provide additional funds for Federal land acquisition and State assistance grants under the LWCF. As reported by the committee, the bill includes approximately $102 million for grants to States for park acquisition and recreational planning programs. This is still a considerable cut from the $173 million provided in fiscal year 1981.

Mr. President, the LWCF is justifiably recognized as one of the best examples of creative federalism. It is a program that should be maintained and encouraged, and I am pleased that the full Senate Appropriations Committee's actions do just that.●

SRC–I

● Mr. DODD. Mr. President, I supported Senator PROXMIRE's amendment to delete funds for the solvent refined coal I (SRC–I) project because I do not believe this massive expenditure of Federal funds is in the best interest of synthetic fuels development in this country. I have consistently supported the development of an aggressive synthetic fuels program in this country. I have been, and remain,

in favor of Federal support for the development of synthetic fuels. I believe such support is justified as a means of bringing about, through reasonable risk reduction, the essential private investment upon which a synthetic fuels industry in this Nation must ultimately stand.

The Congress established the Synthetic Fuels Corporation to oversee the distribution of Federal support for the synfuels industry. The Board of Directors of the Corporation has now been appointed and confirmed and is in the process of considering more than 60 project proposals. The most viable of these projects will receive Government loans or loan guarantees. In contrast to the SRC–I project, the companies proposing these projects will have to provide at least 40 percent of their financing. The private backers of SRC–I are providing only 2 percent of the project's funding, with the Federal Government providing 98 percent of the estimated $4.5 billion the project will cost.

This arrangement, in my view, does not serve the interests of American taxpayers, American energy consumers, or the American energy-producing industry. It is this kind of ill-advised use of public funds that could discredit the entire synthetic fuels effort. No project that requires 98-percent Government funding has very good prospects of leading to a commercially viable synthetic fuels facility.

This Nation must invest its limited resources wisely if it is ever going to reduce its dependence on unreliable foreign energy supplies. If we are to be successful it is imperative that we concentrate those resources in support of projects that have commercial viability. The best test of that viability that has yet been devised is whether or not the private market is willing to put its own capital at risk. SRC–I obviously fails that test.●

FUNDING FOR URBAN INDIAN HEALTH CENTERS

● Mr. BAUCUS. Mr. President. I have been hearing the concerns of Indian people who are not only from my State but from other States with significant Indian populations. What I am hearing is evidence Indians are indeed among the truly needy. Indians fall at the bottom of every social and economic indicator. They have the shortest life expectancy; they have the highest suicide rate; their poverty is 300 percent of the national average; they have the lowest per capita income; they have the highest unemployment rates; they have the lowest level of education; they have the poorest housing; and they have the worst health conditions and health care. It is little wonder there is an acute need for health care in urban areas.

How did this problem come about? In 1952, the Government policy of relocating reservation Indians to urban areas caused about one-third of American Indians to move to cities.[1] As a consequence of that policy it is estimated that about one-half of all American Indians live in urban areas.[2] Those estimates were made in 1976, and given the present economic conditions in rural areas, the percentage could be even higher.

Indians were not received in the cities with health care waiting for them, and currently the Indian Health Service of the Department of Health and Human Services will not provide direct health care to urban Indians.[3] Individuals cannot afford to go to a reservation health center in most instances, and because people assume the Federal Government provides for its Indian wards, there are no urban health care delivery systems which have served Indian people.[4] Where there are free health care systems, Indians are denied their services.[5] It has also been found that there has been gross discrimination against Indians in tax-supported institutions.[6] In other words, urban area facilities simply assume Indians have been provided for, and some discriminate against Indian people for reasons too lengthy and complex to comment upon here.

As a result of this situation, Indian and urban community leaders attempted to establish part-time volunteer community clinics. While those experiments were noteworthy and noble, they found that the health needs of urban Indians were larger than anticipated, due to the numbers of people to be served and due to the frequency and kinds of ailments to be treated. Thus they found they simply could not go further without outside funding.[7]

As a result of this situation, we enacted the Indian Health Care Improvement Act, which was designed to bring Indian health to an acceptable level.[8] Funding for programs under the act did not begin until fiscal year 1978, and now that the programs has gotten off the ground for funding urban Indian health programs, it is in great danger of death at an early age.

Our American Indian Policy Review Commission looked at these problems in a great deal of detail, and it developed the expertise to tell Congress what is needed to address some of the problems I mentioned earlier. On the issue before us the Commission recommended:

> Congress appropriate sufficient funds for the continuance of present Indian centers in urban areas which assist Indians in obtaining medical and other social services; and should encourage, with funds and guidance, the establishment of additional such centers in all urban areas where Indians live.[9]

That is some of the background to the problem, but what is the current problem?

Of the 50 percent of all American Indians who live in cities, over 50 percent of that number are children of school age or younger.[10] In other words, 25 percent of all American Indians are urban children. They, along with other urban Indians, have an unusual incidence of special medical problems.[11] Some of the more recent studies of Indian health problems show that the No. 1 ailment among Indians is otitis media, an ear infection which is related to poverty and which can cause deafness.[12] Reports show this ailment to be quite high in children, with 63.6 percent of the children having it being under the age of 5.[13] If those little children are untreated they will have hearing problems which will cause them to do poorly in school, leaving more people in the vicious cycle of poverty. The No. 2 disease is strep throat, a highly infectious disease.[14] It only makes public health sense to make certain there are facilities which can check the spread of this disease. The next highest ailment consists of intestinal infectious diseases, and we know these can cause a great deal of pain and even death.[15] I will not go through the full list, which is available to you in government reports, but the fourth highest ailment is impetigo, a staphylococcal skin disease, the fifth is pneumonia, and the sixth is influenza. These are all serious ailments and many of them are very highly contagious. However you can see they are ones which can be treated easily and effectively in a clinic setting. If they are caught early through checkup programs and the encouragement of parents and others to come in, the community is protected and, more importantly, Indian people can obtain the medical care they deserve.

That is the background. We owe a duty to the Indian peoples who were sent to our cities, we owe a duty to the cities to assist them in providing services, and the nature of the ailments treated require public attention for the sake of the community at large. This program is one for the truly needy, it is fundamental and it is in line with the history of the special relationship of the Federal Government to Indians. It is also a step toward a better future. As one of my Indian constituents put it, "I have a vision of a day when being Indian and poor in America is not dangerous to your health."

Mr. President, it is, thus, with great concern that I note the action of the Senate Interior appropriations to totally eliminate funding for the urban Indian health program.

The House, however, has seen fit to fund the urban Indian health program. And it recommended $9.79 million for fiscal year 1982. When the Interior measure goes to conference, I want to strongly urge my colleagues to adopt the House figures for this very important health care program.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

Mr. JOHNSTON. Mr. President, have the yeas and nays been ordered?

The PRESIDING OFFICER. They have not.

Mr. JOHNSTON. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The bill having been read the third time, the question is, shall it pass? The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER), the Senator from New Mexico (Mr. SCHMITT) and the Senator from Virginia (Mr. WARNER) are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico (Mr. SCHMITT) would vote "yea."

Mr. CRANSTON. I announce that the Senator from Missouri (Mr. EAGLETON) and the Senator from Hawaii (Mr. INOUYE) are necessarily absent.

I further announce that, if present and voting, the Senator from Hawaii (Mr. INOUYE) would vote "yea."

The PRESIDING OFFICER (Mr. SYMMS). Are there any other Senators in the Chamber wishing to vote?

The result was announced—yeas 87, nays 8, as follows:

[Rollcall Vote No. 337 Leg.]

YEAS—87

Abdnor	Exon	Metzenbaum
Andrews	Ford	Mitchell
Armstrong	Garn	Moynihan
Baker	Glenn	Murkowski
Baucus	Gorton	Nunn
Bentsen	Hart	Packwood
Biden	Hatch	Pell
Boren	Hatfield	Percy
Boschwitz	Hawkins	Pressler
Bradley	Hayakawa	Pryor
Bumpers	Heinz	Quayle
Burdick	Hollings	Randolph
Byrd, Robert C.	Huddleston	Riegle
Cannon	Jackson	Rudman
Chafee	Jepsen	Sarbanes
Chiles	Johnston	Sasser
Cochran	Kassebaum	Simpson
Cohen	Kasten	Specter
Cranston	Kennedy	Stafford

Dole	Matsunaga	Wallop
Domenici	Mattingly	Weicker
Durenberger	McClure	Williams
East	Melcher	Zorinsky

NAYS—8

Byrd, Harry F., Jr.	Heflin	Nickles
Grassley	Helms	Proxmire
	Humphrey	Roth

NOT VOTING—5

Eagleton	Inouye	Warner
Goldwater	Schmitt	

So the bill (H.R. 4035) was passed.

Mr. McCLURE. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. McCLURE. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make any necessary clerical and technical corrections in the engrossment of the Senate amendments to H.R. 4035.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLURE. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives thereon and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to, and the Presiding Officer (Mr. SYMMS) appointed Mr. McCLURE, Mr. STEVENS, Mr. LAXALT, Mr. GARN, Mr. SCHMITT, Mr. COCHRAN, Mr. ANDREWS, Mr. RUDMAN, Mr. HATFIELD, Mr. ROBERT C. BYRD, Mr. JOHNSTON, Mr. HUDDLESTON, Mr. LEAHY, Mr. DECONCINI, Mr. BURDICK, Mr. BUMPERS, and Mr. PROXMIRE conferees on the part of the Senate.

Mr. McCLURE. Mr. President, I take the opportunity at the completion of the rather lengthy consideration of this appropriations measure to express my own personal appreciation to the ranking minority member, the distinguished minority leader, Senator ROBERT C. BYRD of West Virginia, for his courtesy and help and the help of his staff in the deliberations over the weeks and months in the subcommittee, and also to express my thanks to the floor manager on behalf of the minority, the Senator from Louisiana (Mr. JOHNSTON).

Of course, as is always the case, we never get to this point without the active and considerable help of very talented staff members. I particularly thank Frank Cushing, Linda Richardson, Don Knowles, and Diana Bernhart of the majority staff; Charlie Estes of the minority staff; and Laura Hudson of Senator JOHNSTON's staff for the really extraordinarily help that has been exerted on the floor in consideration of this bill.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. McCLURE. I yield.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished Senator from Idaho for his reference to me.

In turn, may I express my appreciation to him for the courtesies that he has shown to me and for the splendid cooperation that I have been given and for his excellent leadership as chairman of the Subcommittee on Interior Appropriations.

He has been at all times most considerate and very helpful, and I am thankful for this.

I also wish to commend Mr. JOHNSTON for his skill and dedication as he has worked in the Chamber to manage the bill. I personally appreciate it, and I wish to say that I think that the Senate is in his debt.

Mr. BAKER. Mr. President, I want to take this opportunity to thank the distinguished manager of the Interior Appropriations bill, Senator McCLURE, the distinguished ranking member of the Interior Subcommittee, Senator BYRD, and Senator JOHNSTON for their able and effective leadership throughout the past 2 days.

Additionally, majority staff members Frank Cushing, Linda Richardson and Don Knowles should be commended for their assistance as well as minority staff members Charlie Estes, Laura Hudson, and Penny German.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, I take the floor at this time to inquire of the distinguished majority leader what the program is for tomorrow and for the remainder of the week.

Mr. BAKER. Mr. President, I thank the minority leader.

WEDNESDAY

Mr. President, on tomorrow I hope the Senate will agree to convene at 8:45 a.m.. At 9 a.m., under the order previously entered, the Senate will proceed to the consideration of the resolution of disapproval of the AWACS sale. That will continue throughout the day and at 5 p.m. tomorrow a vote will occur on that resolution under the terms of the statute.

THURSDAY

Mr. President, on Thursday, October 29, also under the previous order, the Senate will resume consideration of the Emergency Petroleum Allocation Act and continue its deliberations on that measure until final passage. I hope and I expect that we can complete that bill sometime around midday on Thursday.

I hope then to proceed to the consideration of the Agriculture appropriations bill, and I am advised by the managers on this side that the bill may be disposed of in 2 or 3 hours. If that is possible to do Thursday, having been a busy day, I would not expect the Senate to be asked to remain late although Thursday is the usual late day and this is late in the year. If we can complete that important appropriations bill as well as the emergency petroleum allocation bill, I would expect that that would be a good day's work and that we would go out at a reasonably early hour.

FRIDAY

On Friday I hope that the Senate will agree to proceed to the consideration of the Transportation appropriations bill or the D.C. appropriations bill. I expect votes to occur on Friday and for Friday to be a full day extending perhaps until 6 p.m. or 6:30 p.m. on that day.

Mr. President, that is the outlook as I see it at the present time for the remainder of this week.

Mr. ROBERT C. BYRD. Mr. President, does the distinguished majority leader say that on Friday the Senate will consider either the Transportation appropriations bill or the District of Columbia appropriations bill?

Mr. BAKER. Yes.

Mr. President, I hope that we might do both. and I think there is some prospect that we will, but I shall not ask the Senate to remain very late in order to do that.

Mr. ROBERT C. BYRD. I thank the majority leader.

Mr. McCLURE. Mr. President, will the majority leader yield?

Mr. BAKER. I yield.

Mr. McCLURE. Mr. President, I did not hear, but is it possible that other legislative items that are cleared for

action on both sides might be inserted in that schedule if there is time?

Mr. BAKER. Yes, indeed, that is a possibility, and I thank the Senator from Idaho for reminding me that throughout the week as we can clear items on both the Calendar of General Orders and the Executive Calendar we will do them by unanimous consent, and we will certainly do so.

Mr. McCLURE. I thank the Senator.

ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that there now be a brief period for the transaction of routine morning business to extend not past 6:45 p.m. in which Senators may speak.

The PRESIDING OFFICER. Without objection, it is so ordered.

REGRESSIVE EXCISE TAXES

Mr. FORD. Mr. President, I am deeply disturbed by recent reports that the administration and Senate majority leadership are considering doubling Federal excise taxes on gasoline, telephone charges, alcohol and tobacco as a means of financing the recent tax cut. These reports are troubling, not only because of the severe implications they pose for the State I represent, but also because of the negative implications this has for an equitable Federal tax policy.

In revealing that such a plan is under active consideration by the administration, Treasury Secretary Regan termed it a painless way to enhance Federal revenues. Exactly who Secretary Regan has in mind I do not know, but it will certainly not be painless to two major industries in my State, nor to the low- and moderate-income individuals who will bear the brunt of this tax increase.

Let us dispel any illusions right here at the start, Mr. President. You can call it an excise tax, a revenue enhancement or anything else you want. But, in reality, it is nothing more than a regressive sales tax which will end up on the backs of consumers.

The State of Kentucky, which has already been asked to bear a disproportionate share of Federal spending cuts, will have to carry an even heavier load if these excise tax increases go through. Kentucky produces more distilled spirits than any other State in the country and produces the second largest crop of tobacco.

Currently, Mr. President, the Federal excise tax on distilled spirits is $10.50 per proof gallon. When you add on State and local excise taxes, more than 50 percent of the price of a bottle of distilled spirits is made up of excise taxes. The Federal excise tax on spirits alone accounts for 26 percent of the retail price. That is a higher share of retail price than any other industry.

So what is being contemplated? Why just make it even higher?

The doubling of the excise tax on distilled spirits would, without question, decrease demand. Decreased demand means decreased sales and the sum effect would be to cripple an industry that, in my State, is composed primarily of small companies producing bourbon whisky and employing more than 5,000 individuals.

If excise taxes are increased, all of these companies would be hard hit. Some would undoubtedly go out of business. The Senate Committee on Finance estimates that a doubling of the tax on wine, spirits, beer, and tobacco would reduce consumption 27 percent overall. Because the excise tax on spirits is higher than all other alcoholic beverages and makes up a greater proportion of the retail price, distilled spirit producers can expect as much as a 50-percent decrease in sales.

If that happens, what would be the net gain to the Federal Treasury be? How many distilleries would have to shut down? How many workers would be out of jobs? Who would we really have helped?

Indeed while the possibility of doubling excise taxes on gasoline, telephone charges, alcohol, and tobacco would hurt Kentucky, it holds equally negative repercussions for all American people.

Congress has just enacted the largest tax cut in history—a tax cut that, without question, directs most of its relief toward upper income individuals. I do not intend to discuss the relative merits of that tax cut; whether it should have been enacted, whether it is fair; or what impact it will have on the national economy.

But, I do not think it can be challenged that the tax cut made the U.S. tax system less progressive. It intentionally was designed to give benefits to upper income individuals. The administration would agree that the philosophy behind the tax cut was to create more incentives for the affluent to save and invest in productive enterprises. The administration cannot deny the skewing of tax benefits toward the more well-to-do.

But now we see that the tax cut is too big. It is going to cost, at a minimum, $750 billion over the next 5 years, and now we are stuck with the job of finding ways to finance it so that the 1982 deficit can be kept below $13 billion.

The administration had originally intended to reduce the deficit and pay for the tax cut by further cutting Government spending. There will be further reductions in Government spending, but the administration now is being made to realize that the poor of this Nation have been hardest hit by the first round of budget cuts and it is just not politically feasible to make them bear the lion's share of further cuts.

So, now the administration must look for other ways to pay for this excessive and expensive tax cut. They apparently are choosing to do so by new and different taxes to increase Federal revenues.

Mr. President, I say to you the most unfair way of all to finance the Economic Recovery Tax Act is through further regressive taxes. And, make no mistake about it—an excise tax—because it is a tax on consumption—is, like all sales taxes, a regressive tax.

Doubling the excise tax on gasoline, telephone charges, alcohol and tobacco will have a much greater impact on lower income individuals, not because they consume more of these products—they do not—but because all consumption taxes impact hardest as income level decreases. It is a basic law of economics that consumption expenditures, as a percent of family income, are greater the lower a person's income. There is no debating this. Thus, an increase in excise taxes will fall disproportionately harder on low- and moderate-income households—it is these people who will be required to finance the recent tax cut.

Still, Treasury Secretary Regan says that the cut will be painless. Well, it may be painless to Secretary Regan and those in his income bracket, but it is not painless to the thousands of Kentuckians whose jobs would be threatened, nor the millions of lower- and middle-income individuals on whom the greatest part of this burden would fall.

I also point out that this tax increase would come on top of action we have already taken to shift greater tax burdens on middle- and lower-income taxpayers. The recently passed budget reconciliation bill substantially cut Federal Government spending putting new revenue raising pressures on State and local governments. Because State and local governments typically rely on a more regressive tax structure to raise revenue, the recent spending cuts will transfer the burdens of taxation to households with smaller incomes. We should not further contribute to this tax burden redistribution by increasing excise taxes.

And, we should not dismiss this as an easy way to raise Federal revenues. Indeed it is something that must be carefully studied because it is not the quick fix solution that many seem to think. It is regressive, it is bad public policy, it is counterproductive. It is, without question, contrary to the concept of an equitable Federal tax system.

THE AWACS SALE TO SAUDI ARABIA

Mr. PRESSLER. Mr. President, last week I spoke with the Antidefamation League of B'nai B'rith in a session after meeting with the national leaders of that association I agreed to deliver a message to the President regarding the aftermath of tomorrow's vote on AWACS in which I think we all should be prepared to bind up any wounds after that vote, and I wish to have printed in the RECORD at this point my letter that I delivered to the Honorable Ronald Reagan this afternoon regarding the aftermath of the vote tomorrow on the AWACS sale, and I so ask unanimous consent to have that letter printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., October 27, 1981.

Hon. RONALD REAGAN,
President of the United States,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Recently I spoke to a meeting of the National Executive Committee of the Anti-Defamation League of B'nai B'rith. After discussing with the 500 to 600 participants the question of the ethnic role in American politics and the constitutional right of all Americans—regardless of race or

religion—to participate fully in the American political system. I then met with the top national leadership of the League for over one hour.

Although they knew of my position concerning the AWACS sale to Saudi Arabia, they nevertheless treated me most graciously, and I appreciated this opportunity to exchange views with them.

I know from our previous discussions that you share my concern that it would be unfortunate if any particular group were blamed, or identified as being responsible, for the outcome of the current Congressional disposition of the AWACS sale disapproval resolution. This is also a concern of the leadership of the ADL as expressed to me last week. I assured them that I would communicate their feelings on this matter to you.

It is extremely important that, whatever the outcome of the AWACS debate, we should not allow this issue to polarize or divide Americans along religious or ethnic lines. As one of your strong supporters on a variety of issues, I know that you share this view. We can all be proud of the active role played by all Americans in our political system.

Sincerely,

LARRY PRESSLER,
U.S. Senator.

AWACS SALE

Mr. LEVIN. Mr. President, as Hodding Carter, former Assistant Secretary of State for Public Affairs, pointed out in the Wall Street Journal of October 15, "the royal We has reappeared in Washington." He refers to the fact that President Reagan has increasingly abandoned the attempt to use substantive arguments to justify h's desire to sell F–15 enhancement equipment and AWACS to the Saudis and, instead, increasingly relies on the claim which emphasizes the fact that he is the President and a rejection of this sale would weaken his ability to conduct foreign policy.

I find it extraordinary that the debate on this sale has increasingly focused on Presidential power rather than national need.

Our Constitution was and is built on the concept of checks and balances. Its operating premise is that no branch of Government and no individual will be able to unilaterally commit the people of this Nation to most major courses of action. Indeed, such is the case, by law, with the sale of arms of the kind involved in the proposed sale to the Saudis. The law specifically allows the Congress to disapprove a sale. And practice specifically invites the President to consult with the Congress before making a proposal. While this President belatedly gave some rhetorical attention to such consultation, he ignored the advice that his invitation generated. As a result, it is the President who has created this unfortunate game of chicken in which we now find ourselves engaged.

Despite the fact that the Congress has an obligation to consider the merits of the proposed sale and render a judgment on it, some may be tempted to consider the effects that a rejection of the sale would have on the Presidency. But William Safire, in the New York Times of October 15, provided a devastating response to that concern. He wrote that:

As a former Presidential aide, I recall all too well the temptation to quiet the voices of friends warning of danger with a blast about "weakening the Presidency." But it is the demand to close ranks regardless of conscience that weakens the Presidency. . . . "Our President, right or wrong," just will not fly anymore. No secret agreement can become a "national commitment" without a nation's knowledge and Congress's concurrence and no strong President would try to wheedle such concurrence by pleading that rejection will make him look bad.

Mr. President, there is disagreement about the wisdom of this proposed sale to Saudi Arabia. No matter how much I reject the reasoning of those who favor the sale, I respect their right to make that decision and I will defend the integrity of their choice so long as it was based on the merits of the proposal and not on a perceived need to rally around the President. We have rallied that way before—and we discovered only too late that we were being asked to assemble in a quagmire.

In the time left before the Senate is asked to formally render its judgment on the wisdom of this sale, I would ask my colleagues to remember that we are being asked to choose between differing policies and not differing personalities. Our task is to decide if we favor the sale or not, rather than whether we favor the President or not.

There are institutional issues of the highest order involved here. The Senate has a duty to reach an independent decision on this question. This body was not created to act as a rubber stamp. This body was not conceived as an agent to be manipulated by Presidential patriotism.

I ask unanimous consent to have printed in the RECORD the full text of Mr. Safire's analysis, as well as a powerful analysis of George Will which makes a similar point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Oct. 15, 1981]

A STALWART'S LAMENT

(By William Safire)

WASHINGTON, October 14.—I am a staunch supporter of Ronald Reagan's foreign posture. Although "foreign policy" has not yet been articulated, the Reagan foreign posture is unmistakable: a tough-minded approach to the Soviet Union on arms reduction and its sponsorship of terrorism, a rejection of third-world demands for psychological and material coddling, and the projection of the impression that the U.S. is again a reliable ally.

At the same time, I oppose the Reagan Administration's decision to abrogate past assurances to the Senate and to sell Saudi Arabia equipment that would enable its F–15's to bomb Israel, combined with its proposal to sell our most supersecret command and control equipment to a feudal regime in danger of an internal revolt, which could lead to a Soviet advantage in reading American defenses.

Those contrary views—generally for, specifically against—leave my head in a state that Prof. Leon Festinger once described as "cognitive dissonance," with the zigging part of my brain yelling at the zagging part to get in line to restore consonance and consistency. Many other loyal Republicans, conservatives and longtime hawks are going through the same internal tug-of-war.

Our problem is worsened at the sight of Tip O'Neill gleefully using the AWACS vote to resuscitate his party and strike at Ronald Reagan.

Worse still for our morale is the spectacle of Walter Mondale, who as Jimmy Carter's Vice President twisted Sen. Muriel Humphrey's arm until she voted for the sale of F–15's to the Saudis, now posing as a great defender of Israel by denouncing Mr. Reagan for following Mr. Carter's custom of acceding to Arab wish lists.

President Reagan has not made it easy for us, either, by insisting that a vote against him on Awacs would damage the foreign posture of strength and determination that we applaud. In such a bind, what is a stalwart to do?

We do not strengthen our Presidents, or help along their ability to conduct foreign policy, by acquiescing in blunders. The Awacs sale is not a test of strength between President and Congress, nor a partisan fight between Democratic doves and Republican hawks, but a test of wisdom that supporters of Ronald Reagan must not let him flunk.

As we now know, the combined Awacs and F–15 enhancement deal had its genesis in an unauthorized sales pitch by some of our least competent generals; it was secretly advanced by the Carter men as their farewell thumb-in-the-eye to Israel; it was quickly misinterpreted as a "national commitment" by Alexander Haig, who then sought to conceal the Awacs sale from the Senate and the U.S. press and Israeli Government while the F–15 enhancement deal was going through. Not until Defense Secretary Weinberger insisted that the complete U.S.-Saudi package be revealed did the world learn the extent of the secret promises made to a country that has been sabotaging the Camp David accords.

Must those of us who believe in the Reagan foreign posture permit this momentum to take him over the cliff? Henry Kissinger, in wrestling with this problem, deplored the way the proposed F–15 enhancement "casts doubt on the American word" to our Israeli ally, and doubted whether the subtle Saudis needed Awacs support "in such an ostentatious manner." But even so, he set these merits aside on follow-the-leader grounds: "the Congress must not undermine the President's authority in international affairs."

No: "our President, right or wrong" just will not fly anymore. No secret agreement can become a "national commitment" without the nation's knowledge and Congress' concurrence, and no strong President would try to wheedle such concurrence by pleading that rejection will make him look bad.

The way for Mr. Reagan not to look bad is not to let his advisers get him into such a mess. One sure way to look bad is to force longtime supporters into bed with strange bedfellows. Dim-witted diplomacy has pushed the nation into this choice between insulting an oil resource and endangering an ally, and the Reagan men add insult to injury by accusing principled supporters of causing the problem.

As a former Presidential aide, I recall all too well the temptation to quiet the voices of friends warning of danger with a blast about "weakening the Presidency." But it is the demand to close ranks regardless of conscience that weakens the Presidency.

Along with others who were outspoken Reagan enthusiasts as far back as the 1978 primaries, I resent and reject insinuations of ideological inconsistency from men who were then reviling Ronald Reagan as a lightweight demagogue, and who now call into question our basic political loyalties from seats of the mighty in the White House and State Department.

It is the Johnnies-come-lately who are failing Ronald Reagan and weakening his Presidency, not the men and women who are trying with some pain to remind him what he stood for.

[From the Detroit News, Oct. 25, 1981]

AWACS DISTORTS POLITICAL LANGUAGE

(By George F. Will)

WASHINGTON.—Proof of the capacity of the proposed AWACS sales to cause dreadful developments is that it has awakened the sleeping pedagog in me. The pedagog thinks the nation should define its terms especially those that denote the things it covets, such as "peace" and "moderation."

If "peace" means simply the absence of armed conflict, then peace is a clear-cut concept, but it is a classification that does not classify in a way compatible with common sense. The United States has not known peace in any meaningful sense since the first week of December, 40 years ago. Thus, the president's strategic arms proposal (MX, B-1, and the rest) should be understood as another maneuver in what John Kennedy called a "long twilight struggle," countering maneuvers of arms by the enemy.

The President's proposal—to deploy a new capacity for violence, for the purpose of countering the enemy's capacity—is not war, but it is indicative of a condition closer to war than to peace.

Similarly, Israel has never known a day of peace. Israel has suffered four wars, but the intervals between have not been peace. Saudi Arabia, whose "moderation" is cited by proponents of the AWACS sale, is among the foremost contributors to the climate of war and, hence, to the destabilization of the region.

In his letter offering assurances to senators, the president says he would cancel the sale if "the Saudis adopt policies which are disruptive to prospects for stability of the region and detrimental to U.S. national interests." That statement implies that the Saudis have not hitherto adopted such policies. The statement is an example of the deceptions, including self-deceptions, the administration has been driven to in its search for rationalizations of the sale.

The Saudis have relentlessly excoriated the Camp David agreements. They have persistently undermined the peace process. They have financed the transformation of the foremost terrorist organization, the PLO, into a conventional army in Lebanon. They have called (in January) for a "holy war" against Israel. They have never denounced treaties of cooperation between the Soviet Union and Arab states such as Syria and Libya. They have vigorously opposed any military bases on the Arabian peninsula and the Gulf (although the Soviet Union has a substantial presence in Syria and South Yemen). They have pressured Oman to be less hospitable to the United States.

They denounced the hostage rescue mission in Iran as "American military aggression." They initiated the founding of, and are host to, the Gulf Cooperation Council that denounced as "piracy" the U.S. shooting down of the two Libyan aircraft that attacked U.S. aircraft. They raised the price of oil more than $20 a barrel between the end of 1978 and the beginning of 1981. Their oil minister recently threatened a $60-a-barrel price if oil companies would not reduce inventories. And they are the hosts of Idi Amin (who is not in Libya, as George Bush charged when reaching for definitive proof of Libya's immoderation).

Worse than what will happen when the president wins or loses is what already has happened: Our political language, and hence our capacity for clear thought and sensible action, has been damaged by the administration's need to ascribe moderation to Saudi Arabia. The administration also has manfully, but unconvincingly, celebrated the "stability" of Saudi Arabia, a nation undergoing pell-mell modernization, with low literacy and 75 percent of its labor force consisting of foreigners.

There has always been one, but only one, good argument for supporting the sale: The president (as distinguished from his aides, who concocted this misadventure) does not deserve, and the country cannot afford, another blow to the believability of U.S. undertakings. The argument is not "My country—or my president—right or wrong" (which, as Chesterton said, is like "My mother drunk or sober"). But there are times, and this may be one, when it is more important for the executive to be effective than correct.

The administration should be prepared, if it wins, to issue a statement that is both reassuring and admonitory. It should reassure Israel and should admonish the Saudis not to believe what is, by now, all too easy to believe: that the United States expects no reciprocity for its favors.

When the Senate Foreign Relations Committee was considering the sale, the Washington Post carried a large front-page photo of two of the president's supporters conferring: Sens. Larry Pressler, R-S.D., and Charles Percy, R-Ill.

The president should wonder about a Middle East policy that depends on the perceptions of Percy, who thinks the PLO's Yasser Arafat is a moderate, and Pressler, who is not famous for constancy on behalf the president's, or other, foreign policy views.

NEARLY A HALF-CENTURY OF SERVICE COMES TO AN END

Mr. ROBERT C. BYRD. Mr. President, across the United States, thousands of ministers, priests, rabbis, and other professionally trained religious workers are responsibly and faithfully serving the spiritual needs of millions of Americans.

From time to time, however, the record and quality of service of one of those clergymen or religious workers assumes exceptionally noteworthy and remarkable dimensions.

Rabbi Samuel Cooper of B'nai Jacob Congregation in Charleston, W. Va., has achieved such distinction. Now, after 49 years of serving his congregation and the Charleston community, Rabbi Cooper is retiring. This weekend, hundreds of Rabbi Cooper's congregants, friends, and admirers are coming together in Charleston to bid this distinguished spiritual leader farewell, and I want to add my voice to their acclaim.

Rabbi Cooper came first to B'nai Jacob Congregation in 1932. As a 22-year-old, Canadian-born, fledgling rabbi just out of rabbinical school, Rabbi Cooper originally officiated at the 1932 high holy days services in Charleston on a temporary and emergency basis. But the young rabbi and the Charleston Jewish community were destined for a surprise.

Almost instant attachment is not always limited to budding romances. Apparently from the beginning, the elders of B'nai Jacob were captivated by their interim teacher and pastor. His presence, eloquence, demeanor, and brilliance quickly won for Rabbi Cooper a warmth, respect, and reverence usually reserved for a more mature and seasoned rabbi. In consequence, the people of B'nai Jacob overwhelmingly voted to ask Rabbi Cooper to become their permanent rabbi.

The famous American clergyman Phillips Brooks once said, "A sermon is truth expressing itself through human personality." One might paraphrase Brooks by adding that an effective ministry is compassion expressing itself through human personality. Not coincidentally, under Rabbi Cooper's nurturing leadership and ministry over nearly five decades, the B'nai Jacob congregation was renewed, grew, and extended a widening and welcome influence throughout the Charleston area.

Consequently, a growing recognition came to Rabbi Cooper from outside his congregation. Among the many responsibilities that Rabbi Cooper accepted were the chairmanship of the West Virginia Human Rights Commission and the Charleston Housing Council, and membership on the Board of Trustees of the American Red Cross and the Executive Committee of the Rabbinical Council of America.

In addition to serving as the president of the Zionist Region of Ohio, Indiana, Kentucky, and West Virginia, Rabbi Cooper has also been West Virginia's delegate to the American Jewish Conference and a delegate to the World Zionist Congress in Basle, Switzerland. For these and his many other public contributions, in 1964, Rabbi Cooper was honored as West Virginian of the Year.

Mr. President, I commend Rabbi Cooper for his years of unselfish service to the B'nai Jacob Congregation and to Charleston. Rabbi Cooper is departing a familiar field of labor for new challenges and perhaps a more leisurely pace of responsibilities. May he go assured of the heartfelt appreciation of thousands of people whom his influence has touched, and confident of the strength of the moral and spiritual foundations that he helped lay in the lives of countless men and women throughout his rabbinate.

Mr. President, I yield the floor and I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. SYMMS). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ANGUS GAVIN RECEIVES OUTDOOR LIFE CONSERVATION AWARD

Mr. STEVENS. Mr. President, Angus Gavin is receiving the prestigious "Outdoor Life Conservation Award" today. The award will be presented by Clare Conley, editor-in-chief of Outdoor Life Magazine.

It is being given in recognition of his work for Atlantic Richfield Co. (ARCO) on Alaska's North Slope from 1969 to 1978. ARCO hired Angus to monitor the effects of pipeline construction on North Slope wildlife. He paid particular attention to the migratory patterns of caribou and wildfowl.

The presentation of this award is significant because it points to a facet of resource development in undeveloped areas which is frequently missed: That is that we can permit development which will not cause harm to the surrounding environment. When oil was discovered on Alaska's North Slope and a pipeline

to carry it out was proposed—some people said the project would be a massive environmental disaster. Mr. President, they were wrong. The Trans Alaska pipeline was built and oil has been going through that line from Prudhoe Bay to Valdez since 1977 and there has not been a disaster. America is receiving Alaska's valuable energy resource and on our North Slope caribou and migratory waterfowl still flourish.

Prior to joining ARCO, Angus spent 23 years with Ducks Unlimited in Canada, where he was senior vice president in 1968. He spent many years as Ducks Unlimited provincial manager in Saskatchewan.

All told, Angus has spent over 45 years working in the Arctic and Subarctic areas of Canada and Alaska. He is one of the most knowledgable men in the world on Arctic wildlife. During his work in Canada Angus was responsible for the discovery of the nesting grounds of the Ross and Tule geese in the Perry River District of the Northwest Territories.

It is my hope that the whole Senate will join Senators JAMES MCCLURE and ROBERT STAFFORD and me in honoring Angus Gavin in the Caucus Room this evening. The reception is scheduled from 5:30 to 7:30.

I ask unanimous consent that the press release on the award be printed in the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

OUTDOOR LIFE MAGAZINE PRESENTS ANGUS GAVIN WITH ITS ANNUAL "OUTDOOR LIFE CONSERVATION AWARD"

WASHINGTON, D.C., October 27.—Angus Gavin, renowned ecologist and author in the field of wildlife conservation, today received the prestigious, annual "Outdoor Life Conservation Award" presented by Clare Conley, Editor-in-Chief of Outdoor Life magazine.

Mr. Gavin was given this award in recognition of his ten years (1969–1978) of ecological work on Alaska's North Slope during the installation of the trans-Alaskan pipeline. He was employed by The Atlantic Richfield Company (ARCO) to monitor the environmental effects the pipeline construction had on wildlife, with particular concern given to the migratory habits of the caribou and various wildfowl, and to advise ARCO on his findings.

"While this award has been given since 1964 to many exceptional and courageous individuals in the conservation field, it seems more timely than ever that Angus Gavin receives the honor this year," said Editor Conley. "His personal integrity and superb knowledge of ecology and wildlife habits make his contributions invaluable, not only to this one project, but to all future endeavors of industry that will concern our natural resources," continued Mr. Conley.

A native of Ellon, Scotland, Angus Gavin now makes his home in Winnipeg, Manitoba. He has worked in the Far North for more than 45 years and is responsible, among other accomplishments, for the discovery of the nesting grounds of the Ross and Tule geese in the Perry River District of the Northwest Territories. He also developed the first workable Eskimo dictionary, which is still in use today. Before joining ARCO, Mr. Gavin spent 23 years with Ducks Unlimited, an international conservation organization.

Outdoor Life, a Times Mirror Magazines publication, is celebrating its 84th continuous year in print.

REMARKS BY ATTORNEY GENERAL WILLIAM FRENCH SMITH BEFORE THE NATIONAL PRESS CLUB

Mr. THURMOND. Mr. President, for too long, crime has been one of our most pressing problems. Over the years, many approaches have been used to address this problem, but we have continued to see crime grow at an alarming rate. This year, I have joined with many of my colleagues here in the Senate to call for a national effort to address the crime issue.

Fortunately for all Americans who are concerned about the rights and safety of law-abiding citizens, we now have an administration that is willing to deal realistically with crime. This administration has an able spokesman for its package to deal with crime in the person of Attorney General William French Smith. Recently, the Attorney General presented the administration package on crime to the National Press Club. This program consists of a four point program:

First. An increased coordination of efforts between State and Federal law enforcement officials;

Second. Direct Federal assistance to State and local efforts against crime;

Third. An improved effort by the Federal Government against crime; and

Fourth. Correcting the current imbalance which favors the forces of lawlessness over the forces of law.

Mr. President, I look forward to working with the President and Attorney General Smith as the administration presents the details of its new program to the Judiciary Committee. I feel confident that the approach endorsed by the administration will provide a valuable vehicle for our united effort against crime.

Mr. President, in order to share the comments of Attorney General Smith with my colleagues, I ask unanimous consent that the text of his address before the National Press Club be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY THE HONORABLE WILLIAM FRENCH SMITH, ATTORNEY GENERAL OF THE UNITED STATES

Although I am delighted to speak here today, it is always a little risky to appear before the press to give a speech or outline some new plan. For example, following Abraham Lincoln's Gettysburg Address, one Chicago newspaper commented:

"The cheek of every American must tingle with shame as he reads the silly, flat, and dish-watery utterances of the man who has to be pointed out to intelligent foreigners as the President of the United States."

Similarly, just one week before the Wright brothers flew their plane at Kitty Hawk, the great New York Times itself branded "airship experiments" a "waste" of "time, and . . . money." And, on the same editorial page, the Times also observed: "One does not expect too close an adherence to logic or to law from an assemblage of women." Although I am neither a Lincoln nor an "assemblage of women"—and the program I outline today may not prove quite as valuable as the airplane—those editorial precedents give me some pause.

In any event, I intend to present an outline of administrative and legislative actions that this Administration earnestly believes will prove of great benefit in fighting crime. The comprehensive nature of our package makes it to large to discuss fully in any one speech of bearable length. Tomorrow, however, I will appear before the Senate Judiciary Committee to discuss its many features more fully. In addition, we will then release a detailed list of all its elements.

Before addressing what the package would do, I want to emphasize what it will not do—and why. It does not require any massive new spending schemes by the federal government. Its breadth and potential effectiveness cannot be measured by accountancy journalism, by adding up the costs of its constituent parts on a ledger. They require careful analysis—and an appreciation of the many things the federal government has unsuccessfully tried to do in the area of criminal justice thus far.

Judged by the growth of crime, federal efforts to assist state and local governments to fight crime have not succeeded well enough. For more than a decade, the federal government has emphasized direct financial assistance to state and local enforcement through LEAA grants. Since 1969 the federal government has expended some eight billion dollars in that effort. The results are in. They demonstrate that throwing money at crime is not the most basic answer—and that we must find a better way to help.

The Law Enforcement Assistance Administration began its efforts in 1969. In the last decade, the federal government has increased its total annual spending on criminal justice nearly four-fold. And state and local governments have more than tripled their spending. Nevertheless, violent crime has nearly doubled. Between 1959 and 1978, annual federal spending on criminal justice rose by more than 1100 percent, yet violent crime increased by almost 500 percent.

There must be a better way to utilize federal resources than those that have been tried thus far. We must more effectively meet the single most important set of law enforcement problems that confront all levels of government in America today—violent crime and the drug traffic that lies at the root of so much violent crime.

Having recognized the need for new approaches, we have fashioned initiatives that we believe are necessary now. Saying this, however, does not mean that there will be no need in the future for added federal expenditures in the effort to fight crime. It merely means that a due recognition of the need for new laws and new procedures counsels great care in the adding of new expenditures at least until the new approaches are in place and have been tested. Federal funding often gains a life of its own separate from the effectiveness of the programs it supports. Although federal expenditures have resulted in the development of some effective law enforcement tools, we now need to try a new approach before committing any massive additional infusions of federal funds. Naturally, the tremendous need for controlling all government expenditures in an effort to turn around our economy only adds to the need for caution in the funding of federal efforts against crime. Simply put, let's try something new and see how it works. Then, let's increase the funding for those efforts that are effective and can benefit from enhanced funding.

Following the President's speech to the International Association of Chiefs of Police on September 28, the New York Times editorialized about the fight against crime in the following words, which may prove as accurate as its editorials I cited from 1903:

"No Federal effort to help that fight can have much meaning unless it involves money."

The Federal effort, however, already involves a commitment of billions of dollars to criminal justice. It is now time to ensure

that this money is being spent in the most effective way possible before launching new spending efforts. It is time for basic changes and innovation before throwing more money into the battle. Innovation could prove more effective than more of the same.

The program we propose is innovative. It is schooled in the failings of the past. It recognizes that the primary responsibility for effectively fighting crime rests on the state and local level. And it therefore emphasizes restructuring the federal effort to assist state and local efforts. The numerous elements of the Administration package would advance four basic goals:

First, to coordinate the use of federal law enforcement resources with state and local needs and efforts;

Second, to offer direct federal assistance to state and local efforts;

Third, to improve the effectiveness of federal efforts themselves; and

Fourth, to correct the imbalance that has arisen and favors the forces of lawlessness over the forces of law.

Although designed to further those four basic goals, the package is made up of many times that number of elements. Exclusive of the proposed Federal Criminal Code that it incorporates, the program addresses twenty different areas of law enforcement. They include—to cite some of those areas—narcotics, bail, corrections, the exclusionary rule, habeas corpus, juveniles, the dealth penalty, organized crime, victims, and federal assistance to state and local governments.

The proposed Federal Criminal Code by itself presents very important body of law enforcement improvements. It contains over one hundred significant improvements in federal criminal law. The other twenty areas addressed by our program themselves contain some forty legislative proposals and fifteen administrative initiatives.

The first goal of our crime package is to ensure full federal cooperation with state and local law enforcement—especially to direct federal resources more effectively against the specific crime problems experienced in different localities. We must reverse the trend in recent years toward federal law enforcement officials deciding their own priorities without fully consulting state and local officials. Too often, U.S. Attorneys and federal law enforcement entities have taken an elitist approach to their role in enforcing the law. U.S. Attorneys have frequently focused their resources on specific types of cases without consulting local authorities.

For example, in several cities in this country where heroin is a major problem, U.S. Attorney's offices had been declining prosecution when the amount of heroin involved was perceived as too small. As a result, many cases that could have been dealt with in the federal system were processed through state and local criminal justice systems whose resources and facilities were at the breaking point.

In some cities, local district attorneys must handle 50 times the number of felony cases brought in the U.S. Attorneys offices next door. Yet some of those district attorneys offices have no more than two or three times the prosecutorial resources; no speedy trial act to ensure swift justice; and no room in state prisons.

Therefore, I have directed implementation of a program that requires all U.S. Attorneys and other federal law enforcement officials to emphasize close coordination with state and local law enforcement.

In each district, the U.S. Attorney is establishing a Law Enforcement Coordinating Committee. Federal law enforcement officials will meet with the appropriate state and local enforcement officials to identify together the community's most important crime problems upon which federal resources can have an impact.

Next, the U.S. attorney will coordinate with other federal, state, and local law enforcement officials to develop a plan for using federal resources and jurisdiction to achieve the maximum impact on the most serious crime problems facing that community. The plan will then be put into effect in allocating federal resources. Federal law enforcement already emphasizes five areas: violent crime, drug enforcement, organized crime, white collar crime, and public corruption. Through the new Law Enforcement Coordinating Committees, local communities can ensure a federal emphasis among these areas that will prove most valuable to that community.

These Law Enforcement Coordinating Committees will form the cornerstone of our efforts to increase federal assistance to state and local law enforcement. I have spoken personally with local prosecutors and other local law enforcement officials. If anyone doubts the importance of this new concept in the fight against crime, I suggest they do likewise.

By employing federal resources—including concurrent jurisdiction—in response to the specific crime problems that are perceived to be most serious in particular localities, federal law enforcement can and will make a difference in the fight against crime. Through enhanced cooperation—for example, the cross-designation of prosecutors in both the state and federal systems—all levels of law enforcement can begin to employ their resources in unison and in accordance with the strengths each can contribute to the fight against crime.

When there is concurrent jurisdiction, cases developed by federal, state, and local investigators could then be presented in the judicial system best suited to the facts, statutes, sanctions, and space on the docket.

The concept of Law Enforcement Coordinating Committees depends upon the existence of federal concurrent jurisdiction to respond with federal resources to the different needs felt in different localities. For example, at least one-third of the federal criminal cases pending at the end of last fiscal year involved an exercise of our concurrent jurisdiction over violent crime or conduct directly related to violent crime.

We are now proposing some expansion of that federal concurrent jurisdiction. For example, the proposed Federal Criminal Code would permit federal prosecution of any violent or serious crime committed during the course of any other federal offense. It would also provide federal jurisdiction over murder for hire, large-scale arson, the leaders of enterprises engaged in organized crime, and those who facilitate or solicit federal crime.

Clearly, the federal government can greatly assist states and localities by directing its law enforcement resources against those problems of greatest local concern. It can also assist state criminal justice systems by ending excessive federal court review of state criminal convictions through federal habeas corpus. Our proposal in this area would provide for broader deference to the state judicial processes without jeopardizing the legitimate protection of fundamental federal rights. It would reduce the substantial commitment of resources presently required of the states and the federal courts to deal with federal habeas corpus petitions by convicted state prisoners.

Although there are many ways in which our initiatives would assist state and local law enforcement, the measures concerning corrections provide direct and immediate assistance. We have established a Clearinghouse in the U.S. Bureau of Prisons to facilitate the transfer to states and localities of surplus federal facilities that could be used as a short-term way to ease the crowded condition of state and local prisons. In fact, the first such transfer occurred just two weeks ago in Watertown, New York. It will not, however, be the last. Indeed, we are seeking legislation to enhance the success of this program and to make federal vocational education funds available to state and local corrections.

Similarly, we have established a National Corrections Academy to improve the training available to state and local corrections officers through the National Institute of Corrections. In addition, other federal training programs are being established to improve the operation of state and local corrections facilities. Last, the Bureau of Prisons is giving emphasis to housing in federal facilities those state prisoners who represent the greatest burdens upon state facilities.

The federal criminal justice system assists the state and local fight against crime in two other important ways. First, state and local governments can devote fewer of their resources to those crimes the federal government attacks effectively—such as white collar crime, organized crime, and public corruption. Second, when the federal system reflects the best approaches gleaned through the Nation, it then serves as a model upon which state and local law enforcement can confidently build.

Both of these processes are furthered by improvements in the federal approach to fighting crime. Therefore, many of the initiatives contained in our crime program are aimed specifically at improving the federal system itself—and would thereby further assist state and local law enforcement.

Perhaps the most important of our initiatives are directed at enhancing the federal effort against drug trafficking and use. We are establishing an interagency Task Force on Drug Enforcement to bring real coordination to the domestic and international efforts of the Departments of State, Treasury, Defense, Transportation, and Justice. In addition, we will seek the necessary legislation to utilize fully the sophisticated resources of the U.S. Navy to detect drug traffic at sea and in the air.

In recent years, under the leadership of its recently retired chief Peter Bensinger, the Drug Enforcement Administration has broken new ground in the fight against drugs. The increasing sophistication of commerce in drugs now requires even greater and more sophisticated efforts. The more substantial resources of the FBI are needed to enhance DEA's activities. Our recent success with Operation Bancoshares demonstrated the value of the FBI's expertise in tracing the sophisticated money trail typical of drug trafficking today.

We are therefore creating a relationship between those two agencies that will allow the FBI to play a larger role in assisting the DEA when the FBI's greater resources and different technical capabilities can have a substantial impact on the drug problem.

In our package there are still other legislative proposals that recognize the significance of drug-related crimes to the overall growth of crime in this country. We are proposing legislation that would permit the responsible use of herbicides against foreign and domestic marijuana crops, for example. In addition, the proposed Federal Criminal Code contains numerous specific provisions directed against drug-trafficking—such as increased penalties for large-scale trafficking and a mandatory prison term for heroin-trafficking.

Just as the proposed Federal Criminal Code would enhance our ability to fight drug trafficking, it would generally enhance federal law enforcement's ability to combat crime. By simplifying and clarifying federal law across the boards, it would improve the efficiency of federal law enforcement. Its specific provisions also represent an improvement in the substantive reach of federal criminal law and in the procedures to enforce that law.

Our Declaration of Independence itself

emphasized the most basic of individual rights secured by government: the right to "Life, Liberty, and the pursuit of Happiness." In the pursuit of other civil rights, we have sometimes shown insufficient regard for this most basic civil right. We have allowed increasing crime—and the fear it breeds—to threaten and confine the pursuit of life, liberty, and happiness by law-abiding Americans.

Nearly fifty years ago the great jurist Benjamin Cardozo wrote:

"Justice, though due to the accused, is due to the accuser also. The concept of fairness must not be strained till it is narrowed to a filament. We are to keep the balance true."

In the years since, however, a growing imbalance has arisen between the tactics available to the lawless and the powers of the law. There has been an ever-growing public perception that the criminal has gained the upper hand over society itself.

Too frequently, Congressional failure to act has invited the courts to fashion makeshift approaches that favor the accused over the accuser. More refined and balanced policies could only be fashioned through the legislative process. It is time that was done, and we have therefore proposed various pieces of legislation that would restore the proper balance between the powers of the law and the rights of the lawless.

Foremost among those proposals is modification of the exclusionary rule so that reasonable, good-faith action by law enforcement does not result in release of the lawbreaker. Intended to ensure due process of law, the exclusionary rule too often merely results in a criminal's avoiding punishment due under law. As Justice Cardozo observed long ago, the criminal should not go free merely because the constable blundered.

Perhaps, the interests of justice would be best served by the complete abolition of the exclusionary rule. The exclusionary rule should at least be modified. Clearly, good-faith efforts by law enforcement, though found technically deficient later, should not result in a court's excluding evidence of crime. At the very least, Congress should begin the process of reform by modifying the rule so that evidence would not be excluded when it was obtained with a reasonable, good-faith belief of conformity with the fourth amendment. Such a judicial construction of the rule already governs in the U.S. Courts of Appeals for the Fifth and Eleventh Circuits.

Reform of the exclusionary rule does not, by any means, exhaust our list of proposals to Congress to restore the balance necessary to succeed in fighting crime. For example, the new sentencing provisions of the proposed Federal Criminal Code add certainty to the judge's responsibilities in the criminal justice system—and eliminate much of the flexibility that saps the public's confidence and diminishes the deterrent impact of punishment.

Our proposals to reform the bail process would, among other things, allow courts to deny bail to persons who clearly present a danger if released—or who are likely to jump bail.

Perhaps the most often forgotten persons in the criminal process are the victims of crime. The President has recognized this fact and will appoint a Task Force on Victims of Crime to correct it. In addition, the proposed Federal Criminal Code itself contains provisions that would protect victims and witnesses from intimidation and would provide a mechanism for restitution to victims through fines imposed upon those who have preyed upon them.

Our proposals would aid in deterring the most serious of crimes. Where appropriate, we are proposing a constitutionally sound death penalty. And we are proposing mandatory prison sentences for the use of firearms in committing a federal felony.

Recognizing the increasing number of crimes committed by young onenders, we are proposing juvenile justice reforms aimed at increasing the likelihood of their being apprehended and punished appropriately.

In order to improve the access of law enforcement agencies to the information they need to combat crime, we are proposing changes in the Tax Reform Act of 1976 and the Freedom of Information Act. Both of these statutes serve laudable goals with which we agree. They also, however, contain some provisions that are very detrimental to the ability of law enforcement to combat crime. By allowing law enforcement greater access to information possessed by the Internal Revenue Service, our proposals should enhance the Department's ability to investigate and prosecute white collar crime, drug trafficking, public corruption, and violent crime. In addition, our proposals would deny criminals access to information that would assist their illegitimate endeavors or enable them to threaten those who aid in apprehending them.

Last, the proposals we will make contain numerous improvements in the law to combat the menace of organized crime. They enhance our ability to prevent and punish labor racketeering. And they would facilitate criminal forfeiture in racketeering and narcotics trafficking cases. Enhanced forfeiture provisions would make it possible to take more of the incredible profits out of large-scale criminal endeavors.

The comprehensive nature of the program we are embarking upon to combat crime has required me to speak longer than I would normally require an audience to listen—even an audience whose job is to listen. The breadth of our proposals serve as an important reminder, however, of a very important fact. We have been losing the battle against crime.

Tried approaches have proved less than true, and new approaches are needed in all of the areas I have touched upon today.

Previous failures are especially disheartening when they occur in an area of so much importance to the American people. Nevertheless, failure can also provide the impetus to more innovative and more effective approaches.

There is an old story about the great inventor Thomas Edison that we should all keep in mind. An acquaintance once reproved him for having unsuccessfully tried some 1,200 different materials as the filament for the incandescent light. He told Edison:

"You have failed 1,200 times."

Edison replied:

"I have not failed. I have discovered 1,200 materials that won't work."

In the past decades we found many approaches that haven't worked, but we have not necessarily failed in the fight against crime. We will fail only if we do not persevere to find more effective weapons to fight crime without offending the other values basic to our society. I believe that the Administration has succeeded in finding those kinds of new weapons in the extensive set of proposals I have outlined briefly today. In the days and months ahead, I can promise you that we will persevere in our efforts to see them implemented and tested. And we will persevere in the effort to find every acceptable weapon that can aid in diminishing the blight of crime that afflicts our land.

REFLECTIONS ON THE LATE EGYPTIAN PRESIDENT ANWAR EL-SADAT

Mr. THURMOND. Mr. President, much has already been said about the tragic loss of that great statesman and man of peace, the late President Anwar el-Sadat of Egypt. However, I would like to share with my colleagues some additional reflections after my return from his funeral.

My prayers go particularly for the wife and family of Mr. Sadat, as well as for the new leader of that strategic land. It is indeed fortunate that President Sadat had an able vice president and group of leaders who share his peaceful, forward-looking policies.

Appropriate words during a time of tragedy and challenge are hard to come by, but I feel that two newspaper viewpoints best express some of my views on the life and death of President Sadat and what it may ultimately mean.

The first is a fine article which appeared in the Los Angeles Times, written by Sol M. Linowitz, U.S. Ambassador to the Middle East autonomy negotiations under President Carter. It is entitled: "Memories: A Man of Vision." The second is a very perceptive editorial from the Wall Street Journal entitled "Shadow and Act."

Mr. President, though these brief reflections cannot completely depict the life of this great man, I wish to share them with my colleagues, and I ask for unanimous consent that these articles appear in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MEMORIES: A MAN OF VISION

Anwar Sadat was the irreplaceable man of our time. He was a man of deep faith and unshakable commitment to peace. To be with Sadat was to be with a man who always seemed serene and at ease with himself—confident of his intuitive judgment and bolstered by his religious commitment.

I remember my first visit with Sadat at his home outside Cairo. He greeted me warmly and took me into his study. Relaxed and apparently without any sense of schedule, he talked with me for several hours. I knew that an important foreign delegation was awaiting him in the anteroom, but he never gave any indication that he was aware of another appointment.

I noted with interest that, six minutes after he and I began talking, he was calling me "Sol." Thereafter, in our subsequent conversations and in his meetings with the press, he always referred to me as "my dear friend Sol." And I always felt that he meant it—that his friendship was real.

Friendship was for Sadat a very important quality. I was with him a day or two after the shah had arrived in Egypt, and I said to him: "It must have been a very difficult decision for you to make—to decide to invite the shah, knowing that it might cause some real repercussions." Sadat stopped and said to me, with indignation, "Difficult? Why should it be difficult to decide how to treat a friend? For me there was no difficulty."

Above all, Sadat showed himself as a leader in the effort to find peace in the Middle East. Committed to Camp David, he was determined to move forward resolutely to carry out the provisions of the accords, often deriding those raising questions about his leadership. He was supremely confident that, in due course, other Arab leaders would join him in supporting Camp David.

Sadat was truly committed to help the Palestinians achieve full autonomy, and seemed confident that one day this would be accomplished. He had a feeling of respect and real liking for Prime Minister Menachem Begin of Israel, but he also became impatient and sometimes deeply annoyed at what he regarded as Begin's unwillingness to take steps that might move them closer to an agreement.

He did, however, understand Begin's

problems. On one occasion, when I was discussing my forthcoming visit to see Begin in Israel, Sadat suggested that I talk to him about Jerusalem, and then he added: "But approach it very carefully, because with him it is a very, very sensitive subject."

Anwar Sadat towered over the Egyptian landscape, but he knew that not everyone in his government was in agreement with him on his policies. As a realist, he also knew that he lived in a world in which one force must be balanced against another, and he had the politician's sure instinct for the act or word that might create the effect he wanted. He played his role on the world stage with consummate skill, knowing that, when he was center stage, his country would also be a focal point of attention and of world concern.

Sadat was a man of vision whose reactions seemed to be instinctive and visceral rather than the result of long contemplation. He walked sure-footedly to the beat of his own drummer. Once I cautiously asked him if he would be willing to approve a statement I had prepared to be issued by him and Begin. After I read it, he immediately said, "I'll do it." I was taken aback, because I thought an argument would be necessary, and I told him so. He said, "There is nothing to argue about. Everyone else in my government will disagree with me, but I believe it is right, and we will do it."

That, more than anything else, characterized the Anwar Sadat I knew.

SHADOW AND ACT

The name of Anwar El-Sadat of Egypt will go down in history linked to peace and courage, looming larger in the latter half of the 20th Century, so far at least, than that of most any leader. It is true that it takes two to make a peace pact, and Mr. Sadat's cosigner on the Camp David accords, Menachem Begin, took a brave gamble as well. But Mr. Sadat had to summon that special courage needed to walk away from longtime friends and allies when they are wrong, such as those in the Arab and communist worlds who had stood with Egypt through the Yom Kippur War, and to pursue peace alone. This is why President Sadat was so widely loved and admired.

It is also why he was so feared and, ultimately, why he was struck down. Although we don't yet know who, exactly, pulled the triggers, we do know who Sadat's enemies were. Col. Qadhafi of Libya has been one of the most zealous of them, but only one. Not in a generation has any leader so frustrated the Soviet Union's designs of influence and conquest in the Middle East. And it is clear that since the day Mr. Sadat stood up on his own and expelled the Soviets from Egypt he has been a marked man, with every Soviet pal and proxy from Tripoli to Tehran now looming as a suspect in his murder. (A remorseless Radio Moscow yesterday was blaming the shooting on Egyptian discontent with Mr. Sadat's foreign and domestic policies, "especially the peace treaty with the Israeli aggressor and military cooperation with the United States.")

In recent years, Mr. Sadat's successes began to take hold and the plots against him grew more dangerous. In March 1980, an Egyptian exile group with left-wing allies announced its intentions to overthrow Mr. Sadat. The announcement was made in Damascus by Saad al-Shazli, the former Egyptian chief of staff who led Cairo's forces to catastrophe in the Sinai in 1973 and was sacked by Mr. Sadat. Shazli's group was promptly recognized by Syria, South Yemen, Libya and the Palestine Liberation Organization and set up a headquarters in Tripoli, with branch offices not only in Syria but also in Lebanon and Algeria.

Whichever of President Sadat's local enemies was immediately responsible, though, his death dramatically raises again the issue of possible Soviet complicity in world-wide terrorism. Someone asked to name three men in the world whose death would most advance the Soviet cause would be likely to list President Reagan, Pope John Paul II and President Sadat, all of whom were the objects of assassination attempts in the past year. While there is no direct evidence of Soviet involvement, least of all in the Reagan attempt, the coincidences strain credulity.

At the very least, we are growing totally impatient with the claim from Western authorities that there is "no evidence" of Soviet involvement in terrorism. It becomes increasingly apparent that those authorities have not looked very hard for such evidence. Western intelligence and police authorities are repeatedly scooped by books like Claire Sterling's "The Terror Network" or Sterling Seagrave's "Yellow Rain." Then the experts, including many within governments, debunk such books by setting up and knocking over the straw man of an office in the Kremlin planning each terrorist assault.

The real issue is whether the Soviets and their clients water and fertilize indigenous terrorism wherever they find it, with the goal of destabilizing other societies. While proof gathered in compliance with the Miranda rule may not be available, the weight of experience grows heavy. We can learn much from the example of Turkey, the object of Russian ambitions since the Czars, and the two waves of terrorist invasion described elsewhere on this page today.

President Sadat's death takes from us one of the few great statesmen of our age. As its ramifications unfold, it may prove to be a grievous blow to Western interests and the cause of peace. At the very least, we owe him the memorial of starting to take seriously the issue of terrorism and assassination.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Saunders, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGES FROM THE HOUSE

At 12:25 p.m., a message from the House of Representatives, delivered by Mr. Berry, one of its reading clerks, announced that the House has passed the following bill, with amendments:

S. 195. An act to incorporate the United States Submarine Veterans of World War II.

The message also announced that the House has passed the following bills, in which it requests the concurrence of the Senate:

H.R. 3963. An act to amend the Contract Services for Drug Dependent Federal Offenders Act of 1978 to extend the period for which funds are authorized to be appropriated;

H.R. 4734. An act to reorganize the organization known as the Italian American War Veterans of the United States;

H.R. 4755. An act to recognize the organization known as Former Members of Congress; and

H.R. 4769. An act to recognize the organization known as the American Council of Learned Societies.

At 5:02 p.m., a message from the House of Representatives, delivered by Mr. Gregory, one of its reading clerks, announced that the House recedes from its disagreement to the amendment of the Senate to the bill (H.R. 4068) to continue in effect any authority provided under the Department of Justice Appropriation Authorization Act, fiscal year 1980, for a certain period, and for other purposes, and agrees thereto, with an amendment.

The message also announced that the House has passed the following bill, in which it requests the concurrence of the Senate:

H.R. 4503. An act to amend the Federal Water Pollution Control Act to authorize funds for fiscal year 1982, and for other purposes.

HOUSE BILLS REFERRED

The following bills were read twice by unanimous consent, and referred as indicated:

H.R. 3963. An act to amend the Contract Services for Drug Dependent Federal Offenders Act of 1978 to extend the period for which funds are authorized to be appropriated; to the Committee on the Judiciary.

H.R. 4734. An act to reorganize the organization known as the Italian American War Veterans of the United States; to the Committee on the Judiciary.

H.R. 4755. An act to recognize the organization known as Former Members of Congress; to the Committee on the Judiciary.

H.R. 4769. An act to recognize the organization known as the American Council of Learned Societies; to the Committee on the Judiciary.

HOUSE BILL PLACED ON THE CALENDAR

The following bill was read twice by unanimous consent, and placed on the calendar:

H.R. 4503. An act to amend the Federal Water Pollution Control Act to authorize funds for fiscal year 1982, and for other purposes.

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-2127. A confidential communication from the Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report on the Department of the Army's proposed letter of offer to the Sudan for defense articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC-2128. A communication from the Assistant Secretary of the Army (Installations, Logistics, and Financial Management), transmitting, pursuant to law, a report with respect to a study on converting the laundry and linen service at Fitzsimons Army Medical Center, Colorado, and the decision that performance under contract is the most cost effective method of accomplishment; to the Committee on Armed Services.

EC-2129. A communication from the Assistant Secretary of the Army (Installations, Logistics, and Financial Management), transmitting, pursuant to law, a report on a study with respect to converting the custodial services activity at Madigan Army Medical Center, Washington, and the decision that performance under contract is the most cost effective method of accomplishment; to the Committee on Armed Services.

EC-2130. A communication from the Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report on the Department of the Air Force's proposed letter of offer to Pakistan for defense articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC-2131. A communication from the Secretary of Commerce, transmitting a draft of proposed legislation to amend the Tuna Conventions Act of 1950, and for other purposes; to the Committee on Commerce, Science, and Transportation.

EC-2132. A communication from the Acting Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Medicaid's Quality Control System Is Not Realizing Its Full Potential"; to the Committee on Finance.

EC-2133. A communication from the Assistant Legal Advisor for Treaty Affairs, Department of State, transmitting, pursuant to law, a report on international agreements, other than treaties, entered into by the United States in the sixty day period prior to October 22, 1981; to the Committee on Foreign Relations.

EC-2134. A communication from the Secretary of the United States Postal Rate Commission, transmitting, pursuant to law, the Presiding Officer's notice soliciting written comments and rescheduling prehearing conference on the electronic mail classification proposal; to the Committee on Governmental Affairs.

EC-2135. A communication from the Chief of Insurance and Debt Management, Air Force Welfare Board, transmitting, pursuant to law, the annual report on the Air Force Nonappropriated Fund Retirement Plan; to the Committee on Governmental Affairs.

EC-2136. A communication from the Secretary to the Council of the District of Columbia, transmitting, pursuant to law, a resolution adopted by the Council on September 29, 1981; to the Committee on Governmental Affairs.

EC-2137. A communication from the Chairman of the Council of the District of Columbia, transmitting, pursuant to law, copies of legislation adopted by the Council on September 29, 1981; to the Committee on Governmental Affairs.

EC-2138. A communication from the Chairman of the Council of the District of Columbia, transmitting, pursuant to law, copies of legislation adopted by the Council on September 29, 1981; to the Committee on Governmental Affairs.

EC-2139. A communication from the Chairman of the Council of the District of Columbia, transmitting, pursuant to law, copies of legislation adopted by the Council on September 29, 1981; to the Committee on Governmental Affairs.

EC-2140. A communication from the Chairman of the Council of the District of Columbia, transmitting, pursuant to law, copies of legislation adopted by the Council on October 14, 1981; to the Committee on Governmental Affairs.

EC-2141. A communication from the Chairman of the Council of the District of Columbia, transmitting, pursuant to law, copies of legislation adopted by the Council on September 29, 1981; to the Committee on Governmental Affairs.

EC-2142. A communication from the Deputy Assistant Secretary of the Interior (Indian Affairs), transmitting, pursuant to law, a plan for the use and distribution of judgment funds awarded to the Mescalero Apache Tribe of the Mescalero Reservation; to the Select Committee on Indian Affairs.

EC-2143. A communication from the Deputy Assistant Secretary of the Interior (Indian Affairs) transmitting, pursuant to law, an appendix to a previously submitted plan for the use and distribution of certain Indian judgment funds; to the Select Committee on Indian Affairs.

EC-2144. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Uncertain Quality, Energy Savings, and Future Production Hamper The Weatherization Program"; to the Committee on Labor and Human Resources.

PETITIONS AND MEMORIALS

The following petitions and memorials were laid before the Senate and were referred or ordered to lie on the table as indicated:

POM-536. A resolution adopted by the Senate of the State of Alabama; to the Committee on Agriculture, Nutrition, and Forestry:

"RESOLUTION

"Whereas, by its rejection on October 15, 1981, of the Federal peanut program, the U.S. House of Representatives dealt a vital blow to our nation's peanut industry, the world's largest, and to the peanut growers of Alabama and the United States; and

"Whereas, through production controls, the Federal peanut program has kept supply and demand at a proper level and has further served to insure an adequate supply of high quality products; now therefore,

"Be it resolved by the Senate of the Legislature of Alabama, That we strongly petition the United States Congress to reconsider and support the federally funded peanut price support and allotment programs which are in the best interest of the American public and essential to the economic well-being of the State of Alabama and of our entire country as well.

"Be it further resolved, That copies of this resolution be sent to the presiding officers of both houses of Congress, to the Alabama Congressional Delegation and to the President of the United States."

POM-537. A petition from a citizen of Muscatine, Iowa, favoring congressional cooperation with President Reagan's efforts to strengthen the military; to the Committee on Armed Services.

POM-538. A petition from a citizen of Silver Spring, Md., favoring congressional cooperation with President Reagan's efforts to strengthen the military; to the Committee on Armed Services.

POM-539. A resolution adopted by the Republic National Hispanic Assembly of Texas, commending President Reagan for his accomplishments in office and supporting his economic program; to the Committee on the Budget.

POM-540. A resolution adopted by the Senate of the Commonwealth of Massachusetts; to the Committee on Finance:

"RESOLUTION OPPOSING DELAYS IN SOCIAL SECURITY COST OF LIVING ADJUSTMENTS

"Whereas, any delay in Social Security cost of living adjustments would surely impose further harm on millions of our Nation's senior citizens; and

"Whereas, in these times of economic difficulty any reduction in the cost of living adjustments would be detrimental to those senior citizens living on fixed incomes; and

"Whereas, the senior citizens of this Nation have contributed greatly to the productivity of this Nation; and

"Whereas, the recipients of social security should be allowed to live their remaining years in dignity; and

"Whereas, there are currently thirteen appropriation bills awaiting congressional action where further cuts could be made rather than those proposed for social security; now therefore be it

"Resolved, That the Massachusetts Senate is hereby opposed to any cuts in social security cost of living adjustments to the senior citizens of America; and be it further

"Resolved, That copies of these resolutions be transmitted forthwith by the clerk of the Senate to the President of the United States, the Presiding Officer of each branch of the Congress, and to each Member thereof from the Commonwealth, and to the Director of the Office of Management and the Budget in the City of Washington, District of Columbia."

POM-541. A concurrent resolution adopted by the Legislature of the State of Pennsylvania; to the Committee on Foreign Relations:

"RESOLUTION

"Whereas, The people of Poland, mindful of their motto, 'Our freedom is your freedom,' have sought liberty for themselves, other people and especially the citizens of the United States through persons such as Generals Kosciuszko and Pulaski; and

"Whereas, The people of Poland, united with the Solidarity Independent Trade Union, are dramatically and peacefully struggling for the right of collective bargaining; and

"Whereas, The farmers and laborers of Poland are striving for a humanistic and spiritual way of life, which is counter to Soviet ideology; and

"Whereas, the Polanders are suffering from food shortages and economic deprivation; therefore be it

"Resolved (the House of Representatives concurring), That the General Assembly of the Commonwealth of Pennsylvania memorializes the President and the Congress of the United States to support the people of Poland; and be it further

"Resolved, That the President of the United States give aid to the people of Poland, especially in the United Nations; and be it further

"Resolved, That the Secretary of the Senate is directed to transmit copies of this resolution to the President of the United States and the presiding officers of the House of Representatives and Senate of the Congress of the United States of America and to each member of Congress from the Commonwealth of Pennsylvania."

POM-542. A resolution adopted by the Macalester College Community Council, St. Paul, Minnesota, relative to the South African Rugby Team American Tour; to the Committee on Foreign Relations.

POM-543. A resolution adopted by the State Council of West Virginia Junior Order United American Mechanics, relative to restrictive immigration; to the Committee on the Judiciary.

POM-544. A resolution adopted by the State Council of West Virginia Junior Order United American Mechanics, relative to illegal aliens; to the Committee on the Judiciary.

POM-545. A petition from a citizen of New York, New York, relative to union violence in America; to the Committee on Labor and Human Resources.

POM-546. A petition from a citizen of Blairsville, Pennsylvania, relative to union

violence in America; to the Committee on Labor and Human Resources.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. THURMOND, from the Committee on the Judiciary, without amendment:

S.J. Res. 113. Joint resolution to designate the week beginning November 8, 1981, as "National Home Health Care Week".

By Mr. HATFIELD, from the Committee on Appropriations, with amendments:

H.R. 4209. An act making appropriations for the Department of Transportation and related agencies for the fiscal year ending September 30, 1982, and for other purposes (Rept. No. 97-253).

H.R. 4522. An act making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending September 30, 1982, and for other purposes (Rept. No. 97-254).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. THURMOND, from the Committee on the Judiciary:

Richard J. Cardamone, of New York, to be United States Circuit Judge for the Second Circuit;

Paul A. Magnuson, of Minnesota, to be United States District Judge for the District of Minnesota;

Robert D. Potter, of North Carolina, to be United States District Judge for the Western District of North Carolina;

Guy Gordon Hurlbutt, of Idaho, to be United States Attorney for the District of Idaho for the term of four years;

William H. Ewing, Jr., of Tennessee, to be United States Attorney for the Western District of Tennessee; and

Laurence C. Beard, of Oklahoma, to be United States Marshal for the Eastern District of Oklahoma.

By Mr. PERCY, from the Committee on Foreign Relations:

John Dimitri Negroponte, of New York, a Foreign Service Officer of Class One, to be Ambassador Extraordinary and Plenipotentiary of the United States to Honduras.

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: John D. Negroponte.

Post: Tegucigalpa, Honduras.

Contributions, amount, date, donee (if not, write none):

1. Self, none.
2. Spouse, none.
3. Children and spouses names: N/A.
4. Parents names: Catherine and Dimitri Negroponte: None.
5. Grandparents names: Helen Coumantaros: None.
6. Brothers and spouses names: George, Michel, Nicholas (and Elaine) Negroponte: None.
7. Sisters and spouses names: N/A.

Tom C. Korologos, of Virginia, to be a Member of the United States Advisory Commission on Public Diplomacy for a term expiring July 1, 1984;

Robert C. McEwen, of New York, to be a Commissioner on the part of the United States on the International Joint Commission, United States and Canada;

Donald Eugene Santarelli, of Virginia, to be a Member of the Board of Directors of the Overseas Private Investment Corporation for a term expiring December 17, 1983.

(The above nominations were reported from the Committee on Foreign Relations with the recommendation that they be confirmed, subject to the nominees commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

Mr. PERCY. Mr. President, I also report favorably, for the Committee on Foreign Relations, sundry nominations in the Foreign Service which have previously appeared in the RECORD and, to save the expense of reprinting them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of September 21 and October 16, 1981, at the end of the Senate proceedings.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. NUNN:

S. 1776. A bill to encourage the education and other activities of the Richard B. Russell Foundation; to the Committee on Labor and Human Resources.

By Mr. MITCHELL (for himself and Mr. COHEN):

S. 1777. A bill relating to the establishment of a permanent boundary for that portion of the Acadia National Park as lies within the town of Isle au Haut, Maine; to the Committee on Energy and Natural Resources.

By Mr. EAST:

S. 1778. A bill to repeal the Metric Conversion Act of 1975 (89 Stat. 1007; 15 U.S.C. 205a et seq.); to the Committee on Commerce, Science, and Transportation.

By Mr. SCHMITT:

S. 1779. A bill to authorize the exchange of certain land held in trust by the United States for the Navajo Tribe, and for other purposes; to the Select Committee on Indian Affairs.

By Mr. ROTH (for himself, Mr. RUDMAN, Mr. COHEN, and Mr. NUNN):

S. 1780. A bill to provide civil penalties for false claims and statements made to the United States, to recipients of property, services, or money from the United States, or to parties to contracts with the United States, and for other purposes; to the Committee on Governmental Affairs.

By Mr. HATCH:

S.J. Res. 116. Joint resolution to designate the week beginning November 8, 1981, as "National Home Health Care Week"; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. MITCHELL (for himself and Mr. COHEN):

S. 1777. A bill relating to the establishment of a permanent boundary for that portion of the Acadia National Park as lies within the town of Isle au Haut, Maine; to the Committee on Energy and Natural Resources.

BOUNDARY OF ACADIA NATIONAL PARK

● Mr. MITCHELL. Mr. President, I am pleased to join my distinguished colleague from Maine, Senator COHEN, in introducing legislation to establish a permanent boundary for Isle au Haut, an outer island on the coast of Maine which forms part of Acadia National Park.

This bill is the product of years of negotiation among several parties, including representatives of Isle au Haut's town government, the National Park Service and Maine's conservation organizations. A long list of issues has been debated among them and reduced to compromises which all parties can support. It is for this reason that I anticipate prompt consideration of the legislation and speedy passage into law.

Acadia National Park is Maine's only national park. It encompasses some of the most beautiful islands in the northeast section of Maine's rocky coastline.

The legislative history of the park dates back to 1929, when Congress authorized the National Park Service to accept donated lands by private donors throughout Hancock County and portions of Knox County. Isle au Haut, located at the eastern extremity of Knox County, saw its first donation of land to the Federal Government in 1943. For the next 30 years, however, the National Park Service did little to plan for the management of this property.

In 1972, the Park Service proposed a specific master plan to consolidate park acreage in the southern part of the island by exchanging park lands for private lands and to achieve other objectives. Because the town residents and elected officials were unhappy with the proposal, they began extensive negotiations to achieve a management package that was more acceptable.

The legislation we are introducing today is the culmination of a dialog that has only recently been concluded for Isle au Haut. Unfortunately, no similar consensus has been reached with respect to the master plan on Mount Desert Island, which has the highest level of visitation in Acadia National Park. In light of this, the Maine congressional delegation wishes to proceed with legislation to finalize Isle au Haut's boundary, and hopes that a management agreement on Mount Desert can be reached in the near future.

The first section of the bill emphasizes that conservation of the natural, scenic, and cultural resources is to be the prime goal of this legislation. Those resources are fragile in nature and must be conserved and protected for future use and enjoyment. The island itself is sparsely populated and solely accessible by mailboat from the mainland. It has few overnight facilities for the public and its visitation experience has been designated remote island camping.

This legislation is therefore designed to recognize and preserve both the fragile quality of the resources, which would be degraded by high levels of visitation, and the camping experience common to remote areas of the National Park System.

The second section of the bill establishes the permanent boundary of Acadia National Park on Isle au Haut and con-

centrates the Government's fee holdings in the southwest section of the island. The effect of the new boundary is to straighten the actual park border with that of the town of Isle au Haut.

Further, it will permit the Federal Government to retain the bulk of its current holdings and to acquire six new parcels of exceptional quality which thus far have been in private ownership. The individual donors of these parcels have agreed to either donate or exchange their land as part of a final management plan thus avoiding the use of eminent domain and the need for Federal appropriations for their acquisition. Mr. President, these individuals deserve special recognition for their interest in adding to the National Park System and in contributing to the legislative resolution of the overall boundary question.

The third section would permit the conveyance of three major parcels of land currently under Federal ownership to the town of Isle au Haut. These parcels, located north of the new boundary line, form part of the management agreement. Two of the holdings are not contiguous to other portions of the park and have thus been accessible only through trespass on private lands.

Deletion of the parcels will, therefore, enhance relations between the residents and park officials. The third parcel adjoins the northwestern tip of the park. Its deletion is consistent with the relocation of the park entrance already effected by the National Park Service at a point farther south along the coast.

It is important to add, Mr. President, that the parcels will be deleted with covenants running with the land aimed at maintaining them forever in their natural condition above 300 feet from the mean high water level. The only exceptions to the preservation of the resources above this level would be in the event of fire requiring the cutting of fire trails and the extinguishment of fire. Also, the gathering and removal of dead and fallen timber would be permitted on lands between the 300-foot and 400-foot levels.

The Secretary of the Interior will be authorized to acquire lands and interests within the new park boundary by donation or exchange. This legislation is further intended to prohibit the Secretary from accepting any donations of land outside the permanent boundary, including any parcels which may be immediately adjacent or contiguous to the boundary.

The bill also recognizes that conservation easements are frequently used by private individuals to preserve scenic property in its natural state. While individuals can now and will in the future be able to donate such easements to organizations interested in accepting them for preservation, a new entity, the Isle au Haut Land Conservation Trust, will soon be established under the laws of Maine.

This private organization is being set up to facilitate the donation of conservation easements outside the new park boundary on Isle au Haut. The superintendent of Acadia National Park is being authorized to serve as an ex officio trustee of the trust and the Secretary of the Interior will be authorized to accept by donation a limited enforcement interest in those easements.

Mr. President, the issue of conservation easements outside the boundary has been the subject of dispute among environmental organizations and town officials, all of whom are interested in conserving the national resources of the island. This provision of the legislation is a compromise meant to preserve the ability of landowners on the island to conserve their property through the donation of easements and to permit Federal involvement for their proper enforcement.

The final section of the bill reinforces the conservation aspect of the management of park lands. The level of visitation is to be limited to assure that the natural resources will not deteriorate and that it does not interfere with the local economy, based on fishing and sheep raising.

The carrying capacities of the park are not to exceed the average annual visitation to Isle au Haut during the past 3 years. This provision is meant to give the National Park Service some flexibility in adjusting the varying levels of visitation in the future. The method should help Federal officials manage the resource properly and, at the same time, avoid the use of an absolute limit on the number of visitors who can tour park lands during the summer months.

Mr. President, I believe this legislation represents a reasonable compromise between the legitimate interests of the island residents and those of Federal officials charged with managing the unique resources on Isle au Haut. The local residents and elected officials are to be commended for their patient and persevering efforts during the 1970's to work with the National Park Service and conservation groups to devise a plan that preserves park property for future generations.

I urge its prompt enactment into law.

At this point, I ask unanimous consent that the text of the legislation be reprinted in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1777

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress finds that—

(1) there are significant scenic, educational, natural, and cultural resources in the town of Isle au Haut, Maine;

(2) due to the isolated location and traditional resource-based economy of the town's island community, these resources are fragile and deserving of conservation and protection through both public and private efforts; and

(3) both residents of the town and visitors to the Acadia National Park will benefit from the establishment of a permanent boundary for the park and the management of parklands on a limited entry, low intensity basis.

SEC. 2. Notwithstanding any other provision of law, the permanent boundary of Acadia National Park lying within the town of Isle au Haut, Maine, is hereby established to include only those lands and interests therein comprising approximately 3,782 acres as are depicted on the map entitled "Boundary Map, Acadia National Park, Town of Isle au Haut, Maine", numbered 123-8003 and dated October, 1981, which map is on file and available for public inspection in the offices of the Department of the Interior and at the Registry of Deeds for Hancock and Knox Counties, Maine.

SEC. 3. (a) Within the boundary established by section 2, and as indicated on the map referenced therein the Secretary of the Interior (hereinafter referred to as "the Secretary") is authorized to acquire lands and interests therein by donation or exchange. No later than 90 days from enactment hereof, the Secretary shall convey to the town of Isle au Haut all right, title and interest of the United States in and to those lands under the jurisdiction of the Secretary which lie outside the boundary established by section 2 and within the town of Isle au Haut, subject only to such covenants running with the land as the Secretary and the town agree are necessary to preserve the general character of such lands, which shall include covenants to maintain forever in their natural condition (excepting the cutting of firetrails and the extinguishment of fires) lands above 300 feet above the mean high water level; *provided,* however, that such covenants with respect to lands above 300 feet and below 400 feet shall permit the gathering and removal of dead and fallen timber.

(b) Notwithstanding any other provisions of this Act, the Secretary is also authorized to accept by donation, as a coholder for enforcement purposes only, a limited enforcement interest in conservation easements on lands outside the boundary established by section 2 hereof and within the town of Isle au Haut which may from time-to-time be donated to the Isle au Haut Land Conservation Trust, a trust established under the laws of the State of Maine. The Superintendent of Acadia National Park is hereby authorized to serve as an ex-officio trustee of such trust.

SEC. 4. The management and use of parklands on Isle au Haut shall not interfere with the maintenance of a viable local community with a traditional resource-based economy outside the boundary of the park. To the maximum extent practicable, no development or plan for the convenience of park visitors shall be undertaken which would be incompatible with the preservation of the flora and fauna or the physiographic conditions now prevailing, and every effort shall be exerted to maintain and preserve this portion of the park in as nearly its present state and condition as possible. In recognition of the special fragility and sensitivity of the park's resources, visitation shall be strictly limited to assure negligible adverse impact on such resources, to conserve the character of the town and to protect the quality of the visitor experience. In furtherance thereof, the Secretary shall establish carrying capacities not in excess of annual average visitation during the period 1979 through 1981.●

ACADIA NATIONAL PARK

Mr. COHEN. Mr. President, I am pleased today to introduce with Senator MITCHELL legislation establishing a permanent boundary for that portion of Acadia National Park on the island of Isle au Haut. Our bill represents the culmination of many long hours of study and discussion between all parties with an interest in this important matter.

Over a hundred years ago, Maine's most famous poet, Henry Wadsworth Longfellow, was inspired by the natural beauty of the Acadia area when he wrote the poem "Evangeline." Longfellow wrote of "the forest primeval * * * the murmuring pines and the hemlocks, bearded with moss, and in garments green, indistinct in the twilight." Just as Longfellow was inspired by the unspoiled region before him, so have hundreds of

visitors every year sought the unique and remote beauty of Isle au Haut.

Isle au Haut, "the high island," is aptly named for the 543-foot Isle au Haut Mountain, which distinguishes it from most other islands in the Gulf of Maine. A perimeter road bisects a portion of the park lands, and a spur extends to the area known as Western Head. Rugged cliffs, hidden caves, and forest-covered hills dot the area.

Today, a large portion of Isle au Haut remains in the domain of Acadia National Park. Nearly 55 percent of the island is now protected and preserved for the enjoyment of future generations as park holdings and private easements.

Isle au Haut serves as far more than simply an inspiration and source of beauty for poets and preservationists. A small community of 70 permanent residents has inhabited the island for generations, coexisting with the national park. The residents of the town depend on lobstering, commercial fishing, livestock production, and subsistence farming for their livelihood. In the summer, the population swells to 200 residents, who join the natives to partake of the quiet and remote beauty of the island.

Unique conditions surrounded the creation of Acadia National Park in 1929. At that time, Congress authorized the National Park Service to accept donated land and easements anywhere within the town of Isle au Haut, producing, over the years, a pattern of both contiguous and noncontiguous parcels. Easements have been increasingly utilized to further the preservation of prime areas on the Maine coast. However, if allowed to increase at an uncontrolled pace, further easements could ultimately wreak havoc upon the municipality's tax base, and its ability to use land and water resources for the benefit of permanent residents.

The legislation Senator MITCHELL and I are introducing today seeks to solve this problem by establishing a permanent boundary. The boundary, which appears on map 123/80003, represents a rational, manageable, and most importantly of all, permanent boundary for the fee holdings of the park within the town of Isle au Haut. Under the provisions of this bill, the park not only retains the bulk of its current holdings, including the most scenic parts of the island, but also acquires several other parcels of land contiguous to its present boundary.

This expansion of the park, as provided for in section 2 of the bill, is predicated on the exchange of three parcels of land in the northern section of the island which are currently held by the Park Service. Under the provisions of this bill, these holdings would be transferred to municipal ownership and preserved by covenants that the Park Service and the town agree are necessary to preserve the island's general character.

The conservation restrictions which have been agreed upon would designate lands above 400 feet as forever wild, and those between 300 and 400 feet as forever wild except for dead and fallen timber. Lands below 300 feet would remain subject to current town zoning ordinances. In my view, this represents a reasonable compromise.

In addition to establishing a permanent boundary this bill would create the Isle au Haut Land Conservation Trust. This new trust is a fair solution to a controversial and difficult problem—the continued protection of lands donated for conservation easements in the future by current landowners. The new five member trust, which will consist of private individuals, municipal officials, and the superintendent of Acadia National Park, will be created under Maine State law to accept lands by donation or easement for current holders.

The Park Service will, for enforcement purposes only, be authorized to accept by donation a limited enforcement interest in conservation easements on lands outside the permanent boundary. This represents the maximum degree of Federal involvement in the trust, and should in no way subvert the decisions made independently by the trust itself. With the exception of the limited enforcement role in easements outside the new boundary, the National Park Service will have no further legal authority to own property outside the boundary.

Mr. President, for years, the residents of Isle au Haut have searched for a solution to the permanent boundary problem which this legislation addresses. I believe this bill represents a good faith effort on the part of the town and the Federal Government to reach a responsible solution to this problem.

I appreciate the help the Senate Energy Committee has provided in drafting this legislation, and I hope hearings can be scheduled in the near future to resolve this matter as quickly as possible.

By Mr. EAST:

S. 1778. A bill to repeal the Metric Conversion Act of 1975 (89 Stat. 1007; 15 U.S.C. 205a et seq.); to the Committee on Commerce, Science, and Transportation.

REPEAL OF METRIC CONVERSION ACT

● Mr. EAST. Mr. President, I am today introducing a bill to repeal the Metric Conversion Act of 1975. This bill is identical to one introduced in the House by Congressman ELDON RUDD. Mr. RUDD, to his credit, has been leading the fight against forced metrification since 1978.

The metric system has been a legal system of weights and measures in this country since it was so designated by act of Congress in 1866. For 115 years, the American people have had the option of converting to metric units. Few, however, have chosen to exercise that option.

This longstanding opposition is not difficult to understand. Aside from the fact that most people prefer customary weights and measures, the costs of conversion are staggering. From shirt sizes to land surveys, from gas pumps to highway signs, from bathroom scales to the most complex electronic equipment, all measurements and measuring devices must be switched to metric units. A 5-year study by the General Accounting Office has estimated that conversion could cost many billions of dollars.

Furthermore, these costs will not be equally borne by all Americans. They will bear hardest on small business owners, who are least able to absorb them.

For these reasons, I urge the prompt repeal of the Metric Conversion Act. We do not need to spend $2.7 million of the taxpayers' money on a Metric Conversion Board, nor do we need to give other Federal agencies an excuse to push metrics on a reluctant populace. The Metric Conversion Act is another unwarranted governmental intrusion into our daily lives; we would be well rid of it.●

By Mr. ROTH (for himself, Mr. RUDMAN, Mr. COHEN, and Mr. NUNN):

S. 1780. A bill to provide civil penalties for false claims and statements made to the United States, to recipients of property, services, or money from the United States, or to parties to contracts with the United States, and for other purposes; to the Committee on Governmental Affairs.

PROGRAM FRAUD CIVIL PENALTIES ACT OF 1981

● Mr. ROTH. Mr. President, I am introducing today, on behalf of myself and Senators RUDMAN, COHEN, and NUNN, a bill to create a mechanism whereby the Federal Government can more aggressively and effectively pursue fraud in Government programs.

On May 7, 1981, the General Accounting Office [GAO] released a report entitled "Fraud in Government Programs—How Extensive Is It—How Can It Be Controlled." The report observed that during the period October 1976 to September 1979 the Government lost between $150 to $200 million as a result of fraud directly related to Government programs. Among its conclusions, the report recommended the enactment of an administrative and penalty statute which would allow Federal agencies to impose appropriate monetary sanctions against persons, corporations, and other entities who engage in fraud upon the Government.

GAO observed that current efforts to control fraud were primarily directed toward the filing of criminal and civil actions by the Department of Justice or by the imposition of administrative sanctions by the affected agencies. GAO concluded that for the reasons set forth below, these efforts were insufficient to address the magnitude of the problem and that a new statutory penalty must be enacted which would allow affected agencies to directly impose monetary penalties for fraud.

GAO estimated that during the reporting period, approximately 77,000 cases of fraud were detected. Of this number, only 12,900 cases were referred to the Department of Justice for criminal prosecution. The Department of Justice subsequently declined to prosecute 61 percent of these cases. Furthermore, GAO estimates that under new Department of Justice guidelines for white-collar-crime prosecutions, an even greater percentage of such cases will be declined.

GAO further noted that the Department of Justice in pursuing criminal fraud remedies did not adequately con-

sider appropriate remedies which would make the Government whole for the loss suffered from an incident of fraud. A previous GAO report noted that the Department of Justice did not coordinate criminal and civil remedies in most fraud cases. Even when a civil remedy was proposed by an agency to the Department of Justice declinations are rarely ever filed. Of the 393 cases referred to the Department of Justice during the reporting period for the commencement of a civil fraud unit, only 28 cases were filed.

Furthermore, even if criminal, civil, or administrative action is taken, the Government rarely recovers an amount equal to the loss sustained. The GAO estimates that in approximately 1,500 criminal and civil cases, defendants were ordered to reimburse $14 million to the Federal Government. Administrative actions resulted in the proposed recovery of an additional $29 million. However, in many instances the Government achieved only a judgment against the individual and was not able to recover the full amount due.

Administrative civil penalties would give the Government an additional tool to serve as a deterrent against fraud and to recover Federal funds lost due to fraud. Ideally, this administrative mechanism would be used in appropriate circumstances when the Department of Justice declines to prosecute. According to GAO estimates, 62 percent of all Department of Justice declinations are based upon the following factors:

First. Lack of prosecutive merit/jury appeal, 16 percent;

Second. Small monetary loss to the Government, 14 percent;

Third. Administrative action is more appropriate, 8 percent; and

Fourth. Insufficient evidence for criminal prosecution, 24 percent.

It may be argued that the cases which comprise the majority of these declinations are clearly within the scope of a civil administrative proceeding.

Currently, administrative proceedings are primarily designed to deny an entity the right to continue to participate in a Federal program. As such, their effects are primarily prospective in nature, and are not designed to restore to the Government the funds lost as a result of the fraud.

Furthermore, GAO concluded that even if the criminal, civil, or administrative penalty resulted in a monetary judgment for the Government, neither the Department of Justice nor the affected agencies have aggressively sought to enforce these judgments and to make the Government whole.

The Program Fraud and Civil Penalties Act which I am introducing today is designed to create an administrative mechanism that will allow the affected agency to impose a monetary penalty for fraud. This penalty is cumulative with existing criminal, civil, and administrative penalties and is ideally suited to situations where the Department of Justice has declined to seek criminal action against a person who has committed fraud against a Federal program. The bill will also assist agencies in the collection of such penalties by allowing an offset of such penalties against any other outstanding Federal obligation owed to the liable party, including Federal tax refunds.

Recent hearings by the Permanent Subcommittee on Investigations detailed fraudulent activity in federally funded home health care and in Federal workers compensation claims. This bill is designed to provide a much needed mechanism to assist in the swift punishment of those persons who prey upon Federal programs.

Last Friday, in a statement before the Subcommittee on Criminal Law of the Senate Judiciary Committee, Attorney General William French Smith cited the need for an administrative fraud mechanism to combat fraud in Federal programs. This bill will meet that need.

The bill contains eight sections which would amend title 5 of the United States Code by adding a new chapter 8 to create new administrative remedies for false claims and statements submitted to Federal agencies by persons seeking money, services, or property from the Federal Government. While current Federal law provides criminal penalties for false statements (for example, 18 U.S.C. 1001, 18 U.S.C. 494, 15 U.S.C. 645) and criminal and civil penalties for false claims (for example, 18 U.S.C. 287, 31 U.S.C. 321) the imposition of these sanctions requires the Department of Justice to initiate and conclude a criminal or civil suit in Federal court. Because the Department of Justice guidelines regarding the prosecution of Government fraud usually limit prosecution to instances where the Government has suffered a substantial and identifiable monetary loss, the Government is left without an adequate remedy for many false claims and statements, which do not result in a significant monetary loss to the Government, but which may have a detrimental impact upon the Federal program which received the claim or statement.

This impact is best demonstrated by the following examples:

First. A large business falsely certifies its identity as being a small business for the receipt of a Federal small business set aside contract. The large business successfully underbids several bona fide small businesses and is awarded the contract. Later after an administrative procedure relating to a challenge of the small business size status of the company, the large business is disqualified from the future receipt of such contracts. However, by such time the large business has fully and adequately performed the awarded contract. Under Federal law, the large business has filed false statements and false claims relating to the award and performance of the contract in question. However, the Government has received full value for the contract price. The primary loss to the Government is, therefore, in the undermining of the integrity of the small business set aside program, not in a monetary loss. The likelihood of prosecution in such instances is small.

Second. A contractor submits a falsely inflated claim to the Federal Government. In the course of an audit of the claim, the falsity of the majority of the claim is discovered and disallowed. The contractor is never paid for the false portion of the claim. In such a case, the contractor has submitted a false statement and a false claim to the Government. However, because the Government discovered the falsity of the claim prior to payment, the contractor's civil liability is limited to $2,000 under 31 U.S.C. 231, even if the false claim was for hundreds of thousands of dollars.

Third. An individual applies for Federal home mortgage assistance, falsely states that the home will be occupied by the purchaser. This false statement entitles the purchaser to provide a smaller down payment because the Federal mortgage assistance program provides greater assistance to occupier purchasers rather than to investment purchasers. Without monetary loss to the Government, prosecution of the false statement is unlikely. The practical result is that the limited amount of Federal mortgage insurance which is available to the qualified public is misdirected toward insuring the purchases of real estate speculators.

Fourth. An individual applies for a Federal insured home improvement loan, falsely stating that the money will be used for home improvements. The money is spent in an unauthorized manner and not on home improvements. These false statements are rarely prosecuted, even when the individual fails to repay the loan, because the amount of the loan is usually under $25,000.

This bill will allow the agencies who are the recipients of such false claims and statements to administratively adjudicate a civil penalty for such false claims and statements.

Such a penalty will give agencies a significant tool in policing the integrity of their programs. Furthermore, the deterent effect of enhanced enforcement of civil penalties against fraudulent participants in Federal programs will assist the good faith participants in such programs.

I would emphasize that this bill is not aimed at these good faith program participants. It is not designed to stifle business nor provide agency administrators with a means of camouflaging their own errors. I emphasize that the authority vested in the executive branch by this bill must be wielded carefully, and I intend to do everything I can during the hearing process to make sure that this principle is developed and emphasized.

Mr. President, I ask unanimous consent that a section by section analysis of the Program Fraud Civil Penalties Act of 1981 be printed at the end of my remarks.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SECTION BY SECTION ANALYSIS OF THE PROGRAM FRAUD CIVIL PENALTIES ACT OF 1981

SECTION 801. DEFINITIONS

Section 801 sets out definitions of key terms used in the bill. The term "authority" is defined to encompass those agencies with substantial audit and investigative capability, specifically the 16 agencies and departments with statutory Inspectors General, together with the Department of Defense, the Department of Treasury, the Department of Justice and the Postal Service.

The term "claim" is defined to include requests or demands for money, property or services, whether made directly to the government authority or a fiscal intermediary, including a state, political subdivision or other entity. Each individual voucher, claim form or other separate request or demand constitutes a separate claim for which a penalty could be imposed.

The term "statement" is defined to include all written representations and certifications of fact, whether made directly to the government authority or through a fiscal intermediary, including a state, political subdivision or other entity. Furthermore, no monetary loss need be sustained by the federal government as a result of the statement.

The bill creates the position of "investigating official" in order to enable those departments without a statutory Inspector General to conduct investigations of false claims and statements in a manner similar to an Inspector General investigation.

SECTION 802. LIABILITY FOR FALSE CLAIMS AND STATEMENTS

This section identifies false claims as those claims supported by false statements, or claims which seek payment for services not provided, or which were provided in violation of law or regulation. False statements are those which falsely misrepresent material facts or contain omissions which make a statement materially false.

This section establishes liability for claims and statements that are known by the presenter to be false or which are submitted with reckless disregard for the truth or falsity thereof. It provides for damages consisting of a civil penalty of not more than $10,000 for each false claim, plus an assessment of not more than double the amount of money or value of property or services provided or double the amount of damages, including consequential damages, sustained by the United States as a result of such false claims and statements. Such damages also include the costs associated with the investigation. Such a penalty would be in addition to any criminal, civil or administrative penalty.

SECTION 803. DETERMINATION BY AUTHORITY HEAD AND SUBPOENA AUTHORITY

This section sets out the procedures to be followed by the government authority in imposing administrative sanctions and in issuing subpoenas in order to investigate false claims and statements.

An appropriate investigation is conducted by the investigating official. The results of the investigation are presented to a senior department or agency reviewing official. If this official determines that there is probable cause to conclude that a fraudulent claim or statement has been committed, the matter is referred to the authority head for an appropriate proceeding.

The respondent must be notified in writing of the anticipated administrative action and afforded an opportunity for a hearing on the record, at which time the person is entitled to be represented. The hearing would be governed by the Administrative Procedures Act. It is contemplated that, while cases will be developed by the Inspectors General and the investigating officials, the required hearing will be conducted and determinations reached by the principal officer of the agency or by an administrative law judge. Upon completion of the administrative determination imposing sanctions, which except in exceptional circumstances must not be less than the amount of damages sustained by the United States, the person must be notified in writing of the findings and determination and of his/her right to judicial review under Section 904.

This section also expands the authority of the 16 Inspectors General to allow for the administration of oaths or affirmations and for the issuance of testimonial subpoenas in the investigation of such false claims and statements. This expansion of the subpoena authority is essential in order to enable the Inspectors General to develop adequate evidence of fraud for the administrative determinations which are authorized by the bill.

Similarly, the section empowers the investigating official of the Department of Defense, the Department of Treasury, the Department of Justice, and the Postal Service with the oath/affirmation administration and subpoena powers of the statutory Inspectors General.

This section also authorizes the Inspector General or the investigating official to seek the enforcement of any such subpoena in the United States district court.

SECTION 804. JUDICIAL REVIEW

This section provides that judicial review by a United States court of appeals may be obtained by filing, within 60 days of notification of the administrative determination, a written petition urging that the administrative determination be modified or set aside. In reviewing the administrative determination, the findings of the government authority on questions of fact, if supported by substantial evidence on the record considered as a whole, are conclusive. Similarly the amount of penalties or assessments imposed is conclusive if within the statutory limits set out in section 802. No new objection or evidence may be used before the appellate court that was not presented in the administrative proceeding, except in unusual circumstances, in which event the court may reprimand the case to the government authority for further proceedings. Further judicial review by the Supreme Court may be sought pursuant to 28 USC 1254.

SECTION 805. COLLECTION OF CIVIL PENALTIES AND ASSESSMENTS

This section states that unless judicial review is sought, the administrative sanctions become final and may be enforced by a civil action in a United States district court or asserted as a counterclaim or setoff in any other civil action to which the United States and the person are parties. Penalties and assessments may be compromised or settled by the government authority except during the pendency of any appeal of an enforcement action, during which such authority vests in the Attorney General.

Where losses involve joint federal-state programs, funds recovered may be used to reimburse the state in the same ratio as the amount paid out by the state bears to the total payment on such claim, up to the amount actually paid by the state. Except for this reimbursement to the states, funds recovered through administrative proceedings are to be deposited as miscellaneous receipts in the United States Treasury.

SECTION 806. LIMITATIONS

This section limits actions to those authorized by the Attorney General. If within 120 days of receipt of a request to initiate an administrative action, the Attorney General takes no action to restrict the initiation of administrative proceedings, the authority may initiate the action as if the Attorney General has authorized it. This 120-day period is consistent with the existing time frame of Department of Justice review of such matters.

Any administrative action must be commenced within 6 years of the presentation of the false claim or statement and any civil enforcement action must be commenced within 3 years from the date of the sanction becomes final. If at any time during the administrative proceedings it appears, based on specific information, that bribery, conflicts of interest, or other corruption involving any officer or employee of the government in connection with the claim or statement has occurred, such information must be reported to the Attorney General who, by written finding that continuation of the administrative proceeding may adversely affect any civil or criminal action related thereto, may stop the administrative proceeding.

SECTION 807. RIGHT TO SETOFF

This section authorizes setoff of civil penalties and assessments against any sum owing by the United States or a state to the person against whom sanctions are imposed. Setoff authority may also be exercised with respect to any tax refunds due the person.

SECTION 808. REGULATIONS

This section requires the promulgation of regulations to implement the provisions of the bill, including regulations which must ensure that the role of the Inspectors General or investigating officials is limited to an investigative role.

Furthermore, the section also authorizes the Attorney General and the heads of the government authorities to enter into memoranda of understanding to provide for expeditious approval by the Attorney General of administrative proceedings.

The new remedy provided by this bill would apply to any claim or statement submitted after December 31, 1981.●

ADDITIONAL COSPONSORS

S. 1407

At the request of Mr. PRYOR, the Senator from Missouri (Mr. EAGLETON), and the Senator from Maine (Mr. COHEN) were added as cosponsors of S. 1407, a bill to amend title 39, United States Code, by strengthening the investigatory and enforcement powers of the Postal Service by authorizing inspection authority and by providing for civil penalties for violations of orders under section 3005 of such title—pertaining to schemes for obtaining money by false representations or lotteries—and for other purposes.

SENATE CONCURRENT RESOLUTION 33

At the request of Mr. PRESSLER, the Senator from Virginia (Mr. HARRY F. BYRD, JR.), the Senator from Arizona (Mr. GOLDWATER), the Senator from Mississippi (Mr. COCHRAN), the Senator from Wyoming (Mr. SIMPSON), the Senator from Arkansas (Mr. BUMPERS), the Senator from Texas (Mr. TOWER), the Senator from Nevada (Mr. CANNON), the Senator from Tennessee (Mr. SASSER), the Senator from Alabama (Mr. HEFLIN), the Senator from Hawaii (Mr. MATSUNAGA), the Senator from Iowa (Mr. GRASSLEY), the Senator from Minnesota (Mr. BOSCHWITZ), and the Senator from Wyoming (Mr. WALLOP) were added as cosponsors of Senate Concurrent Resolution 33, a concurrent resolution disapproving the Federal Trade Commission trade regulation rule relating to the sale of used motor vehicles.

AMENDMENT NO. 591

At the request of Mr. D'AMATO, the Senator from New York (Mr. MOYNIHAN), and the Senator from Alabama (Mr. DENTON) were added as cosponsors of amendment No. 591 intended to be proposed to H.R. 4121, a bill making appropriations for the Treasury Department, the U.S. Postal Service, the Executive Office of the President, and certain independent agencies, for the fiscal year ending September 30, 1982, and for other purposes.

SENATE RESOLUTION 232—RESOLUTION WITH RESPECT TO TAX INCENTIVES FOR ENERGY CONSERVATION AND RENEWABLE ENERGY SOURCES

Mr. CHAFEE (for himself, and Mr. MATSUNAGA, Mr. PELL, Mr. RUDMAN, Mr. MITCHELL, Mr. STAFFORD, Mr. DODD, Mr. DURENBERGER, Mr. BAUCUS, Mr. LEAHY, Mr. GOLDWATER, Mr. TSONGAS, Mr. PACKWOOD, Mr. CRANSTON, Mr. DECONCINI, Mr. BURDICK, Mr. LEVIN, Mr. RIEGLE, Mr. KENNEDY, Mr. HATFIELD, Mr. EXON, Mr. COHEN, Mr. ZORINSKY, Mr. D'AMATO, Mr. HART, Mr. HUDDLESTON, Mr. QUAYLE, Mr. ANDREWS, Mr. PERCY, Mr. SPECTER, Mr. BRADLEY, Mr. HEINZ, Mr. HAYAKAWA, Mr. ARMSTRONG, Mr. BOSCHWITZ, Mr. RANDOLPH, Mr. HEFLIN, Mr. HUMPHREY, Mr. BUMPERS, Mr. PRYOR, Mr. SARBANES, Mr. FORD, Mr. GORTON, Mr. WILLIAMS, Mr. CHILES, Mr. MELCHER, Mr. JACKSON, Mr. CANNON, Mr. INOUYE, Mr. METZENBAUM, Mr. HOLLINGS, Mr. SCHMITT, Mr. SASSER, Mr. WALLOP, Mr. DIXON, Mr. STEVENS, and Mrs. HAWKINS) submitted the following resolution; which was referred to the Committee on Finance:

S. RES. 232

Whereas American dependence upon imported petroleum constitutes a serious threat to our economic stability and national security and results in balance of payments deficits;

Whereas we must reduce our use of imported oil;

Whereas increased utilization of energy conservation and renewable energy sources can continue to make significant contributions to this effort;

Whereas the residential and business tax incentives for conservation, cogeneration, solar, wind, hydropower, geothermal, alcohol fuels, and biomass have proven to be effective means of encouraging the increased use of energy conservation and renewable energy sources;

Whereas the funding for Federal programs to encourage energy conservation and the use of renewable energy resources has been greatly reduced; and

Whereas uncertainty concerning the continuation of the tax incentives for energy conservation and renewable energy sources will discourage such investments: Now, therefore, be it

Resolved, That it is the sense of the Senate that the provisions of the Internal Revenue Code of 1954 which provide incentives for energy conservation and development of renewable energy sources should not be repealed or amended to reduce such incentives.

Mr. CHAFEE. Mr. President, today I am submitting with Senator MATSUNAGA, and a strong bipartisan group of 55 other Senators, a resolution putting this body on record in support of the existing tax incentives for investment in conservation and in the development of alternative energy sources. The resolution concludes with the following statement:

That it is the sense of the Senate that the provisions of the Internal Revenue Code of 1954 which provide incentives for energy conservation and development of renewable energy sources should not be repealed or amended to reduce such incentives.

One theme which marks the past decade is the recognition of growing American interdependence in the global economy. The steady increases in the price of oil since 1973 best attest to this trend. At no time since the early years of our Republic has the United States been so vulnerable to economic pressures from abroad. Can any of us in this body forget the lengthy gas lines, the odd-even system of rationing, or the natural gas shortage of 1977 and say that the occasional shortage and spiraling price of energy have not caused massive dislocation in our economy?

In 1978 and 1980, Congress took specific actions to reduce our national dependence on foreign oil and gas supplies by enacting a series of renewable energy and conservation tax credits. Now, in the budget crunch of 1981, the administration has suggested eliminating the energy tax credits as part of its revenue enhancement program to narrow the deficit. Although I have supported the administration in achieving its economic goals, I have advised Treasury officials that I cannot support changes in these tax provisions. The fact that a bipartisan majority of Senators has agreed to cosponsor my resolution will show the administration the broad base of opposition to any reduction or early termination of the energy tax credits.

In contemplating repeal of these tax credits, the administration should consider the possibility that doing so will significantly undermine our national effort to reduce dependence on foreign energy supplies. I believe it will.

Residential and business energy conservation is one of the major untapped sources of domestic energy supply in the United States. Development of fledgling alternative energy technologies, likewise, is one of our best hopes that we can be energy independent in the future. The energy tax credits, most of which expire by 1985, are the cornerstone of a national energy policy designed by Congress to take advantage of these sources and achieve this independence.

Many homeowners and businesses would not be able to make expensive energy-saving investments without the current tax credits which offset between 15 and 40 percent of cost. Businesses in particular, both the manufacturers and the purchasers of energy equipment, have made long-range decisions based on the expectation that the credits would continue to be in place until their scheduled termination. Since they were put in place 3 years ago, 15 million Americans have used the various tax credits to help finance insulation, weatherization, the purchase of more efficient furnaces, the installation of solar hot water systems, wind energy equipment, small-scale hydroelectric facilities, and so on. The potential for these tax incentives to move us further down the road toward energy independence in the next few years should not be deterred.

In its budget proposals presented in March, the administration justified reducing the conservation and alternative energy budgets sharply on the premise that "* * * total Federal support for solar energy will remain extremely high under the President's proposal due to continuation of the tax credits." Consider how sharply we have cut many Federal energy programs already. For instance, funding for the solar and energy conservation bank has declined from $121 million in fiscal 1981 to $50 million this year, a 59-percent decrease, and the total Department of Energy energy conservation budget has fallen 23 percent.

In the second round of budget cuts just announced in September, the administration has proposed further cuts in these energy programs. Tying these deep cuts with the repeal of the energy credits in the Tax Code is unacceptable. Such action would gut the commitment made by our Federal Government in the past decade to cushion the effects of higher energy prices on vulnerable customers and to stimulate the development of renewable energy sources, and to diversify our energy base and thereby protect our Nation's economic security.

Let me make one final point. Already there is evidence of hesitation by investors to finance alternative energy projects unless these energy tax credits are in place. Several major propects are reportedly on hold until this situation can be cleared up. The likelihood that such projects would be canceled without the assistance of the tax credits is perhaps the best evidence that the credits are needed, that they are effective and that they should be preserved.

The fact that more than half the Senate and half the House of Representatives have cosponsored this resolution is a clear message to the administration that any proposal to repeal or reduce the energy tax credits will not pass this Congress. We urge the administration to avoid further confusion in the important areas of energy conservation and renewable energy supply by not sending Congress such a proposal.

Mr. President, I ask unanimous consent that a list of some of the major energy tax credits, and a letter from the "Energy Conservation Coalition" endorsing our efforts be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Residential Renewable Energy Credit: 40 percent on the first $10,000 invested by a homeowner in active solar, certain passive solar components, wind, photovoltaics and geothermal equipment used for residential space heating, electrical or mechanical applications (maximum credit of $4,000); scheduled termination under current law: December 31, 1985.

Residential Energy Conservation Credit: Provides a 15 percent credit for specified energy—conserving home improvements, such as insulation, weather-stripping, energy-efficient furnace replacement burners, etc., up to $2,000 invested (for a maximum credit of $300); scheduled termination under current law: December 31, 1985.

Business/Industrial Renewable Energy Investment Tax Credit: Provides a 15 percent Investment Tax Credit (ITC) on top of the existing 10 percent ITC (for a composite credit of 25 percent) for solar, wind or geothermal equipment which contributes to an industrial process; scheduled termination under current law: December 31, 1985.

Business/Industrial Hydroelectric Investment Tax Credit: Provides an 11 percent ITC (on top of the existing 10 percent ITC, for a composite credit of 21 percent) for small-scale hydroelectric facilities retrofitted to existing dams; scheduled termination under current law: December 31, 1985.

Business/Industrial Biomass Property Credit: Provides a 10 percent ITC (on top of the current 10 percent ITC, for a composite credit of 20 percent) for biomass adaptions which contribute to an industrial process: scheduled termination under existing law: December 31, 1985.

Business/Industrial Alcohol Fuels Production Credit: A producer/blender may choose to take a tax credit of 40 cents a gallon for alcohol which is 190 proof or greater or 30 cents per gallon for alcohol which is 190–150 proof; scheduled termination under current law: December 31, 1992.

ENERGY CONSERVATION COALITION,
October 27, 1981.

Hon. JOHN H. CHAFEE,
Dirksen Senate Office Building,
Washington, D.C.

DEAR SENATOR CHAFEE: On behalf of the Energy Conservation Coalition, I wish to express our support for your efforts to place the Senate on record in favor of the existing tax credits for energy conservation and renewable resources.

In particular, the residential energy conservation credit serves as an important incentive to homeowners to make new investments to save energy. In 1980 alone, this credit helped stimulate almost 4.5 million Americans to invest nearly $4 billion in energy conservation. This credit has helped to alleviate the crushing burden of rising energy prices since 1977, especially in states which heat with oil. It will be needed more than ever as natural gas prices begin to outstrip oil price increases between now and 1985. Eliminating the credit now would unfairly discriminate against homeowners who heat with natural gas—a majority of the American homeowners.

Moreover, any proposal to eliminate the credit would violate the understanding on which many of the budget cuts have already been made. The Administration has consistently justified cuts in conservation on the grounds that higher prices and the existing credits were sufficient, and Congress accepted many budget cuts, explicitly and implicitly, on that ground. Your resolution serves as an important and appropriate reminder of that understanding.

Finally, it would clearly be inappropriate to eliminate the residential credit at a time when energy conservation has become critical to controlling inflation, increasing national security, and generating new growth. Energy conservation is primarily responsible for the temporary "glut" in oil supply worldwide, lessening our debilitating dependence on OPEC and breaking the two-year price spiral that followed the Iranian revolution. Equally important, new energy conservation outstrips new energy supply by 7 to 1 as the factor most responsible for promoting new growth in the GNP since 1973.

For all these reasons, the Energy Conservation Coalition welcomes your resolution, and urges its adoption by the full Senate.

Sincerely,

DAVID H. MOULTON,
Policy Director.

Mr. MATSUNAGA. Mr. President, on September 24, 1981, President Reagan in his budget message announced that the administration was considering the repeal of the energy tax credits. Although, the Treasury Department has yet to convey its specific proposal to the Congress, the mere fact that the administration announced that it is reviewing these credits for repeal has already aborted a number of alternative renewable energy projects. In the wind area alone, projects that would produce 700 megawatts of electricity would be abandoned by investors because of the lack of certainty over the tax credits. Indeed, the administration will achieve its objective of repealing the tax credit simply by stretching out its consideration; as long as repeal is under consideration, no investor would enter a project with the credits in jeopardy.

Just as alcohol fuel projects had been delayed for 3 years because of the on-again off-again loan guarantee program, so also will alcohol fuel projects and all renewable energy projects be thwarted now, because of the administration's dilatory position.

To end this uncertainty and to permit the continued development of renewable energy projects, a positive statement of commitment is needed. For this reason 55 Senators have cosponsored this resolution stating the sense of the Senate that these energy tax credits should be retained; and I strongly urge all Senators to support this resolution.

Let me briefly outline the tax credits which have been called into question by the administration. As enacted in the 1978 Energy Tax Act and as further expanded by the Crude Oil Windfall Profit Tax Act of 1980, the energy Tax credits include:

First. A 15-percent individual tax credit through 1985 for residential energy conservation to retrofit existing houses.

Second. A 40-percent individual tax credit up to the first $10,000 of expenditure for residential use of alternative energy.

Third. A 15-percent business credit through 1985 for solar, wind, ocean thermal, and geothermal energy equipment.

Fourth. An 11-percent business credit through 1985 for hydroelectric facilities.

Fifth. A 10-percent business credit through 1985 for biomass energy equipment which also includes alcohol fuel facilities.

Sixth. A 10-percent business credit through 1982 for cogeneration equipment not fueled by oil or natural gas.

Seventh. A 10-percent credit through 1982 for boilers and combusters using an alternative fuel.

Eighth. A 10-percent business credit through 1982 for waste recycling equipment.

Ninth. A 10-percent business credit through 1982 for certain conservation equipment.

The primary reason for the enactment of these credits has not changed. These credits were enacted to encourage development of alternative domestic energy sources so as to lessen our dependence on uncertain foreign supplies of oil and natural gas. In 1979, the United States paid $55 billion for oil imports. According to the Department of Energy projection, we will pay in constant 1979 dollars, $70 to $80 billion for imported oil in 1990; the bill for imported oil in 1990 will equal 2.5 percent of our gross domestic product.

At this date, the temporary glut of oil has lulled us into a false sense of security. The oversupply of petroleum in the world today has come about solely because of the excess Saudi Arabian production. Saudi Arabia is overproducing today, not because of any great sensitivity or desire to help the American economy; but because it is only seeking to reestablish its primacy in dictating OPEC price policy. Once that primacy is reestablished, and I have no doubt that it will soon again be reasserted, the current glut of petroleum will evaporate as suddenly as it had materialized, when the Saudis stop the excess pumping.

The fact that the United States spends a quarter of our defense budget in defense of our so-called Middle East oil friends, demonstrates the degree to which the Middle-East kingdom controls American foreign and domestic policies. The one quarter of our defense budget spent in the Middle East equals an added cost of $20 per barrel of imported oil; in this light, we should recognize that imported petroleum costs the United States more than $58 per barrel when all costs are factored in.

The repeal of the energy tax credits would not only repudiate the established congressional policy, it would also perpetuate our economic thralldom to OPEC pricing.

The repeal of the only significant incentive for domestic renewable energy production also contradicts the administration's own policy of less than a year ago. In its Program for Economic Recovery issued on February 18, 1981, the White House stated:

The President is proposing no change in the current energy conservation tax credit, which is expected to provide at least $739 million in support of private and conservation activities during 1981 and $799 million during 1982. The proposed reduction in the Department of Energy conservation activities thus represents a decrease of less than 20 percent in total Federal support for energy conservation in 1982.

In that same message, the administration stated that it would continue its support of tax incentives specifically for alcohol fuels.

Similarly, the Honorable David Stockman, Director of the Office of Management and Budget, told the Congressional Alcohol Fuels Caucus on March 16, 1981, that as far as existing tax incentives for alcohol fuels were concerned:

We have made no recommendations or changes and I can guarantee that we won't in the future. Insofar as the investment tax credit for conservation, including for alcohol production equipment, we have no intention of making recommendations or changes in there.

At a later date, while testifying before the House Budget Committee on October 1, 1981, Director Stockman was asked if it made sense to eliminate tax credits for insulation and weatherization expenditures or for solar heating, while retaining the $1 billion exemption from the windfall profits tax given to some small royalty holders in the recent tax bill. Mr. Stockman said:

It doesn't seem to have plausible economic rationale that I can see.

The administration had justified reduction in various Department of Energy alternative fuel programs, on the basis that the tax credits would be retained. Let me stress that we in Congress enacted these cutbacks for alternative energy projects on the strength of this repre-

sentation. Many members of the private sector and many Members of the Congress supported the President's cutbacks because of the administration's assurances that the tax incentives for alternative energy development would be retained. The repeal of the energy tax credit would be a direct repudiation of this basic understanding between the administration and its supporters in the Congress and the private sector.

It stretches credulity to believe that the market today would provide sufficient incentive for alternative energy development, for there is simply not a free market in energy. The energy market continues to be subject to Government policy both foreign and domestic. The OPEC nations dictate the cost of petroleum and by reference the cost of natural gas today. Furthermore, to encourage our domestic production of oil and gas, the Federal Government provides billions of dollars in tax assistance to our domestic industries. In fiscal year 1981, tax expenditures for intangible drilling and development costs, the excess of percentage over cost depletion and capital gain treatment of coal royalties, are projected to amount to $4.9 billion. The tax encouragement for fossil fuel development is far more generous than the comparable incentive for alternative energy development. The tax expenditures for renewable energy and conservation in both business and individual sectors, will amount to only $1.4 billion in contrast to the $4.9 billion afforded to fossil fuels.

Significant Federal support has also been extended to nuclear energy development. Incentives for nuclear power are estimated to have cost the Federal Government $18 billion in terms of 1977 dollars for the years between 1948 and 1977. A major component of these expenditures was the civilian reactor development program in which developmental fission reactors and early cooperative power demonstration reactor projects were supported. More recently, the bulk of Federal developmental funds mounting to $3.1 billion were devoted to the liquid metal fast breeder reactor program. In addition, Federal nuclear biology and medical research programs, the nuclear submarine propulsion research program, education and training programs, and high energy physics research program, also assisted the commercialization of nuclear power. In comparison, the Federal assistance to the renewable energy program today is but a small portion of what has been spent in the development of nuclear energy.

The renewable energy area is not one operated by star-eyed academics operating out of garage shops. Rather, substantial companies are backing significant alternative energy projects throughout the country. Alternative energy projects involve such companies as Westinghouse, Boeing, Atlantic Richfield, Reynolds Aluminum, Standard Oil of California, and Lockheed. Boeing Engineering and Construction Co. reports the development of a wind turbine system and installation of three such units near Goldendale, Wash. Boeing also reports industry consideration of up to 700 megawatts of wind turbine generating capacity for installation in the United States by 1985. These machines could save up to 5 million barrels of imported oil costing $175 million based on $35 per barrel in the course of a single year. In comparison, the energy tax credits associated with this investment in wind energy equipment would be approximately a total of $300 million, a very prudent investment for the Federal Government to reduce our oil import bill and to improve our balance of payments.

The substantiality of the alternative energy field is further documented by a report from the First Boston Corp., a major investment banker. The report describes the Tennessee Synfuel project which is a joint venture of Koppers Co., Incorporated and Cities Service Co.; this joint venture will construct a coal liquefaction plant for the production of gasoline in Tennessee. This plant will take approximately 6 years to build at a cost of roughly $2 billion.

Similarly in the hydropower area, significant and substantial advances have been made. In 1976, the Federal Energy Regulatory Commission received only two applications for permits. By the end of this year, the Commission estimates it will receive more than 1,800 applications for hydropower development, backed by blue-chip companies. The involvement of these companies prove that domestic renewable energy development is not a quixotic dream. Current development is justified by present economics and the energy tax credits; but those economics are now jeopardized by the repeal of the energy tax credits.

The typical return on equity of the 90th percentile of Fortune 500 corporations in 1980 was 22 percent after taxes. With the energy tax credit a typical hydropower project offers a return of 22.8 percent after taxes. However, without the energy tax credit, the return on an investment of a typical hydropower project drops by 44 percent to 12.7 percent. Thus, few investors would be interested in a hydropower project when compared with more conventional investments in the absence of the energy tax credit. The 12.7 percent return is based on the tax benefits from the accelerated cost recovery system for tax depreciation.

The accelerated cost recovery system provides little incentive for renewable energy development. Alcohol fuel plants and waste recovery facilities for example are worse off under the accelerated cost recovery system than under prior depreciation law. These facilities could previously be depreciated under the double declining balance method using an 8-year useful life and enjoy the energy investment tax credit as well as the regular investment tax credit. Today, these facilities although depreciated over a 5-year period, are subject to the 150-percent declining balance for the next several years.

If the energy tax credits were repealed, an alcohol fuels plant or a refuse steam generating plant would be 15 cents per dollar of investment worse off under the accelerated cost recovery system than it would have been under prior law. Furthermore, this comparison is overly favorable to the accelerated cost recovery system, because it assumes a 46-percent marginal tax rate for the taxpayer.

Likewise in the synfuel area; the First Boston Corp. reports that the Tennessee synfuel project would sustain a 26-percent decline in expected rate of return if the energy tax credit were repealed; such a project would simply not be financeable, in the view of the investment bankers. Whereas the return on equity for the Tennessee synfuel project under prior law was 18 percent, the return on equity under the accelerated cost recovery system without the energy tax credit would be reduced to 16.6 percent.

The newly enacted research and development tax credit does very little for the alternative energy area. Most of the basic research has already been completed, and the alternative energy industries are at the point of commercialization. Thus, very few of these industries are able to utilize the research and development tax credit. We are at a point where tax incentives are needed to encourage the commercial utilization of hard-won technology.

It would be an embarrassment to the United States if renewable energy commercialization is not realized. There is intense foreign competition to attain the level of American technological development in the alternative energy area. The French, the German, and the Japanese Governments have embarked on significant programs to develop alternative energy technology for commercialization. These foreign governments envision growing exports to Third World countries as well as to industrialized nations. For us to remove the sole incentive for alternative energy commercialization in the United States would mean the surrender of the field to foreign competitors.

Lastly, let me note that the administration will derive very little revenue in the next couple of years by repeal of the energy tax credits, and indeed would diminish future revenues to the Treasury.

As the First Boston Corp. has stated, based on its work as financial advisers to a multitude of these projects, the elimination of the energy tax credits will not have a meaningful budget impact, at least until 1984 and more likely into 1985. These alternative energy projects will not be able to make qualifying expenditures on an appreciable scale until several years hence.

In addition, the revenue effects of an alternative energy program can be exceedingly favorable as determined in a study for the Department of Energy by Resource Planning Associates. In this analysis of a heavily agricultural State, Iowa, and a heavily industrialized State, Connecticut, the tax revenues and economic activity derived from an alcohol fuels facility were positive. In terms of Federal tax revenues alone, the Iowa project would increase Federal taxes by $22.6 million and the Connecticut project by $9.5 million from a single 50 million gallon per year plant.

These and many more renewable energy projects are now in jeopardy because the energy tax credits have been called into question. To encourage re-

newable energy development in the United States we must reaffirm the congressional commitment to retain the energy tax credits. I urge my colleagues to reaffirm that commitment by supporting this resolution.

Mr. COHEN. Mr. President, I rise in support of this sense of the Senate resolution that would put the Senate on record in support of retaining the existing tax incentives for investments in conservation and renewable energy sources. I am an original cosponsor of this resolution, and I am pleased to have the opportunity to speak today on its behalf.

Recent reports that the President will propose elimination of the residential energy tax credits are quite disturbing. They are particularly disheartening because they run counter to statements made by administration officials earlier this year.

In proposing budget reductions in the energy area, the administration argued that "Federal conservation assistance should be drastically reduced because individuals, businesses, and institutions are undertaking major conservation efforts on their own as a result of rising energy costs and Federal tax credits." Later in a hearing before the Senate Subcommittee on Energy, Nuclear Proliferation, and Government Processes, on which I serve, the Assistant Secretary for Conservation and Renewable Energy elaborated on this point. He stated that:

> The free market and existing tax credits, in conjunction with the proposed revised tax structure, will be adequate to encourage industry to take the conservation measures that are most appropriate.

While I support the administration's commitment to an unregulated energy market, I submit that a free market in which all sources of energy supply can compete equally does not exist today. Although there are many examples I could draw on to demonstrate the inequities in the energy market, I will focus on the Federal Government's tax and expenditure policy toward all energy sources.

The Office of Management and Budget and the Joint Committee on Taxation have recently completed analyses of current tax and expenditure policies for energy conservation and production. These reports conclude that there is a substantial imbalance between Government expenditures for energy supply investments and those for energy conservation. In the area of incentives alone, the Federal Government will spend $10.9 billion for investments in energy production in fiscal year 1982, spending only $895 million on tax incentives for conservation investments. Thus, the Federal Government will spend 12 times as much promoting energy supply production than it will in promoting energy conservation investments. If the administration succeeds in repealing the existing tax incentives for energy conservation and renewable energy sources, the disparity between Federal support for conservation and supply will widen even further.

In recent years, the United States has made steady progress in addressing our energy problems. Imports of crude oil and petroleum products have fallen from a high of 8.8 million barrels a day in 1977 to under 6 million barrels a day at present. We have reduced our imports significantly in the last year alone. This progress has come about largely because the American people have accepted the reality of the energy problem and have taken steps to reduce their individual consumption. Each additional step forward we take on the conservation and alternative fuels production fronts will make it that more difficult for OPEC to arbitrarily manipulate the prices and supply of oil to our disadvantage.

The tremendous contribution made by renewable energy and conservation tax credits is clear. In 1979, 4.8 million taxpayers took advantage of energy tax credits to make energy-saving improvements to their homes. The American business community has also taken advantage of existing conservation and alternative energy development incentives, and dramatically reduced its energy consumption in the process. That the national interest has been served by these actions is borne out by the stability that now exists on the price and supply fronts.

In the State of Maine, one of the coldest States in the country, residents have used these tax credits extensively. In 1978, 32,000 households claimed a residential energy tax credit. This number increased to 36,000 in 1979. In these 2 years alone, Maine homeowners have invested $60 million in conservation and renewable energy sources. As a result of these efforts, Maine's consumption of home heating oil, nearly all of which is imported, has declined by 10 percent.

Mr. President, the lesson of the past few years could not be clearer: Energy tax credits work. They encourage conservation and help to promote alternative energy development. Most importantly, they promote permanent energy savings. American homes and buildings that are well-insulated will yield an energy savings of millions of barrels of oil in the years ahead. The use of renewable energy sources not only reduces oil imports, but eases the pressure on the diminishing supplies of domestic oil and gas reserves.

Mr. President, this resolution merits the support of the Senate. Now is not the time to draw back from our commitment to increasing the efficiency with which we use energy. Passage of this resolution will signal the Senate's strong ongoing commitment to energy conservation. It is a message we should send not only to the administration, but to the American people as well.

Mr. MITCHELL. Mr. President, I am pleased to join my colleagues in registering our support for the residential and business tax credits for conservation and renewable energy investments.

The submission of this resolution is an important gesture. Simply by announcing that they are considering a proposal to repeal the energy tax credits, administration officials have effectively negated much of the effectiveness of the credits. Concerned that the energy-related purchases they make will not be eligible for the tax benefits, homeowners, businesses, and investors are reluctant to commit themselves to conservation and alternative energy equipment investments. By getting the support of a majority of Senators, this resolution can remove the chilling effect that the administration's proposal has had.

The energy tax credits play an important role in our national energy policy. Conservation and renewable energy sources offer the greatest opportunities to reduce our dependence on foreign oil. They are also the most environmentally acceptable options.

Maine, because of its heavy reliance on foreign oil and extremely high home heating costs, stands to benefit greatly from continued Federal conservation efforts. By reducing our imports through greater energy efficiency and more renewable energy, Maine can reduce its vulnerability to oil supply disruptions and can strengthen its economic base. Currently, oil imports drain over $1 billion a year from Maine's economy.

It is not surprising that Maine residents have been taking advantage of the energy tax credits. In 1979, approximately 36,000 households claimed the residential energy conservation credit. Also, two of Maine's leading renewable energy sources, hydropower and solar energy, have been receiving a boost from the tax credits.

Yet terminating the credits now could be premature, even in a State such as Maine. A recent survey of Maine households found that 37 percent still had not undertaken any significant conservation measures, while many of the other households could still achieve further energy savings. Clearly, the potential for energy conservation has not been fully tapped. Similarly, solar power has great potential in Maine, but the solar industry is still in its early stages and needs the credits to develop consumer acceptance.

It is unfortunate that the Senate must take action to reaffirm its support for these credits, but the hostile attitude of the administration toward energy conservation and alternative energy development requires that it do so. I hope that we can act soon so that homeowners and businesses can proceed with confidence in their energy investments.

Mr. DURENBERGER. Mr. President, I want to commend the chief author, Senator CHAFEE, for the resolution that we are submitting today. It is an important resolution. It is a resolution that requires early attention by the full Senate. It is a resolution that I am pleased to cosponsor and for which I will work diligently until action is secured.

Mr. President, the administration believes that American energy consumers should rely on the marketplace, not the Government, for the proper signals as to future energy prices and energy resources. I think this policy is wrongheaded. It is a head-in-the-sand policy that does not serve the public well—and I mean head in the sand literally for whoever it is in this administration pretending expertise in energy policy. It is a policy which diminishes our security and virtually guarantees severe economic dislocations in our future.

There is no marketplace for energy resources. This should be apparent to anyone who can read the headlines. Later this month OPEC is expected to get together and agree on a unified price of $34 per barrel for crude oil. This decision will be a victory for Saudi Arabia. It is a victory for the long-term interests of Saudi Arabia. There are some who believe that conservation and the resistance to higher prices has put a burden on the world oil market and that OPEC is in disarray—about to go out of business. Nothing could be further from the truth.

There is a difference of interest in OPEC. The Saudis have a lot of oil—enough oil to produce at current levels well into the next century. They have a long-term interest in our dependence on their oil reserves. Conservation and conversion to renewables are a direct threat to their future. Prices so high that consumption is reduced does not threaten their long-term interest. Other OPEC nations have small reserves. They want all the revenue they can get and they want it today because they fear we may take control of our future. High prices now are in their interest. Our gradual conservation is no threat to them, because their wells will soon be dry.

As I say, there is a difference of interests in OPEC. The Saudi interest has prevailed. The Saudis have used their excess production capacity and a price of $32 to force other OPEC nations with higher prices out of the market. Now that prices have been unified at $34 per barrel, OPEC will return a plane of stability. The world oil glut will be reduced. Each member of OPEC will be given a share of the contract market and the cartel will be in control again.

I suppose these events can be read by the free market types as a confirmation of their policy. But to me the headlines say that Saudi Arabia has the power to unilaterally impose a world oil policy that serves their interests to the exclusion of the market and other nations. Meanwhile, we are busy here in Washington unilaterally repealing energy policies that took us a decade to construct. We turn not to a marketplace, but to a prayer that over the long run our interests will coincide with those of Saudi Arabia. Well, they will not. Our long-term goal must be to reduce our dependence on imported oil. Current Saudi policy—price moderation—is designed to continue our dependence on them and their production of 8½ million barrels of oil per day. And who can say what our policy will be in the future.

So there is no marketplace today, only a continuing need to safeguard our economy and our security against the seduction of momentary lulls in the energy crisis. Along with the strategic petroleum reserve and the emergency petroleum allocation legislation—which Senator WALLOP has been working so hard on in the Energy Committee—the energy tax credits play an important role in our policy of energy independence. They provide—or did until the President made his statement—clear signals to energy consumers and producers about our energy future. These signals are not provided by the marketplace on which the administration would have us rely.

Consider the price of oil over the last decade. It went from $3 per barrel to $14 in a few short months in 1973 and 1974. People took conservation seriously for awhile after the Arab embargo. We also experienced the deepest recession since World War II. But we recovered. Oil prices leveled out. People forgot about the energy crisis—forgot until the Iranian revolution in 1979. The price then went to $40 per barrel—again in a few short months. And once again we had a recession. Major American industries are on the brink of collapse. Detroit did not anticipate the Iranian revolution. Detroit's consumers did not either. In fact the marketplace was reducing inventories right up to the day of the revolution. Is that the kind of energy future that this administration would prescribe for our economy?

We can admit that Government policy was part of the problem in 1979. The decade of price controls masked the true danger of OPEC even after the embargo. But the failure of one policy does not mean that every policy is doomed to failure. In 1979 we corrected the errors. We began the process of decontrol. The Finance Committee in designing the windfall profits tax, replaced the price controls with a different policy. Rather than keep the low prices of the past, we enacted the credits to anticipate higher prices in the future. We will never break OPEC. Oil is a limited resource that will continue, with or without further disruptions, to get more expensive. Rather than wait for the roller coaster effects of the energy marketplace to triple the prices again, we chose to subsidize those conservation and renewable fuel technologies that have promise of immediate benefits. The subsidies are designed to take us on a smoother path to an energy future that does not include the oil reserves of Saudi Arabia.

The tax credits are designed to do what the marketplace does not—send signals to rational consumers and producers about future energy prices. It is not that I do not believe in markets. I do. That is why I supported oil decontrol, the windfall profit tax and tax credits financed thereby. I just do not think this administration understands this marketplace. No financial institution is going to loan money for alcohol plants today. The price of alcohol is still above the price of gasoline. We all know that this price relationship will change. What no one can say with any certainty is when that change will occur. The energy marketplace sends no signal, because the change awaits the outcome of political events. By enacting the tax credit we have decided that we would be better off to produce and consume domestic fuel alcohol now rather than to wait for Saudi Arabia to tell us when the time has come. The price of this policy in the short run is the price of our security—an insurance policy for our economy.

Mr. President, we must resolve the status of the existing credits quickly. A proposal by the President does not eliminate the credits, but it can make them largely ineffective. Few companies are going to take the risks with alcohol plants, new businesses in solar and wind energy or plan new hydro and geothermal facilities, if there is some possibility that the credits may soon be repealed.

The President's proposal, unanswered, can be the kiss of death. The investments that the credits are designed to encourage will evaporate, if we do not make it clear that our commitment to them remains stronger than ever.

That is why I believe the Senate should make this resolution a high priority for this session. The Congress supports the existing credits. To be effective encouragement for conservation and the production of renewable energy resources, we need to send the President and the Nation a clear signal—that the existing energy credits will be continued.

● Mr. PACKWOOD. Mr. President, today over 50 Members of the Senate are submitting a resolution in support of the tax incentives for conservation and renewable energy. I am pleased to be one of them.

I think most Senators know why this resolution is being submitted today. The administration is considering whether to recommend repeal of these tax incentives. Personally, I am not yet 100 percent sure that President Reagan means to repeal them. I hope that he does not. Clearly, judging by the strong support for this resolution, many other Senators feel the same way.

Senator support for these tax incentives has been strong for several years now. We first enacted them as part of the Energy Tax Act of 1978; then we increased them in the Windfall Tax Act of 1980. In the face of insecure and increasingly costly foreign oil supplies, the Senate recognized the need to encourage investment in renewable energy sources and thereby lessen American dependence on imported oil.

Circumstances have not changed so much since 1980 that we can afford to abandon the conservation and renewable energy incentives. Our use of imported oil remains unacceptably high. I remain convinced that conservation and renewable technologies can have an important impact on our efforts to reduce our use of imported oil. These technologies are generally available now for wide-scale use, but tax incentives can substantially increase the rate at which our society makes these energy investments.

Looking beyond our dependence on imported oil, I am not prepared to see these incentives dismissed as economically wasteful. I believe they are cost and energy effective. Study after study by organizations such as the General Accounting Office, the Congressional Budget Office, the Harvard Business School, and others has documented the potential for saving oil with conservation and renewable technologies. Generally speaking, this oil saving is available to us at a bargain price: it costs less to save a barrel of oil with these technologies than it costs to buy one.

In short, I believe these tax incentives must be part of our energy strategy. Sooner or later we will have to move to

renewable energy sources. From the perspective of our dependence on foreign oil, the sooner the better. Those of us who work to see these credits become part of the Tax Code feel strongly that they are helping us move in the right direction.●

● Mr. BAUCUS. Mr. President, I do not intend to take the usual amount of time expounding on the great accomplishments promised by the legislation we submit today.

In all honesty, the purpose of this resolution is to stop a bad idea, as much as to promote a good one. And to stop this bad idea, I have already joined with several Senators in writing to the President and in seeking cosponsors for the resolution now being submitted.

As you know, President Reagan has suggested that he will soon propose the termination or sharp decrease in existing tax incentives for conservation and renewable energy supplies.

This is a bad idea.

It is bad for U.S. businessmen. It is bad for U.S. energy consumers. It is bad for our Nation's security. And, it is bad for an energy-starved world.

I might add that should the President go forward with this proposal, it surely will be bad as well for his credibility before Congress; Mr. Reagan has repeatedly justified his renewable energy budget cuts by assuring us that these very tax measures would remain as sturdy incentives for the private sector to do the job.

The White House, through Mr. Reagan's Economic Recovery message of February 18 of this year, stated:

> The President is proposing no change in the current energy conservation tax credit, which is expected to provide at least $739 million in support.

And, on March 16, Office of Management and Budget Director David Stockman went on to specify that as to existing tax incentives for alcohol fuels:

> We have made no recommendations or changes and I can guarantee you we won't in the future.

THE UNITED STATES, A FAT MAN AT THE WORLD TABLE?

Mr. President, recently leaders from a number of countries met in Mexico to discuss how to make progress in bringing all people, everywhere on our planet, to at least a bearable standard of living. The statistics are grim.

If the population of the planet were reduced to 100 people, the United States would have but 5 of them. Yet, we consume between a third and a fourth of the world's energy.

Truly, to the poorer peoples on our planet we must seem like a grossly fat man who has come to dinner—only to elbow away all other guests and then eat the lion's share of the food.

And yet—incredibly to me—the administration seems inclined to back away from the clear progress American businesses have made as the result of the conservation and renewable energy tax incentives.

TAX INCENTIVES WORKING

And it indeed has been real progress. I will share with my colleagues portions of a letter recently sent to me by Roger Young on behalf of the Great Falls, Mont., Chamber of Commerce. He writes:

> The 40 percent federal solar tax credit is one action of Congress which should not be repealed. . . . I am informed that in 1981 alone, some 100 billion BTU's of energy were saved by solar systems manufactured by Sunwise Manufacturing in Great Falls. . . . The small amount the government has spent . . . has contributed greatly to the nation's energy independence.

And that, Mr. President, is from just one chamber of commerce speaking of just one business. There are literally thousands of small businesses, nationwide, working on wind power and solar, alcohol fuel, and insulation—thousands whose work depends in part on these tax incentives.

There are 56 Senators who are joining today in sponsoring this resolution, and I would urge all Senators to join in making sure the administration understands our message: Renewable energy and conservation are keenly important to our country's and the world's energy security.

U.S. private enterprise can help both American energy consumers and the world by developing these nonconsumptive resources.

The existing tax incentives are working: We should keep them.●

NOTICES OF HEARINGS

SUBCOMMITTEE ON ENERGY REGULATION AND SUBCOMMITTEE ON WATER AND POWER

Mr. MURKOWSKI. Mr. President, I would like to announce for the information of the Senate and the public that the joint oversight hearing on hydroelectric development and licensing procedures previously scheduled for Thursday, October 29 at 2 p.m. has been cancelled and will be rescheduled at a later date.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON THE JUDICIARY

Mr. McCLURE. Mr. President, I ask unanimous consent that the Judiciary Committee be authorized to hold a business meeting during the session of the Senate at 12:30 today, Tuesday October 27, to discuss the nominations of: Richard J. Cardamone, of New York, to be U.S. circuit judge for the second circuit; Robert D. Potter, of North Carolina, to be U.S. district judge for the western district of North Carolina; Paul A. Magnuson, of Minnesota, to be U.S. district judge for the district of Minnesota; Guy G. Hurlbutt, of Idaho, to be U.S. attorney for the district of Idaho; William H. Ewing, of Tennessee, to be U.S. attorney for the western district of Tennessee, and Laurence C. Beard, of Oklahoma, to be U.S. Marshal for the eastern district of Oklahoma; and to discuss the designation of the week beginning November 8, 1981, as "National Home Health Care Week."

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON SMALL BUSINESS

Mr. McCLURE. Mr. President, I ask unanimous consent that the Committee on Small Business be authorized to meet during the session of the Senate on Tuesday, October 27, to hold a hearing on SBA's direct loan program.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Agriculture, Nutrition, and Forestry be authorized to meet during the session of the Senate on Wednesday, October 28, at 11 a.m., to receive a briefing for Agriculture Secretary John Block on the administration's soil conservation policy.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON COLLECTION AND FOREIGN OPERATIONS

Mr. BAKER. Mr. President. I ask unanimous consent that the Subcommittee on Collection and Foreign Operations of the Select Committee on Intelligence be authorized to meet during the session of the Senate on Wednesday, October 28, to hold a closed hearing on intelligence matters.

The PRESIDING OFFICER. Without objection, it is so ordered.

PERMANENT SUBCOMMITTEE ON INVESTIGATIONS

Mr. BAKER. Mr. President. I ask unanimous consent that the Senate Permanent Subcommittee on Investigations of the Governmental Affairs Committee, be authorized to hold a hearing in connection with the oversight responsibility to determine appropriate responses from Government, industry, and labor unions to address labor-management corruption, on Wednesday, October 28 at 8:30 a.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON INVESTIGATIONS

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate Permanent Subcommittee on Investigations of the Governmental Affairs Committee, be authorized to hold a hearing in connection with the oversight responsibility to determine appropriate responses from government, industry, and labor unions to address labor-management corruption, on Thursday, October 29, at 10 a.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Energy and Natural Resources be authorized to meet during the session of the Senate on Wednesday, October 28, to hold a business meeting on pending calendar business.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON SMALL BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that the Small Business Committee be authorized to meet during the session of the Senate on Wednesday, October 28, at 2 p.m., to meet with the National Advisory Committee to the Small Business Committee.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

DEPARTMENT OF ENERGY SHOULD NOT BE ABOLISHED—DOMESTIC COAL POLICY MUST BE IMPLEMENTED

● Mr. RANDOLPH. Mr. President, as major shifts in energy use in the United States have evolved, newly utilized sources have been cheaper, more abundant, and cleaner than the energy it replaced. In fact, these sources were so abundant and relatively cheap that neither the majority of workers in Government nor the people in general felt a need for an energy policy.

But in the early seventies a growing awareness of what some of us had been saying for decades began to emerge. We were faced with a domestic energy crisis. Responding, each of several Presidents proposed what were portrayed as complete energy policy plans of action to answer energy challenges. Unfortunately, none of the early proposals included a central focal point which could deal with the insecurity, the costliness, the pollution, and the shortages of our energy supplies, each caused by largely separate combinations of circumstances.

This unfortunate situation was rectified in October 1977, when the Department of Energy was established, giving Cabinet-level leadership in shaping the energy policy of this Nation.

During the last several months, I have urged the Reagan administration to cooperate with the 97th Congress to resolve conflicts which result from pursuit of energy, economic, and environmental concerns in concert. We have instead witnessed to date drastic proposed cuts to fossil fuel research and development funds and token support for a viable synthetic fuels industry which should have been of commercial size in the midfifties. We see the abandonment of a forceful, vigorous domestic coal policy, replaced by an unrealistic slant toward sole reliance on unproven, suspect nuclear power technologies. Added to these, on September 24 of this year, President Reagan announced his intention to abolish the Department of Energy as part of his budget cutting strategy.

Mr. President, during the eight sessions of Congress since the oil embargo we have enacted major energy laws. Many involved tough fights between those advocating different facets as solutions to the energy dilemma. But, some have avoided major conflicts between perspectives and have passed easily. The Department of Energy Organization Act passed easily—74 to 10—because of recognition of the need to have a Cabinet office to provide sound and continuous policy to the Executive.

Shuffling boxes again on organization charts and changing names will not cut redtape, eliminate duplication, improve intergovernment communication or reduce the bureaucracy. It will merely reactivate a classic and repetitive cycle common to Government which in energy led from the White House Energy Office to the Federal Energy Office to the Federal Energy Administration and the Energy Research and Development Administration before the creation of the Department of Energy.

Mr. President, even if we eliminate the name on the Department, most of its programs will continue. I urge President Reagan to redirect the efforts of his policy advisers working on the abolition of DOE toward formation of a domestic coal policy. In the absence of policy direction from the Congress and administration, utilities and industries will continue to delay meaningful significant improvement toward coal. Exporters will hesitate to enter long-term supply contracts until there is certainty that our transportation system can move large amounts of coal. The prospective owners of major gasification and liquefaction plants will delay construction decisions until Federal policies relating to financing supports have a firm agreement.

If we continue to ignore legitimate applications for coal use, the disaster which now faces the American automobile industry, because of the inability to adapt to and changes in energy patterns, will pale to insignificance in comparison to what could confront the entire American industrial complex in the future, especially coal.●

INTERNATIONAL SECURITY

● Mr. HEINZ. Mr. President, on October 23, 1981, 25 residents from western Pennsylvania attended an informal noncredit program sponsored by the Pennsylvania State University dealing with topics of international security. This type of interest by private citizens in attempting to gain a better understanding of critical issues now facing the United States is indeed laudable. Also, the efforts of the Pennsylvania State University in maintaining its leadership role in providing quality, innovative adult programing for the residents of Pennsylvania should be noted. This specific program was initiated under the supervision of Mr. Wesley Hakanen, assistant director of continuing education at Penn State's McKeesport Campus. As Senator, I wish to congratulate these individuals for their interest, and the Pennsylvania State University for its continued civic involvement.●

THE 27TH ANNUAL SESSION OF THE NORTH ATLANTIC ASSEMBLY

● Mr. BIDEN. Mr. President, last week the North Atlantic Assembly, the interparliamentary arm of NATO, convened in Munich for its 27th annual session. Although NATO's history has been far from free of controversy, this session of the Assembly occurred at a particularly important juncture. For complicated though discrenible reasons, a wave of concern has spread across certain European countries that East-West confrontation could lead to nuclear war, and a consequence has been mounting protest against the arms race in general and NATO's planned TNF modernization in particular. On the eve of the Assembly's Munich session, some 250,000 persons assembled in Bonn to express this protest—the largest demonstration in the Federal Republic's 32-year history.

Aware of such growing concern in West European public opinion, the Assembly acted earlier this year to create a Special Committee on Nuclear Weapons in Europe, which I now chair, to study the military and political aspects of theater nuclear force modernization and arms control. While deeply regretting that Foreign Relations Committee consideration of the Saudi AWACS sale prevented my presence in Munich, I was pleased to learn that the Special Committee's interim but comprehensive report to the Assembly, considered by both the political and military committees, was praised by Assembly delegates across the entire political spectrum.

In addition, the Special Committee initiated and presented to the Assembly a draft resolution on nuclear weapons in Europe, which provided the focus for the Assembly's plenary debate, attended by parliamentarians from all 15 NATO-member nations. I consider this resolution, passed overwhelmingly by the Assembly at the end of debate, an excellent statement on the TNF issue. I ask that the resolution be printed in the RECORD.

The resolution follows:

NORTH ATLANTIC ASSEMBLY RESOLUTION ON NUCLEAR WEAPONS IN EUROPE

The Assembly, recognising the far-reaching significance of the NATO 12 December 1979 "dual-track" decision in several respects:

To enhance NATO's strategy of flexible response by producing a visible "coupling" of the American strategic deterrent and European defence;

To provide a much-needed response to modernised and expanded Soviet long-range theatre nuclear forces (LRTNF);

To facilitate permanent limitations on LRTNF through arms control negotiations;

To demonstrate Alliance political cohesion and solidarity in risk sharing;

Welcoming the determination of member governments to sustain the consensus behind the 12 December "dual-track" decision;

Noting that the deployment of the SS-20 is continuing beyond the levels predicted in 1979, while stressing that the number of LRTNF required by NATO should not be directly tied to Soviet force levels;

Noting the recent threat assessment by the High Level Group on the extent and pace of Soviet SS-20 deployment and of Soviet modernisation at all levels of theatre nuclear forces;

Welcoming the announcement that negotiations on LRTNF between the United States and the Soviet Union will commence on 30 November 1981;

Noting that a continued commitment to modernisation is essential if real progress in arms control is to be achieved;

Stressing that limitations on LRTNF will not provide stability unless achieved within a framework of limitations on central strategic systems;

Recognising that a "zero outcome," the mutual elimination of the land-based missile component of LRTNF—however difficult to achieve—represents the ideal objective of negotiations;

Concerned that confusion exists about a) the relationship between modernization and arms control; b) the precise objective of the LRTNF negotiations; and c) the extent to which NATO deployments depend upon Soviet actions and the results of arms control negotiations;

Concerned that the growth of opposition in several European countries to the dual track decision could undermine NATO's negotiating position and Alliance cohesion and could inadvertently serve Soviet purposes;

Urges member governments:

1. To maintain an equal emphasis on the twin objectives of modernization and arms control.

2. To develop and maintain a unified Allied negotiating position on LRTNF arms control.

3. To undertake concerted efforts to persuade their publics that the dual-track decision constitutes a strategy for achieving military stability and sustaining peace in Europe.

Urges the United States Administration:

1. To continue consultations with its Alliance partners on LRTNF arms control and also on future theater nuclear force modernization requirements.

2. To proceed as now planned to undertake early negotiations with the Soviet Union on the limitation and reduction of strategic nuclear arms.●

MULTIEMPLOYER PENSION PLANS

● Mr. QUAYLE. Mr. President, I am pleased to be a cosponsor of S. 1748 introduced by Senator HATCH, chairman of the Labor and Human Resources Committee. This bill will exempt most multiemployer pension plans from the provisions of title IV of ERISA relating to plan termination insurance. In 1974, Congress passed ERISA but deferred the effective date of the mandatory coverage of multiemployer pension plans. Because of the detrimental impact that title IV might have on multiemployer plans and the resulting large-scale liabilities that may have been assumed by PBGC, Congress found it necessary to defer coverage of multiemployer plans four times as it attempted to substantially revise title IV.

Since a revised multiemployer termination insurance program was not enacted nor another deferral date approved, title IV of ERISA as originally enacted became effective August 1, 1980. However, Congress subsequently passed the Multiemployer Pension Plan Amendments of 1980 bill which was signed into law on September 26, 1980. I believe that Congress made a mistake in passing that law instead of indefinitely postponing coverage of multiemployer plans and this bill will rectify the error we made then.

The Multiemployer Pension Plan Amendments of 1980 amended title IV of the Employee Retirement Income Security Act (ERISA) to require insurance coverage of multiemployer pension plans and by assessing liability against employers who withraw, or significantly reduce their contributions. The principal concept of this act is the requirement that an employer that wholly or partially withdraw from a plan pay its pro rata share of unfunded vested liability to the plan. This withdrawal liability is often larger than the company's net worth. I am convinced that the Multiemployer Act presents an extremely serious threat to many businesses, particularly in the trucking and construction industries.

Contrary to the intention of the act, collection of withdrawal liability will damage multiemployer pension plans because the potential liability will discourage new entrants from entering plans. Without normal replacement of participants and employers, multiemployer plans will face decline and possibly even insolvency.

The essence of most multiemployer pension plans is that the employer, through the collective bargaining agreement, pays a fixed contribution to a trust fund and the trustees determine the benefits that can be provided. The withdrawal provision of the 1980 act added a new liability to the employer, one greater than he had bargained for or had any reason to anticipate. This liability was applied retroactively in a manner that was certainly unfair, if not unconstitutional.

The employers withdrawal liability is often so extensive that it effectively prevents the sale or transfer of assets of a company with particularly adverse consequences on small business. With the possibility that the Financial Accounting Standards Board will require employers to footnote this pension liability on financial statements, it may dramatically reduce the ability of a company to borrow money. For many small businessmen this inability to borrow money may result in liquidation, which in turn would trigger withdrawal liability. For those same small businessmen who own their own businesses, they are held personally liable for these costs.

To resolve these problems, we believe that ERISA should be amended to provide that those multiemployer plans, in which contribution levels have historically been bargained should be recognized as exempt from the withdrawal liability and plan termination provisions of the act. We further believe that withdrawal liability which has currently been assessed should be remitted. This bill promotes free collective bargaining, and relieves these plans from onerous regulations which protect neither pensions for those who have earned them nor the financial security of those who fund them.●

A STORY OF COURAGE

● Mr. KASTEN. Mr. President, I ask today that an article entitled "Anger Melts Into Achievement for Polio Victim" from the Merrill Shopper & Foto News be inserted in the RECORD.

Cathy Clark Spatz, a native of Merrill, Wis., was stricken with polio at the age of 8. Her story of accomplishment is an impressive one and I know will inspire others to fight adversity and to overcome the seeming limitations of serious handicaps.

I draw the article to the attention of my colleagues and to my fellow citizens, and I commend Mrs. Spatz for the courage and strength she has demonstrated.

The article follows:

[From the Merrill (Wis.) Shopper & Foto News, Oct. 21, 1981]

ANGER MELTS INTO ACHIEVEMENT FOR POLIO VICTIM

This is the International Year of the Disabled. For many of us we nod at the reminder, "Oh, yes. Year of the Disabled. Now I remember." But one person fighting to make sure we all understand the signincance of this year is a Merrill native now living in Two Rivers, WI. She is Cathy Clark Spatz, one of millions in the world for whom this year has been named.

Cathy, daughter of Margaret Clark, 2600 E. Main St., Merrill, was stricken with polio when she was eight years old growing up here in Merrill. It was 1949 and a once carefree child was now burdened with a future of leg braces and walking crutches. She carried a deep resentment which urged her to over excell in everything she attempted. She graduated from Merrill High School in 1960, set back only a year by the crippling affliction which at one time almost took her life. "When you have a disability you have to try harder. I guess it just comes with the territory," Cathy says.

It was not until she went to college at the University of Wisconsin-Stevens Point, however, that she began to cope with the emotional side of her handicap. "I realized maybe I could help myself," she recalls. Her new classmates, never knowing that carefree eight year old of so many years ago, were accepting her for who she was. Feeling a new sense of freedom she was determined to learn how to drive a car so she could lead a more active life. Though rejected by two insurance companies she found a third company which would provide insurance. She bought a car with specialized hand controls and started taking lessons. When she passed her driver's exam she knew for the first time in her life she was really on her own.

After graduation from the University Cathy, having developed a talent for art, went to work as an art teacher. For the next five years she lived alone while teaching at LaCrosse, Port Huron, Michigan and Oak Creek. After that, she married a college friend, Kenn Spatz, also an art teacher, and they settled in Two Rivers. Ignoring the possible difficulties of raising a child, Cathy became a mother. Today the Spatz's have a nine year old daughter, Sara.

Although she "retired" from teaching to become a mother Cathy has always remained active outside the home. She is a champion in promoting rights for the disabled. On a local level in Two Rivers she has worked closely with the owners of shopping centers in promoting compliance of handicap parking laws. Too often, she notes, the truly handicapped are cheated from a handicap parking space by someone who simply wants a good parking spot near the store. That may not sound like a big deal to most of us, but to the handicapped it is. As Cathy is quoted in a Lakeshore Chronicle article on the subject, "Disabled people are not in that position because they want to be. They need to be part of the community. They may have to do their shopping, like everyone else. But sometimes they need just to get out of their four walls, to change the environment around them." She adds, "We are now in an age where technology is advancing our years of life. It's no longer just the disabled who are going to benefit from these laws, but the senior citizen also."

In addition to the role of advocate, Cathy has created a handicap counseling serving through Lakeshore Technical Institute called, "New Beginnings." "The goal is to make the handicapped as independent and self confident as possible," she notes further explaining that idea was created from her own early inability to face up to her disability. She wants the handicapped to know that they are still able to function and can lead productive lives again if they can rid themselves first of the burden of frustration.

In addition to that job she is actively engaged in Easter Seals and she and Kenn have a decorating consultant business on the side.

Despite Cathy's active life the damages

created by polio 32 years ago can never be forgotten. Just last week she underwent her seventh operation to correct the results of her affliction. "I have to psych myself up a lot," she admits about each new operation. Her latest, performed Sept. 30, went well, but the entire healing process will take about 12 weeks. "I'm going to finally catch up on my art work," she says, knowing that she will be confined to a full leg cast for six weeks, then to a short leg cast for several more weeks.

For someone like Cathy that much sitting around can quickly become depressing, but to keep her spirits lifted to the future she has already scheduled her calendar full for January. And although International Year of the Disabled will be a thing of the past by then, you can bet Cathy Spatz will be back out there fighting for a better understanding between the community and the handicapped.●

VETO OF FTC USED-CAR RULE

● Mr. BOSCHWITZ. Mr. President, today I cosponsor Senate Concurrent Resolution 33, which would disapprove the Federal Trade Commission's recent proposed used-car regulation.

In 1973, the FTC started an investigation into the practices of used-car dealers. Now, on August 14, 1981—some 8 years later—it has published a rule to regulate the sale of used cars. The used-car rule is contained in the Federal Register on pages 41328–41378. That is 50 pages of new regulations that small businessmen must comply with.

Mr. President, the clear thrust of this proposed rule is entirely negative. It presumes that dealers are dishonest—a concept contrary to our country's basic principles. In my view, this presumption is reason enough to disapprove the proposed rule. A closer examination of the proposed rule and its effects fully justifies its disapproval.

The rule was promulgated under the Magnuson-Moss Act. The clear intent of this statute is warranty disclosure—not inspection and not disclosure of defects. The rule violates the intent by requiring disclosure of known defects.

The disclosure of a defect is required if the dealer has knowledge of a defect. Knowledge is determined by an objective, reasonable man standard, which directly or indirectly requires inspection.

Yet the rule itself lists 52 types of defects, many of which are defined by such subjective terms as abnormal and improper.

Thus, the rule not only violates congressional intent, it creates unnecessary uncertainty and confusion.

These ambiguities will no doubt require clarification through the courts. If the ambiguities themselves don't cause litigation, the $10,000 penalty provision is a lucrative incentive to sue. While the dealer will initially bear the cost of defending the lawsuits, the ultimate cost will be borne by the consumer, who is supposed to be protected by the rule.

Mr. President, the bottom line is that the rule has the opposite effect of that which was intended. The rule will not protect consumers against unscrupulous dealers—they will continue to be unscrupulous.

At the same time, many other dealers may be discouraged from asking pertinent questions or taking other action, so that they do not acquire the knowledge that would subject them to liability—the rule puts a premium on lack of knowledge.

Furthermore, the rule is an incentive to sell the car as is, without a warranty.

Finally, Mr. President, the rule would add additional costs to an already distressed industry. We are all aware of the grave state of the auto industry—in the last 2 years 10 percent of the dealerships in Minnesota have gone out of business. This is roughly the same percentage as nationwide. Dealers are already plagued with decreased demand because of high interest rates, and increased inventory and financing costs.

At precisely the time when dealers are just trying to survive, the FTC has promulgated a rule that would pile an additional costly paperwork and legal burden on small businessmen.

Ironically, as more dealers go out of business, more used cars will be sold by nondealers—50 percent of the current market is not covered by the rule.

Mr. President, the Federal Trade Commission Improvements Act of 1980 gave Congress the authority to veto FTC regulations. The used car rule provides the opportunity to exercise that authority responsibly. I urge my colleagues to join me in supporting Senate Concurrent Resolution 33, to veto the FTC used car rule.●

ENTERPRISE ZONES

● Mr. HART. Mr. President, several bills have been introduced this year advocating the so-called enterprise zone approach to economic redevelopment. The administration has endorsed this approach for rebuilding our Nation's devastated inner cities.

It is offered as a free enterprise alternative to a long and expensive history of failed urban planning and social programing.

Despite many technical difficulties with the enterprise zone bills, there is obvious merit to dealing with high unemployment and poverty in depressed areas by stimulating business there.

Enterprise zones should not, however, be seen as a comprehensive strategy for urban redevelopment, nor should they be used to replace existing urban programs which have proven successful.

The search must go on for new solutions, and the details of this partial solution, the enterprise zone, must be scrutinized carefully.

As presently proposed, however, the enterprise zone is unlikely to work. It offers too few incentives and incentives of the wrong kind for attracting existing businesses to zones. More important, it offers little or no incentive for starting new businesses.

Continued refinement of enterprise zone legislation may reduce some of these problems. But the more important concern is whether the zone concept is focused on the right goals and whether it still meets its original, stated purpose. While the rhetoric surrounding zone bills emphasizes job creation, most provisions are actually designed to create profits for employers. Jobs and other economic benefits are expected to trickle down to the poor and unskilled. But zone bills do not target minority business nor even small business, the greatest source of jobs.

The problem with this very traditional economics is that not enough trickles down and what does trickle down does not go far enough and is not equitable. It is also true that what trickles down is not really what is needed most.

Is the purpose of urban development to attract business to a cheap source of labor and to create dead end, minimum wage jobs for the poor? Is this the best we can do with a supposedly new and innovative idea like enterprise zones?

These sorts of jobs certainly cannot be to the overall benefit of inner-city dwellers when they carry the cost of residential displacement.

We must look for approaches which lead to long-term, stable economic development in distressed communities, approaches which draw capital to productive uses in these communities. Without a stable, enduring market, few businesses, especially small businesses, will be able to survive in an enterprise zone.

If we can increase the financial reserves of the inner city community over time, few additional incentives will be needed to attract new business there.

But how do we increase buying power and financial reserves where there are few businesses or jobs of any sort to start with?

Two rules of thumb should guide our efforts:

First, any tax breaks or subsidies we offer to business owners or investors should be passed along to employees and owners wherever possible.

Second, percolate up rather than trickle down strategies for aiding the poor and unemployed should be tried; where possible, we should build on and stimulate the existing economic efforts of local communities first, then look to outside economic forces.

Consider the first guideline. Some may think that the relevant trade off—tax breaks for jobs—has already been struck between business and government in the very concept of an enterprise zone.

Actually, however, current enterprise zone bills include refundable job tax credits, in addition to other tax advantages. These credits subsidize the salaries of zone employees with tax dollars.

We would get more for our tax dollars if they were used to give employees and residents of inner cities more of an economic share and stake in their community, for example, by targeting some of the most attractive tax breaks to employers who are willing to adopt employee ownership plans. Such plans are entirely consistent with free enterprise and the expressed purposes of enterprise zones. They would increase productivity and competition by allowing more businesses to form, where employees pool resources, survive, and remain independent.

Stimulating new business in our cities is crucial, but so is keeping fledgling businesses alive and helping them expand. It does little good to create new jobs in zones only to have them disappear a year later. Yet most businesses fail, and small businesses, which create most jobs, fail

at the astonishing rate of from 60 to 80 percent. In inner-city areas qualifying for zone status, the chances for survival will be even slimmer.

Employee ownership can help. Employees have an astonishingly good record in buying out failing businesses and turning them into more productive and profitable concerns.

Moreover, employee buy-outs provide a ready alternative to merger with large conglomerates which could pull business out of zones. In these ways, employee ownership increases and saves the number of jobs available, and decreases transfer payments from the Government which are needed when shutdowns and mergers cause layoffs.

By sharing in the risks and payoffs of entrepreneurship, employees and employee-residents of a zone could develop stronger commitments to their work. They could see that when they work for the success of their area business they are working for their own business and area, their own success.

This stake in the local economy would not only increase productivity, but might reduce crimes against business, vandalism and shoplifting. In all these ways, employee ownership makes people an active part of the recovery process of their own community.

Consider the second, percolate up, guideline. Authors of current zone proposals cite community-based small businesses in the South Bronx as models for the enterprise approach to urban revitalization. Yet there are no provisions in their bills for building on or building up ongoing efforts within communities. Instead the emphasis is on incentives for the purchase and renovation of property which could lead to real estate speculation and gentrification.

On the other hand, if the emphasis was on incentives for capital formation, local residents, pooling their assets, would have a fighting chance to start their own companies. Some of the least known success stories in business involve groups of welfare recipients or farmworkers who started their own companies on a shoestring and now gross a million dollars or more per year.

Just as we need to encourage employee ownership where possible, we should also try to make community ownership attractive.

Closely related to the employee stock ownership plan (ESOP) is the General Stock Ownership Corporation (GSOC). This corporate form was enacted into law by Congress to provide all residents of a State with voting shares in the major economic ventures of their areas. The GSOC concept can be applied easily to a local area such as an enterprise zone where it would give the residents of a zone community a direct meaningful say in their economic future.

They could hire expert consultants, on credit, to generate various investment options for the development of their community. The advantages and disadvantages of these options could be presented, the dangers raised for the community by competing corporations could be explained.

Then residents could vote their common interest to create the sorts of economic changes they could live with and benefit from.

Funds could be generated for chosen GSOC projects from a variety of private and public sources, with eventual revenues paying back loans and providing resident-shareholders with dividend checks, dividend checks instead of welfare checks.

Of course, ESOP's and GSOC's represent only one path to the economic self-determination and development of communities with little economic power. They are not without problems.

Yet they deserve serious consideration, along with other means to like ends.

The proponents of enterprise zone legislation have proven themselves willing to revise their ideas and adopt new measures which increase the likelihood that zones will work effectively. I hope they will look into these kinds of incentives to economic recovery and consider adding them to their present plans. Economy with democracy must be our overriding goal.

I will soon be introducing legislation which seeks both to build on and transform the enterprise zone approach along the lines I have proposed here. This bill will provide special support for small and indigenous businesses in economically distressed areas and will target incentives for investment and credit to business activities which spread capital ownership broadly among zone residents and employees. I believe this will be an important contribution to the growing debate on enterprise zones.●

THE CALENDAR

Mr. BAKER. Mr. President, I would inquire of the minority leader if there are items on today's calendar that he is prepared to consider by unanimous consent, and I especially call his attention to the following calendar order numbers: 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, and 334.

Mr. ROBERT C. BYRD. Mr. President, these are all relief bills, and there is no objection on this side of the aisle to proceeding to action on them.

Mr. BAKER. I thank the minority leader.

Mr. President, I wonder if the minority leader would agree that we might consider them en bloc since they are of a similar nature?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Mr. President, I ask unanimous consent that the list just submitted be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

RELIEF OF PUANGPAKA VERTREES AND PUANGTIP VERTREES

The bill (S. 175) for the relief of Puangpaka Vertrees and Puangtip Vertrees was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 175

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Puangpaka Vertrees and Puangtip Vertrees shall be classified as children within the meaning of section 101(b)(1)(F) of such Act, upon approval of a petition filed in their behalf by Mr. and Mrs. Ronnie Dale Vertrees, citizen and lawful permanent resident, respectively, of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiaries shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

RELIEF OF HYONG CHA KIM KAY

The bill (S. 235) for the relief of Hyong Cha Kim Kay was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 235

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 212(a)(23) of the Immigration and Nationality Act, Hyong Cha Kim Kay may be issued a visa and admitted to the United States if she is found to be otherwise admissible under the provisions of that Act.

SEC. 2. This exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the date of the enactment of this Act.

RELIEF OF HUN SIK SANDERSON

The bill (S. 278) for the relief of Hun Sik Sanderson was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 278

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of paragraphs (12) and (23) of section 212(a) of the Immigration and Nationality Act, Hun Sik Sanderson may be issued a visa and admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of that Act.

SEC. 2. This exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the date of the enactment of this Act.

RELIEF OF MICHAEL WHITLOCK

The bill (S. 555) for the relief of Michael Whitlock was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 555

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 212(a)(23) of the Immigration and Nationality Act, Michael Whitlock may be issued a visa and admitted to the United States if he is found to be otherwise admissible under the provisions of that Act.

SEC. 2. This exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice

had knowledge prior to the date of the enactment of this Act.

RELIEF OF ROSITA N. PACTO

The bill (S. 593) for the relief of Rosita N. Pacto was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 593

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 212(a)(14) of the Immigration and Nationality Act, for the purposes of such Act, Rosita N. Pacto shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by one number, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under section 203(a) of the Immigration and Nationality Act.

RELIEF OF WALTER PREY

The Senate proceeded to consider the bill (S. 174) for the relief of Walter Prey, which had been reported from the Committee on the Judiciary with an amendment:

On page 1, line 4, strike "Walter Prey", and insert "Friedrich Walter Prey";

So as to make the bill read:

S. 174

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Friedrich Walter Prey shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by one number, during the current fiscal year or the fiscal year next following, the total number of immigration visas and conditional entries which are made available to natives of the country of the alien's birth under section 203(a) of the Immigration and Nationality Act or, if applicable, from the total number of such visas and entries which are made available to such natives under section 202(e) of such Act.

Amend the title so as to read: "A bill for the relief of Friedrich Walter Prey.".

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Friedrich Walter Prey.".

RELIEF OF SANG SUN RUSSO

The Senate proceeded to consider the bill (S. 1143) for the relief of Sang Sun Russo, which had been reported from the Committee on the Judiciary with an amendment to strike out all after the enacting clause, and insert the following:

That, notwithstanding the provisions of sections 212(a)(12) and 212(a)(23) of the Immigration and Nationality Act, Sang Sun Russo may be issued a visa and admitted to the United States for permanent residence, if she is found to be otherwise admissible under the provisions of that Act: *Provided,* That these exemptions shall apply only to grounds for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The amendments were agreed to.

● Mr. HEINZ. I am pleased to have this opportunity to support the passage of two private relief bills which I have introduced in this Congress. S. 1143, for the relief of Sang Sun Russo, and S. 1144, for the relief of Maxine Ann Fricioni. Let me take this opportunity to summarize the background for each of these two bills, and explain why I believe passage of these bills is justified.

USAF S. Sgt. Harold Russo (Ret.), obtained his commander's permission to be married to Sang Sun Russo as required under Air Force Regulations 211–218. This regulation requires a background investigation on the intended spouse by the Air Force Office of Special Investigations and the results were favorable. This investigation was one of the most important source documents used by the commander granting Russo permission to marry.

The couple was married October 1976, with the understanding that the procedures which led to permission for the marriage also included an investigation of any records of conviction. After marriage they began the application process for obtaining a visa for Mrs. Russo to immigrate to the United States. Upon visiting the American Embassy in Seoul, Korea, on July 27, 1978, they were informed that Mrs. Russo would be ineligible for immigration to the United States because of charges of "possession of marihuana." Mrs. Russo served a sentence for her involvement in this situation. Noteworthy is the fact that the initial investigation conducted by the Air Force Office of Investigation and the Korean National Police showed no record of this conviction for Sang Sun Russo.

S. Sgt. Russo and his wife have a daughter who was born in December 1978, and at this time the family is separated, with the wife and daughter residing in the Republic of Korea and S. Sgt. Russo living in the Philippines.

I believe S. 1143 is meritorius due to the fact that Mrs. Russo paid the penalty for her past charges and also due to the administrative misunderstanding which resulted in marriage, since they assumed that all clearances had been given for Sang Sun Russo's immigration to the United States.●

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF MAXINE ANN FRICIONI

The Senate proceeded to consider the bill (S. 1144) for the relief of Maxine Ann Fricioni, which had been reported from the Committee on the Judiciary with an amendment to strike out all after the enacting clause, and insert the following:

That, notwithstanding the provisions of section 212(a)(23) of the Immigration and Nationality Act, Maxine Ann Fricioni may be issued a visa and admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to grounds for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The amendment was agreed to.

● Mr. HEINZ. Mr. President, with respect to S. 1144 for the relief of Maxine Ann Fricioni, the following facts are relevant:

Sgt. David R. Fricioni, USAF, obtained his commander's permission to marry Maxine Ann Fricioni as required under the Air Force regulations 211–18 and 211–6. They were married in February 1978, with the understanding that the procedures which led to permission for the marriage also included an investigation of any records of conviction. On that basis, they were married and began the application process for obtaining a visa for Maxine Ann Fricioni to immigrate to the United States. Upon visiting the American Embassy in London, England, in July 1978, they were informed that Maxine Fricioni would be ineligible for immigration to the United States because of charges of possession of marihuana. Mrs. Fricioni was sentenced to a conditional discharge of 12 months in August 1975 for her involvement in this matter.

Noteworthy is the fact that the initial investigation conducted by the Air Force Office of Investigation showed no record of conviction for Maxine Fricioni. It was upon those initial findings the permission for marriage was granted.

Sergeant and Mrs. Fricioni and their daughter are waiting to return to the United States to join their family here and also to begin their life here.

I believe that this private immigration bill, S. 1144, is meritorius due to the fact that Mrs. Fricioni paid the penalty for her past charges and also due to the administrative misunderstanding which resulted in their marriage, since they assumed that all clearances had been given for Maxine Ann Fricioni's immigration to the United States.●

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF JUAN ESTEBAN RAMIREZ

The Senate proceeded to consider the bill (S. 167) for the relief of Juan Esteban Ramirez, which had been reported from the Committee on the Judiciary with amendments, as follow:

On page 2, line 1, strike "visa fees.", and insert "visa fee.";

On page 2, line 4, strike "officials", and insert "officer"; and

On page 2, line 8, strike "paragraphs (1) through (8) of".

So as the make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality

Act, Juan Esteban Ramirez shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by one number, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under section 203(a) of the Immigration and Nationality Act.

The amendments were agreed to.

○ Mr. ANDREWS. Mr. President, I rise in support of S. 167, which my colleague Senator BURDICK, and I cosponsor, in behalf of Juan Esteban Ramirez.

Juan Ramirez is an orphan, one of seven children born to an impoverished family in Ecuador in 1958. The beneficiary contracted polio at the age of 3, and has undergone surgery a number of times in various hospitals in his native land, followed by intense physical rehabilitation here in this country, where he has been a resident student of the Anne Carlsen School for the Physically Handicapped at Jamestown, N. Dak.

He has made good improvement, and is now able to walk with the aid of a brace and crutches, and has progressed well in the school, both in mental and physical activities.

Mr. President, during the summer months when not in school, Juan lives with his foster parents, Mr. and Mrs. Vic Karges of Hazen, N. Dak. It is these people who have provided this young man with a haven in this country, while he pursued his education and rehabilitation.

This bill grants Juan permanent residence in the United States. I urge its approval by my colleagues in the firm belief that Juan Ramirez will become a productive and loyal citizen of his new country, where he has found the care and love that he never could have known anywhere else.●

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF THE FONG FAMILY

The Senate proceeded to consider the bill (S. 367) for the relief of Kuan Sheng Fong, also known as Pete K. S. Fong; and Shyr Yuh-Yu Fong, also known as Nancy Fong, his wife; and Shueh Wei Fong, also known as Sylvia Fong, his daughter, and I. Chun Fong, also known as Victor Fong, his son; which bill had been reported from the Committee on the Judiciary with amendments, as follows:

On page 2, strike line 6, through and including line 7, and insert the following: "and Sylvia Shueh-Wei Fong, his daughter"; and

On page 2, line 17, strike "paragraphs (1) through (8) of".

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for purposes of the Immigration and Nationality Act, Kuan Sheng Fong, also known as Pete K. S. Fong; and Shyr Yuh-Yu Fong, also known as Nancy Fong, his wife; and Sylvia Shueh-Wei Fong, his daughter, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct the required numbers from the total number of immigrant visas and conditional entries which are made available to natives of the country of the aliens' birth under section 203(a) of the Immigration and Nationality Act, or, if applicable, from the total number of such visas and entries which are made available to such natives under section 202(e) of such Act.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Kuan Sheng Fong, also known as Pete K. S. Fong; Shyr Yuh-Yu Fong, also known as Nancy Fong, his wife; and Sylvia Shueh-Wei Fong, his daughter.".

RELIEF OF SANDRA REYES PELLECER

The Senate proceeded to consider the bill (S. 1093) for the relief of Sandra Reyes Pellecer, which had been reported from the Committee on the Judiciary with amendments, as follows:

On page 1, line 4, strike "Sandra Reyes Pelecer", and insert "Sandra Reyes Pellecer";

On page 2, line 1, strike "Mrs. Greta J. Pellecer, citizen of the United States,", and insert the following: "Mr. and Mrs. Samuel Pellecer, a lawful permanent resident and citizen of the United States, respectively";

On page 2, line 4, strike "bother", and insert "brother";

So as to make the bill read:

S. 1093

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Sandra Reyes Pellecer shall be classified as a child within the meaning of section 101(b)(1)(F) of such Act, upon approval of a petition filed on her behalf by Mr. and Mrs. Samuel Pellecer, a lawful permanent resident and citizen of the United States, respectively, pursuant to section 204 of such Act. No natural parent, brother, or sister, if any, of Sandra Reyes Pellecer shall, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The amendments were agreed to.

SANDRA REYES PELLECER

● Mr. PACKWOOD. Mr. President, the Senate is today considering S. 1093 for the relief of Sandra Reyes Pellecer. The Senate passed this legislation in the 96th Congress, but unfortunately no action was taken by the House of Representatives. It is my sincere hope that Congress will complete action on this bill soon so Sandra and her adoptive parents, Mr. and Mrs. Samuel Pellecer, can celebrate Sandra's high school graduation and the privilege of remaining with her adoptive family.●

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF INOCENCIO EDER AND LOURIE ANN EDER

The Senate proceeded to consider the bill (S. 215) for the relief of Inocencio Eder and Lourie Ann Eder, which had been reported from the Committee on the Judiciary with an amendment to strike out all after the enacting clause, and insert the following:

That, in the administration of the Immigration and Nationality, Lourie Ann Eder may be classified as a child within the meaning of section 101(b)(1)(F) of such Act, upon approval of a petition filed in her behalf by Federico P. Eder and Irinea R. Eder, a lawful permanent resident and a citizen of the United States, respectively, pursuant to section 204 of such Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read "A bill for the relief of Lourie Ann Eder".

RELIEF OF THE BYUN FAMILY

The Senate proceeded to consider the bill (S. 220) for the relief of Duk Chan Byun, his wife, Yung Ja Byun, and his children, Hye Ja Byun, Hye Sun Byun, Hye Ryung Byun, and Yung Eun Byun, which had been reported from the Committee on the Judiciary with an amendment:

On page 1, line 4, strike "Duk Chan Byun, his wife Yung Ja Byun, and his", and insert the following: "Yung Ja Byun, and her".

So as to make the bill read:

S. 220

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Yung Ja Byun, and her children Hye Ja Byun, Hye Sun Byun, Hye Ryung Byun, and Yung Eun Byun shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by the required numbers, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are made available to natives of the country of the aliens' birth under section 203(a) of the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read "a bill for the relief of Yung Ja Byun and her children, Hye Ja Byun, Hye Sun Byun, Hye Ryung Byun, and Yung Eun Byun".

RELIEF OF DR. JOSELITO SISON ALMARIO AND HIS WIFE, LETICIA ALMARIO

The Senate proceeded to consider the bill (S. 244) for the relief of Dr. Joselito Sison Almario, and his wife, Leticia Almario, which had been reported from the Committee on the Judiciary with an amendment:

On page 2, beginning on line 9, strike "paragraphs (1) through (8) of".

So as to make the bill read:

S. 244

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Joselito Sison Almario, and his wife, Leticia Almario, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by the required numbers, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are made available to natives of the country of the aliens' birth under section 203(a) of the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF YAEKO HOWELL

The Senate proceeded to consider the bill (S. 280) for the relief of Yaeko Howell, which had been reported from the Committee on the Judiciary with an amendment:

On page 1, line 3, strike "not withstanding", and insert "notwithstanding".

So as to make the bill read:

S. 280

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 212 (a)(23) of the Immigration and Nationality Act, Yaeko Howell may be issued a visa and admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF DR. HERMAN SARDJONO AND HIS WIFE, ERLANDA SARDJONO

The Senate proceeded to consider the bill (S. 340) for the relief of Dr. Herman Sardjono and his wife, Erlanda Sardjono, which had been reported from the Committee on the Judiciary with an amendment:

On page 2, line 9, strike "paragraphs", through and including "Act" on line 10, and insert the following: section 203(a) of the Immigration and Nationality Act, or if applicable, from the total number of such visas and entries which are made available to such natives under section 202(e) of such Act.

So as to make the bill read:

S. 340

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Herman Sardjono and his wife, Erlanda Sardjono, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by the required numbers, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are made available to natives of the country of the aliens' birth under section 203(a) of the Immigration and Nationality Act, or if applicable, from the total number of such visas and entries which are made available to such natives under section 202(e) of such Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF TESSIE AND ENRIQUE MARFORI

The Senate proceeded to consider the bill (S. 191) for the relief of Tessie and Enrique Marfori, which had been reported from the Committee on the Judiciary with amendments, as follows:

On page 2, line 1, strike "fee.", and insert "fees."; and

On page 2, line 7, strike "alien's", and insert "aliens' ";

So as to make the bill read:

S. 191

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Tessie and Enrique Marfori shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by the required number, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are made available to natives of the country of the aliens' birth under section 203(a) of the Immigration and Nationality Act or, if applicable, from the total number of such visas and entries which are made available to such natives under section 202 (e) of such Act.

The amendemnts were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF PETER CHI HUNG KWOK AND PING CHI CHAU KWOK

The Senate proceeded to consider the bill (S. 236) for the relief of Peter Chi Hung Kwok, doctor of medicine, and Ping Chi Chau Kwok, husband and wife, which had been reported from the Committee on the Judiciary with amendments, as follows:

On page 2, line 11, strike "paragraphs (1) through (8) of"; and

On page 2, line 15, strike "202", and insert "202(e)".

So as to make the bill read:

S. 236

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of paragraphs (14) and (32) of section 212(a) of the Immigration and Nationality Act, for purposes of such Act, Peter Chi Hung Kwok, doctor of medicine, and Ping Chi Chau Kwok, husband and wife, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by the proper number, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are made available to natives of the country of the aliens' birth under section 203(a) of such Act, or if applicable, the total number of immigrant visas and conditional entries which are made available to natives of the country of the aliens' birth under section 202(e) of the Act.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RELIEF OF BLANCA ROSA LUNA DE FREI

The bill (H.R. 661) for the relief of Blanca Rosa Luna de Frei, was considered, ordered to a third reading, read the third time, and passed.

JUNIOR EDMUND MONCRIEFFE

The bill (H.R. 688) for the relief of Junior Edmund Moncrieffe, was considered, ordered to a third reading, read the third time, and passed.

RELIEF OF ROLAND KARL HEINZ VOGEL

The bill (H.R. 783) for the relief of Roland Karl Heinz Vogel, was considered, ordered to a third reading, read the third time, and passed.

RELIEF OF MADELEINE MESNAGER

The bill (H.R. 1469) for the relief of Madeleine Mesnager, was considered, ordered to a third reading, read the third time, and passed.

RELIEF OF OMAR MARACHI

The bill (H.R. 1480) for the relief of Omar Marachi, was considered, ordered to a third reading, read the third time, and passed.

RELIEF OF AURORA ISIDRA RULLAN DIAZ

The bill (H.R. 1550) for the relief of Aurora Isidra Rullan Diaz, was consid-

ered, ordered to a third reading, read the third time, and passed.

RELIEF OF GLADYS BELLEVILLE SCHULTZ

The bill (H.R. 1785) for the relief of Gladys Belleville Schultz, was considered, ordered to a third reading, read the third time, and passed.

RELIEF OF KAI-MEE CHEN

The bill (H.R. 2010) for the relief of Kai-Mee Chen, was considered, ordered to a third reading, read the third time, and passed.

RELIEF OF HANIFE FRANTZ

The bill (H.R. 2185) for the relief of Hanife Frantz, was considered, ordered to a third reading, read the third time, and passed.

RELIEF OF MOSES BANK

The bill (H.R. 2573) for the relief of Moses Bank, was considered, ordered to a third reading, read the third time, and passed.

RELIEF OF YUK YEE LI

The bill (H.R. 2975) for the relief of Yuk Yee Li, was considered, ordered to a third reading, read the third time, and passed.

Mr. BAKER. Mr. President, I move to reconsider the vote en bloc by which the bills were passed en bloc.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

CONGRESSIONAL BUDGET ACT WAIVER

Mr. BAKER. Mr. President, I ask the minority leader if he is in position to consider Calendar Order 343, the Congressional Budget Act waiver to S. 1716?

Mr. ROBERT C. BYRD. Mr. President, the minority is ready to proceed.

The Senate proceeded to consider the resolution (S. Res. 226) waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1716, which was considered and agreed to, as follows:

S. RES. 226

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 1716, to amend the Clean Water Act and authorize funding for wastewater treatment construction grants program. Such waiver is necessary to permit consideration of a fiscal year 1982 authorization of appropriations to carry out the purpose of S. 1716.

Such waiver is necessary as S. 1716 was not reported before May 15, 1981, as required by section 402(a) of the Congressional Budget Act of 1974.

Additional time was required to conduct a comprehensive reexamination of this multi-billion-dollar pollution abatement program as a result of the fiscal year 1981 rescission and the repeal of the previously enacted authorization for fiscal year 1982 pursuant to the Omnibus Reconciliation Act of 1981.

CLEAN WATER ACT AMENDMENTS OF 1981

Mr. BAKER. Mr. President, I ask the Chair to lay before the Senate Calendar 296, S. 1716, the Clean Water Act Amendments of 1981.

The PRESIDING OFFICER. The clerk will state the bill by title.

The legislative clerk read as follows:

A bill (S. 1716) to amend title II of the Clean Water Act, and for other purposes.

The Senate proceeded to consider the bill.

Mr. CHAFEE. Mr. President, I am pleased to bring to the Senate today comprehensive amendments to the Environmental Protection Agency's municipal waste water treatment construction grants program. Extensive hearings were held on this legislation and it was reported without a single dissenting vote from the full committee. For a number of reasons, when the committee report was filed, the CBO cost estimate was unavailable. It has since been made available and I wish to include the letter and cost estimate in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., October 14, 1981.

Hon. ROBERT T. STAFFORD,
Chairman, Committee on Environment and Public Works, U.S. Senate, Dirksen Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to Section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has prepared the attached revised cost estimate for S. 1716, the Clean Water Act Amendments of 1981.

Should the Committee so desire, we would be pleased to provide further details on this estimate.

Sincerely,

ALICE M. RIVLIN,
Director.

CONGRESSIONAL BUDGET OFFICE
COST ESTIMATE

1. Bill number: S. 1716.

2. Bill title: Clean Water Act Amendments of 1981.

3. Bill status: As ordered reported by the Senate Committee on Environment and Public Works, September 23, 1981.

4. Bill purpose: S. 1716 authorizes the appropriation of $2.4 billion for the Environmental Protection Agency (EPA) municipal wastewater treatment construction grants program for each of the fiscal years 1982 through 1985. In addition, the bill authorizes $200 million annually, beginning in fiscal year 1983, to correct combined sewer overflows into marine bays and estuaries. (The initial fiscal year 1981 appropriation for construction grants was $3.3 billion, of which $0.8 billion was later rescinded.) Fiscal year 1982 through 1984 funds are to be allocated among the states in accord with a new allotment schedule. The new formula includes a hold harmless provision that provides a minimum share per state in fiscal years 1982 through 1984 based on the amount a state would have received had the old formula been carried forward.

Numerous provisions of the existing wastewater treatment construction grant program are modified. Currently, grants are awarded in three steps—planning, design, and construction. This bill would delay reimbursement for the first two steps until after approval of a step 3 (construction) grant application.

Under current law, the federal share of costs of wastewater treatment facility construction is 75 percent for conventional projects or 85 percent for innovative and alternative projects. Passage of this bill would result in a gradual decrease in the federal share of costs for new projects. The new share would be 65 percent in fiscal years 1982 through 1984 and 55 percent thereafter for conventional projects, with funding for innovative and alternative projects at a rate 20 percent higher than that for conventional treatment processes, up to a maximum of 85 percent. Furthermore, the statutory deadline of September 30, 1981, on innovative and alternative projects is repealed.

This bill would limit grant eligibility to three categories of waste treatment facilities—secondary treatment, advanced treatment beyond secondary, and new interceptors and appurtenances. Various biological treatment facilities to treat waste waters from combined storm and sanitary sewers may be considered as equivalent to secondary treatment so long as those methods do not adversely affect water quality. Communities that have received grants for collector sewer construction prior to October 1, 1981, and meet certain criteria may continue to receive such federal funding from their respective states allotment of grant funds.

Current law requires that the size and capacity of treatment works relate directly to the needs to be served, including sufficient reserve capacity. This bill would prohibit step 3 grants for constructing reserve capacity for new projects and would tie grant eligible size and capacity to 1980 population statistics, with an allowance in design flow capacity for existing industrial flows.

The industrial cost exclusion provision of the Federal Water Pollution Control Act (FWPCA), which limits the flow of industrial sanitary waste handled by publicly owned treatment works to 50,000 gallons per day, effective November 15, 1981, is modified to allow design flow capacity for treatment of existing industrial flows for projects receiving step 2 grant approval after May 15, 1980.

The bill modifies the determination of the amount set aside by states for administration and designates an additional amount of funds to be set-aside for water quality management assistance. These amounts are tied to the sum of unexpended obligations and unobligated allotment funds available to a state at the beginning of a fiscal year, but in no case should they be less than $400,000 and $100,000, respectively. In addition, the mandatory set-aside of funds to increase the federal share for innovative and alternative projects is increased from a maximum of 3 percent to a minimum of 4 percent of a state's allotment.

EPA is required to submit a report within 18 months of passage of this bill identifying publicly owned treatment works not yet in compliance with secondary treatment goals, assessing the impact of the 1981 amendments to the FWPCA on the cost of completing the federal construction grant program, and estimating the remaining federal expenses necessary to complete the program. The secondary treatment compliance deadline is extended by the bill from July 1, 1983, to July 1, 1988.

5. Cost estimate (by fiscal years, in millions of dollars):

	1982	1983	1984	1985	1986
Authorization level	2,400	2,600	2,600	2,600	200
Estimated outlays	20	285	995	1,715	2,115

Including outlays from previous years' appropriations, total construction grant outlays are estimated to be $3.9 billion in 1982, $3.6 billion in 1983, $3.4 billion in 1984, and $2.9 billion in 1985, assuming appropriation of the authorized levels.

The estimated cost to EPA of preparing the mandated report on remaining municipal wastewater treatment needs is approximately $2 million to be spent approximately evenly between 1982 and 1983.

The costs of this bill fall within budget function 300.

6. Basis of estimate: The authorization levels are those stated in the bill. Public Law 97-51, which makes continuing appropriations for fiscal year 1982, provided $2.4 billion for the construction grants program, contingent upon enactment of reform legislation and a subsequent 1982 budget request. For purposes of this cost estimate, it was assumed that S. 1716 would be passed and the entire $2.4 billion 1982 authorization appropriated by December 1, 1981, under the conditions prescribed in the continuing resolution or in some other form. For fiscal years 1983 and beyond, it was assumed that authorized sums would be appropriated by the start of each fiscal year.

The estimated outlays of the construction grant funds are based on historical spending patterns for the program, for which projects often take seven or more years to complete. Various provisions in the bill might result in faster or slower outlay rates, but the net effect of these provisions cannot be determined with accuracy.

Several provisions in the bill, such as the limitation of funding for reserve capacity to planning and design phases and the decreased federal share of construction costs, may significantly affect the demand for construction grants in future years. As a result, appropriated grant funds under this bill will be spent on projects somewhat different in nature from those projects that would have received grants in the absence of these amendments.

7. Estimate comparison: None.

8. Previous CBO estimate: On October 7, 1981, the Congressional Budget Office transmitted a cost estimate for S. 1716 that incorrectly stated that the current authorization for the EPA construction grant program is $5 billion. That authorization was repealed by the Reconciliation Act of 1981 (P.L. 97-35). This estimate supersedes the previous CBO estimate.

A cost estimate of the House version of this bill, the Federal Water Pollution Control Act Amendments of 1981, H.R. 4503, was prepared for the House Committee on Public Works and Transportation on October 9, 1981.

The House and Senate versions of the Clean Water Act Amendments of 1981 differ in many regards. The Senate bill authorizes $2.4 billion for the wastewater treatment construction grant program in each of fiscal years 1982 through 1985, and an additional $200 million annually in fiscal years 1983 and beyond for the correction of combined sewer overflows into marine bays and sanctuaries. H.R. 4503 authorizes the appropriation of $2.4 billion for the construction grant program for fiscal year 1982 only and does not include an additional authorization for combined sewer overflow treatment grants. The House bill authorizes the continued use of the existing allotment formula; the Senate bill sets forth a new formula to be used in fiscal year 1982 through 1984.

The bills also have different provisions with regard to the industrial cost exclusion provision of the Clean Water Act, the size of the set-aside from a state's allotment for increasing the federal share of innovative and alternative projects, and the limitation on federal funding of reserve capacity.

The Senate bill defers reimbursement for steps 1 and 2 grants until after approval of a step 3 grant application beginning October 1, 1981. The Senate bill also extends the municipal secondary treatment compliance deadline from July 1, 1983 to July 1, 1988.

The House bill does not contain corresponding provisions. However, it directs the Administrator of EPA to allot sufficient funds, from 1982 appropriations, to the State of New York to convey sewage from the New York City Convention Center to the Newtown Sewer Treatment Plant in Brooklyn, New York.

9. Estimate prepared by: Anne Hoffman (226-2860)

10. Estimate approved by: James L. Blum, Assistant Director for Budget Analysis.

Mr. CHAFEE. Since the Federal Water Pollution Control Act was passed in 1972 Congress has authorized $44 billion and appropriated $35 billion to assist States and local governments in the construction of needed treatment facilities. In turn the States have obligated $29 billion to approximately 17,000 projects nationwide. Unless we act expeditiously, projects in more than half of the States will be halted because of insufficient Federal support.

As chairman of the Subcommittee on Environmental Pollution and floor manager of this complex legislation I want to assure the Senate that the Pollution Subcommittee and full Environment and Public Works Committee has worked diligently to bring the issue before the full Senate today. Pressure has been building since March. During the reconciliation process the President requested that the Congress in effect "zero out" this program for 1982. No funds were to be included in the 1982 budget until the program reforms were enacted. The President sent his reforms to Congress in April. Several members of our committee introduced that legislation which became S. 975. Those amendments focused on limiting the eligible categories of treatment works which could receive Federal grant assistance and called for an end to grants which subsidized growth.

Shortly after that legislation was introduced, I introduced a more comprehensive set of amendments to the program, S. 1274. Those amendments were more comprehensive than the administration's request and provided for much needed multiyear funding.

Before discussing the merits of S. 1716, I want to outline the situation that the subcommittee found itself in when we started working on these amendments. Every 2 years the Environmental Protection Agency is required by law to develop for the Congress a survey of the State and local needs for this program. The most recent "needs survey" was delivered to the Congress this past spring. It reported the total need for the eligible categories of treatment facilities to be $120 billion. The Federal share of that total is $90 billion.

Given our present budgetary situation it is clear that the Federal Government will never have the resources to address needs of this magnitude. The time had come when a decision had to be made about this program's future which was not going to be easy. Quite frankly, the 1972 act may be responsible for improved water quality nationally and be a landmark in environmental law but it also elevated expectations about the Federal commitment to construct sewers too high.

During the summer the Subcommittee on Environmental Pollution held 6 days of hearings in Washington and a field hearing in Providence, R.I. We heard testimony from over 60 public witnesses and developed a record in excess of 1,000 pages. We had many excellent suggestions on what course the subcommittee should follow in reforming the municipal waste treatment program. The witnesses represented Federal and State governments, public interest groups, and the private sector.

After reviewing the hearing record the committee determined that two key elements had to be addressed in this rewrite: Focusing fewer dollars of the most urgent treatment needs and providing stability in the program so that States and local governments can adequately plan their capital budgets. Although some things are no longer eligible for funding, the bill encourages correction of infiltration and inflow. Infiltration and inflow is a significant problem but its correction should be part of local maintenance responsibility.

S. 1716 includes many of the recommendations that the President made in the spring, but not all of them. This legislation requires that States structure their priority lists for receiving funds on public health and water quality. It takes the construction grant program out of the business of subsidizing growth and focuses the fewer Federal dollars on treatment of pollution, not creating it.

In the future, sewerage collection systems can only be constructed when several strict criteria are met. The same is true of funding for growth capacity. However, S. 1716 provides minimal disruption of the ongoing process so that this transition period from a vast set of eligibilities to a more focused one is not disruptive enough to slow the program down. It also reduces Federal exposure to a level acceptable and within reach.

S. 1716 contains another significant change; the gradual reduction of the Federal share from its present 75 percent down to 55 percent. This reduction is prospective. It does not affect facilities which have already reached a certain stage in the grant process. The committee determined that the only way to address many of the projects in the pipeline is to require that the Federal dollars be spread thinner. I want to emphasize one more time however that this step will not effect projects which have received step 3 construction grants. It will only affect projects which are in the earliest stages of development.

This program has been roundly criticized during the last year by the media and other organizations which have failed to appreciate its history. The instantaneously clean water that was expected was not forthcoming. Although recent trends point to generally improved water quality, dramatic national results are just beginning to emerge. There are several reasons for this but the one that attracted our attention was program instability. Since its inception the funding cycle has been erratic.

First there were impoundments which held up a large portion of promised Fed-

eral dollars. Subsequently, that impoundment was determined to be illegal. Huge State allocations were suddenly available. States found themselves in a position of having more money available to them than they had staff to handle. Then, in the late 1970's the administration gradually reduced its funding request to well below the authorization levels. This year several billion dollars were actually taken away from the States just as they were preparing to commit them. To cap this off and further keep instability in this mix, the administration proposed only a 1-year program.

Clearly what is needed after reviewing this dismal funding performance is a signal to State and local governments that Congress intends that this program should move forward smoothly and efficiently. Maximizing water quality improvement should be our concern, not legislating instability. For that reason, S. 1716 authorizes 4 years of funding for the construction grants program at the level the President requested, $2.4 billion. Providing stability and program direction will be an important step in getting needed facilities on line to treat municipal wastes and further clean up our lakes, rivers, and streams.

S. 1716 is comprehensive legislation that will provide the type of new direction the President is seeking and that the public is demanding. Fewer Federal dollars will be focused on treatment of waste, not encouraging more of it. This legislation takes important steps to provide for greater accountability from those who design and construct municipal facilities, more use of the innovative and alternative treatment systems, and a special program to deal with the problem of combined sewer overflows. At this point in the RECORD I ask unanimous consent to include a brief summary of the legislation.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS OF THE CLEAN WATER ACT AMENDMENTS OF 1981

(As approved by the Subcommittee on Environmental Pollution Wednesday, July 15, 1981)

Section 1. Title.

Section 2. Provides that after October 1, 1981, states and local communities will have to provide funding for the engineering and design phases of publicly owned waste treatment facilities. In the event that a step 3 construction grant is awarded by the Federal government, the Federal share of steps 1 and 2 will be reimbursed to the grantee. The Administrator is required to promulgate regulations which establishes the percent of the construction grant to be used to repay the grantee for costs incurred. That percentage is to be based on actual experience with the program. States are authorized to provide loans to communities to begin the planning process for facilities.

Section 3. Provides for the gradual reduction of the Federal share of wastewater treatment facilities from 75 percent through fiscal year 1981 to 65 percent through fiscal year 1984 and 55 percent thereafter. It will not affect grants which had approval to proceed with step 2 plans prior to September 30, 1981. Municipalities which had voter approved bonds prior to July 1, 1981 and which receive a construction grant prior to July 1, 1985 shall receive a 75 percent grant.

Section 4. Provides for limitation on the eligible waste treatment facilities that may receive Federal cost-sharing assistance in the future. In the future, the eligible categories will be secondary treatment, more stringent than secondary treatment, and new interceptors and appurtenances. These correspond to categories I, II, and IV b of the EPA Needs Survey.

Section 5. Provides that any grant for innovative or alternative wastewater treatment systems shall receive 20% in excess of the prevailing Federal cost-sharing at the time the grant is made, but not in excess of a 85% Federal share.

Section 6. Extends the authorization period for the innovative and alternative wastewater treatment program.

Section 7. Provides that a Governor may use a portion of his allotment for treatment of combined sewer overflows upon demonstrating to the Administrator that the water quality goals of the Act will not be achieved without such treatment.

Additionally it amends the Act to include a new provision by which the Administrator, upon the demonstration of need by the Governor of a State, may fund the necessary facilities to correct combined sewer overflows where the receiving waters will not be improved by other methods or wastewater treatment. It is restricted to those facilities discharging into bays and estuaries.

This section also allows Governors to utilize federal funds for the construction of sewage collection systems when several criteria are met. Funding of collection systems in communities of 3500 can continue through FY 1982 when the needs of the 1980 population are being addressed and the system is needed to correct an existing discharge into ground or surface waters. It also allows sewage collection facilities which received step 5 grants prior to October 1, 1981 and not the same criteria as the small communities provision to complete the planned facility.

Section 8. The combined grant ceiling is raised from $4 million to $8 million and turned into a turn key program.

Section 9. Provides that after enactment of the 1981 amendments, no grant shall include any Federal funds for meeting the needs of population beyond that included in the 1980 Census unless the facility received approval to proceed with steps prior to September 30, 1981 and which receives a construction grant for a phase of the project prior to October 1, 1983.

Section 10. Amends the Act by deleting the reference to "two brand names or equal" in 204(a) 6 and inserts in lieu thereof "or equal".

Section 11. Amends the Act to require that the prime consultant to a grantee remains on the site for one year following start-up to certify to EPA and the appropriate agency that the treatment works is in compliance with its permit.

It also provides for no Federal preemption of any state or local requirements.

Section 12. Provides an allocation of funds among the states for four years. For the first three years, 1982, 1983, and 1984 the funds will be allotted in accordance with categories I, II, and IV b, with a descending hold harmless provision of 90, 85 and 80 percent of the recently completed EPA Needs Survey. Beginning in 1985, funds will be allotted among the states based on the impact of publicly owned treatment works on water quality. No state would receive less than one-half percent.

Section 13. Provides that state management assistance grants will be negotiated by the Administrator with each state. The amount of each grant shall be directly related to the unexpended obligations and unobligated allotments available to each state.

Section 14. Amends section 205 to allow states to use construction grant funds similarly to state management assistance grants either at the state level or through areawide planning agencies to assist in relating investment decisions to water quality needs.

Section 15. Provides that for the innovative and alternative program a state shall expend at a minimum, 4 percent of its allocation in each fiscal year for innovative and alternative treatment systems.

Section 16. Authorizes $2.4 billion per year for the construction grants program for each of the four years authorized by this Act.

Section 17. Requires the states to restructure their priority lists to give priority to those projects which will have the most significant benefits in public health and water quality.

Section 18. Requires EPA and the states to complete revision of water quality standards within three years of enactment in order to participate in the program.

Section 19. Extends the deadline for the uniform achievement of secondary treatment by municipalities through the municipal waste discharge permit program. It does not affect those facilities which are on schedule and will be completed prior to that date. In addition, Section 19 removes the best practicable waste treatment technology standard for municipalities from Sec. 301.

Section 20. Provides that facilities such as oxidation ponds, lagoons, trickling filters and devices to treat waste waters from combined sewers will be considered the equivalent of secondary treatment when they can make certain demonstrations to the Administrator.

Section 21. Requires the Administrator of the Environmental Protection Agency to report to the Congress concerning the impact of these amendments on the cost of completing the Federal wastewater treatment effort. This report is to be transmitted to the Congress within 18 months of enactment of these amendments.

Section 22. A technical amendment which corrects several misprints in Section 116(b) of the Clean Water Act.

Mr. CHAFEE. Before closing I want to thank the full committee chairman, BOB STAFFORD, and the ranking minority member, JENNINGS RANDOLPH, for assisting me in getting this bill before the Senate today. As usual, their contributions to S. 1716 were substantial and their input was appreciated. I also want to thank Senators MITCHELL and GORTON for attending all the hearings and mark-ups and giving the subcommittee activities their undivided attention.

I am hopeful that we can enact this needed legislation rapidly so that the States with programs left unfunded or nearly unfunded will not experience an unnecessarily prolonged delay in funding needed projects.

There are three technical amendments that I am pleased to offer for the committee. The amendments are technical in nature and do not address the substance of S. 1716 and are being done on behalf of Senator STAFFORD and Senator CRANSTON.

Mr. RANDOLPH. Mr. President, today the Senate considers S. 1716, the Clean Water Act Amendments of 1981. I support this legislation, which authorizes significant changes in the construction grant program which is contained in title II of the act. As one of the original authors of the Clean Water Act of 1972, I have watched the progress of this program carefully over the years. Its positive achievements are many, and have

resulted in calculable improvements to the waters of our Nation.

The basic goals of the Clean Water Act and the construction grant program, that of preventing further degradation of our water and the cleanup of existing pollution, have been found valid. This legislation does not in any way alter those goals. It does, however, provide the means by which our objectives may be met with fewer Federal dollars. The reduced Federal share and the reduction of eligible project categories, mandated in this bill, will place an increased burden on the States. The time originally thought to be required for the achievement of acceptable water quality will probably be lengthened. This is unfortunate, but necessary, in the face of current economic constraints.

With regard to the reduced project categories eligible for Federal funding under this legislation, I wish to highlight one particular category—collector sewers. In the bill which was developed by the Subcommittee on Environmental Pollution, collector sewers were eliminated from eligibility for assistance under the Clean Water Act. I felt this to be ill-advised.

Since the inception of the construction grant program, Federal funds have been available to help communities build collector sewers as part of their overall treatment systems. This authority has been invaluable, particularly to smaller communities such as in West Virginia and other States, where collectors are the most viable treatment systems. Many of these smaller communities do not have the economic basis to finance sewer construction without Federal assistance.

The importance of Federal assistance for collector sewers is illustrated by the fact that prior to 1972, the State of West Virginia frequently was unable to use all of the water pollution control funds allocated to it. Since that time, however, with the authority to construct collectors, every cent available to that State has been utilized. In recent years, approximately two-thirds of the money for West Virginia's construction grant needs has been used to provide collector sewers, primarily for small, rural communities. The State of West Virginia now has requests from communities for water quality projects totaling $305 million, of which $180 million is for collectors.

West Virginia is not the only State in this position. Many other States with large numbers of smaller communities would suffer if collector sewers were summarily removed from project eligibility. I, therefore, offered an amendment at the full committee level to restore collector sewer eligibility, but in a far more limited manner than in existing law. As adopted by the committee, the amendment would allow communities of less than 3,500 population to continue to construct collectors.

This authority, however, would extend only through fiscal year 1982. Funds to be used for this purpose must be obligated prior to October 1, 1982; fiscal 1981 funds may also be used. The funding is to come from the section 205 funds allocated to the pertinent State.

The amendment further limits funding for collector sewers to circumstances in which the public health is threatened from existing discharges into ground or surface water; such condition is included in a State's priority list; sufficient demonstration is made that a collector sewer is geologically and technically preferable to other systems; and that it is the most cost-effective alternative. These conditions assure that such collector sewers will be constructed to serve existing needs and not future growth.

I emphasize that this amendment will in no way increase the cost of this legislation. Any funds expended for collector sewers would come from a State's regular allocation and only at the request of the Governor.

This amendment will insure that smaller communities with imperative water pollution control needs may continue, for a short time, to use construction grant funds for the construction of collector sewers.

Another aspect of this legislation which I emphasize is the continuation of incentives for projects employing innovative and alternative technology. These systems usually have lower capital and energy requirements. The committee has encouraged their use since the 1977 amendments by providing up to 85 percent Federal funding and by mandating a 3-percent State set-aside annually for such systems.

In recognition of the importance the committee attaches to innovative and alternative technology, this legislation continues the higher funding even with the reduced level of overall Federal support. In addition, the percentage of allocated funds to be earmarked by States for funding such systems is raised from 3 percent to 4 percent.

I believe in the importance of developing innovative and alternative systems as the most promising tool for the encouragement of new, low-cost technology for communities, and I heartily endorse these aspects of this legislation.

In closing, Mr. President, I commend the Members of the Committee on Environment and Public Works for their efforts in the development of this legislation. The Subcommittee on Environmental Pollution, chaired by the able Senator JOHN CHAFEE, held extensive hearings on the construction grant program. As ranking minority member of the subcommittee, Senator GEORGE MITCHELL deserves special note for his diligence in participating in the hearing and markup sessions on this legislation.

Subsequent to subcommittee markup, the measure was considered at full committee, where Chairman ROBERT STAFFORD made significant contributions to the bill. I commend these and all the other members of the Environment and Public Works Committee for the time and diligence directed toward development of the Clean Water Act Amendments of 1981. Mr. President, I urge the speedy approval of this important legislation.

Mr. ABDNOR. Mr. President, I would like to rise in strong support of S. 1716, to amend the Clean Water Act.

The distinguished chairman and ranking minority member of the Environmental Pollution Subcommittee, Mr. CHAFEE and Mr. MITCHELL, and the distinguished chairman and ranking minority member of the full committee, Mr. STAFFORD and Mr. RANDOLPH, have done an outstanding job in working with members of the committee to develop much-needed reforms of the EPA municipal wastewater treatment construction grant program. The revisions agreed to by the committee represent a bipartisan effort to meet the basic objectives set forth by the administration, while enabling us to move forward with the original intent of this program, which is to clean up our Nation's existing water pollution problems. As chairman of the Subcommittee on Water Resources, I am firmly committed to the preservation of this extremely valuable, and finite, resource.

I would like to remind my colleagues that if this body fails to pass a reform package acceptable to the administration, we will see the end of this vitally important program. Further, I would like to point out that in view of the expansive eligibility provisions being considered by the other body, it is imperative that we approve the measure before us today.

Through enactment of this well-balanced legislation, the efforts made by your States and mine will continue, making possible significant improvement in our Nation's water quality. Again, I commend the leadership of the Committee on Environment and Public Works and I ask my colleagues to join me in support of S. 1716.

Mr. STAFFORD. Mr. President, I would like to add a few words to those of the distinguished manager of the bill, Senator CHAFEE, in support of S. 1716, to amend and reauthorize the municipal wastewater treatment construction grants program. In a year in which the Senate's legislative activity seems little more than wave after relentless wave of revisions to the Federal budget, we have produced a bill that does more than reauthorize a familiar program at reduced levels of Federal spending. We have reshaped and refined one of history's most ambitious efforts in public construction to more effectively achieve its purpose: to help our cities improve the quality of the waters of the United States.

It is a credit to Senator CHAFEE's skill and determination as chairman of the Environmental Pollution Subcommittee that the difficult task of trying to do more with less has been received by the committee and by the Senate with such a broad base of acceptance.

This is in part due to the extensive hearings and consultation that the committee has sought with Governors and mayors, State and local environmental officials, affected industries and engineering professionals, environmental and other public interest groups. It is also due to the desire of Congress to respond constructively to the mandate to reduce Federal spending and more efficiently deploy what Federal financial resources are available.

I believe that we have succeeded in

applying the economic themes articulated by the Reagan administration to this major Federal program. We have included in this bill most of what the President requested in the way of reforms of the construction grants program.

Importantly, it authorizes $2.4 billion in fiscal 1982, exactly the level the President is pledged to request when program reforms are finally enacted. The pending bill, over the next 4-year reauthorization period, will eliminate the Federal subsidy for constructing expensive reserve capacity, that is more appropriately a local responsibility. Federal funding will henceforth be targeted to those construction activities that most effectively treat and abate water pollution.

The bill also gradually reduces the Federal cost-share over the next few years from the current 75 percent to 55 percent. For all these changes, however, a transition period is provided for projects that are so far along in the planning stage that disruption would prove costly to the overall program.

The committee also removed the uncertainty associated with the eligibility of industrial treatment costs for users of municipal plants. Only the capacity to treat existing discharges from industrial polluters will be eligible for Federal assistance under the bill. Although the treatment of industrial wastewater places considerable financial demands on the limited resources in this program, which was of great personal concern to me throughout our consideration of this bill, the costs of this industrial treatment provision will be minimized by virtue of the other reforms included in the bill.

In particular, the fact that a subsidy for anticipated or unplanned reserve capacity is no longer allowed, and that the Federal share will be declining, will encourage potential industrial users to more carefully evaluate treatment alternatives and water conservation to keep total costs down.

The purpose of our amendment to section 511 is to make it clear that the Clean Water Act and other statutes do not displace, preempt, or in any other way disturb the Federal common law unless by their clear language they say so. This provision is similar to one inserted in the Comprehensive Environmental Response, Compensation, and Liability Act passed by the Congress last year, and is necessitated by the Supreme Court decision in City of Milwaukee against Illinois, which was decided in April of this year.

In that case, the Supreme Court held that in the absence of express language preserving the Federal common law, the statute displaced it. The effect of the decision is to convert what amounts to, at the worst, a congressional oversight into an affirmative act of repeal. It has never been our intention to repeal, displace, or modify another law unless we so state. That is especially true of the common law, which has painstakingly evolved over centuries of decisions.

Therefore, this amendment corrects a misreading of congressional intent and assures that the regulatory program under the Clean Water Act does not displace other Federal law, including common law. The amendment also corrects a similar misinterpretation in Middlesex County Sewerage Authority, et al. against National Sea Clammers Association, regarding private actions in cases of violations of a Federal regulatory program.

The amendment, however, does not permit the litigants in those cases to reopen them by virtue of this clarification. In cases such as Milwaukee where the final determination has been made, the litigants must now live with it, unless there are legitimate reasons not created by this amendment to reopen or otherwise revive the suits.

I genuinely believe that this is a bill worthy of the support of the Senate, and of the President's approval. It is critical to securing an appropriation for fiscal year 1982, without which many if not most States will confront a total shutdown of their municipal water quality programs. This would be undesirable and is unnecessary.

Progress on the legislation was greatly enhanced by the helpful and cooperative spirit of Dr. John Hernandez, Deputy Administrator of the Environmental Protection Agency and other administration officials. I am confident that we can continue to count on our excellent working relationship as we move through conference with the House.

Finally, I would like to say something about the Committee on Environment and Public Works itself. When I first came to this committee as its most junior minority member in the middle of the session in 1971, the very first bill I worked on was the landmark water pollution control legislation that became Public Law 92–500. That law created the multibillion-dollar municipal construction grants program. At the time, I realized that we were embarking on a very ambitious effort, though I doubt any of us knew just how expensive the municipal program would turn out to be.

Since then, Congress has appropriated nearly $35 billion to assist the Nation's cities and towns in this joint effort, and the States have contributed billions more. Even with the reforms included in this bill, we will need to spend nearly that much again to finish the job.

I recall in particular the cooperative, bipartisan spirit among members of the Committee on Environment and Public Works in that legislative effort. The 1971 water pollution bill was reported from the committee unanimously. It also passed the Senate unanimously. This was in no small part thanks to the gracious and thoughtful manner in which my friend, Senator JENNINGS RANDOLPH, guided the committee's work as its chairman in those days.

That was 10 years ago this month. I now find myself the chairman of this same committee, working on a legislative descent of the original bill that served the environmental protection revolution of the 1970's. We are still waging that fight and we continue to have the support of most Americans in our effort to restore environmental quality to our air, water, and physical surroundings. Even though problems with inflation and productivity have required us to alter our environmental strategy from time to time, we remain determined to achieve our original goals that would restore the integrity of the Nation's waters and support its best uses by our people.

It is personally gratifying to me that we as a committee remain united and directed toward these goals. This bill was reported unanimously from the committee several weeks ago, and I know of no opposition to it that has developed since in the Senate. I want to especially thank Senator RANDOLPH for his personal contribution and the cooperation of the minority members in this effort. It is a little more difficult to write legislation in the present economic environment, when we must necessarily be less generous than we would like to be, than it was 10 years ago. I recall that our side gave you its wholehearted support in those days and I am doubly grateful for your support in these more challenging times.

I also recall that the Federal Water Pollution Control Act Amendments of 1972 were enacted over the veto of then-President Richard Nixon. I am confident that the Clean Water Act of 1981 will be a law that President Reagan will be happy to sign. I intend to work toward that end.

Mr. BAKER. Mr. President, I rise in support of S. 1716—the Clean Water Act Amendments of 1981. I heartily commend the Committee on Environment and Public Works for their expeditious action to reform the wastewater treatment program. The committee has responded quickly and thoughtfully to the President's challenge to reduce the scope and eligibilities of this program.

The wastewater treatment program is a necessary component of the overall program to clean up all the waters of this country sufficiently to support aquatic life and recreation. From the beginning, this program has had major difficulties in accomplishing the goals the Congress intended. Abuses of the program and lack of sufficient progress are often cited by critics of the program. The committee bill addresses these problems and the purpose of the reforms in the bill is to correct these abuses and to facilitate reasonable progress.

It is imperative that we enact these reforms quickly because funds will not be available for the wastewater treatment program until appropriate reforms have been enacted. Unless we adopt the needed reforms and funds are provided, many areas will have to cease or severely curtail their efforts to achieve a higher level of wastewater treatment.

The bill before the Senate authorizes funding for this program for 4 years. I support multiyear funding because it will provide much-needed stability and continuity to this program. States will be better able to plan and construct their facilities and reach the goals and objectives of this part of the Clean Water Act with the knowledge of continued availability and extent of funding.

S. 1716 encompasses the reforms in the Clean Water Act which the administration has cited as necessary for funding this year. Once the Senate acts

on these reforms, I would urge the committee to preserve these reforms through Conference with our colleagues in the House to insure that funding for this needed program will occur this year.

UP AMENDMENT NO. 542

Mr. BAKER. Mr. President, I send to the desk an amendment on behalf of the Senator from Rhode Island (Mr. CHAFEE), and the Senator from Vermont (Mr. STAFFORD) and the Senator from California (Mr. CRANSTON).

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Tennessee (Mr. BAKER), for Mr. CHAFEE, Mr. STAFFORD, and Mr. CRANSTON, proposes an unprinted amendment numbered 542.

Mr. BAKER. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 1, line 5, after "2." insert "(a)".

On page 3, after line 6, insert the following:

"(b) Section 201 of the Clean Water Act is amended by adding the following new subsection:

"(m) Notwithstanding any other provisions of this title, the Administrator is authorized to make a grant from any funds otherwise allotted to the State of California under section 205 of this Act to the pro'ect (and in the amount) specified in Order WQG 81-1 of the California State Water Resources Control Board."

On page 7, line 1, strike "The" and insert in lieu thereof "Beginning fiscal year 1983, the".

On page 18, after line 12, insert the following new section:

"SEC. 23. (a) Section 511 of the Clean Water Act is amended by adding a new subsection (e):

"(e) Nothing in this Act shall be construed, interpreted or otherwise deemed to displace, restrict, limit, affect, or modify in any way the obligations or liabilities of any person, or the right to seek abatement or damages, under other Federal or State law, including common law."

(b) The amendment to the Clean Water Act made by subsection (a) of this section shall not be the basis for reopening any judicial proceeding finally ad'udicated prior to the date of enactment of this section."

Mr. CRANSTON. Mr. President, I am very pleased that the Clean Water Act reauthorization bill before us, S. 1716, includes a provision to authorize funding for the expansion of the Bayview/Hunter's Point sewage treatment project in San Francisco, Calif. This project is being built to help bring San Francisco into compliance with the Clean Water Act.

At the time the city of San Francisco proposed expanding the sewage treatment facility in the Bayview/Hunter's Point area, there was considerable local community opposition because of the fear that the project would lead to renewed deterioration of the area which is the poorest in the city. EPA in its environmental evaluation of the plant identified numerous adverse effects on the community including odors, visual impacts, disruption to the community during construction, and ongoing traffic and noise impacts during the operation of the plant.

In response to these concerns, San Francisco proposed that a playground be placed on top of the sewage treatment plant as a mitigation measure at a cost of $11 million. The California State Water Resources Control Board, which acts as EPA's representative in determining grant eligibility in California, made a favorable grant eligibility determination and commitment to an $11 million playground project on March 24, 1976 (Order WQG 76-6).

Later because of citizen concern about safety of children playing on top of a sewage treatment plant, the playground mitigation was changed to a greenhouse/skills training center at a cost of $15 million. The greenhouse/skills center is to be constructed next to the sewage treatment plant and connected to the facility by pipes which will carry methane to heat the center and use sludge from the facility as fertilizer for the greenhouse. The center will also provide job training for youthful residents of the Bayview/Hunter's Point area. A favorable grant eligibility determination and commitment to a $15 million greenhouse/skills training project was made by the State on January 22, 1981 (Order WQG 81-1).

On the basis of both the 1976 and the 1981 commitments by the State, San Francisco began construction of the expansion of the Bayview/Hunter's Point Sewage Treatment Plant and gave considerable publicity to the fact that the greenhouse/skills center would be built as mitigation. New portions of the plant are now partially operational.

However, EPA recently notified San Francisco that the greenhouse/skills center would not be eligible for grant funding under the Clean Water Act. This notification was made in spite of the prior grant commitments by the California State Water Resources Control Board of which EPA was fully aware.

Both the State and San Francisco continue to believe that the mitigation work is grant eligible. Moreover, they would like to keep their commitments to the Bayview/Hunter's Point community and avoid lengthy litigation by area residents. I fully concur that there are strong equities supporting funding of the greenhouse/skills training center as part of the Bayview/Hunter's Point sewage treatment facility expansion project.

Thus, I am deeply appreciative of the assistance of the distinguished Senator from Rhode Island (Mr. CHAFEE) in including in the Clean Water Act Reauthorization a provision which would permit the California State Water Resources Control Board to fund this San Francisco project out of the State's share of clean water funds. The provision does not increase expenditures under the bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Tennessee.

The amendment (UP No. 542) was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed as follows:

S. 1716

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Clean Water Act Amendments of 1981".

SEC. 2. (a) Section 201 of the Clean Water Act is amended by adding a new subsection (l):

"(l)(1) After October 1, 1981, Federal grants shall not be made for the purpose of providing assistance solely for facility plans, or plans, specifications and estimates for any proposed project for the construction of treatment works. In the event that the proposed project receives a grant under this section for construction, the Administrator shall make an allowance in such grant for non-Federal funds expended during the facility planning and advanced engineering and design phase at the prevailing Federal share under section 202(a) of this Act, based on the percentage of total project costs which the Administrator determines is the general experience for such projects.

"(2)(A) Each State is authorized to use a portion of the funds allotted to such State each fiscal year, but not to exceed 10 per centum of such funds, to establish a revolving fund from which such State may advance to a potential grant applicant under this title the costs of facility planning or the preparation of plans, specifications, and estimates.

"(B) Such an advance shall be limited to the allowance for such costs which the Administrator establishes under paragraph (1) of this subsection, and shall be provided only to a potential grant applicant who in the judgment of the State would otherwise be unable to prepare a request for a grant for construction costs under this section.

"(C) In the event a grant for construction costs is made under this section for a project for which an advance has been made under this paragraph, the Administrator shall reserve from such grant the allowance established under paragraph (1) of this subsection and transfer it to the State for replenishment of the revolving fund established under this paragraph. In the event no such grant is made, the State is authorized to seek repayment of such advance on such terms and conditions as it may determine."

(b) Section 201 of the Clean Water Act is amended by adding the following new subsection:

"(m) Notwithstanding any other provisions of this title, the Administrator is authorized to make a grant from any funds otherwise allotted to the State of California under section 205 of this Act to the project (and in the amount) specified in Order WQG 81-1 of the California State Water Resources Control Board.".

SEC. 3. (a) Section 202(a)(1) of the Clean Water Act is amended by striking "shall be 75 per centum" and inserting in lieu thereof "and before September 30, 1981, shall be 75 per centum, for any fiscal year beginning after September 30, 1981, and before September 30, 1984, shall be 65 per centum, and for any fiscal year beginning after September 30, 1984, shall be 55 per centum".

(b) The amendment to section 202(a)(1) of the Clean Water Act made by subsection (a) of this section shall apply only to grants other than for projects (1) which received grant approval to prepare construction plans and specifications before September 30, 1981, (2) which are subject to a consent decree or other Federal judicial mandate entered on or before December 31, 1980, and for which grants for construction of one or more segments of such project have been approved prior to September 30, 1981, or (3) which had obtained voter approval for the bond financing of the local share prior to July 1, 1981, and receives a grant for construction costs before July 1, 1985.

SEC. 4. Paragraph (1) of section 202(a) of the Clean Water Act is amended by adding the following new sentence before the last sentence thereof: "Notwithstanding any other provision of this Act, for purposes of

this section and section 201(g)(1) of this title, grants for treatment works shall be limited to the following categories of projects: secondary treatment or more stringent treatment, or any cost-effective alternative thereof, and new interceptors and appurtenances.".

SEC. 5. The first sentence of section 202(a)(2) of the Clean Water Act is amended to read as follows: "The amount of any grant made after September 30, 1978, for any eligible treatment works or significant portion thereof utilizing innovative or alternative wastewater treatment processes and techniques referred to in section 201(g)(5) shall be a percentage rate of the cost of construction thereof 20 per centum greater than the rate established by paragraph (1) of this subsection or the modified uniform percentage rate in which the Administrator has concurred pursuant to such paragraph, but in no event greater than 85 per centum of the cost of construction thereof.".

SEC. 6. Section 202(a)(4) of the Clean Water Act is amended by striking the words "in the fiscal years ending September 30, 1979, September 30, 1980, and September 30, 1981".

SEC. 7. Section 202(a) of the Clean Water Act is amended by adding new paragraphs as follows:

"(5) Prior to October 1, 1982, upon the request of the Governor of an affected State, the Administrator is authorized to use funds available to such State under section 205 to assist new sewage collection systems in existing communities, which are not otherwise eligible under this subsection, where—

"(A) such systems are proposed for municipalities less than 3,500 in population;

"(B) such systems are necessary to protect the public health from existing discharges into ground or surface water;

"(C) correction of such public health problems in such communities is a major priority for such State; and

"(D) the applicant can demonstrate that a system of collection and central treatment is preferable to individual onsite or cluster treatment units because of physical and technical limitations in the area or because collection and central treatment is the most cost-effective alternative.

"(6) Upon the request of the Governor of an affected State, the Administrator is authorized to use funds available to such State under section 205 to assist a new sewage collection system serving the population as of 1980 in an existing community, which is not otherwise eligible under this subsection, where—

"(A) a grant for construction of a portion of such collection system has been approved before October 1, 1981;

"(B) such system is necessary to protect the public health from existing discharges into ground or surface water;

"(C) correction of such public health problems in such community is a major priority for such State; and

"(D) the applicant can demonstrate that a system of collection and central treatment is preferable to individual onsite or cluster treatment units because of physical and technical limitations in the area or because collection and central treatment is the most cost-effective alternative.

"(7)(A) Upon the request of the Governor of an affected State, the Administrator is authorized to use funds available to such State under section 205 to address water quality problems due to the impacts of discharges from combined storm water and sanitary sewer overflows, which are not otherwise eligible under this subsection, where correction of such discharges is a major priority for such State.

"(B) Beginning fiscal year 1983, the Administrator shall have available $200,000,000 per fiscal year in addition to those funds authorized in section 207 of this Act to be utilized to address water quality problems of marine bays and estuaries subject to lower levels of water quality due to the impacts of discharges from combined storm water and sanitary sewer overflows from adjacent urban complexes, not otherwise eligible under this subsection. Such sums may be used as deemed appropriate by the Administrator as provided in paragraphs (1) and (2) of this subsection, upon the requests of and demonstration of water quality benefits by the Governor of an affected State."

SEC. 8. Section 203(a) of the Clean Water Act is amended by striking "$4,000,000" and inserting in lieu thereof "$8,000,000". The last sentence of section 203(a) is hereby repealed.

SEC. 9. (a) Section 204(a)(5) of the Clean Water Act is amended to read as follows:

"(5) that the size and capacity of such works relate to the needs to be served by such works, including sufficient reserve capacity, except that no grant, other than for facility planning and the preparation of construction plans and specifications (to the extent provided under section 202(1) of this Act), shall be made under this title to construct that portion of the treatment works providing reserve capacity. This limitation on grants for the construction of reserve capacity shall not apply to grants for projects which received grant approval to prepare construction plans and specifications before September 30, 1981, and for which grants for construction of one or more segments of the treatment works are approved prior to October 1, 1983. The size and capacity of the treatment works eligible for a grant under this title shall be determined by the Administrator based upon the 1980 population statistics as reported by the United States Department of Commerce: *Provided, however,* That the total eligible design flow capacity of a treatment works may include existing industrial flows as determined by the Administrator; and".

(b) Section 201(k) of the Clean Water Act is amended to read as follows:

"(k) No grant made after November 15, 1981, for a publicly owned treatment works, other than for facility planning and the preparation of construction plans and specifications, shall be used to treat, store, or convey the flow of industrial users into such treatment works in excess of the existing flows from such industrial users. This subsection shall not apply to any project proposed by a grantee which is carrying out an approved project to prepare construction plans and specifications for a facility to treat wastewater, which received its grant approval before May 15, 1980.".

SEC. 10. Section 204(a)(6) of the Clean Water Act is amended by striking ", or at least two brand names or trade names of comparable quality or utility are listed and are followed by the words 'or equal'" and by adding at the end thereof the following: "When in the judgment of the grantee, it is impractical or uneconomical to make a clear and accurate description of the technical requirements, a 'brand name or equal' description may be used as a means to define the performance or other salient requirements of a procurement, and in doing so the grantee need not establish the existence of any source other than the brand or source so named.".

SEC. 11. Section 204 of the Clean Water Act is amended by adding the following new subsection:

"(c)(1) A grant for the construction of treatment works under this title shall provide that the engineer or engineering firm supervising construction or providing architect engineering services during construction shall continue its relationship to the grant applicant for a period of one year after the completion of construction and initial operation of such treatment works. During such period such engineer or engineering firm shall supervise operation of the treatment works, train operating personnel, and prepare curricula and training material for operating personnel. Costs associated with the implementation of this paragraph shall be eligible for Federal assistance in accordance with this title.

"(2) On the date one year after the completion of construction and initial operation of such treatment works, the owner and operator of such treatment works shall certify to the Administrator whether or not such treatment works meet the design specifications and effluent limitations contained in the grant agreement and permit pursuant to section 402 of the Act for such works. If the owner and operator of such treatment works cannot certify that such treatment works meet such design specifications and effluent limitations, any failure to meet such design specifications and effluent limitations shall be corrected in a timely manner, to allow such affirmative certification, at other than Federal expense.

"(3) Nothing in this section shall be construed to prohibit a grantee under this title from requiring more assurances, guarantees, or indemnity or other contractural requirements from any party to a contract pertaining to a project assisted under this title, than those provided under this subsection.".

SEC. 12. (a) Section 205(c) of the Clean Water Act is amended by inserting "(1)" after "(c)" and by adding the following new paragraph:

"(2) Sums authorized to be appropriated pursuant to section 207 for the fiscal years 1982, 1983, and 1984 shall be allotted for each such year by the Administrator not later than the tenth day which begins after the date of enactment of the Clean Water Act Amendments of 1981. Sums authorized to be appropriated pursuant to section 207 for the fiscal year 1985 shall be allotted for such year by the Administrator no later than September 30, 1984. Sums authorized for fiscal years 1982, 1983, and 1984 shall be allotted in accordance with the following table:

"States	Fiscal year— 1982	1983	1984
Alabama	0.011398	0.010764	0.010131
Alaska	.006656	.007044	.007271
Arizona	.006885	.006502	.006120
Arkansas	.006668	.006298	.005927
California	.070569	.066648	.067392
Colorado	.008154	.007701	.007248

Sums authorized for fiscal year 1985 shall be allotted among the States in accordance with the relative effect of eligible publicly owned treatment works on water quality in each State, based on water quality standards and total maximum daily loads of pollutants established under section 303 of this Act and reports of water quality submitted under section 305(b) of this Act.".

(b) Section 205(e) of the Clean Water Act is amended by striking "and 1981" each place it occurs and inserting in lieu thereof "1981, 1982, 1983, 1984, and 1985".

SEC. 13. Section 205(g) of the Clean Water Act is amended by adding the following new sentence after the first sentence of paragraph (1): "From sums authorized for each fiscal year beginning on or after October 1, 1981, the Administration is authorized to reserve from the allotment for each State for each such fiscal year an amount not to exceed 1 per centum of the sum of the unexpended obligations and the unobligated allotment available to such State as of the first day of such fiscal year, or $400,000, whichever amount is the greater.".

SEC. 14. Section 205(g) of the Clean Water Act is amended by adding the following new paragraph:

"(3) The Administrator is authorized to reserve for each State each fiscal year an additional one-half of 1 per centum of the sum of the unexpended obligations and the unobligated allotment available to such State as of the first day of such fiscal year, or $100,000 whichever amount is greater, for the purpose of (A) making water quality management decisions as to what publicly owned treatment works should be constructed with assistance under this title, in which areas and in what sequence, taking into account the relative degree of effluent reduction attained, the relative contributions to water quality of other point or nonpoint sources, and the consideration of alternatives to such construction, and (B) implementing section 303(e) of this Act. The State is authorized to make available funds under this paragraph to multijurisdictional agencies or local governments which the State determines have the necessary technical expertise to assist in performing the tasks under this paragraph.".

SEC. 15. Section 205(i) of the Clean Water Act is amended by—

(a) striking "and September 30, 1981," in the first sentence and inserting in lieu thereof "September 30, 1981, September 30, 1982, September 30, 1983, September 30, 1984, and September 30, 1985,";

(b) inserting before "a total of" in the second sentence the phrase "not less than";

(c) inserting after "September 30, 1981," in the second sentence the phrase "and 4 per centum for each fiscal year beginning after September 30, 1981,";

(d) striking "subsection (a) of" each place it occurs; and

(e) striking "from 75 per centum to 85 per centum" each place it occurs.

SEC. 16. Section 207 of the Clean Water Act is amended by striking from "September 30, 1981," through the end of the sentence and inserting in lieu thereof "September 30, 1981, not to exceed $5,000,000,000 per fiscal year, and for the fiscal years ending September 30, 1982, September 30, 1983; September 30, 1984, and September 30, 1985, not to exceed $3,400,000,000 per fiscal year.".

SEC. 17. Section 216 of the Clean Water Act is amended to read as follows:

"SEC. 216. Notwithstanding any other provision of this Act, the determination of the priority to be given projects for construction of publicly owned treatment works within each State shall be made by that State, consistent with this title. Only projects eligible for funding under section 201 of this title, as defined in section 202, shall be included on a State's priority list. A State, in determining the priority to be given a project, shall give highest priority to projects which demonstrate that significant public health or water quality benefits will be achieved, and in particular to projects having the greatest effect on the improvement of water quality.".

SEC. 18. The review, revision, and adoption or promulgation of revised or new water quality standards pursuant to section 303(c) of the Clean Water Act and, to the extent practicable, the establishment of total maximum daily loads of pollutants pursuant to section 303(d) of the Clean Water Act shall be completed by the date three years after the enactment of the Clean Water Act Amendments of 1981. No grant shall be made under title II of the Clean Water Act after such date until water quality standards are reviewed and revised pursuant to section 303(c) and total maximum daily loads of pollutants established pursuant to section 303(d) for the waters affected by the project for which such grant is requested, except where the State has in good faith submitted such revised water quality standards and total maximum daily loads of pollutants and the Administrator has not acted to approve or disapprove such submission within one hundred and twenty days of receipt.

SEC. 19. (a) Section 301(i) of the Clean Water Act is amended by striking "July 1, 1983," and inserting in lieu thereof "July 1, 1988,". The amendment made by this subsection shall not be interpreted or applied to extend the date for compliance with section 301(b)(1)(B) or (C) of the Clean Water Act beyond schedules for compliance in effect as of the enactment of this Act, except in cases where reductions in the amount of financial assistance under this Act or changed conditions affecting the rate of construction beyond the control of the owner or operator will make it impossible to complete construction by July 1, 1983.

(b) Section 301(b)(2) of the Clean Water Act is amended by striking subparagraph (B).

(c) It is the sense of the Congress that any court with supervision over a consent degree or other court order establishing a deadline, schedule, or timetable for the construction or completion of sewage treatment works take judicial notice of the amendments to the Clean Water Act made by sections 2, 3, 4, 9, 17, and 20 of this Act, the reduced level of authorizations under section 207 of the Clean Water Act, and the extensions of final compliance date possible under the amendment made by subsection (a) of this section, in considering modifications of such deadline, schedule, or timetable.

SEC. 20. Section 304(d) of the Clean Water Act is amended by adding the following new paragraph:

"(4) For the purposes of this subsection, such biological treatment facilities as oxidation ponds, lagoons, and ditches, trickling filters, and devices to treat waste waters from combined storm and sanitary sewers shall be deemed the equivalent of secondary treatment. The Administrator shall provide guidance under paragraph (1) of this subsection on design criteria for such facilities, taking into account pollutant removal efficiencies and, consistent with the objective of the Act, assuring that water quality will not be adversely affected by deeming such facilities as the equivalent of secondary treatment.".

SEC. 21. Section 516 of the Clean Water Act is amended by inserting a new paragraph (f):

"(f)(1) The Administrator, in cooperation with the States, shall submit to the Congress a report (A) identifying those publicly owned treatment works needed to comply with sections 301(b)(1)(B) or (C), 201(g)(2)(A), and 201(g)(5) of this Act and with water quality standards established pursuant to section 303 of this Act, and (B) taking into account all actions of the Administrator pursuant to section 301(h) of this Act and amendments to title II of this Act made by the Clean Water Act Amendments of 1980 and of 1981, estimating the total cost and the amount of Federal funds necessary for the construction of such publicly owned treatment facilities.

"(2) The report required by this subsection shall be submitted to the Congress not later than eighteen months after the enactment of the Clean Water Act Amendments of 1981.".

SEC. 22. Section 116(b) of the Clean Water Act is amended by striking "(a)" and inserting in lieu thereof "(c)" each place it occurs.

SEC. 23. (a) Section 511 of the Clean Water Act is amended by adding a new subsection (e):

"(e) Nothing in this Act shall be construed, interpreted or otherwise deemed to displace, restrict, limit, affect, or modify in any way the obligations or liabilities of any person, or the right to seek abatement or damages, under other Federal or State law, including common law.".

(b) The amendment to the Clean Water Act made by subsection (a) of this section shall not be the basis for reopening any judicial proceeding finally adjudicated prior to the date of enactment of this section.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

VETERANS' ADMINISTRATION AND DEPARTMENT OF DEFENSE HEALTH-CARE RESOURCES SHARING ACT

Mr. BAKER. Mr. President, I would inquire of the minority leader if he is in position to consider at this time calendar 288, S. 266.

Mr. ROBERT C. BYRD. Mr. President, that measure has been cleared on this side of the aisle.

Mr. BAKER. Mr. President, I ask the Chair to lay before the Senate Calendar No. 288, S. 266, the Federal interagency medical resources bill.

The PRESIDING OFFICER. The clerk will state the bill by title.

The legislative clerk read as follows:

A bill (S. 266) to establish a Federal Inter-Agency Medical Resources Committee to insure the most efficient and effective use of Federal direct health care resources.

The Senate proceeded to consider the bill which had been reported from the Committee on Veterans' Affairs with an amendment to strike out all after the enacting clause and insert the following:

That this Act may be cited as the "Veterans' Administration and Department of Defense Health-Care Resources Sharing Act".

SEC. 2. (a) The Congress finds that—

(1) there are opportunities for greater coordination and sharing of the health-care resources of the Veterans' Administration and the Department of Defense which, if achieved, would be beneficial to veterans, members of the Armed Forces on active duty, and other health-care beneficiaries of the Veterans' Administration and the Department of Defense, and which could result in reduced costs to the Government by minimizing duplication and underutilization of health-care resources;

(2) there are not adequate incentives to encourage such coordination and sharing of health-care resources; and

(3) such coordination and sharing of health-care resources may be achieved without a detrimental effect on each agency's primary beneficiaries.

(b) The Congress further finds that—

(1) there might be situations during a period of war or national emergency in which the Department of Defense would not have adequate health-care resources; and

(2) the Veterans' Administration has an organized health-care system which could be used to assist the Department of Defense in meeting the medical contingencies which might occur during a period of war or national emergency.

SEC. 3. (a) There is established an interagency committee to be known as the Veterans' Administration/Department of Defense Health-Care Resources Coordination Committee (hereinafter referred to as the "Committee").

(b) The Committee shall be composed of the Chief Medical Director of the Veterans' Administration (hereinafter in this section referred to as the "Chief Medical Director") and the Assistant Secretary of Defense for Health Affairs (hereinafter in this section referred to as the "Assistant Secretary"), or their respective designees, and such other employees of the two agencies as they shall mutually designate.

(c) In order to promote the coordination of health-care services between the Veterans' Administration and the Department of Defense and to provide guidance to the two agencies in regard to the interagency sharing of health-care resources, the Committee shall on a continuing basis—

(1) review existing policies and practices in regard to the coordination and sharing of health-care resources (including administrative and support services) between the two agencies;

(2) identify and assess further opportunities for the coordination and sharing of health-care resources between the two agencies that will not adversely affect the quality of, or the established priorities for, care provided by either agency;

(3) develop and recommend to the Administrator of Veterans' Affairs and the Secretary of Defense changes in policies and procedures which would produce maximum feasible interagency coordination and sharing of health-care resources between the two agencies as authorized by title 38, United States Code;

(4) provide guidance for and monitor the implementation of activities designed to promote such coordination and sharing of health-care resources;

(5) monitor the plans of the two agencies to acquire additional health-care resources (including the location of new facilities and the acquisition of major equipment), and review the potential impact of such proposals on opportunities for such coordination and sharing; and

(6) develop, in consultation with such other agencies as the President may direct, a plan for the effective utilization of Veterans' Administration resources, as authorized in subsection (e) of section 5011 of such title (as added by section 4(a)(4) of this Act), to assist in meeting medical contingencies which might result from a period of war or national emergency.

(d) In carrying out the duties prescribed in this Act, the Assistant Secretary shall consult regularly with the surgeons general of the Army, Navy, and Air Force.

SEC. 4. (a) Section 5011 of title 38, United States Code, is amended—

(1) by amending the heading to read as follows:

"§ 5011. Sharing of Veterans' Administration and Department of Defense health-care resources";

(2) by inserting "(a)" before "The Administrator";

(3) by striking out "and material" and all that follows through "this title," and inserting in lieu thereof "material, and other resources as may be needed to operate such facilities properly, except that at no time shall the Administrator enter into any agreement which will result in a permanent reduction of Veterans' Administration beds below any minimum number prescribed by law"; and

(4) by adding at the end the following new subsections:

"(b) After considering the recommendations made under section 3(c)(3) of the Veterans' Administration and Department of Defense Health-Care Resources Sharing Act, the Administrator and the Secretary of Defense shall jointly establish guidelines for the sharing of health-care resources to the maximum extent feasible consistent with the health-care responsibilities of the Veterans' Administration and the Department of Defense under this title and title 10. Such guidelines shall be established not later than nine months after the date of enactment of this subsection, and (notwithstanding any other provision of law) shall include provisions for the following:

"(1) The director or the commanding officer of each health-care facility under the jurisdiction of either of the two agencies shall, to the maximum extent feasible, appropriate, and consistent with such respective responsibilities, enter into sharing agreements with the head of each health-care facility of the other agency in the same geographic area under which those eligible beneficiaries of one agency who are identified in the agreement may be provided health care at the facility of the other agency.

"(2) Each such agreement shall explicitly identify the health-care resources to be shared, the health care to be provided, and the beneficiaries to be treated. Resources to be shared may include any health-care resource.

"(3) Each such agreement shall ensure that the availability of direct health care to individuals who are not primary beneficiaries of the providing agency shall be on a referral basis from the facility of the other agency and shall not (as determined by the heads of the facilities concerned) adversely affect the range of services, quality of care, or priority for services provided to the primary beneficiaries of such providing agency.

"(4) Each such agreement shall be submitted on the same day to the Chief Medical Director and the Assistant Secretary of Defense for Health Affairs (hereinafter referred to as the 'Assistant Secretary') and shall become an interagency agreement (A) on the forty-sixth day following receipt by such officials, unless earlier disapproved by either such official, or (B) if earlier approved by both such officials, on the date of such approval.

"(5) Each such agreement shall provide that the agency providing the health-care services will be reimbursed by the other agency for the cost of care and services provided. Such reimbursement shall be based upon a methodology, agreed upon by the Chief Medical Director and the Assistant Secretary, which provides appropriate flexibility to the heads of the facilities concerned to take into account local conditions and needs and the actual costs to the facility being reimbursed. Such reimbursements shall be credited to appropriations available to the facility which provided such care or services.

"(c) The Administrator and the Secretary of Defense shall, each year at the time the President's Budget is transmitted to Congress, jointly submit a report to Congress on the implementation of subsection (b) of this section during the fiscal year that ended during the previous calendar year. Each such report shall include information with regard to—

"(1) the guidelines and any revisions thereof prescribed pursuant to subsection (b) of this section;

"(2) the assessment of opportunities, identified under section 3(c)(2) of the Veterans' Administration and Department of Defense Health-Care Resources Sharing Act, for coordination and sharing of health-care resources between the two agencies;

"(3) the recommendations, made under section 3(c)(3) of such Act, for changes in policies and procedures in order to produce maximum feasible interagency coordination and sharing of such resources as authorized by this title;

"(4) a review of the interagency sharing agreements entered into by health-care facilities of the two agencies;

"(5) the activities of the two agencies under such agreements;

"(6) other interagency coordination, planning, and activities involving either agency directed toward producing the maximum feasible efficient use of Federal health-care resources during the preceding fiscal year; and

"(7) such legislative recommendations as the Administrator and the Secretary of Defense consider appropriate to facilitate interagency sharing of health-care resources between and by the two agencies.

"(d) For the purposes of this section:

"(1) The term 'direct health care' means health care provided to a beneficiary in a facility operated by the Veterans' Administration or the Department of Defense.

"(2) The term 'beneficiary' means (A) a veteran or other person who is eligible under this title for health care in Veterans' Administration facilities, or (B) a member or former member of the Army, Navy, Air Force, or Marine Corps or other person who is eligible for medical and dental care under title 10.

"(3) The term 'providing agency' means the Veterans' Administration or the Department of Defense, as appropriate.

"(4) The term 'primary beneficiary' means (A) with respect to the Veterans' Administration a veteran or other person who is eligible under this title (other than by virtue of subsection (b) of this section) for health care in Veterans' Administration facilities, and (B) with respect to the Department of Defense a member or former member of the Army, Navy, Air Force, or Marine Corps or other person who is eligible for medical and dental care under title 10.

"(5) The term 'health-care resource' means any health-care support or administrative resource, including hospital care, medical services, and rehabilitative services as those terms are defined in paragraphs (5), (6), and (8), respectively, of section 601 of this title.

"(e)(1) During a period of war declared by the Congress or a period of national emergency declared by the President or the Congress which involves the use of the Armed Forces of the United States in armed conflict, notwithstanding any other provision of this title, the Administrator may (pur-

suant to regulations which the Administrator shall prescribe)—

"(A) give a higher priority to the furnishing of hosptial care, nursing home care, and medical services under chapter 17 of this title to members of the Armed Forces on active duty, to the extent authorized by this subsection, than to any other group of persons eligible for such care and services with the exception of veterans with service-connected disabilities; and

"(B) to the extent authorized by the President and subject to the availability of appropriations or reimbursements under paragraph (2)(B) of this subsection, contract with private facilities for the provision by such facilities of hospital care and medical services described in paragraph (2)(A) of this subsection during a period of war or national emergency as described in this paragraph.

"(2)(A) Hosptial care and medical services referred to in paragraph (1)(B) of this subsection are—

"(i) hospital care or medical services authorized under this title for a veteran and necessary for the care or treatment of a condition for which the veteran is receiving medical services under subsection (f) or (g) of section 612 of this title, in any case in which the delay involved in furnishing such care or services at the Veterans' Administration facility concerned would, in the judgment of the Chief Medical Director pursuant to regulations prescribed by the Administrator, be likely to result in a significant deterioration of that condition; and

"(ii) hospital care for a medical emergency which poses a serious threat to the life or health of a veteran eligible for such care under chapter 17 of this title, if the Chief Medical Director pursuant to regulations prescribed by the Administrator, finds that the Veterans' Administration facility concerned is utilizing a substantial portion of its hospital care capability for the furnishing of priority care to members of the Armed Forces under paragraph (1) of this subsection.

"(B) The cost of any care or services provided by the Veterans' Administration under paragraph (1) of this subsection shall be reimbursed to the Veterans' Administration by the Department of Defense at such rates as may be agreed upon by the Administrator and the Secretary of Defense based on the cost of such care or services provided. Amounts received under this paragraph shall be credited to appropriations available to the Veterans' Administration facility which provided such care or services.

"(3) Within ninety days after the declaration of a period of war or national emergency described in paragraph (1) of this subsection (or as soon after the end of such ninety-day period as is reasonably practicable), the Administrator shall submit to the committees a report on the allocation of facilities and personnel in order to provide priority hospital care, nursing home care, and medical services to members of the Armed Forces on active duty. Thereafter, the Administrator shall report periodically to the committees regarding the extent to which, and the circumstances under which, the authority to contract with private facilities provided in paragraph (1)(B) of this subsection is being used.".

(b) The item relating to such section in the table of sections at the beginning of chapter 81 is amended to read as follows:

"5011. Sharing of Veterans' Administration and Department of Defense health-care resources.".

(c) Not later than one hundred and eighty days after the date of the enactment of this Act, the Administrator of Veterans' Affairs shall enter into an agreement with the Secretary of Defense under which the Administrator and the Secretary shall agree to pursue planning activities and to establish procedures and guidelines under which subsection (e) of section 5011 of title 38, United States Code (as added by subsection (a) of this section), may be carried out.

Mr. SIMPSON. Mr. President, I rise in support of S. 266, the proposed "Veterans' Administration and Department of Defense Health-Care Resources Sharing Act." S. 266 is designed to promote the coordination and sharing of health-care resources between the Veterans' Administration and the Department of Defense in order to reduce costs while improving access to health care for beneficiaries of each agency. In addition, it would establish the Veterans' Administration health-care system as the primary reserve to the Department of Defense for treatment of combat casualties.

Mr. President, I wish to take this opportunity to first describe the basic peacetime provisions of S. 266.

The Veterans' Administration (VA) health-care system includes 172 hospitals and the Department of Defense (DOD) operates 124 hospitals. In addition, the two agencies have numerous clinics and related facilities under their jurisdictions. In the past they have pursued their respective missions independently even when facilities of the two agencies were in geographic proximity.

Some local administrators have exchanged resources either informally or under existing legislative authority, but this has not been done on a systematic basis.

Mr. President, my esteemed colleague, Senator CHARLES H. PERCY, has examined the possibilities for greater coordination and sharing of health-care resources as chairman of the Subcommittee on Energy, Nuclear Proliferation, and Government Processes. That committee has carefully reviewed Government Accounting Office, GAO, studies and held comprehensive hearings. The committee concluded that there is a tremendous potential for reducing Federal direct health care costs and enhancing the quality of care to beneficiaries through greater coordination among Federal providers, particularly the VA and DOD.

Subsequently, the Committee on Governmental Affairs reported out S. 266 which would establish an interagency committee to encourage the sharing of health-care resources, and which would provide appropriate incentives for such sharing.

Mr. President, S. 266 was sequentially referred to the Committee on Veterans' Affairs, which shared Senator PERCY's desire to improve the efficiency and effectiveness of Government programs.

However, the committee wanted to be certain that any modifications to the VA health-care system would not impair the agency's ability to meet its obligations to the veterans of this Nation.

After carefully reviewing the issue, the committee has determined that greater coordination and sharing of health-care resources between the VA and DOD has the potential for increasing access to services for veterans who neither live near a VA facility, nor near one which has the specialized services they might need.

In addition, sophisticated new equipment and technologies which might be too expensive for a single facility could become available to veterans on a shared basis.

The Veterans' Affairs Committee reported out an amendment in the nature of a substitute for S. 266, which I introduced. It retains Senator PERCY's exemplary emphasis on improving Government operations while conforming to the procedure of establishing the appropriate VA implementing authorities in title 38, United States Code.

The first portion of this bill addresses the VA and DOD equally in providing a mandate for the coordination and sharing of their health-care resources. An interagency committee, under the direction of the chief medical officials of the two agencies, would be responsible for reviewing policies, assessing further opportunities for sharing, providing guidance, and engaging in related activities to foster effective interagency planning for resource utilization.

The remainder of the bill, Mr. President, would amend title 38 to authorize specific agency actions in support of the coordination and sharing of health-care resources.

After considering the recommendations of the interagency committee, the Administrator of Veterans' Affairs and the Secretary of Defense would establish guidelines for the sharing of health-care resources to the maximum extent feasible consistent with their respective responsibilities.

Such guidelines would contain provisions whereby the Administrator of each VA and DOD health-care facility would be able to enter into sharing agreements for the provision of care or services to eligible beneficiaries of one agency at the other agency's facilities whenever feasible and appropriate.

Such agreements would allow the sharing of any health-care resources including administrative and support services as long as they identify explicitly the resources to be shared, the care to be provided, and the beneficiaries to be served.

Shared services would be provided on a referral basis as long as they did not adversely affect the range of services, quality of care, or priority for services provided to the primary beneficiaries of the host agency.

Reimbursement to the providing agency would be on the basis of local conditions, needs, and costs, and made to the facility which provided the care or services.

Sharing agreements would be subject to review and the opportunity for approval or disapproval by the chief medical officials of the two agencies.

Mr. President, in order to assist with congressional oversight of the program's implementation, the Administrator of Veterans' Affairs and the Secretary of Defense would be required to submit an annual report to Congress. It would contain information on the guidelines and their revision, the opportunities for coordination and sharing, a review of in-

teragency activities and agreements, and legislative recommendations.

Mr. President, I would also like to briefly describe the contingency provisions incorporated in S. 266 by the Veterans' Affairs Committee.

The General Accounting Office has pointed out that there could be situations during war or a national emergency in which DOD would not have adequate health-care resources to meet the medical needs of combat casualties.

Although DOD has initiated contingency arrangements with several civilian hospitals, it is the judgment of this committee that the VA health-care system should be the principal backup health-care resource to the DOD in such critical situations.

Mr. President, as reported by the Committee on Veterans' Affairs, S. 266 would initiate contingency planning and provide special authorities for use only during a period of war or national emergency which involved the use of the Armed Forces in armed conflict. In such a situation, the Administrator would be able to give a higher priority for the furnishing of care and services to members of the Armed Forces on active duty than to any other eligible group with the exception of veterans with service-connected disabilities.

Furthermore, the Administrator could contract with private facilities to provide specified hospital care and medical services to certain groups of eligible veterans who otherwise might not be able to have urgent health-care needs met because of military pressures on the VA system.

The Administrator and the Secretary of Defense would be required to enter into an agreement to engage in planning for such medical contingencies and establish implementation procedures. Subsequent to any declaration of war or national emergency, the Administrator would report to the committees on the provision of priority care and services to members of the Armed Forces and on the use of the authority to contract with private facilities.

Mr. President, in concluding I wish to sincerely thank the distinguished ranking minority member from California, Senator CRANSTON, for his invaluable collaboration on this bill, and each of the other committee members who supported it unanimously.

In addition, I would like to recognize and to thank the very able members of the majority staff for their efforts. Kenneth Bergquist, former chief counsel and staff director, and his successor, Tom Harvey, Julie Susman, Edward Kelty, Laurie Altemose, and our editorial director, Harold Carter, as well as members of the highly competent minority staff, Jonathan Steinberg, Edward Scott, and William Brew.

Mr. President, I believe the committees have reported out a bill which meets the concerns of the Committee on Governmental Affairs and the Committee on Veterans' Affairs. S. 266 addresses the efficiency and effectiveness of the VA and DOD health-care programs, the health-care needs of our veterans, and the preparedness requirements of our Armed Forces. On behalf of the entire committee, I urge the Senate's favorable consideration of this bill. Thank you, Mr. President.

Mr. CRANSTON. Mr. President, as the ranking minority member of the Committee on Veterans' Affairs, I am very pleased to support S. 266, the proposed Veterans' Administration and Department of Defense Health-Care Resources Sharing Act, as reported by the Committee on Veterans' Affairs on September 29. This measure addresses the appropriate relationship between the health-care resources of the Veterans' Administration and the Department of Defense both in peacetime and in time of war or national emergency involving armed conflict.

Mr. President, this legislation, as it is before the Senate today, is based on S. 266, introduced on January 27, 1980, by my good friend from Illinois (Mr. PERCY), dealing with peacetime sharing as well as on a measure I introduced on June 9, 1981—amendment No. 62 to S. 636 dealing with both peacetime sharing and the VA's role as the principal backup for DOD in treating casualties of armed conflict.

The legislation I introduced was identical to the text of H.R. 3502, authored by my good friend from Mississippi (Mr. MONTGOMERY), the chairman of the Veterans' Affairs Committee in the other body, as reported by that committee on May 10, 1981.

H.R. 3502 is now pending before the House Armed Services Committee, which ordered the bill reported on October 22. In submitting this legislation to the Senate, I noted that I did so with an open mind and was not committed to the precise formulations of that bill.

S. 266, as introduced, was originally referred to the Committee on Governmental Affairs and, following that committee's action on June 15, 1981, reporting the bill favorably, without amendment, S. 266 was referred to the Committee on Veterans' Affairs.

After a hearing on June 17, at which the Committee on Veterans' Affairs heard from a wide range of witnesses on both S. 266 and amendment No. 62 to S. 636, the Committee on Veterans' Affairs reported S. 266 with an amendment in the nature of a substitute that I proposed with our distinguished committee chairman (Mr. SIMPSON).

We sought in our substitute to meld together aspects of S. 266 as reported by the Governmental Affairs Committee and of amendment No. 62.

Mr. President, the Senator from Illinois (Mr. PERCY) is to be congratulated for his great interest in and persistence on the issue of the sharing of VA and DOD health-care resources during peacetime. During our committee's consideration of this measure, it was suggested by administration representatives that there was no need for legislation to authorize the sharing of health-care resources between VA and DOD during peacetime because there is ample authority in current law.

One example that was cited in this regard was the general authority for interagency sharing contained in the Economy Act, 31 U.S.C. 686. Without resolving this point, I was persuaded by the Senator from Illinois (Mr. PERCY) that the primary need for legislative action was not to establish new authority to share these resources but rather to remedy the lack of appropriate incentives for such sharing, to remove some disincentives to sharing, and to place a renewed statutory emphasis on sharing.

For these reasons, I was pleased to take the initiative in developing a measure that would help provide the needed incentives for and also remove the disincentives to peacetime sharing as well as authorize specifically the VA's role as backup for treating casualties of armed conflict. I believe that the pending measure meets these goals.

PEACETIME SHARING

Mr. President, I believe that increased emphasis on the sharing and coordination of health-care resources in peacetime between the VA and DOD is desirable in that it could lead to improved access to health care for the beneficiaries of the two agencies and, at the same time, result in economies in the operation of the two health-care systems through more efficient utilization of their resources.

However, it is my firm conviction that such sharing must not be permitted to have a detrimental impact on the ability of either of the two agencies to continue to provide quality health care to their respective beneficiaries under current law. The Veterans' Affairs Committee is, of course, the entity in the Senate charged with direct responsibility for legislation and oversight regarding the VA health-care system, and it is for this reason that I strongly urged that our committee have the opportunity to help shape this measure.

In this regard, Mr. President, I believe, and I hope the Senator from Illinois (Mr. PERCY) would agree, that the measure as reported by the Veterans' Affairs Committee represents a fair approach to meeting the goals of S. 266 as reported by the Government Affairs Committee—to promote and foster increased cooperation and sharing of health-care resources between VA and DOD during peacetime—while recognizing and reaffirming the VA health-care system's primary role of providing timely, quality health care to beneficiaries eligible for care under the VA's basic health-care legislative authorities in title 38 of the United States Code.

Mr. President, the committee substitute—in a free-standing legislative provision not in title 38, but referred to by cross-reference in amendments to title 38 provisions later in the committee substitute—provides, as did S. 266 in a freestanding provision without any cross-references, for the establishment of an interagency committee, the Veterans' Administration/Department of Defense Health-Care Resources Coordinating Committee, that will be the principal body responsible for promoting increased coordination and sharing of health-care resources between the two agencies.

It is important to note, however, that this body, on which the two agencies'

chief medical officers will serve as the principal members, is responsible only for developing strategy for increased coordination and sharing of resources.

Any implementation of such strategy will lie with the Administrator of Veterans' Affairs and the Secretary of Defense, and it is vital that these two officials become and remain active in the area of sharing.

Without such a commitment of attention and effort from the top, efforts of the VA/DOD Committee may not result in any real increase in sharing between the two agencies.

Conversely, if the Administrator and the Secretary commit themselves to increasing the level of VA/DOD cooperation and sharing with respect to health-care resources, I believe that the goals of this legislation can be realized.

Mr. President, I would like to make one further point with reference to making, as I just noted, the chief medical officers of the two agencies the principal members of the VA/DOD Committee. At the present time, the VA's Chief Medical Director is Dr. Donald L. Custis. Dr. Custis is a former Surgeon General of the Navy and, if this measure is enacted and the VA/DOD Committee is established, I believe that his presence as an initial member of that committee will prove to be highly beneficial to the committee's success.

I have the highest regard for Dr. Custis' efforts as the VA's chief medical director, and I know that he is very supportive of the basic thrust of this legislation and will be very sensitive to the needs and limits of the VA health-care system as he participates in developing new opportunities for sharing with DOD. At the same time, his experience as the chief health officer of one of the uniformed services gives him unique insights into the DOD health-care system that should further enhance his participation in developing a new emphasis on improved coordination and sharing of the resources of the two agencies.

Mr. President, I want to note how S. 266 as reported by the Committee on Veterans' Affairs addresses specifically two concerns about provisions in amendment No. 62 that were raised by the Senator from Illinois (Mr. PERCY) during his testimony before the Committee on Veterans' Affairs on June 17—namely, precluding the VA from treating military dependents under a sharing agreement and requiring that reimbursements between local facilities be based on uniform, standard rates.

On the issue of treating dependents under sharing agreements, the committee substitute authorizes each agency, pursuant to sharing agreements, to treat any statutory beneficiaries of the other agency that are specified in a particular sharing agreement.

This would allow VA facilities, where appropriate and desirable, to treat military dependents, and DOD, again where appropriate and desirable, to treat those VA dependents eligible for care and services under title 38.

In adopting this approach, the Committee on Veterans' Affairs did not intend to require any particular VA facility to provide care under a sharing agreement to any particular category of beneficiaries that could not be provided the needed care and services in the normal course of providing health-care services, but only to authorize the provision of care and services when and where consistent with a facility's capacity and capabilities.

Moreover, the committee was well aware of the strong opposition of the VA's Department of Medicine and Surgery and others to any use of VA health-care facilities to treat DOD dependents. Hence, under the committee substitute, this is a matter left entirely to the discretion of the two agencies to determine together; if the VA persists in its view on this issue, it can obviously prevail.

With reference to Senator PERCY's second major concern, the reimbursement mechanism, the committee substitute would expressly authorize reimbursements to be made on the basis of locally determined formulas—developed in light of central guidance from the two agencies—which would be subject to approval by the chief medical officers of the two agencies. This approach should insure that local conditions and needs are taken fully into account in developing sharing agreements, including reimbursement formulas.

CARE FOR CASUALTIES OF ARMED CONFLICT

Mr. President, in addition to providing a renewed emphasis on the peacetime sharing of health-care resources between the VA and DOD, S. 266 as reported by the Committee on Veterans' Affairs contains amendments to title 38 relating to the appropriate relationship of the health-care resources of the two agencies in time of war or national emergency involving the use of our Armed Forces in armed conflict.

I view these provisions as very important, and I strongly urge that they be addressed in the context of the overall VA/DOD health-care resources relationships. I have long believed and stated that the VA should be the principal backup to the health-care resources of the Department of Defense in time of war or national emergency.

It has been very clear for a number of years that, in the event of major armed conflict, the Department of Defense would be unable to cope with more than a small percentage of the anticipated casualties from such a conflict—a point that was reaffirmed during the committee's June 17 hearing.

In my view, the firstline backup to DOD in such a situation should be the VA health-care system. It is a comprehensive, nationwide system, and there is a natural linkage between the two systems in that the beneficiaries of the DOD generally become the beneficiaries of the VA at some point, a result that frequently occurs after a member of the Armed Forces is disabled in service and is then medically discharged.

Mr. President, despite what seems to me an obvious role for the VA, DOD has been reluctant in the recent past, as contingency plans have been developed, to rely fully on the VA to fulfill this contingency role because of questions about the adequacy of the VA's authority under current law to treat combat casualties on a priority basis. Instead, DOD had been working to establish voluntary agreements with civilian hospitals across the country to provide contingency backup through a "Civilian-Military Contingency Hospital System." Although I agree that there is a role for civilian hospitals to play in this regard depending on the extent of the casualties, I believe that DOD should turn first to the VA, an assessment shared by the General Accounting Office, which, after reviewing the Civilian-Military Contingency Hospital System, issued a June 26, 1980, report entitled "The Congress Should Mandate Formation of a Military-VA-Civilian Contingency Hospital System."

Mr. President, the committee substitute would provide a basis for the VA to fulfill this contingency role by expressly authorizing the agency, during a period of war or national emergency that involves the use of our Armed Forces in armed conflict, to provide the primary backup to DOD health-care facilities in rendering hospital care, nursing home care, and medical services to members of the Armed Forces on a higher priority basis than to any other group of individuals other than veterans with service-connected conditions.

The establishment of this new mission for the VA—together with provisions in H.R. 3499, legislation passed earlier this month which is now awaiting Presidential action, that would require the VA to maintain a contingency capacity to assist the Department of Defense in time of war or national emergency—should remove any impediment to the VA's working closely with DOD to develop contingency plans and, in the tragic event that the agency's health-care resources are ever needed to support the DOD in time of war or national emergency, the mechanism should be in place to carry out such a supportive role.

Mr. President, in conjunction with this new authority, the pending measure would also authorize the Administrator, in situations in which the VA is treating Armed Forces personnel under the new authority, to contract with private health-care facilities to provide health care under certain circumstances to specified categories of veterans.

I believe that this is an important adjunct to the new contingency authority and demonstrates that, even in situations in which the agency is treating wartime casualties, there would be a continuing obligation to provide care for specified categories of veterans.

Mr. President, the specific provisions amending title 38 with respect to this contract eligibility and other aspects of the committee substitute are discussed in detail in the section-by-section analysis in the committee report—No. 97-196. The excerpts from the committee report that the committee chairman (Mr. SIMPSON) has inserted in the RECORD during his remarks on this bill include the section-by-section analysis, and I particularly call the attention of my colleagues to the description there of proposed new subsection (e) of sec-

tion 5011 of title 38, as proposed to be added by section 4(a)(4) of the committee substitute.

CONCLUSION

Mr. President, I believe that S. 266, as it is before the Senate today, represents an appropriate reconciliation of the two approaches to the sharing of VA and DOD health-care resources that were encompassed in S. 266 as reported by the Committee on Governmental Affairs and amendment No. 62.

The pending measure should give the full emphasis on peacetime sharing between the two agencies that the Senator from Illinois (Mr. PERCY) advocates while recognizing and respecting the separate missions and statutory authorities of the two agencies' health-care components.

The inclusion in this measure of the new contingency authority for the VA to treat the casualties of an armed conflict provides appropriate recognition of the fact that the relationship between the health-care resources of the two agencies should not be limited to peacetime efforts to reduce costs and eliminate duplication of effort but also must include a recognition that the VA can and should supplement DOD in those situations in which DOD cannot care for all the casualties of an armed conflict.

To the extent that peacetime sharing efforts may create pressure to reduce the capability or capacity of either agency, there will likely be a counterpressure to recognize and take action with respect to the need for the maintenance of health-care resources to care for battle casualties, and I believe that it is appropriate that these potentially competing concerns be addressed together, as in the pending measure.

Mr. President, I want to thank my good friend from Wyoming (Mr. SIMPSON) for his cooperation and assistance as we have worked together to develop the measure that is before the Senate today. We have enjoyed a very productive working relationship since he first came to the Senate and the committee at the beginning of the last Congress, and I am pleased that, although we have exchanged roles this Congress, that relationship has been maintained and strengthened.

I also want again to note the fine efforts of my good friend from Illinois (Mr. PERCY) on this issue and express my appreciation for his assistance in insuring that the Committee on Veterans' Affairs has had an appropriate opportunity to review and work on this legislation.

I also want to express my appreciation to the members of the committee staff who have worked on this measure—particularly for the majority staff, Ed Kelty, a congressional fellow who has quickly grasped the many complex issues involved in the legislation and has worked with it throughout his tenure on the staff, and Julie Susman, and Bill Brew, Ed Scott, and Jon Steinberg on the minority staff.

Mr. President, I urge my colleagues to give this measure their unanimous approval.

Mr. THURMOND. Mr. President, I rise to strongly endorse S. 266, the Veterans' Administration and Department of Defense Health-Care Resources Sharing Act, which is being considered today. The Committee on Veterans' Affairs held a hearing on this bill on June 17, 1981, and we have worked hard since then to prepare what I believe to be a meritorious legislative initiative.

Mr. President, the Veterans' Administration and the Department of Defense today both operate major health-care systems which serve many Federal beneficiaries.

These two health-care systems have operated in large part without coordinative efforts to reduce expenses through resource sharing. S. 266 will promote resource sharing while insuring that there are no adverse effects on the quality of care given to primary beneficiaries of either system.

Mr. President, I would like to take a moment to briefly outline the major provisions of this bill.

First, the bill will establish a committee to be known as the Veterans' Administration Department of Defense Health-Care Resources Coordination Committee, which will review existing sharing practices and policies, assess further opportunities for sharing, and provide guidance in implementing the purposes of the bill. The committee will be comprised of the Chief Medical Director of the Veterans' Administration and the Assistant Secretary of Defense for Health Affairs and other employees they may designate.

Second, the bill will provide for the sharing of beds and health-care resources by the Veterans' Administration and the Department of Defense at their respective facilities.

Third, the bill provides that during wartime or national emergency, the Administrator of the Veterans' Administration may designate VA medical facilities to aid in the treatment of active members of the Armed Forces.

Mr. President, this bill represents a chance for us to reduce an area of Federal spending without reducing the quantity or quality of services now being provided. At the same time, we will enhance our defense posture by insuring our readiness to care for our casualties in time of war. For these reasons, I intend to support S. 266, and I urge my colleagues to do the same.

Mr. PERCY. Mr. President, we are asking many Americans to make sacrifices in our efforts to reduce Federal spending and balance the budget by 1984. In view of this, it is only fair that we make an unprecedented effort to ferret out waste, duplication, and inefficiencies in the operation of all Government programs.

The Federal Interagency Medical Resources Sharing and Coordination Act of 1981, cosponsored by Senator COHEN, Senator DURENBERGER, Senator PROXMIRE, and Senator SIMPSON, will help put an end to the needless duplication that currently exists in the Veterans' Administration and Defense Department hospital systems. What is most unusual about this legislation, especially in these days of reduced Government services, is that it will save money and improve the quality of health care provided to Federal beneficiaries.

I originally introduced similar legislation last year, and the Senate unanimously approved hospital sharing legislation last September. Unfortunately, the House did not act on the proposal. This year, the House is moving quickly toward passage of similar legislation. I would like to thank Senator SIMPSON and Senator CRANSTON of the Veterans' Affairs Committee, as well as Senator ROTH and Senator EAGLETON of the Governmental Affairs Committee, for their support of S. 266. Because of their help, the bill was promptly considered and reported unanimously by these two committees in the Senate.

The Federal Government operates one of the largest health-care systems in the world at a cost of more than $12 billion annually. The Veterans' Administration operates 171 hospitals; the Defense Department maintains 129—these two agencies account for 95 percent of the Federal hospital system.

Last summer, I discovered that millions of dollars were being needlessly wasted, and access to quality care was being hindered, because these agencies are unable to share health-care facilities and personnel—such as hospital beds, medical equipment, and doctors. Even worse, they often plan new facilities, sometimes within blocks of each other, without considering consolidating their facilities and equipment to avoid duplication.

Mr. President, one of the worst examples of this practice is going on right now in my own State of Illinois. In north Chicago, the VA and Navy operate hospitals less than a mile from each other. While the Navy's modern facility sits more than three-quarters empty because of a lack of doctors, forcing them to spend $3 million on private sector care, the VA nearby plans to spend millions in coming years on its crumbling 1905 era buildings. The VA, unlike the Navy, enjoys a relative abundance of doctors. Current laws, regulations, and other problems have blocked all attempts to coordinate these expensive resources among the two Federal facilities.

For lack of a VA-Army agreement to share Boston VA orthopedic services, the Army flies dozens of patients from Boston to Walter Reed Hospital in Washington on its very expensive air evacuation system, when more convenient and less costly treatment could be provided by the VA.

These are just two examples of costly duplication in the Federal Government's health-care programs. The General Accounting Office has estimated that, although 202 of the VA and DOD hospitals lend themselves to some form of coordination in 73 locations, little sharing or planning exists.

Why do not these agencies share? There are legal obstacles preventing efficient use of Federal hospitals. For instance, a VA patient cannot be transferred to a Navy bed. Also, military de-

pendents, entitled to Federal care, cannot be treated in a VA hospital—regardless of whether the VA doctors have time to see them. In addition, there are clear disincentives mitigating against greater cross-agency sharing. For example, when a local VA hospital agrees to provide a service to a Defense Department facility, the funds reimbursed for that service go to Washington rather than to the providing hospital. Whereas, if that same hospital buys that service from a private hospital, where costs may be four times higher to the taxpayer, they get reimbursed directly. Thus, we are forcing Government to buy medical services at a higher price outside the Government, before looking to other agencies that may have available care.

The consequences of this lack of coordination by the VA and DOD reach beyond the millions of dollars wasted and impeded access to care for some Federal beneficiaries.

If war were to break out tomorrow, there would not be a contingency plan for returning wounded to use VA hospital beds. In fact, there is some doubt as to whether the VA would have statutory authority to treat combat casualties.

The purpose of S. 266 is simple: Clear away the legal and administrative barriers to sharing, create incentives at the local level, and encourage the agencies to begin assessing moneysaving and care-enhancing opportunities for sharing, and implement them expeditiously. Also, it will allow the Veterans' Administration to treat incoming combat casualties in case of war.

Because of the important obligation that we have to those who have served their country, I have insisted throughout the deliberations over this bill that specific safeguards be included to prohibit sharing where it would adversely affect the quality of, or established priority access to, direct health care by veterans. We will not turn our backs on the many veterans who have given so much to keep this country free. This legislation will only enhance the quality of care provided veterans, and other Federal beneficiaries.

Reaction to the bill has been nearly unanimous—this legislation is needed. Perhaps the GAO put it best when they said:

> The enactment of (this legislation) would represent a significant step forward in which federal agencies could make the most cost-effective use of their medical resources while maintaining, or perhaps enhancing, the quality of care provided to their many beneficiaries.

UP AMENDMENT NO. 543

Mr. BAKER. Mr. President, I send to the desk an amendment on behalf of the Senators from Indiana and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

> The Senator from Tennessee (Mr. BAKER), for Mr. LUGAR and Mr. QUAYLE, proposes an unprinted amendment numbered 543.

Mr. BAKER. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

> At the appropriate place in the bill add a new section:
>
> SEC. —. That the Veterans' Administration medical center located at 1481 West 10th Street, Indianapolis, Indiana, shall hereafter be known and designated as the "Richard L. Roudebush Veterans' Medical Center". Any reference to such medical center in any law, regulation, document, map, record, or other paper of the United States shall be deemed to be a reference to the Richard L. Roudebush Veterans' Medical Center.

Mr. QUAYLE. Mr. President, I wish to express my strong support of the amendment to S. 266, offered by the majority leader, which would designate the Veterans' Administration Medical Center in Indianapolis, Ind., as the "Richard L. Roudebush Veterans' Medical Center." I understand the amendment has been cleared with both the Committee on Governmental Affairs and the Committee on Veterans' Affairs.

On September 15, 1981, my colleague from Indiana, Senator LUGAR, and I joined in introducing a bill to provide this deserved recognition to a fellow Hoosier, Richard Roudebush.

There certainly is no controversy over this legislation and by attaching it to S. 266 we hope to accomplish this honor for "Rowdy" at the earliest possible time.

Dick Roudebush has been so strongly identified with veterans and veterans organizations for so many years that it is highly appropriate that the veterans' medical center in the capital city of his native Indiana bear his name.

"Rowdy" served in the U.S. House of Representatives for 10 years, and then made an unsuccessful bid for the U.S. Senate.

In 1971 he was named Director of the Congressional Relations Office of the Veterans' Administration. Subsequently, he served as Deputy Administrator for the VA, and President Ford appointed him Administrator in October 1974.

He proved to be an able, efficient, and effective leader of the Veterans' Administration.

This small effort to honor the contributions of Dick Roudebush for his service to our Nation and to the cause of veterans has the strong endorsement of the major veterans organizations. Incidentally, "Rowdy" was the first World War II veteran to be named commander of his local VFW post in 1948. He continued his dedication and service to VFW through various important positions and in 1957 was elected national VFW commander in chief.

Today, Mr. President, Dick Roudebush is working back on his farm in Noblesville, Ind., but he continues to be keenly interested and involved in community and national affairs. He remains a patriot of the first order.

I urge the adoption of this amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Tennessee.

The amendment (UP No. 543) was agreed to.

UP AMENDMENT NO. 544

Mr. BAKER. Mr. President, I send another amendment to the desk on behalf of Mr. SIMPSON and Mr. CRANSTON, and I ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

> The Senator from Tennessee (Mr. BAKER), for Mr. SIMPSON and Mr. CRANSTON, proposes an unprinted amendment numbered 544.

Mr. BAKER. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

> On page 21, after line 13, insert the following new section:
>
> SEC. 5. (a) Section 1786(a)(1) of title 38, United States Code, is amended by striking out "Each" and inserting in lieu thereof "Notwithstanding any other provision of law unless enacted in express limitation of this subsection, each".
>
> (b) The amendment made by this section shall take effect as of October 1, 1981.

Mr. CRANSTON. Mr. President, I rise in support of the pending amendment which I am offering along with the distinguished chairman of the Veterans' Affairs Committee (Mr. SIMPSON) that would provide for the continuation of entitlement to GI bill benefits for correspondence training at the level agreed to in the Omnibus Budget Reconciliation Act of 1981—now Public Law 97-35—and that is offered in order to signify that if the entitlement to this benefit is to be terminated or restricted it should not be done through the appropriations process but rather through the authorization process and to make clear that, in any event, it should be done clearly and unequivocally.

As Members may recall, the Senate and House Veterans' Affairs Committees and, upon their recommendations, the Congress very recently acted in the context of legislation within our committee's jurisdiction to reduce the correspondence training entitlement. Pursuant to reconciliation instructions in House Concurrent Resolution 115, the first concurrent resolution on the budget for fiscal year 1982, to recommend legislative savings for veterans' programs by $110 million, the members of the two Veterans' Affairs Committees agreed in the context of negotiations on the Omnibus Budget Reconciliation Act of 1981 to reduce from 70 to 55 percent of the established charges the amount of the allowance that the VA will pay for correspondence lessons completed and submitted after September 30, 1981, and to eliminate, effective October 1, 1981, GI bill benefits for flight training for veterans not enrolled in such training on August 31, 1981.

These provisions were estimated to save $17.3 million in fiscal year 1982—$14.1 million in connection with the elimination of flight training and $3.2 million in connection with the modification of the entitlement to correspondence training—and were signed into law on August 13, 1981, as sections 2003 and 2004, respectively, of the Omnibus Budget Reconciliation Act of 1981.

Shortly thereafter, on September 11, the conferees on H.R. 4034, the HUD-Independent Agencies Appropriations Act for fiscal year 1982, filed the conference report on that measure (H. Rept. No. 97–222) containing a proviso to the appropriations for the VA's readjustment benefits account stating that—

This appropriation is hereby reduced by $19,700,000 through the elimination of payments for flight and correspondence training benefits, except for those persons enrolled in flight training on August 31, 1981, and correspondence training on September 30, 1981, and who remain continuously thereafter so enrolled and meet the applicable requirements of eligibility.

The amount of the purported reduction in this provision is $2.4 million more than the savings estimated to result from the two GI bill changes made by the Reconciliation Act.

This conference report was passed by the House on September 15 but has not been acted on by the Senate. However, section 101(e) of the continuing resolution—House Joint Resolution 325, signed into law as Public Law 97–51 on October 1—provided that provisions of that conference report were incorporated into the continuing resolution—

to the extent and in the manner provided for in the conference report and joint explanatory statement of the Committee of Conference . . . as if such act had been enacted into law.

Mr. President, as my good friend from the other body, the chairman of the House of Representatives Committee on Veterans' Affairs (Mr. MONTGOMERY), pointed out during the debate in the other body on the conference report, and as I reiterated in endorsing these points during consideration of the continuing resolution on September 24, this proviso is highly questionable in form and substance in light of the title 38 provisions providing eligible veterans with entitlement to the GI bill benefits involved. For the reasons Congressman MONTGOMERY expressed during the debate on the conference report—CONGRESSIONAL RECORD pages 20604-20605, September 15, 1981—I do not believe that the Congress, in passing the continuing resolution, intended to repeal the entitlement that Vietnam-era veterans have under title 38, United States Code, to benefits for the pursuit of correspondence training.

As the chairman noted on September 15, section 1786(a)(1) of title 38 provides clearly that any eligible veteran—

who enters into an enrollment agreement to pursue a program of education exclusively by correspondence shall be paid an educational assistance allowance computed at the rate of 55 percent of the established charge which the institution requires non-veterans to pay for the course or courses pursued by the eligible veteran.

Section 1661(a) of title 38 states that such a veteran "shall be entitled" to educational assistance for a specified period of time up to 45 months.

Thus, the GI bill benefit paid to eligible Vietnam-era veterans enrolled in approved correspondence courses is unquestionably an entitlement under title 38—a view also expressed in a September 30 opinion of the VA General Counsel's Office. That benefit is in no sense discretionary, as are some other VA benefit programs. If a veteran meets the eligibility requirements regarding service under this provision of law, and enters into an enrollment agreement with a school to pursue a program of education through correspondence training, the law directs the Administrator to pay an educational assistance allowance not to exceed the rate established by law.

In light of the questions arising from the relationship between the legislative changes made in the Reconciliation Act and the proviso included by reference in the continuing resolution, the VA is, pending further guidance from the Congress, holding in suspension new applications of veterans wishing to use their GI bill benefits for correspondence training.

Mr. President, I ask that the legal opinion I referred to earlier and an October 2, 1981, memorandum from the VA's Acting General Counsel to the Chief Benefits Director on this subject be printed in the RECORD at this point.

The material follows:

MEMORANDUM, OCTOBER 2, 1981

To Chief Benefits Director.
Subject: Correspondence Training.

1. As you are aware, the Congress, in enacting the Omnibus Reconciliation Act (Pub. L. No. 97–35), provided that effective October 1, 1981, section 1786 of title 38, United States Code, was to be amended to reduce the reimbursement rate for correspondence training from 70 percent to 55 percent.

2. As you are also aware, the House-Senate Conferees on the HUD-Independent Agencies Appropriation Act, provided that effective October 1, 1981, no funds would be available for correspondence training courses except for those individuals enrolled in correspondence training on September 30, 1981, and who remain continuously thereafter so enrolled and meet the applicable requirements of eligibility.

3. A question has arisen as to whether or not the subsequent enactment of program restrictions in an appropriation measure has the effect of limiting program entitlements. For that reason, we requested a legal opinion by PSG–IV concerning this matter. A copy of their opinion is attached for your information.

4. In the enactment of the continuing resolution (HJRes. 325), the Congress provided that the amounts of money and the conditions set forth in the conference report on the HUD appropriation measure would govern VA authority for spending under the continuing resolution. Thus, in view of that language, the VA would be subject to the correspondence limitation cited above. The appropriation measure has not, of course, been finally adopted by the Congress and sent to the President. Therefore, the possibility still remains that a further change could be made in the language presently contained in the conference report. Nevertheless, in light of the provisions in the continuing resolution, we would suggest that you may wish to consider issuing instructions to your regional offices to the effect that any new applications for correspondence training received after September 30, 1981, be held pending final resolution of this problem.

ROBERT E. COY,
Acting General Counsel.

MEMORANDUM, SEPTEMBER 30, 1981

To: Assistant General Counsel.
Subject: Readjustment Benefits (RB) Appropriation Language Limiting Payment of Flight and Correspondence School Benefits.

1. You have asked our opinion as to the VA's authority to pay educational assistance benefits to veterans enrolling in flight and correspondence schools after October 1, 1981, the beginning of FY 1982. It is our understanding that Pub. L. No. 97–35 altered the entitlement of these veterans by repealing 38 U.S.C. § 1677 (flight training) and amending 38 U.S.C. § 1786(a)(1) (reducing reimbursement to correspondence trainees from 70 percent to 55 percent effective October 1, 1981.) However, the Conference Report on H.R. 4034, the FY 1982 HUD-Independent Agencies Appropriation Act, includes the following proviso in the Readjustment Benefits (RB) account language:

"*Provided*, That this appropriation is hereby reduced by $19,700,000 through the elimination of payments for flight and correspondence training benefits, except for those persons enrolled in flight training on August 31, 1981, and correspondence training on September 30, 1981, and who remain continuously thereafter so enrolled and meet the applicable requirements of eligibility."

2. The "savings" clause of the appropriation language pertaining to flight training corresponds substantially with the language of section 2006(b) of Pub. L. No. 97–35. The effect is that both title 38 and the appropriation language prohibit payment to veterans who enroll in flight training after September 30, 1981, unless they had previously enrolled by August 31, 1981. However, veterans who enroll in correspondence school after October 1, 1981, appear to be eligible for benefits under 38 U.S.C. § 1786, while the RB appropriation language would apparently bar payments to these individuals.

3. At the present time, this matter is further confused by the reluctance of the Congress to forward H.R. 4034 to the President. As an interim measure, the Senate has proposed that the following language be inserted in H.J. Res. 325, the continuing resolution authorizing funding for all agencies for FY 1982:

"(e) Notwithstanding any other provision of the joint resolution, except section 102, such amounts as may be necessary for projects or activities provided for in the Department of Housing and Urban Development-Independent Agencies Appropriations Act, 1982 (H.R. 4034), at a rate of operations and to the extent and in the manner provided for in the conference report and joint explanatory statement of the Committee of Conference (H. Rept. No. 97–222) filed in the House of Representatives on September 11, 1981, as if such Act had been enacted into law."

It is the Senate's intent that the VA operate its programs within the limits provided for in the conference version of H.R. 4034, which includes the limitation on flight and correspondence benefits quoted above.

4. While we are aware that an argument could be made that the language of the continuing resolution does not constitute a repeal of the VA's authority to make payments to new enrollees in correspondence courses, it is our opinion that this argument is legally insufficient. We believe that the conferees on the VA's appropriation bill clearly intended to prohibit payment to new enrollees in correspondence courses. The same Committee in the Senate offered the language quoted above as an amendment to the continuing resolution when it became apparent that H.R. 4034 would not be enacted into law by October 1, 1981. The language is susceptible to varying interpretations, but we think it is apparent that the intent of the Senate is to prohibit payment to any person enrolling in a correspondence course after September 30, 1981.

5. Although time constraints have not permitted us to examine this issue in depth, we conclude that the VA will have no authority to make payments to these individuals during the period when the continuing resolution is in effect. If H.R. 4034 is enacted with substantially the same language

that was agreed to by the conference committee, the same conclusion would be applicable to FY 1982. It should be expressly noted that we have not reached any conclusion wtih regard to the question of whether the language of H.R. 4034 or the continuing resolution constitutes a repeal of the entitlement to such benefits.

"It has long been established that the mere failure of Congress to appropriate funds, without further words modifying or repealing, expressly or by clear implication, the substantive law, does not in and of itself defeat a Government obligation created by statute. *United States* v. *Vulte*, 233 U.S. 509, 34 S.Ct. 664, 58 L.Ed. 1071 (1914); *Ralston* v. *United States*, 91 Ct.Cl. 91 (1940), cert. denied, 311 U.S. 687, 61 S.Ct. 65, 85 L.Ed. 444, involving a lack of appropriations to pay a naval officer his retired pay and allowances pursuant to a special act placing him on the retired list. The failure to appropriate funds to meet statutory obligations prevents the accounting officers of the Government from making disbursements, but such rights are enforceable in the Court of Claims. *Gibney* v. *United States*, 114 Ct.Cl. 38, 51, 52 (1949); *Leonard* v. *United States*, 80 Ct.Cl. 147 (1935); *New York Central R.R.* v. *United States*, 65 Ct.Cl. 115, 128 (1928), aff'd 279 U.S. 73, 49 S.Ct. 260, 73 L.Ed. 619 (1929); *Danford* v. *United States*, 62 Ct.Cl. 285 (1926); *Strong* v. *United States*, 60 Ct.Cl. 627, 630 (1925); *Ferris* v. *United States*, 27 Ct.Cl. 542, 546 (1892)." *New York Airways* v. *United States*, 369 F.2d 743, 748 (Ct.Cl. 1966).

It is our opinion that the likelihood of litigation on this issue would be greatly reduced if the Congress took steps which have been suggested by the Chairman of the House Committee on Veterans Affairs in the CONGRESSIONAL RECORD (127 Cong. Rec. H6202-03 (daily ed. Sept. 15, 1981) (remarks of Mr. Montgomery) (copy attached)). In the absence of such steps, we will reserve an opinion on this issue for another time.

6. If you have any questions about this matter, please contact Patrick Ryan at extension 5017.

NEAL C. LAWSON,
Assistant General Counsel.

Mr. CRANSTON. Mr. President, in my view, if GI bill benefits for correspondence training are to be further reduced or terminated or, indeed, if any changes in a title 38 entitlement program are to be made—legislative action to achieve the desired results should be taken in a measure under the jurisdiction of the Veterans' Affairs Committees. It is not an appropriate function of the Appropriations Committees to propose in appropriations bills that entitlements under current law be terminated or reduced.

Mr. President, this amendment would amend the entitlement provision in title 38, section 1786(a)(1), to provide that such entitlement would continue in effect—

[n]otwithstanding any other provision of law unless enacted in express limitation of [this section]. . . .

This "notwithstanding" reference is specifically designed to supersede or eliminate the effectiveness of any appropriations rider or other enactment—including the proviso incorporated by reference to H.R. 4034 in the continuing resolution—unless such rider or enactment—whether previously or subsequently enacted—expressly limits or alters the entitlement in section 1786(a) of title 38 by making specific reference to that provision.

Therefore, in addition to providing for the continuation of GI bill benefits for correspondence training in fiscal year 1982 as agreed to by Congress and enacted only 2 months ago in the Reconciliation Act, this amendment stands for the proposition that if this entitlement is to be terminated or restricted it should not be done through the appropriations process but rather through the authorization process and that, if that is to be done, it should be done clearly and unequivocally by specific reference to the title 38 entitlement provision.

As I noted, Mr. President, this amendment would be consistent with the viewpoint expressed by Chairman MONTGOMERY on the House floor—and in which I concurred during the Senate's consideration of the continuing resolution on September 25—that—

Legislated entitlements cannot be repealed by indirection or imprecise riders suggesting that the funds were not appropriated by the Congress for a vaguely defined purpose.

At that time, I also stated:

Those remarks seem even more apt in light of the once-removed nature of the action now being taken by this body with respect to that conference report.

The amendment is also consistent with the statement of my distinguished colleague from Wyoming (Mr. SIMPSON) who, as chairman of the Senate Veterans' Affairs Committee, noted during the Senate's consideration of the Continuing Resolution that he did—

not support this action of the conferees, taken unilaterally in disregard of the legislative plans so carefully worked out by both the House and Senate Veterans' Affairs Committees. . . .

Mr. President, I am very grateful to the distinguished committee chairman for his cooperation in joining with me in this measure to carry out the will of Congress under the Reconciliation Act regarding GI bill benefits for correspondence training, to remove the uncertain legal status regarding the availability of and entitlement to these benefits, and to express and signify emphatically the disposition of the Senate in terms of the appropriate division of responsibilities between the authorization and appropriations processes.

Mr. President, I urge the Senate to approve this amendment.

The amendment (UP No. 544) was agreed to.

Mr. SIMPSON. Mr. President, as you are aware, the distinguished Senator from Colorado has asked the Senate to delay consideration of S. 266 to allow him time to prepare a floor amendment to this measure. I would like to yield to my colleague from Colorado.

Mr. HART. Mr. President, the chairman of the Senate Veterans' Affairs Committee is correct. I had intended to offer an amendment, which would incorporate the provisions of S. 349, the Veterans' Administration's Administrative Procedure and Judicial Review Act, to S. 266. The Veterans' Affairs Committee did hold hearings on S. 349 in July and had on two occasions scheduled committee meetings to consider the bill. Unfortunately, both those sessions were canceled.

Mr. President, the provisions of S. 349 are identical to legislation which passed the Senate unanimously last session. I have for some time supported this legislation, first introduced in the 94th Congress, a bill to reform the administrative procedures of the Veterans' Administration and allow for judicial review of certain final decisions by the Veterans' Administration. I believe S. 349 to be an excellent bill that reflects several years of diligent work by the Senate Veterans' Affairs Committee and its staff in consultation with me and my staff.

I have consulted with Senator SIMPSON and believe we have reached an acceptable compromise which will allow S. 266 to be considered without further delay.

Mr. SIMPSON. Mr. President, as the Senator from Colorado knows, I have scheduled a committee meeting for the 25th of November to consider S. 349.

Mr. HART. Mr. President, understanding that the new chairman of the Senate Veterans' Affairs Committee would like an opportunity to thoroughly review the provisions of S. 349, I appreciate his commitment to hold the markup on S. 349 on the 25th of November. It is further my understanding that his intention is to move the measure to the floor in an expeditious manner.

Mr. SIMPSON. Mr. President, the Senator is correct. When the measure is marked up, I expect to recommend that it be expeditiously considered by the committee. I also would intend to work for its expeditious consideration by the Senate.

I know of the strong concern and hard work Senator HART has put into his legislation and appreciate his longstanding concern for the rights of the American veteran.

Mr. BAKER. Mr. President, I ask unanimous consent that a summary of S. 266 as reported be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF S. 266 AS REPORTED

The basic purpose of S. 266 as reported (hereinafter referred to as "the Committee bill") is to foster greater coordination and sharing of health-care resources between the Veterans' Administration and the Department of Defense in order to minimize duplication and underutilization of Federal direct health-care facilities, reduce costs, and enhance health care, as well as to establish the Veterans' Administration health-care system as the primary backup to the Department of Defense health-care system for treatment of combat casualties of the Armed Forces. This would be accomplished through establishment of an interagency committee to plan and coordinate such sharing, as well as by amendments to title 38, United States Code, which would provide authority for peacetime and contingency sharing and coordination of health-care resources between the two agencies.

Included in the Committee bill are provisions which would:

1. Establish a VA/DOD Health-Care Resources Coordination Committee composed of the Chief Medical Director of the VA and the Assistant Secretary of Defense for Health Affairs, or their designees, and other employees they designate.

2. Establish as functions (to promote the coordination and sharing of health-care services) of the interagency committee the

review of existing policies and practices, the identification and assessment of further opportunities, the development and recommendation of changes in policies and practices, the provision of guidance to the agencies, the monitoring of implementation activities, the appraisal of resource planning by each agency, and the development of a plan for effective utilization of VA resources to assist in meeting medical contingencies which might result from a period of war or national emergency.

3. Provide that sharing agreements will not result in a permanent reduction of Veterans' Administration beds below the minimum number prescribed by law.

4. Provide within nine months of enactment for the joint establishment by the Administrator of Veterans' Affairs and the Secretary of Defense of guidelines for the interagency sharing of health-care resources. Such guidelines shall provide for sharing agreements by local administrators which permit the sharing of any health-care resource, the treatment of any eligible beneficiary of the other agency on a referral basis, the reimbursement to the providing facility for the costs of services provided at rates reflecting local conditions and actual costs, and a 45-day review period for each agency.

5. Provide for annual submission to Congress of a joint report by the Administrator of Veterans' Affairs and the Secretary of Defense which covers guidelines and their revisions, the assessment of opportunities for coordination and sharing, recommendations for policy and legislative changes, a review of sharing agreements, activities of the two agencies under such agreements, and other interagency activities directed toward producing the maximum feasible efficient use of Federal health-care resources.

6. Provide during a period of war or national emergency for the establishment of a higher priority to the furnishing of hospital care, nursing home care, medical services, and dental services to members of the Armed Forces on active duty than to any other group of persons eligible for such care and services with the exception of veterans with service-connected disabilities.

7. Provide during a period of war or national emergency for the President to authorize the Administrator of Veterans' Affairs to contract with private facilities for the provision of hospital care and medical services to specific groups of eligible veterans with urgent health-care needs which might otherwise not be met in VA facilities.

8. Provide that within 90 days after the declaration of war or a period of national emergency the Administrator of Veterans Affairs shall submit to the committees a report on implementation of the plan for the allocation of facilities and personnel to provide priority health care to members of the Armed Forces on active duty, and that the Administrator shall keep the committees informed of the use of the contract authority provided.

9. Provide that within 180 days of enactment of this legislation, the Administrator shall enter into an agreement with the Secretary of Defense under which they shall agree to pursue planning activities and to establish procedures and guidelines under which the contingency provisions may be implemented.

DISCUSSION

The need for greater coordination and sharing of health-care resources

Over the past decade Congress has been concerned about the rapidly increasing cost of health care. In order to minimize the role of duplication or underutilization of health-care resources, various authorizations have been given to Federal agencies to share their capabilities and the private sector has been directed to coordinate and plan the use of health-care resources through the mechanisms created by the National Health Planning and Resources Development Act of 1974.

As part of its efforts to monitor such activities, the General Accounting Office (GAO) conducted a series of studies looking at inefficiencies in the delivery of health services. On June 14, 1978, the GAO issued a report entitled, "Legislation Needed to Encourage Better Use of Federal Medical Resources and Remove Obstacles to Interagency Sharing." This study was based on headquarters interviews and field studies at fifty facilities of the VA, DOD, and HEW. On the basis of this review, GAO recommended that Congress enact legislation to establish a greatly expanded and cost-effective interagency sharing program which should:

Establish a Federal policy that directs interagency sharing when appropriate.

Authorize each Federal direct health care provider to accept all categories of eligible beneficiaries on a referral basis when advantageous to the Government and care of primary beneficiaries would not be adversely affected.

Eliminate all restrictions on the types of medical services which can be shared.

Authorize Federal field hospital managers to enter into sharing arrangements, subject to headquarters veto only if judged not in the best interests of the Government.

Authorize expansion of services as necessary to use Federal medical resources in the most cost-effective manner.

Establish a policy requiring full use of available nearby Federal medical resources before using civilian or distant Federal medical resources.

Authorize the establishment of a method of reimbursement under which the providing Federal hospital would receive any revenues received to offset any expenses incurred.

Assign to the Office of Management and Budget the responsibility to (1) coordinate the implementation of an effective interagency Federal medical resources sharing program and (2) report annually to the Congress concerning the progress being made toward increased sharing of these resources.

S. 266 is designed to establish the legislative mandate for coordination and sharing of health-care resources between the VA and DOD when it is beneficial to both agencies. It promotes such activities designed to enhance the efficiency and quality of health-service delivery by the two agencies while removing perceived barriers and disincentives.

Establishment of an interagency committee to promote the coordination and sharing of health-care resources

In order to establish a focal point of accountability for the promotion of interagency activities directed toward the coordination and sharing of health-care resources, this Act establishes the Veterans' Administration/Department of Defense Health-Care Resources Coordination Committee. Responsibility for the establishment and operation of this committee is vested in the chief medical officers of the two agencies. They may jointly chair the committee or designate officials to serve in their behalf. Since there are specific tasks, such as analyses and reports, to be undertaken, it is assumed that agency employees will be assigned to work on and with the interagency committee.

There is nothing in the legislation which would preclude the use of existing mechanisms to perform the specified functions, as long as accountability is retained by the chief medical officers. For example, the Veterans' Administration, Department of Defense, and Public Health Service have formed a Federal Health Resource Sharing Committee, and there are VA and DOD committees that operate in conjunction with the Federal Emergency Management Agency (FEMA). To the extent that such groups which have been formed on an administrative basis engage in similar or identical tasks, there should not be a duplication of effort.

The specified functions call for establishment of a planning process whereby the two agencies review the current status of coordination and sharing, identify and assess further opportunities, and then develop goals with specific objectives for submission to the directors of their respective agencies. Once the Administrator of Veteran's Affairs and the Secretary of Defense issue guidelines for the sharing of health-care resources, the interagency committee shall continue to provide guidance and shall monitor the implementation of activities designed to promote such coordination and sharing. As part of the ongoing nature of the planning process, the interagency committee shall not only identify further improvements which can be made on the basis of experience with the program, but shall also keep informed of resource changes anticipated by each of the agencies and their potential impacts on coordination and sharing. Such changes specifically include the addition of new facilities and the acquisition of major equipment, but consideration should also be given to other changes such as those involving personnel utilization and management systems.

The Act also provides special authorities which may be invoked during a period of war or national emergency involving armed conflict. Although the planning for medical contingencies in such situations has a different emphasis than peacetime coordination and sharing, both wartime and peacetime efforts should strive for maximum efficient use of Federal resources. Furthermore, the GAO has pointed out in a report issued June 26, 1980, that the experience gained in peacetime coordination and sharing can form an experience base for contingency situations. Therefore, the interagency committee is also charged with developing a plan for the effective utilization of Veterans' Administration resources, as authorized in this Act, to assist in meeting medical contingencies which might result from a period of war or national emergency.

It is recognized that the President from time to time issues Executive orders establishing procedures to be followed during such emergency periods. The contingency planning is designed to assure that preparation is made for effective use of the special authorities in this Act at such time as they might be invoked by the President or Congress. Such contingency planning shall be done in consultation with such other agencies as the President may direct, such as FEMA and the Department of Health and Human Services.

In order to assure appropriate participation of all the Armed Forces in planning and implementation directed toward maximizing coordinating and sharing, the Assistant Secretary of Defense for Health Affairs shall consult regularly with the surgeons general of the Army, Navy, and Air Force.

Amendment of title 38, United States Code

Since the Act clarifies and expands the authority of the Administrator of Veterans' Affairs in regard to the coordination and sharing of health-care resources, it is necessary to amend section 5011 of title 38, United States Code. The existing section would become subsection (a), and would be amended to eliminate the existing authority for the mutual transfer between the two agencies without reimbursement of facilities, supplies, equipment, or material needed and proper for the care of veterans. This does not mean that such transfers are prohibited, but that they are to take place through sharing agreements as created herein.

The new subsection (a) would be further amended to require that the Administrator not enter into any agreement which would result in a permanent reduction of Veterans' Administration beds below the minimum number prescribed by law.

New subsections (b) through (d) would establish a legislative mandate for interagency sharing between the Veterans' Administration and the Department of Defense when it is mutually beneficial. They do not alter the autonomy and separate statutory responsibilities of the two agencies, nor alter their existing missions and management authority.

Establishment of guidelines for the sharing of health-care resources

The Administrator of Veterans' Affairs and the Secretary of Defense, after consideration of the recommendations developed by the VA/DOD Health-Care Resources Coordination Committee, are to establish within nine months guidelines for the sharing of health-care resources. Although this legislation is designed to foster such sharing to the maximum extent feasible, it is not meant to infringe upon the responsibilities of the VA and DOD under titles 38 and 10. Nor is it meant to alter or preclude the continued use of other authorities for coordination and sharing (such as 31 U.S.C. § 686, 10 U.S.C. § 1074(b), or 38 U.S.C. § 616 and § 5053).

The guidelines shall provide that the director or commanding officer of each health-care facility shall, to the maximum extent feasible, appropriate, and consistent with their responsibilities, enter into sharing agreements. The purpose of this provision is to encourage free negotiation at the local facility level. It does not preclude the negotiation of interagency sharing at any other level within the providing agencies.

Any health-care resources may be shared including support and administrative services as long as they are clearly identified in the sharing agreements. Likewise, any eligible beneficiaries of one agency may receive services from a facility of the other agency as long as the services are explicitly identified, are on a referral basis, and do not adversely affect the services provided to the primary beneficiaries of the providing agency. Although the Veterans' Administration is opposed to including military dependents among eligible recipients of shared services, this Committee believes that there are adequate safeguards in the new provisions to protect primary beneficiaries and that local administrators must be given as much discretion as is feasible in the implementation of sharing agreements.

Local administrators already have considerable contracting and purchasing authority. The majority of interagency sharing opportunities are the types of management and resource allocation proposals which would clearly be within their capabilities. However, in order to support agencywide planning and coordination it is appropriate for the chief medical officers of the two agencies to have a 45-day period within which to review all sharing agreements. They may jointly approve or individually disapprove such agreements on an earlier date, but if no action is taken by the end of the review period, the sharing agreements will automatically become effective on the 46th day after submission (or on the effective date specified in the agreement as approved). Failure to conform to the guidelines presumably would be the major basis for disapproval, though the chief medical officers probably would also consider the relationship of sharing agreements to systemwide health resource allocations.

One of the previous disincentives to sharing has been the application of standard OMB reimbursement rates which must be charged even when the services may be obtained for less through private contracting or are of negligible cost to the providing facility. The guidelines would assure that the providing facility be reimbursed for the cost of services on the basis of local conditions and needs and the actual costs to the facility being reimbursed. It is assumed that the two agencies will establish accounting procedures with adequate flexibility so that reimbursements are not lost due to the timing of funds availability in relation to the budget cycle.

So that Congress may monitor the program for sharing health-care resources, the Administrator and the Secretary of Defense shall submit an annual report addressing the development, modification, and implementation of the guidelines for such sharing. The joint report is also to include a review of other interagency coordination, planning, and activities involving either agency directed toward producing the maximum feasible efficient use of Federal health-care resources, as well as any legislative recommendations to further facilitate sharing of health-care resources between and by the two agencies.

Contingency authority for periods of war or national emergency

The Department of Defense has indicated that there could be combat situations in which they would not have the capacity to meet the demands for hospital care or casualties. To correct this deficiency, DOD is establishing voluntary agreements with civilian hospitals across the country to provide backup through what is called the Civilian-Military Contingency Hospital System.

The GAO has reviewed the contingency planning for combat casualties and issued a report on June 26, 1980, entitled, "The Congress Should Mandate Formation of a Military-VA-Civilian Contingency Hospital System." It found that there are serious inadequacies in the existing contingency plans and their reliance on civilian hospitals. Efforts to involve the VA have been limited, in part because of questions about the legislative authority of the VA to treat combat casualties.

GAO has recommended that Congress enact legislation which provides that both DOD and VA fully participate in Federal medical planning for and care of returning wartime casualties. They state that such legislation should:

Give VA the mission of providing direct medical support to DOD for treating battlefield casualties.

Place battlefield casualties above veterans with non-service-connected, nonemergency conditions in VA's priority for care.

Remove numerous obstacles to interagency sharing, as GAO previously recommended, so that VA and DOD may establish a strong peacetime medical resources sharing program to serve as an effective foundation for a military-VA-civilian contingency hospital system.

Delay in expanding the VA's mission to incorporate the planning for the treatment of combat casualties could result in unnecessary confusion during mobilization as well as underuse of the VA's medical capabilities.

The VA as the major Federal direct health care system should have a principal role as a contingency backup to the Department of Defense, particularly in view of the close association of its mission with the defense of the nation. This legislation would provide appropriate contingency authority to the Administrator which could be used only during a period of war or a period of national emergency involving the use of the Armed Forces in armed conflict.

A higher priority would be established for the furnishing of health-care services to active duty members of the Armed Forces than to any other eligible group with the exception of veterans with service-connected disabilities. The DOD is to reimburse the VA for such services, and the funds received are to be credited to each facility providing the services.

During such contingency conditions, VA facilities providing backup services to DOD might be unable to fulfill the urgent needs of veterans because of utilization by members of the Armed Forces. This legislation provides that the President may authorize the Administrator to contract with private facilities for the provision of hospital care and medical services to two classes of veterans eligible for health care. Contract services could be provided to a veteran already receiving medical services from the VA in any case in which delay in providing care would likely result in deterioration of the veteran's condition. Such services could also be provided to a veteran eligible for care or services in a medical emergency which poses a serious threat to the life of such veteran when the VA facility concerned is using a substantial portion of its capacity for the treatment of active duty members of the Armed Forces. These two situations require a judgment or finding by the Chief Medical Director. Such authority may be delegated under regulations associated with the contingency plans for decentralized operations under emergency conditions.

These new authorities should provide the VA with the flexibility to respond to the military medical needs of DOD while attending the urgent health-care requirements of eligible veterans. The Secretary of Defense and the Administrator of Veterans' Affairs shall, within 180 days of enactment of this legislation, enter into an agreement to pursue planning activities and to establish procedures and guidelines for implementation of the contingency authorities created in subsection (e). So that Congress may monitor the implementation of these provisions, the Act calls for specific reports on the provision of priority care to members of the Armed Forces and the use of contract services.

COST ESTIMATE

U.S. CONGRESS,
CONGRESSIONAL BUDGET OFFICE
Washington, D.C., September 22, 1981.

Hon. ALAN K. SIMPSON,
Chairman Committee on Veterans' Affairs, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to Section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has reviewed S. 266, the Veterans Administration and Department of Defense Health-Care Resources Sharing Act, as ordered reported by the Senate Committee on Veterans' Affairs, September 21, 1981.

This bill would direct the Administrator of Veterans Affairs and the Secretary of Defense to establish an interagency committee to study the possible opportunities for the sharing of the medical resources of their agencies and to recommend policies and procedures to maximize such sharing. While this bill could eventually result in savings to the federal government through the coordination and sharing of these medical resources, CBO is unable to estimate the magnitude of such savings without knowledge of the new policies and procedures that would ultimately be established.

Sincerely,

ALICE M. RIVLIN,
Director.

REGULATORY IMPACT STATEMENT

In compliance with paragraph 11(b) of rule XXVI of the Standing Rules of the Senate, the Committee on Veterans' Affairs has made an evaluation of the regulatory impact which would be incurred in carrying out the Committee bill. The results of that evaluation are described below.

The Committee bill would establish a VA/DOD Health-Care Resources Coordination Committee to serve planning and advisory functions, and would amend title 38, United States Code, to provide authority for the sharing of health-care resources between the VA and DOD, for the establishment of contingency arrangements for the VA to serve

as the principal back-up to DOD health-care facilities during a period of war or national emergency involving the Armed Forces in armed combat, and to authorize the VA to provide contract health-care for certain veterans during such a period of war or national emergency.

A. Estimate of the numbers of individuals and businesses who would be regulated and a determination of the groups and classes of such individuals and businesses.—The Committee bill would result in no regulation of individuals or businesses.

B. Determination of the economic impact of such regulations on individuals, consumers and businesses affected.—Since, as noted above, there would be no such regulations, there would be no resulting economic impact.

C. Determination of the impact on the personal privacy of the individual affected.—To the extent that beneficiaries of one agency would receive health-care services from the other agency, their medical records would be made available to the other agency for the purposes of providing the care involved. This should not significantly increase the impact on the personal privacy of participants since medical records are provided safeguards by both agencies.

D. Determination of the amount of additional paperwork that will result from regulations to be promulgated under the bill.—It is anticipated that the guidelines for sharing health-care resources which are to be promulgated by the Administrator and the Secretary of Defense will lead to the execution of numerous agreements designed to improve the efficiency of Government operations. Under the Committee bill, proposed agreements must be submitted for approval to the VA's Chief Medical Director and the Assistant Secretary of Defense for Health Affairs. It is not possible to predict with any accuracy the number of agreements that would be proposed.

RECORD OF VOTES CAST IN COMMITTEE

In connection with paragraph 7 of rule XXVI of the Standing Rules of the Senate, and in accord with a procedure agreed upon unanimously by the Members of the Committee on Veterans' Affairs, announcement is made that the Members of the Committee unanimously voted by poll, completed on September 21, 1981, to report favorably on S. 266, with an amendment in the nature of a substitute and an amendment to the title.

SECTION-BY-SECTION ANALYSIS OF S. 266 AS REPORTED

SECTION 1

Would provide that the Committee bill may be cited as the "Veterans' Administration and Department of Defense Health-Care Resources Sharing Act".

SECTION 2

Would state Congressional findings with respect to certain relationships between Veterans' Administration and Department of Defense health-care resources.

Subsection (a) of section 2 would state Congressional findings with reference to these relationships in terms of the coordination and sharing of the health-care resources of the two agencies, as follows:

(1) That there are, at present, opportunities for greater coordination and sharing of the health-care resources of the two agencies and that achieving greater coordination and sharing would be beneficial to the individuals eligible for care from the two agencies and could, at the same time, reduce the overall total cost to the Government of providing health care through the two agencies by minimizing the duplication and underutilization of the two agencies' health-care resources.

(2) That, at present, the incentives to encourage greater coordination and sharing of health-care resources between the two agencies are not adequate. In this regard, the Committee notes that, despite existing authority to share health-care resources, both pursuant to the Economy Act (31 U.S.C. 685) and various specific provisions in titles 10 and 33, other factors discourage greater sharing between the two agencies.

(3) That greater coordination and sharing of health-care resources between the two agencies could be achieved without having a detrimental effect on each agency's primary beneficiaries.

Subsection (b) of section 2 would state Congressional findings with reference to the relationships between the two agencies' health-care resources during a period of war or national emergency, as follows:

(1) That, during a period of war or national emergency, there might be situations in which the health-care resources of the Department of Defense would not be adequate to treat all of the members of the Armed Forces wounded or injured during the war or national emergency.

(2) That the VA has an organized health-care system that could serve as a backup to the health-care resources of the Department of Defense in meeting the medical contingencies that might occur during time of war or national emergency.

SECTION 3

Would establish an interagency committee to be known as the Veterans' Administration/Department of Defense Health-Care Resources Coordination Committee ("VA/DOD Committee") to promote the coordination of health-care services between the VA and the Department of Defense and to provide guidance to the two agencies regarding the sharing of the health-care resources of the two agencies. The Committee intends the establishment of this Committee to be concrete evidence of the intention of Congress to promote greater coordination and sharing of health-care resources between the two agencies and for this Committee to serve the important function of providing guidance to the two agencies on ways to achieve greater coordination and sharing.

Subsection (a) of section 3 would establish the VA/DOD Committee.

Subsection (b) of section 3 would provide that the VA/DOD Committee membership is to consist of the VA Chief Medical Director ("Chief Medical Director") and the Assistant Secretary of Defense for Health Affairs ("Assistant Secretary"), or their respective designees, together with other employees of the two agencies that the Chief Medical Director and the Assistant Secretary mutually designate to serve on that committee

Subsection (c) section 3 would prescribe specific actions that the VA/DOD Committee would be required to undertake, on a continuing basis, so as to promote the coordination of health-care services between the two agencies and to provide guidance to the two agencies on the sharing of health-care resources between them.

Clause (1) of subsection (c) of section 3 would direct the VA/DOD Committee to review current policies and practices relating to the two agencies regarding the coordination and sharing of health-care resources, including administrative and support services, between the two agencies. The Committee intends that this review include not only the practice and policies of each of the two agencies but also any government-wide practices or policies that affect the sharing of resources between the agencies.

Clause (2) of subsection (c) of section 3 would direct the VA/DOD Committee to identify and assess opportunities for the coordination and sharing of health-care resources between the two agencies that would not have an adverse effect on the quality of health care provided by either agency or either agency's priorities for care established under current law, for that agency's primary beneficiaries (defined in new subsection (d) (4) of section 5011 of title 38 as proposed to be added by section 4(a) of this bill). In this regard, the Committee intends a thoroughgoing review aimed at the discovery and evaluation of new opportunities as well as the analysis of those that are already known and might effectively be enlarged.

Clause (3) of subsection (c) of section 3 would direct the VA/DOD Committee to develop proposed changes in the policies and procedures of the two agencies in order to produce the maximum feasible coordination and sharing of health-care resources between the two agencies and to recommend these proposed changes to heads of the two agencies for their review and action as authorized by provisions of title 38, United States Code (including present section 5011 of title 38 with the amendments proposed to be made by section 4 of this bill).

Clause (4) of subsection (c) of section 3 would direct the VA/DOD Committee to provide guidance for and monitor the implementation of the two agencies' activities designed to promote the maximum feasible coordination and sharing of health-care resources between the two agencies. Through this activity, the Committee intends the VA/DOD Committee to serve an important oversight function, becoming a central repository for data relating to the extent of the coordination and sharing of health-care resources between the two agencies.

Clause (5) of subsection (c) of section 3 would direct the VA/DOD Committee to monitor the two agencies' plans to construct or acquire additions to either agency's health-care resources, including the proposed location of new facilities and the proposed acquisition of major equipment, such as computed axial tomography (CAT) scanners, and to review the coordination and sharing opportunities that would result from such planned additions. The Committee expects that these VA/DOD Committee activities would result in more carefully coordinated expenditures of funds by the two agencies for major additions to their health-care resources.

Clause (6) of subsection (c) of section 3 would direct the VA/DOD Committee, in consultation with such other agencies as the President may direct (such as the Federal Emergency Management Agency, if and to the extent appropriate) to develop a plan for the effective utilization, as authorized by new subsection (e) of section 5011 of title 38, United States Code (as proposed to be added by section 4(a) of this bill), of VA health-care resources as a backup to the Department of Defense in time of war or national emergency involving the use of the Armed Forces. The plan developed by the VA/DOD Committee would be submitted to the Administrator of Veterans' Affairs and the Secretary of Defense in order to assist them in carrying out their responsibilities under such new subsection (e) of section 5011.

Subsection (d) of section 3 would require the Assistant Secretary, in carrying out the duties prescribed in this measure (including those in the amendments to title 38 made by section 4 of this bill), to consult regularly with the surgeons general of the Army, Navy, and Air Force. The Committee expects that these consultations would ensure that the needs and views of the various services are recognized and addressed in overall VA/DOD sharing and coordination.

SECTION 4

Would amend present section 5011 of title 38, United States Code, relating to agreements between the Administrator and the secretaries of the Army, Navy, and Air Force for the sharing of certain health-care resources, to establish express authority, re-

quirements, and procedures with respect to the sharing of health-care resources between the VA and the Department of Defense.

Clause (1) of subsection (a) of section 4 would amend the heading of present section 5011 of title 38 to read "Sharing of Veterans' Administration and Department of Defense health-care resources" to reflect more accurately the provisions of that section as proposed to be amended by clauses (2), (3) and (4) of this subsection.

Clause (2) subsection (a) of section 4 would redesignate the existing provisions of present section 5011 of title 38 as subsection (a) of that section.

Clause (3) of subsection (a) of section 4 would further amend present section 5011 of title 38 (redesignated as subsection (a) by clause (2) of this subsection) to clarify that the agreements involving the mutual use or exchange of use of health-care capacity which the Administrator and the secretaries of the Army, Navy, and the Air Force are authorized to enter into may include agreements for the use or exchange of use of any health-care resources (as that term would be defined, for purposes of section 5011, in new subsection (d) of that section as proposed to be added by clause (4) of this subsection, including health-care personnel as well as material items; to delete the authority in current law for the transfer of facilities, supplies, equipment, or material without reimbursement of appropriations in order to ensure that all such activity will take place pursuant to sharing agreements entered into pursuant to new subsection (b) of section 5011 as proposed to be added by clause (4) of this subsection; and to clarify that the Administrator may not enter into any agreement that would result in a permanent reduction of total VA beds below any minimum number of such beds prescribed by law. Present section 5010(a)(1) provides that "[t]he Administrator, subject to the approval of the President, is authorized to establish and operate not less than 125,000 hospital beds in medical facilities over which the Administrator has direct jurisdiction for the care and treatment of eligible veterans." The clarification regarding the minimum number of beds reflects the Committee's intent that the new emphasis placed on interagency sharing by this bill lead to the maximum feasible and appropriate use of the VA's health-care resources without any adverse effect on the VA's capacity to provide care to eligible veterans.

Clause (4) of subsection (a) of section 4 would further amend present section 5011 of title 38 by adding four new subsections, as follows:

New subsection (b): Would require the Administrator and the Secretary of Defense, after reviewing the recommendations of the VA/DOD Committee, proposed to be established by section 3 of this bill, and not later than 9 months after the date of enactment of this subsection, jointly to establish guidelines that would result in the two agencies sharing health-care resources to the maximum extent feasible consistent with VA and DOD health-care responsibilities under provisions of law other than this section. New subsection (b) would specify, in six numbered paragraphs, provisions that would be required to be included in the joint guidelines, as follows:

Paragraph (1) of new subsection (b): Would require that the guidelines direct the head of each health-care facility under the jurisdiction of the VA or the Department of Defense, to the maximum extent feasible, appropriate, and consistent with each agency's health-care responsibilities under law, to enter into sharing agreements with the heads of health-care facilities of the other agency in the same geographic area and that, under such an agreement, individuals who are eligible for care in the facility of one agency and identified in the agreement, would be eligible for care in the facility of the other agency. This would include Defense Department beneficiaries who are dependents of members or former members of the Army, Navy, or Air Force, but only to the extent that the VA specifically agreed to their inclusion in a particular sharing arrangement. This provision is intended to help promote the maximum desirable degree of sharing of health-care facilities on the local level while ensuring that local facility heads enter sharing agreements only to the extent that those agreements can be carried out without having a detrimental impact on their ability to provide care to their primary beneficiaries under current law. As to the VA under title 38, the term "primary beneficiary" includes, for hospital or nursing home care in VA facilities under section 610, veterans who have or were discharged because of service-connected disabilities, veterans who are former prisoners of war, veterans over the age of 65 and veterans who are unable to defray the cost of their care (including, by virtue of section 622(3), any veteran in receipt of VA pension). With respect to direct VA outpatient care under section 612, the term "primary beneficiary" includes various categories of veterans for certain categories of medical treatment for service-connected and non-service-connected disabilities, as follows:

Categories of veterans	Type of disability	Outpatient medical treatment for which eligible
1. Veterans with service-connected disabilities	Any service-connected disability	Comprehensive (for the service-connected disability).
2. Veterans who (a) have service-connected disabilities rated 50-percent-or-more disabling, (b) are veterans of the Spanish-American War or World War I, (c) are former prisoners of war, or (d) are in need of regular aid and attendance or are housebound.	Any disability	Comprehensive.
3. Veterans (a) who are eligible for hospital care (by virtue of inability to defray the costs of the care involved) and (b) (1) whose service-connected disabilities are rated less than 50-percent disabling, or (2) have no compensable service-connected disabilities.	Any disability	Prehospital and posthospital care, and care that would obviate the need for hospitalization.

The term would also include dependents or survivors of certain veterans under certain limited circumstances pursuant to section 613 of title 38.

As to the Department of Defense, under title 10, the term "primary beneficiary" includes members and certain former members of the Army, Navy, or Air Force, and dependents, as that term is defined in section 1072 of title 10, of such members, under the circumstances prescribed in section 1076 of such title for the care and services specified in section 1077 of such title, which include inpatient and outpatient care.

Paragraph (2) of new subsection (b).—Would require that each sharing agreement entered into by local facility heads state explicitly the health-care resources to be shared, which could include support and administrative services, the health care to be provided, and the beneficiaries to be treated.

Paragraph (3) of new subsection (b).—Would require that each sharing agreement ensure that the identified beneficiaries of one agency would have access to the health-care facilities of the other agency under the agreement strictly on a referral basis and that the treatment of the beneficiaries of the other agency would not interfere with the range of services, quality of care, or priority for services provided to the primary beneficiaries of the agency providing the care. The head of each providing facility would have the responsibility for determining that the provision of care to the beneficiaries of the other agency would not have such an adverse impact.

Paragraph (4) of new subsection (b).—Would require that each proposed sharing agreement entered into by local facility heads, in order to become effective as an interagency agreement, be submitted to the Chief Medical Director and the Assistant Secretary. After both of these officials have received a proposed agreement, they would have 45 days within which to act on it. During that period, either such official could disapprove the agreement (and thereby nullify it) or both could approve it (at which point it would become an interagency agreement). If there were no action (or if only one gave approval) within 45 days following the receipt of a proposed agreement, it would become an interagency agreement on the 46th day following receipt. Thus, the Committee intends that local facility directors have significant opportunity to initiate and shape sharing agreements subject, however, to a measure of centralized control over such agreements maintained through the power given to the Chief Medical Director and Assistant Secretary to veto an agreement.

Paragraph (5) of new subsection (b).—Would require that the agency providing services pursuant to an interagency sharing agreement be reimbursed by the other agency. The reimbursement would be based on a methodology, to be agreed to by the Chief Medical Director and the Assistant Secretary, that would provide appropriation flexibility to the heads of the local facilities involved to take into account local conditions and needs as well as the actual cost of the service provided. This provision for crediting all reimbursements to appropriations available to the facility that provided the care would remove the existing disincentive to sharing between individual facilities that results from the requirement under current law that reimbursement for care provided to beneficiaries of another agency be deposited in a centralized account.

New subsection (c).—Would require the Administrator and the Secretary of Defense to submit an annual joint report to the Congress, at the same time the President's annual budget is sent to the Congress pursuant to section 201(a) of the Budget and Accounting Act, 1921 (31 U.S.C. 11(a)), with respect to the implementation, during the most recent fiscal year, of new subsection (b) of section 5011 of title 38 (as proposed to be added by this clause). This new subsection would require that each annual report include information with regard to (1) the guidelines (including any changes thereto) relating to sharing that are prescribed pursuant to new subsection (b) of present section 5011 (as proposed to be added by this clause); (2) the assessment of opportunities for coordination and sharing of health-care resources identified by the VA/DOD Committee pursuant to section 3(c)(2) of the bill; (3) the recommendations made by the VA/DOD Committee, pursuant to section 3(c)(3) of the bill, for changes in policies and procedures of the two agencies in order to produce the maximum feasible level of interagency coordination and sharing of health-care resources; (4) a review of all interagency sharing agreements that have been entered into by local health-care facilities of the two agencies; (5) the activities of the two agencies under those agreements (in this connection the Committee expects the reports to describe, among other things,

the types of services shared, the number of beneficiaries of one agency served by health-care facilities of the other, and other pertinent information that would indicate the extent of sharing activity undertaken by the two agencies); (6) other interagency coordination, planning, and activities involving either agency directed toward producing the maximum feasible efficient use of Federal health-care resources during the fiscal year that is the subject of each such report (in this connection, the Committee expects the report to include information describing, in addition to VA/DOD interagency activities, activities other than those under this bill, involving the VA or the Department of Defense and other agencies); and (7) recommendations for legislative action to facilitate interagency sharing of health-care resources between and by the two agencies.

New subsection (d).—Would define, in five numbered paragraphs, terms used in this section, as follows:

Paragraph (1) of new subsection (d).—Would define the term "direct health care" to mean care provided in a facility operated by the VA or the Department of Defense. This definition would not include care provided by either agency on a fee-for-service or other contractual basis. This term is used in new subsection (b) of section 5011 (as proposed to be added by clause (4) of this subsection) to describe the health-care services that the facility of one agency may provide under a sharing agreement to the beneficiaries of the other agency. By virtue of this definition, therefore, sharing agreements may not provide for a facility of one agency to furnish care to a beneficiary of the other agency under a fee-for-service or other contractual arrangement with a third agency or a private individual or agency.

Paragraph (2) of new subsection (d).—Would define the term "beneficiary" to mean (A) a veteran or other person (dependents of veterans under certain limited circumstances pursuant to section 613 of title 38) eligible for health care under title 38, or (B) a member, or former member of the Army, Navy, Air Force, or Marine Corps or other persons (dependents of such members or former members under the conditions prescribed in section 1076 of title 10 and for the care specified in section 1077 of such title) eligible for medical or dental care under title 10.

Paragraph (3) of new subsection (d).—Would define the terms "providing agency" to mean either the VA or the Department of Defense, as appropriate.

Paragraph (4) of new subsection (d).—Would define the term "primary beneficiary"—the term used in paragraph 3 of new subsection (b) of section 5011 (as proposed to be added by clause (4) of this subsection) to describe those individuals whose access to or priority for health-care services is not to be affected adversely by sharing agreements—to mean (A) with respect to the VA, a veteran or other person (dependents of veterans under certain limited circumstances pursuant to section 613 of title 38) eligible under title 38, other than by virtue of a sharing agreement under new subsection (b) of section 5011 of that title (as proposed to be added by clause (4) of this subsection) for health care in VA facilities, and (B) with respect to the Department of Defense, a member or former member of the Army, Navy, Air Force, or Marine Corps or other persons (dependents of such members or former members under the conditions prescribed in section 1076 of title 10 and for the care specified in section 1077 of such title) who is eligible for medical and dental care under title 10. The difference between the definition in this paragraph and the one in paragraph (2) ("beneficiary") is that "primary beneficiary is defined with specific reference to each of the two agencies and the term, as to the VA, expressly excludes those persons eligible for care in VA facilities under sharing agreements entered into under new subsection (b) of section 5011 of title 38 (as proposed to be added by clause (4) of this subsection).

Paragraph (5) of new subsection (d).—Would define the term "health-care resource"—a term used in paragraph (2) of new subsection (b) of section 5011 (as proposed to be added by clause (4) of this subsection) to describe what may be shared pursuant to an interagency agreement—to mean any health-care resource and any health-care support or administrative resource. The term would also expressly include hospital care, medical services, and rehabilitative services as those terms are defined in paragraphs (5), (6), and (8), respectively, of present section 601 of title 38.

Paragraph (1) of new subsection (e).—Would authorize the Administrator, during a period of war declared by the Congress or a period of national emergency declared by the President or the Congress that involves the use of United States Armed Forces in armed conflict—

(A) to give a higher priority to furnishing hospital care, nursing home care, and medical services under chapter 17 of title 38 to active-duty members of the Armed Forces than to any other group of persons except veterans with service-connected disabilities; and

(B) to the extent authorized by the President and subject to the availability of appropriations or reimbursements from the Department of Defense for care provided to active duty members of the Armed Forces, to contract with private facilities for the provision of hospital care and medical services as defined in paragraph (2)(A) of this new subsection, to provide hospital care or medical services on a contract basis for certain veterans.

These authorities could be exercised only pursuant to regulations prescribed by the Administrator.

Paragraph (2)(A) of new subsection (e).—Would define health care and medical services as (and, thus, in conjunction with paragraph (1) of this new subsection, authorize the Administrator to contract with private facilities for)—

(1) hospital care or medical services for the care or treatment of a condition for which the veteran is receiving outpatient treatment from the VA (under either section 612(f), relating to VA outpatient care for a service-connected disability, or for any disability of a veteran who has a service-connected disability rated at 50 percent or greater or who is a former prisoner of war, or for the pre- or post-hospital care of the non-service-connected disability of a veteran eligible for hospital care under section 610 or for care that would obviate the need for hospital care for the treatment of such a disability, or section 612(g), relating to VA outpatient care for a non-service-connected disability of a veteran of the Mexican border period or of World War I, or of certain severely disabled veterans who are in need of aid and attendance or who are housebound) in any case in which it is the medical judgment of the Chief Medical Director, pursuant to regulations prescribed by the Administrator that the delay in furnishing the care at the VA facility concerned would result in a significant deterioration of the condition for which VA care has been provided; and

(2) hospital care for a medical emergency which poses a serious threat to the life or health of a veteran eligible for VA hospital care if the Chief Medical Director pursuant to regulations prescribed by the Administrator, finds that a substantial portion of the resources of the facility involved are being used to provide care to active-duty members of the armed services pursuant to the authority provided in this subsection. Contract care under this clause, as compared to the care authorized under clause (1) of this paragraph, is more limited in authorizing only hospital care in emergency situations for veterans who are not under a continuing VA care obligation. Care under clause (1) includes both hospital care and medical services so as to ensure the continuity of care needed to prevent a significant deterioration of the condition of a veteran under VA care during a period of war or national emergency.

By the criterion in clause (2) requiring a determination that "a substantial portion of the resources of the facility involved are being used to provide care to active-duty members of the Armed Forces" before contract care would be authorized, the Committee intends that contract care under this clause be authorized when it is clear that the VA facility where the emergency care is sought is caring for significant numbers of combat casualties. It is not the Committee's intent to limit the availability of this contract authority to situations in which every bed in the VA facility is being utilized for such casualties, but rather that this new contract authority not be available when the facility in question is treating only a very limited number of active-duty personnel and is generally unable to provide care to appreciable numbers of non-service-connected disabled veterans because of competing applications by other veterans.

Paragraph (2)(B) of new subsection (e).—Would provide that the cost of any care provided to active-duty members of the Armed Forces pursuant to the authority established in paragraph (1) of this subsection would be reimbursed to the VA by the Department of Defense at rates agreed upon by the two agencies based on the cost of the care provided. These reimbursements would be credited to appropriations available to the VA facility providing the care.

Paragraph (3) of new subsection (e).—Would require that, within 90 days after the declaration of a war or of a national emergency involving the use of United States Armed Forces in armed conflict, or as soon thereafter as is reasonably practicable, the Administrator report to the Veterans' Affairs Committees of the House of Representatives and the Senate on the Administrator's plans to allocate VA health-care resources, including facilities and personnel, in order to provide priority hospital care and medical services to members of the Armed Forces on active duty. After this report is submitted, the Administrator would be required to keep the two Committees apprised on a periodic basis of the extent to which the authority to contract with private facilities for the care of veterans has been utilized and the circumstances of such utilization.

Subsection (b) of section 4 would amend the item relating to section 5011 in the table of sections at the beginning of chapter 81 to reflect the amendment to section 5011's title as proposed to be made by subsection (a) of this section.

Subsection (c) of section 4 would require the Administrator and the Secretary of Defense, within 180 days after the date of enactment of this bill, to enter into an agreement pursuant to which they shall agree to pursue planning activities and to establish procedures and guidelines to carry out the provisions of new subsection (e) of section 5011 as proposed to be added by clause 4 of subsection (a) of this section.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 266

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Veterans' Administration and Department of Defense Health-Care Resources Sharing Act".

SEC. 2. (a) The Congress finds that—

(1) there are opportunities for greater coordination and sharing of the health-care resources of the Veterans' Administration and the Department of Defense which, if achieved, would be beneficial to veterans, members of the Armed Forces on active duty, and other health-care beneficiaries of the Veterans' Administration and the Department of Defense, and which could result in reduced costs to the Government by minimizing duplication and underutilization of health-care resources;

(2) there are not adequate incentives to encourage such coordination and sharing of health-care resources; and

(3) such coordination and sharing of health-care resources may be achieved without a detrimental effect on each agency's primary beneficiaries.

(b) The Congress further finds that—

(1) there might be situations during a period of war or national emergency in which the Department of Defense would not have adequate health-care resources; and

(2) the Veterans' Administration has an organized health-care system which could be used to assist the Department of Defense in meeting the medical contingencies which might occur during a period of war or national emergency.

SEC. 3. (a) There is established an interagency committee to be known as the Veterans' Administration/Department of Defense Health-Care Resources Coordination Committee (hereinafter referred to as the "Committee").

(b) The Committee shall be composed of the Chief Medical Director of the Veterans' Administration (hereinafter in this section referred to as the "Chief Medical Director") and the Assistant Secretary of Defense for Health Affairs (hereinafter in this section referred to as the "Assistant Secretary"), or their respective designees, and such other employees of the two agencies as they shall mutually designate.

(c) In order to promote the coordination of health-care services between the Veterans' Administration and the Department of Defense and to provide guidance to the two agencies in regard to the interagency sharing of health-care resources, the Committee shall on a continuing basis—

(1) review existing policies and practices in regard to the coordination and sharing of health-care resources (including administrative and support services) between the two agencies;

(2) identify and assess further opportunities for the coordination and sharing of health-care resources between the two agencies that will not adversely affect the quality of, or the established priorities for, care provided by either agency;

(3) develop and recommend to the Administrator of Veterans' Affairs and the Secretary of Defense changes in policies and procedures which would produce maximum feasible interagency coordination and sharing of health-care resources between the two agencies as authorized by title 38, United States Code;

(4) provide guidance for and monitor the implementation of activities designed to promote such coordination and sharing of health-care resources;

(5) monitor the plans of the two agencies to acquire additional health-care resources (including the location of new facilities and the acquisition of major equipment), and review the potential impact of such proposals on opportunities for such coordination and sharing; and

(6) develop, in consultation with such other agencies as the President may direct, a plan for the effective utilization of Veterans' Administration resources, as authorized in subsection (e) of section 5011 of such title (as added by section 4(a)(4) of this Act), to assist in meeting medical contingencies which might result from a period of war or national emergency.

(d) In carrying out the duties prescribed in this Act, the Assistant Secretary shall consult regularly with the surgeons general of the Army, Navy, and Air Force.

SEC. 4. (a) Section 5011 of title 38, United States Code, is amended—

(1) by amending the heading to read as follows:

"§ 5011. Sharing of Veterans' Administration and Department of Defense health-care resources";

(2) by inserting "(a)" before "The Administrator";

(3) by striking out "and material" and all that follows through "this title," and inserting in lieu thereof "material, and other resources as may be needed to operate such facilities properly, except that at no time shall the Administrator enter into any agreement which will result in a permanent reduction of Veterans' Administration beds below any minimum number prescribed by law"; and

(4) by adding at the end the following new subsections:

"(b) After considering the recommendations made under section 3(c)(3) of the Veterans' Administration and Department of Defense Health-Care Resources Sharing Act, the Administrator and the Secretary of Defense shall jointly establish guidelines for the sharing of health-care resources to the maximum extent feasibly consistent with the health-care responsibilities of the Veterans' Administration and the Department of Defense under this title and title 10. Such guidelines shall be established not later than nine months after the date of enactment of this subsection, and (notwithstanding any other provision of law) shall include provisions for the following:

"(1) The director or the commanding officer of each health-care facility under the jurisdiction of either of the two agencies shall, to the maximum extent feasible, appropriate, and consistent with such respective responsibilities, enter into sharing agreements with the head of each health-care facility of the other agency in the same geographic area under which those eligible beneficiaries of one agency who are identified in the agreement may be provided health care at the facility of the other agency.

"(2) Each such agreement shall explicitly identify the health-care resources to be shared, the health care to be provided, and the beneficiaries to be treated. Resources to be shared may include any health-care resource.

"(3) Each such agreement shall ensure that the availability of direct health care to individuals who are not primary beneficiaries of the providing agency shall be on a referral basis from the facility of the other agency and shall not (as determined by the heads of the facilities concerned) adversely affect the range of services, quality of care, or priority for services provided to the primary beneficiaries of such providing agency.

"(4) Each such agreement shall be submitted on the same day to the Chief Medical Director and the Assistant Secretary of Defense for Health Affairs (hereinafter referred to as the 'Assistant Secretary') and shall become an interagency agreement (A) on the forty-sixth day following receipt by such officials, unless earlier disapproved by either such official, or (B) if earlier approved by both such officials, on the date of such approval.

"(5) Each such agreement shall provide that the agency providing the health-care services will be reimbursed by the other agency for the cost of care and services provided. Such reimbursement shall be based upon a methodology, agreed upon by the Chief Medical Director and the Assistant Secretary, which provides appropriate flexibility to the heads of the facilities concerned to take into account local conditions and needs and the actual costs to the facility being reimbursed. such reimbursements shall be credited to appropriations available to the facility which provided such care or services.

"(c) The Administrator and the Secretary of Defense shall, each year at the time the President's Budget is transmitted to Congress, jointly submit a report to Congress on the implementation of subsection (b) of this section during the fiscal year that ended during the previous calendar year. Each such report shall include information with regard to—

"(1) the guidelines and any revisions thereof prescribed pursuant to subsection (b) of this section;

"(2) the assessment of opportunities, identified under section 3(c)(2) of the Veterans' Administration and Department of Defense Health-Care Resources Sharing Act, for coordination and sharing of health-care resources between the two agencies;

"(3) the recommendations, made under section 3(c)(3) of such Act, for changes in policies and procedures in order to produce maximum feasible interagency coordination and sharing of such resources as authorized by this title;

"(4) a review of the interagency sharing agreements entered into by health-care facilities of the two agencies;

"(5) the activities of the two agencies under such agreements;

"(6) other interagency coordination, planning, and activities involving either agency directed toward producing the maximum feasible use of Federal health-care resources during the preceding fiscal year; and

"(7) such legislative recommendations as the Administrator and the Secretary of Defense consider appropriate to facilitate interagency sharing of health-care resources between and by the two agencies.

"(d) For the purposes of this section:

"(1) The term 'direct health care' means health care provided to a beneficiary in a facility operated by the Veterans' Administration or the Department of Defense.

"(2) The term 'beneficiary' means (A) a veteran or other person who is eligible under this title for health care in Veterans' Administration facilities, or (B) a member or former member of the Army, Navy, Air Force, or Marine Corps or other person who is eligible for medical and dental care under title 10.

"(3) The term 'providing agency' means the Veterans' Administration or the Department of Defense, as appropriate.

"(4) The term 'primary beneficiary' means (A) with respect to the Veterans' Administration a veteran or other person who is eligible under this title (other than by virtue of subsection (b) of this section) for health care in Veterans' Administration facilities, and (B) with respect to the Department of Defense a member or former member of the Army, Navy, Air Force, or Marine Corps or other person who is eligible for medical and dental care under title 10.

"(5) The term 'health-care resource' means any health-care resource and any health-care support or administrative resource, including hospital care, medical services, and rehabilitative services as those terms are defined in paragraphs (5), (6), and (8), respectively, of section 601 of this title."

(e)(1) During a period of war declared by

the Congress or a period of national emergency declared by the President or the Congress which involves the use of the Armed Forces of the United States in armed conflict, notwithstanding any other provision of this title, the Administrator may (pursuant to regulations which the Administrator shall prescribe)—

"(A) give a higher priority to the furnishing of hospital care, nursing home care, and medical services under chapter 17 of this title to members of the Armed Forces on active duty, to the extent authorized by this subsection, than to any other group of persons eligible for such care and services with the exception of veterans with service-connected disabilities; and

"(B) to the extent authorized by the President and subject to the availability of appropriations or reimbursements under paragraph (2)(B) of this subsection, contract with private facilities for the provision by such facilities of hospital care and medical services described in paragraph (2)(A) of this subsection during a period of war or national emergency as described in this paragraph.

"(2)(A) Hospital care and medical services referred to in paragraph (1)(B) of this subsection are—

"(i) hospital care or medical services authorized under this title for a veteran and necessary for the care or treatment of a condition for which the veteran is receiving medical services under subsection (f) or (g) of section 612 of this title, in any case in which the delay involved in furnishing such care or services at the Veterans' Administration facility concerned would, in the judgment of the Chief Medical Director pursuant to regulations prescribed by the Administrator, be likely to result in a significant deterioration of that condition; and

"(ii) hospital care for a medical emergency which poses a serious threat to the life or health of a veteran eligible for such care under chapter 17 of this title, if the Chief Medical Director pursuant to regulations prescribed by the Administrator, finds that the Veterans' Administration facility concerned is utilizing a substantial portion of its hospital care capability for the furnishing of priority care to members of the Armed Forces under paragraph (1) of this subsection.

"(B) The cost of any care or services provided by the Veterans' Administration under paragraph (1) of this subsection shall be reimbursed to the Veterans' Administration by the Department of Defense at such rates as may be agreed upon by the Administrator and the Secretary of Defense based on the cost of such care or services provided. Amounts received under this paragraph shall be credited to appropriations available to the Veterans' Administration facility which provided such care or services.

"(3) Within ninety days after the declaration of a period of war or national emergency described in paragraph (1) of this subsection (or as soon after the end of such ninety-day period as is reasonably practicable), the Administrator shall submit to the committees a report on the allocation of facilities and personnel in order to provide priority hospital care, nursing home care, and medical services to members of the Armed Forces on active duty. Thereafter, the Administrator shall report periodically to the committees regarding the extent to which, and the circumstances under which, the authority to contract with private facilities provided in paragraph (1)(B) of this subsection is being used.".

(b) The item relating to such section in the table of sections at the beginning of chapter 81 is amended to read as follows:

"5011. Sharing of Veterans' Administration and Department of Defense health-care resources.".

(c) Not later than one hundred and eighty days after the date of the enactment of this Act, the Administrator of Veterans' Affairs shall enter into an agreement with the Secretary of Defense under which the Administrator and the Secretary shall agree to pursue planning activities and to establish procedures and guidelines under which subsection (e) of section 5011 of title 38, United States Code (as added by subsection (a) of this section), may be carried out.

SEC. 5. The Veterans' Administration medical center located at 1481 West 10th Street, Indianapolis, Indiana, shall hereafter be known and designated as the "Richard L. Roudebush Veterans' Medical Center". Any reference to such medical center in any law, regulation, document, map, record, or other paper of the United States shall be deemed to be a reference to the Richard L. Roudebush Veterans' Medical Center.

SEC. 6. (a) Section 1785(a)(1) of title 38, United States Code, is amended by striking out "Each" and inserting in lieu thereof "Notwithstanding any other provision of law unless enacted in express limitation of this subsection, each".

(b) The amendment made by this section shall take effect as of October 1, 1981.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The title was amended so as to read:

A bill to foster greater coordination and sharing of health-care resources between the Veterans' Administration and the Department of Defense, and to amend title 38, United States Code, to authorize appropriate coordination and sharing of such health-care resources.

ORDER OF BUSINESS

Mr. BAKER. Mr. President, could I inquire of the minority leader if he is prepared to consider certain items on today's Executive Calendar, and I refer particularly to Calendar Order Nos. 449 and 450 appearing at the bottom of page 1 and on page 2 of the calendar as printed.

Mr. ROBERT C. BYRD. Mr. President, those nominations are cleared on this side of the aisle.

Mr. BAKER. I thank the minority leader.

EXECUTIVE SESSION

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate now go into executive session for the purpose of considering the nominations just identified.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that the nominations be considered and confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations are considered and confirmed en bloc.

The nominations considered and confirmed en bloc are as follows:

DEPARTMENT OF AGRICULTURE

Everett George Rank, Jr., of California, to be a member of the Board of Directors of the Commodity Credit Corporation.

COMMODITY FUTURES TRADING COMMISSION

Susan Meredith Phillips, of Iowa, to be a commissioner of the Commodity Futures Trading Commission.

Mr. BAKER. Mr. President, I move to reconsider en bloc the vote by which the nominations were confirmed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, I ask unanimous consent that the President be immediately notified that the Senate has given its consent to these nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

JOINT REFERRAL OF NOMINATION

Mr. BAKER. Mr. President, I ask unanimous consent that the nomination of William Coskrey Plowden, Jr., of South Carolina, to be Assistant Secretary of Labor for Veterans' Employment, to be jointly referred to the Committee on Labor and Human Resources and the Committee on Veterans' Affairs.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDERS FOR WEDNESDAY

ORDER FOR RECESS UNTIL 8:45 A.M.

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 8:54 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

REDUCTION IN LEADERSHIP TIME

Mr. BAKER. Mr. President, I ask unanimous consent, the minority leader willing, that the time for the two leaders under the standing order be reduced on tomorrow to 5 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that in the time remaining from the time of convening until the hour of 9 a.m. tomorrow that there be a brief period—truly a brief period—for the transaction of routine morning business in which Senators may speak for not more than 1 minute each.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. BAKER. Mr. President, on tomorrow the Senate will convene at 8:45. The two leaders will be recognized under the standing order for an abbreviated period. The time remaining between the recognition of the two leaders and 9 o'clock will be devoted to the transaction of routine morning business.

At 9 a.m., under the order previously entered, the Senate will begin consideration of the resolution of disapproval of the AWACS bill and continue debate throughout the day on that measure.

At 5 o'clock p.m., under the order previously entered, a vote will occur in respect to that measure under the provisions of the statute.

Mr. President, there are no special orders for tomorrow. I would expect tomorrow to be a busy day.

RECESS UNTIL 8:45 A.M.

Mr. BAKER. Mr. President, if there is no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in recess until the hour of 8:45 a.m. on Wednesday next.

The motion was agreed to; and, at 6:35 p.m., the Senate recessed until Wednesday, October 28, 1981, at 8:45 a.m.

NOMINATIONS

Executive nominations received by the Senate October 27, 1981:

THE JUDICIARY

Richard A. Posner, of Illinois, to be the U.S. circuit judge for the seventh circuit vice Philip W. Tone, resigned.

DEPARTMENT OF STATE

Robert L. Barry, of New Hampshire, a Career Member of the Senior Foreign Service, class of Minister-Counselor, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Bulgaria.

DEPARTMENT OF DEFENSE

Melvyn R. Paisley, of Washington, to be an Assistant Secretary of the Navy, vice David Emerson Mann, resigned.

DEPARTMENT OF LABOR

William Coskrey Plowden, Jr., of South Carolina, to be Assistant Secretary of Labor for Veterans' Employment (new position).

IN THE AIR FORCE

The following-named officers for permanent promotion in the U.S. Air Force, in accordance with sections 601 and 602, title VI, transition provisions, Defense Officer Personnel Management Act of 1980, with dates of rank to be determined by the Secretary of the Air Force.

LINE OF THE AIR FORCE
